The Captain perceived he was in a nasty place, open green ahead but with some tumbled country near at hand, and to the left, a rusty old gravel pit, furze at the sides, water at the bottom. Nasty attractive hole of a place. Sort of thing one gets into. He must pull himself together for this. After all, having undertaken to play a game, one must play the game. If he hit the infernal thing, that is to say the ball, if he hit the ball so that if it didn't go straight, it would go to the right rather—clear of the hedge—it would be so bad to the right. Difficult to manage. Best thing was to think hard of the green ahead, a long way ahead—with just the slightest deflection to the right. Now then—heels well down, club up, a good swing, keep your eye on the ball, keep your eye on the ball, keep your eye on the ball just where you mean to hit it—far below there and a little to the right—and *don't* worry. . . . Rap.

"In the pond I *think*, sir."

"The water would have splashed if it had gone in the pond," said the Professor. "It must be over there in the wet sand. You hit it pretty hard, I thought."

Search. The caddie looked as though he didn't care whether he found it or not. *He* ought to be interested. It was his profession, not just his game. But nowadays everybody had this horrid disposition toward slacking. A Tired generation we are. The world is too much with us. Too much to think about, too much to do, Madeleines, army manœuvres, angry lawyers, lost boys—let alone such exhausting foolery at this game. . . .

"*Got* it, sir!" said the caddie.

"Where?"

"Here, sir! Up in the bush, sir!"

It was resting in the branches of a bush two yards above the slippery bank.

"I doubt if you can play it," said the Professor, "but it will be interesting to try." The Captain scrutinized the position. "I can play it," he said.

"You'll slip, I'm afraid," said the Professor.

THEY were both right. Captain Douglas drove his feet into the steep slope of rusty sand below the bush, held his iron a little short and wiped the ball up and over and as he found afterward out of the rough. All eyes followed the ball except his. The Professor made sounds of friendly encouragement. But the Captain was going—going. He was on all fours, he scrabbled handfuls of prickly gorse, of wet sand. His feet, his ankles, his calves slid into the pond. How much more? No. He'd reached the bottom. He proceeded to get out again as well as he could. Not so easy. The bottom of this pond sucked at him. . . .

(To be continued next week)

Boys' Educational Institutions

Randolph-Macon Academy

For Boys and Young Men — Front Royal, Va.

A branch of the Randolph-Macon System. Liberal gifts make unusual advantages possible. Equipment cost $100,000. Prepares for College or Scientific Schools. Gymnasium, physical culture and outdoor sports. Terms, $275. 25th session opens September 15th, 1914. For catalogue and illustrated pamphlet, address

CHARLES L. MELTON, A. M., Principal
Box 400, Front Royal, Va.

The Raymond Riordon School

Where the Arts and Sciences, Trades and Culture are merged in the Interests of Human Betterment.

On Chodikee Lake, Highland, Ulster County, N. Y.

Farm and Camp Session begins July 1st, with accommodations for parents and friends. Academic year begins October 1st. 300-acre estate. 500-acre demonstration dairy farm. Terms reasonable—include board, books, supplies, laundry, barbering, cubbing, etc., and practically all clothing. *Write for catalog.*

KISKIMINETAS SPRINGS SCHOOL for BOYS Each boy studied and his work adapted to his needs. Character developed along positive lines. Known and indorsed by every American University. Broad business courses for boys not going to college. Two beautiful new dormitories and 136 acres of land have just been added to equipment. Opens 27th year, under same management, September 22, 1914. Write for catalog.

KISKIMINETAS SPRINGS SCHOOL
Department 4 Saltsburg, Pa.

University School FOR BOYS

Never missed a year (for 27 years) in attaining honors in college examinations. A select day and boarding school. Preparatory. Patronage of Chicago's first families for 23 years. Fully accredited. Individual instruction. Teacher for every nine boys. Modern buildings and equipment. A 5 gymnasium. Limited number of boarding pupils under personal supervision of Headmaster. Near Lincoln Park and world-famous Lake Shore Drive. Music and Art centres easily accessible. Catalog.

W. Rhodes Kohr, 1139 N. Dearborn St., Chicago, Ill.

Notre Dame "World Famed"

The University includes the Colleges of Classics, Letters, History, Economics, Journalism, Architecture, Law, Biology, Chemistry, Pharmacy, and Engineering (Civil, Mechanical, Electrical, Mining, and Chemical). Board and Tuition, $400.00 a year.

Preparatory School for boys over thirteen, $400.00
Primary School for boys under thirteen, $250.00

For Catalogue address (specifying department):

DEPARTMENT C., Notre Dame, Indiana

Racine College School

"The School for Manly Boys."
—Chief Justice Winslow.

Character building is our serious work. Modified military system. Location convenient to Chicago. Special provision for younger boys. Supervised athletics. Gymnasium, swimming pool. Diploma accepted by leading institutions. Catalogue. Rev. William Francis Shero, A. M., Ph. D., Warden and Headmaster, Racine, Wis.

Peddie Institute

Hightstown, N. J., 9 miles from Princeton

An endowed school for 250 boys, offering thorough preparation for all colleges and for business. Modern buildings. 60-acre Campus, Gymnasium, Swimming Pool and Athletic Field. Musical Clubs and instruction. Lower school for boys 11 to 14 years. Rates $450 to $550. 49th year opens September 23rd. For catalog address

R. W. SWETLAND, A. M., Box 6-M.

KEEWATIN ACADEMY for BOYS

The Northern school with a winter home in Florida. Outdoor life all the year. Fixed expenses $700. Certificate admits to all colleges. Lower school for young boys. Address Sec., Box 32, Prairie du Chien, Wisc., or 1018 Masonic Temple, Chicago, Ill.

"Advertising is responsible for a deal of the progress made in the market of necessities. Years ago food products were scooped out of a barrel or a box and sold in paper bags. Advertising has taught the public that clean, wholesome package goods, put up under sanitary conditions and removed from the possibilities of contamination in handling or through surrounding store odors, are far preferable, and the day will come when bulk goods, especially among edible products, will be almost unknown."

The Streak of Gold

(Continued from page 11)

Frank Mayo's place in the Black River country near Jonesville.

Colonel Richard Caswell did not return from the cockfights at Vicksburg until the next day and Merritt spent the interim examining cotton seed and playing "bottle pool, a new Yankee game." Early in the forenoon the "couple of thousands was arranged for," the transaction being liberally lubricated with cordials from cut-glass decanters on the sideboard in the Colonel's private office.

"I see you're in haste to return, Jack; but I must delay you for a moment," said the Colonel when his aged cashier had left with the signed documents. "Old Judge Hunt, you know, makes it his business either to assist the prosecution or lead the defense of every criminal case in Concordia. The Judge was at the cocking main and returned on the *Ouachita Queen*. He had imbibed a little more than usual and was garrulous as General Early. Well, Jack, you know the significance of it when I say that Frank has paid Judge Hunt three hundred dollars retainer fee in case he—"

COLONEL RICHARD CASWELL stood up and stared at the retreating figure of John Merritt. Merritt, without a word, had dashed out of the private office, startling the superannuated clerks as he rushed through the quiet banking room and bowling over Liver-Lip Sam at the front door. There was a crunch and squeak of saddle leather, then the hoofs of the big stallion beating the street. The Colonel, never in a hurry himself, was "just a wee bit offended." Such impetuous departure was in very bad taste, unless one were being chased by Federals.

Jefferson Davis tossed his aristocratic head and stamped the deck impatiently while the ancient ferry pounded, wheezed, shook and snorted its curved path through the muddy water to Vidalia. The guardrail drawn back, he single-footed across the little landing wharf and bounded across the levee like a gigantic rabbit. Salvatore, the great track horse of the day, could not have carried Merritt's weight with such graceful swing and lack of all apparent effort. Vidalia, expert in horseflesh and game chickens, sent up many a cheer and "O-oh, you Jeff!"

"Somethin' doin', sure," commented Red Dancy as he observed the long cavalry pistol under the flying coat tails. "O-oh, you Jeff horse!"

UNCLE POMPEY, luxuriously puffing a large cigar, lounged back in the buggy, permitting Old Judy to choose her gait. When out of range of the Merritts' eye and voice, Uncle Pompey was a colored gentleman of infinite leisure. He had dined elegantly on fried chicken by Frank Mayo's largess, and had decided to reach Merritt Hall in time for a hot supper, but too late to serve at the white folks' table. Suddenly Old Judy pricked up her flea-bitten ears and neighed and Uncle Pompey sat up and looked ahead. Jefferson Davis and Mr. Jack were coming like the Texas & Pacific Express.

"F'Gawd sake, Mr. Jack," Uncle Pompey cried when Jefferson Davis stopped on his haunches, "whad am de matter—"

"Where you been, you durned nigger?" demanded Merritt.

"Lawd, Lawd, Mr. Jack, don't tell dis nigger yo' don't kno'," returned Uncle Pompey, immeasurably pleased with a rare sense of having facts to justify himself. "I'se done been out to Mr. Frank Mayo's wid de pretty fixin's fo' de new baby dat come—"

"Pomp, by jimminy, tell me about it!" exclaimed the horseman, swinging out of the saddle. "When did it happen?"

"Night befo' las',' Mr. Jack. Old Doc Leeson—"

"How's Miss Lucy?"

"Missy Scott say Miss Lucy's fine and they a-goin' to—"

"How'd Mr. Frank take it?"

"Who? Him? Lawd 'a' mercy, Mr. Jack, he done went wild. He gimme ten doll'rs and shot de halds offen two pallets fo' my supper. Lawd, Mr. Jack—"

"Pomp, you tell my mother I'm riding out to see Mr. Frank and—"

"T'ain't no use in goin' back," Uncle Pompey advised. "Mr. Frank and old Doc Leeson put on little Doc Young outer Jonesville and druv' out toward Vidalia befo' dis nigger got started. Mr. Jack, they goin' to name—"

"Was there no message for me?"

"Yassir, Mr. Jack, Mr. Frank say all you-alls gen'lemen come fo' to meet at Mr. Dancy's place to-night on very perticuler bus'ness, and Missy Scott say it's goin' to be name—"

"Wait a minute, Pomp!"

Merritt led Jefferson Davis to the rear of the buggy, tethered him to the axle with the hitching rope, and then jumped in and clucked to Old Judy, who hit up a smart trot. "Yassir, Mr. Jack, Missy Scott say the new baby's goin' to be Mr. John Merritt Mayo and—"

"You don't say so, Pomp, you good old rascal. Did Mr. Frank tell you that?"

"Him? No, sir. He didn't tol' me nothin' wid sense to it. He done lose 'is mine. Missy Scott run 'im outer de house. Mr. Frank done gone plum' looney. He gimme ten doll'rs."

Uncle Pompey continued his narrative, elaborately describing his varying degrees of astonishment and surprise, including his emotions concerning the basket of small garments "like you-alls had when you was born." Listening delightedly while he drove Old Judy to her best, John Merritt felt an undercurrent of regret, a sort of subconscious sense of guilt. He stopped the buggy at Dr. Leeson's, ran to the house, and burst into the old man's room.

"How's Miss Lucy?" he asked.

"Huskiest female in the parish," answered the doctor. "Get out of here."

"Where's Frank?"

"Young feller!" bellowed the tired doctor, rising to a sitting position on the horsehair sofa, "Mayo was drinking on the back gallery when you galloped by a while ago. He's in Vidalia. Get to him fast as you was goin' then."

Merritt sprinted down the fifty yards of garden path, untethered Jefferson Davis and mounted.

"Pomp, get home fast as you can and say I've gone over to see Mr. Frank and the new baby," he directed. "Don't say Mr. Frank's not home, you fool nigger, or I'll crack your head."

JEFFERSON DAVIS cavorted, pranced, tossed his mane, and then plunged to the middle of the road and stretched his neck in the long running stride of his Arabian ancestors. He lost the even, machinelike bound of it but once, and that because a two-horse buggy, driven hard and lurching from side to side, forced him to one side as he came upon it at the curve where the road turns into Vidalia. That was Sheriff Tiger Hopkins's buggy and Merritt knew its destination. Fifty feet from Dancy's he stood in the stirrups. Dancy's was empty. Jefferson Davis raced on to the parish jail.

The outer circle of excited negroes opened a path and Merritt forced his way to the sheriff's office. Colonel Rich-

Barrett Specification Roofs

Owner, National Biscuit Co., New York City
Architect, A. G. Zimmerman, 11 E. 24th St., N. Y. City
General Contractor, Caldwell-Wingate Co., 381 Fourth Ave., N. Y. C.
Roofing Contractor, Tuttle Roofing Co., 522 E. 20th St., N. Y. City
Waterproofing Contractor, Germania Roofing Co., 26 Sullivan St., N. Y. City

Photo, copyright, Irving Underhill, N. Y.

A Barrett Specification Roof was put on this building because

—The architect knew all about the different types of roofing and further knew that the National Biscuit Company were mighty particular people.

They had a big plant and they wanted it covered with a roofing that would give *long service at a low cost*.

Under such conditions the architect knew there was only one choice, namely: a Barrett Specification Roof, because it gives longer service at a lower *unit cost* (the cost per square foot per year of service) than any other roofing he could specify.

This building is now covered with a Barrett Specification Roof and it will probably last twenty years or more with *no maintenance cost*. Many such roofs have lasted thirty years.

Every permanent building, whether large or small, should carry a Barrett Specification Roof because that means the most economical roof, and one that will be free from leaks and maintenance.

Ask any first-class architect regarding this proposition and he will verify all of the foregoing statements.

Copy of The Barrett Specification with roofing diagram mailed free on request.

Special Note

We advise incorporating in plans the full wording of The Barrett Specification, in order to avoid any misunderstanding.

If any abbreviated form is desired, however, the following is suggested:

ROOFING—Shall be a Barrett Specification Roof laid as directed in printed Specification, revised August 15, 1911, using the materials specified and subject to the inspection requirement.

"What's in a name?" asked Shakespeare.

The manufacturers of "Ivory Soap," "Kodaks," "Ostermoor," and all other "Branded Goods" would reply: Business insurance, good will, standardization of quality and prices, and many other blessings to manufacturer, retailer and consumer.

And what has made those names stand for what they do? Advertising! The opinion of the famous Dr. Max Nordau on this 20th Century business force, reprinted from the English "Review of Reviews," London, Eng., will prove to be interesting and enlightening.

Advertising Manager Collier's Weekly

"It's amazing how few people seem to be able to draw logical conclusions from patent facts.

"Everybody agrees that the evolution of civilization tends toward democracy. Everywhere the number rules. Everywhere the masses outweigh the classes. How is it that it does not strike everybody as a truism that advertising is the unavoidable outcome of democracy, its obligatory corollary?

"In an autocratic and even an aristocratic society you only need to impose yourself to the attention of one man or a few men whose authority enforces its rules on the whole community. 'The eye of Louis XIV engenders masterworks,' as the French flatterer said. There advertising would be of no use. It is necessary and sufficient to please the King. His patronage carries with it that of the nation. But in a democracy a single, however exalted, person, or a small circle's favor, would do very little for you. You must impress direct the mind of the million. And to effect this there is only one means, Advertising.

"Of course those who indulge in the mad theory of the superman may condemn advertising as vulgar. But, then, let them be consistent. Then they must condemn also the chiming of church bells, which is the advertisement of divine service. They must condemn the Paris salons and all art exhibitions, for they are the advertisement of artists and their works. It would be much more aristocratic not to ring bells, but to wait nobly that the faithful arrive on their own impulse; not to exhibit creations of genius to the crowd, but to reveal them in the artist's studio to some individual connoisseur. But who dares to recommend that haughty method nowadays?

"Advertising can be done in a rough, low, and vulgar way, and in decent, tasteful, and refined style. It can appeal to the base instincts and to perversions, and it can do so to the reason, the common sense, and the better feelings. It is all the difference between unscrupulous demagogy and the electoral campaign of a statesman of high principles and a delicate sense of responsibility.

"In order to advertise in the proper way, you must be an expert in individual and collective psychology; you must be a moral, honest, decent, and truthful man, and you must be, in a certain measure, an artist. All this!

"In short, he who accepts democracy must accept advertising and only wish that it should be done in the proper way. DR. MAX NORDAU."

ard Caswell, who owned lands in the parish, was putting the third superfluous signature to a bond, which the District Judge had fixed with courteous celerity. There was a mighty handshake between Merritt and Mayo. Custer Larkin, gripping the wrist of a bleeding hand, cursed in all the oaths and blasphemies of the language while a clumsy deputy sheriff tried to bandage it. Ross Buckley was the only well-dressed citizen who spoke to Custer Larkin. Conversation was low-voiced and subdued; the social code did not permit rejoicing in the presence of the vanquished, and Custer Larkin "had got his" at last.

BUCKLEY told Merritt what had happened while the hilarious friends of Mayo marched to Dancy's with a rear-guard of negro boys leading their horses.

"Larkin was hanging round the courthouse as usual," he related. "Frank had just come into town to put the new baby on the clerk's books. He fixed that part while waiting for the Judge to come down. Well, some niggers say Frank was down at the corner talking to Bill Peters, from up the river, concerning cutworms in the cotton and watching the courthouse—"

Merritt looked into Buckley's face. Buckley winked his left eye and both laughed.

"Larkin's got my respect, Jack, if he was to blame for this. It takes a lot of nerve to draw right in Frank Mayo's face.

"After a spell Frank goes over and stands with his back to the tree, his arms folded on his chest. There wasn't any whites near by and the niggers were too far away to hear what passed between 'em, but Larkin whips out his gun and Frank shot it out of his hand, having been—"

"Never missed yet!" exclaimed Merritt.

"Nope. But Larkin's got nerve, Jack, to— Hello, here comes old Doc Leeson."

THE two-horse buggy that had forced Jefferson Davis out of his stride lurched and rattled toward the parish jail with Dr. Leeson driving.

There was high wassail at Dancy's that evening. The long unused leaves of the mahogany dining table, over which Larkin had leaned with his hand on his gun, were brought and the wooden circle became oblong. Colonel Caswell argued down Merritt's claim to be host. Little John Merritt Mayo was toasted in enough liquor to float his cradle; his family was liberally toasted; promiscuous toasts that ranged as far from home as President Cleveland, then serving his first term, were proposed, acclaimed, and pledged while the negro in the kitchen cooked the best in the house. Dancy had never seen so large a gathering "soaking itself before sundown" except on Christmas and New Year Eves.

Billy Quigg, lighting the lamps as the day died, saw something that startled him. An exclamation of warning brought the merrymakers to their feet. There stood Custer Larkin, already inside the room, softly laughing at their surprise. It was not a forced laugh, though the broken hand pained him severely, but a low, rippling exuberance of the risibilities that indicated perfect self-possession and guaranteed peace. The sincerity of it made the crowd laugh in contagious sympathy, and Custer Larkin's bold eyes twinkled a little when the right hands of the company came out from under their coats. Then he grew serious and silence answered his frown.

"FELLERS—gentlemen, I mean," Larkin began in such a stillness and quiet that the ear of an owl, the most sensitive of all sound-detecting organs, could have caught nothing but deep breathing. "Gentlemen, I've a word or so for Frank Mayo, and seein' that I got plumb the worst of the deal, maybe you all might think it's his place to listen a bit?"

"Certainly, sir, certainly," spoke up Colonel Caswell. "No Southern gentleman would do otherwise!"

"Sure, Larkin, spit it out," added Mayo, his alert eyes expressing preparedness for any hostile move; and the others murmured assent.

"Well, I just want to say I was goin' to make it up with you," Larkin proceeded, intently watching Mayo, "but you didn't let me have no fair show. I was awful soused that night, else I wouldn't have picked out no square white man to call a card cheat and a liar. I was goin' to offer my excuses when I came up to you under the courthouse tree—"

A ROAR of applause was cut short by a motion of the wounded hand.

"—But when you started cursin' me and remarkin' on my fam'ly, I just took a chance, even if you was touchin' close to your gun under—"

Again Larkin raised the bandaged hand, scowling a little, and the half-uttered cheer died away. Frank Mayo sat down, miserably unhappy. Merritt found something very interesting in Larkin's boots and stared at them. Colonel Richard Caswell was very grave.

"Now, young feller," Larkin resumed, advancing a step toward Mayo, "I'm honest in sayin' how sorry I was for insultin' you. Even break and no favors betwixt us and it's nip and tuck who goes under the daisies. But I ain't intendin' to make trouble for you if you don't make no trouble for me. Doc Leeson told me you got a new-born baby, and, accordin' to my understandin', 'twas on account o' your wife you didn't look me up sooner. Now, young feller, my dad got killed when I was one day old, and I know how hard it is on a poor kid—"

Larkin got no further. Mayo was on him, gripping the unhurt hand in both his own and begging forgiveness. Colonel Richard Caswell actually put a patrician arm across Custer Larkin's shoulders. Merritt pressed forward with a glass of liquor for the gentleman risen from the chrysalis of "the Arkansaw blackguard." There were hats raised in the shout that went up: "'Rah for Larkin!"

The revelry renewed itself in toasts to Custer Larkin, to all his kith and kin, to "Arkansaw, our sister State, lately the home of our distinguished friend, the Hon. Custer Larkin." The feast was brought to the clothless board; and while picking the bones of a squirrel, the Colonel conceived an idea.

IT was an inspiration. The Colonel felt the oratorical value of it as a lover feels a sudden burst of tender emotion. And the Colonel had never permitted anything of oratorical value to escape its proper employment.

Colonel Richard Montague Bolton Caswell doffed his semimilitary corded felt hat, rose and struck an attitude; his left hand on the pleated shirt under the well-fitted Prince Albert coat, his right falling formally at his side. He shook his still heavy but whitened hair back from the fine, high forehead and gazed defiantly into space. You could hear distant bands playing "Dixie" when the Colonel stood like that. You could hear the far-away Confederate yell, the faint boom of long, cold cannon; and you could dimly see the Stars and Bars waving in the shadows behind him.

The Colonel spoke of honor and of self-control, of physical and moral courage, and the elevating effects of possessing both; and he quoted from Tennyson's "Œnone":

"And, because right is right, to follow right
Were wisdom in the scorn of consequence."

But it was not that which has made the speech famous and familiar to this day in the east-central parishes of Louisiana and the southwestern counties of Mississippi. It was the brief and abruptly reached peroration, the inspired words addressed directly to Frank Mayo and Custer Larkin.

"I see the yellow streak in both of you," said the Colonel. "I have seen that same yellow streak in John Morgan and Joe Wheeler. I have seen it in Robert E. Lee. And, by the Lord Harry, gentlemen, it is the streak of gold."

LEWIS "VI"

Monarch of the Sixes.

Future Construction—Our Present Delivery

While other manufacturers are still seeking ideas from Europe's 1915 automobiles we have already anticipated them. We offer for immediate delivery a replica of Europe's most elegant type of automobile. It is equipped with a wonderful motor; the same type of motor which won the first four prizes in the Indianapolis races this year. Rene Petard, the famous European engineer, whose name recalls his former association with the Italia, Fiat, Unic, and Daracq cars, has designed a small bore, long stroke, high speed motor, the

Lewis Year-In-Advance Six

and Wm. Mitchell Lewis, that pillar of American automobile industry, is building this wonderful car in his own new shops at Racine. Into the motor Monsieur Petard has incorporated all the genius of his great engineering skill; into its appearance he has displayed all the beauty, all the identifying grace of the highest price European 1915 cars—and above all he has produced a car that sells for $1,600.

Compare it with every car made; place it beside Europe's and America's finest cars—even those costing twice as much—and you will still be proud to own a Lewis Six.

Don't wait several months for delivery on a next year's "Six". Investigate the one that is ready for delivery now; the year-in-advance car—The Lewis Six.

A car having the appearance of a $3,000 one for $1,600.

"Stand Up" and "Deliver"

An automobile tire must "stand up" and "deliver" mileage enough to justify its first cost, or its first cost at any price is a joke.

"First cost" saving is an "ostrich way" of figuring tire economy—the only true way is to figure on the ultimate cost of your tire service.

Automobile owners learn this in time—the quicker they learn it, the quicker will they learn to buy

Business Basis Tires

That a tremendous majority of automobile owners have learned how to buy automobile tires is proved by the fact that today "Nobby Tread" Tires are the largest selling anti-skid tires in the world.

"Nobby Tread" Tires do two things—they give more mileage and they prevent skidding.

***And remember this*—investigations prove that with "Nobby Tread" Tires punctures are 90% less than with the average tire.**

Based upon their remarkable mileage records

"Nobby Tread" Tires

are now sold under our regular warranty—perfect workmanship and material—BUT any adjustments are on a basis of

5,000 Miles

Thousands upon thousands of veteran motorists now use "Nobby Tread" Tires on their front and rear wheels through all seasons, because they give real anti-skid protection and the lowest cost per mile.

Reo the Fifth

A Super-Car

$1,175 Equipped *F. O. B. Lansing*

Five-Passenger Touring Car and Two-Passenger Roadster

Streamline Body
Dimming Searchlights
One-Rod Control

15 Roller Bearings
190 Drop Forgings

It Took Courage to Build It
But Mark How It Won

Three years ago—when low-cost cars seemed to have the call—R. E. Olds brought out Reo the Fifth. Into every detail he put the best he knew. He adopted many costly extremes. And each car cost him $200 more than if built by lesser standards.

That took courage. Other cars in the class undersold him. But let us note the 3-year result, and see how it applies to you.

Men Turned to Honest Cars

Just at that time there came a reaction. Men rebelled against poorly-built cars. And they started then to buy cars to keep, instead of changing every year or two.

Reo the Fifth appealed to those men. There were times the first season when five orders waited for each car we turned out.

We've increased our output 50 per cent since then. Now we are increasing it 50 per cent again. But we never catch up with orders. Now—in midsummer—we are one full month behind.

In the past few months more than 10,000 men have come to this better-built car.

$220 Saved

As production increased the cost came down. In two years all the cost of special machinery had been charged against our output. We wiped out that charge, and reduced the price—with full equipment—$220.

This costly car then undersold some others in its class—as it does today. And it gave to our buyers more for their money than any car in its class ever gave, we believe.

It gave you the only car equipped with our one-rod control. A slight move of the wrist shifts the gears.

When you analyze this car you will be amazed that a car built like this—the best we can give you—can be sold for $1,175

New Beauties

Three years have brought out a great many improvements. We have added power. We have attained unique simplicity. We have perfected a remarkable clutch which prohibits gear clashing. We have added many comforts and beauties.

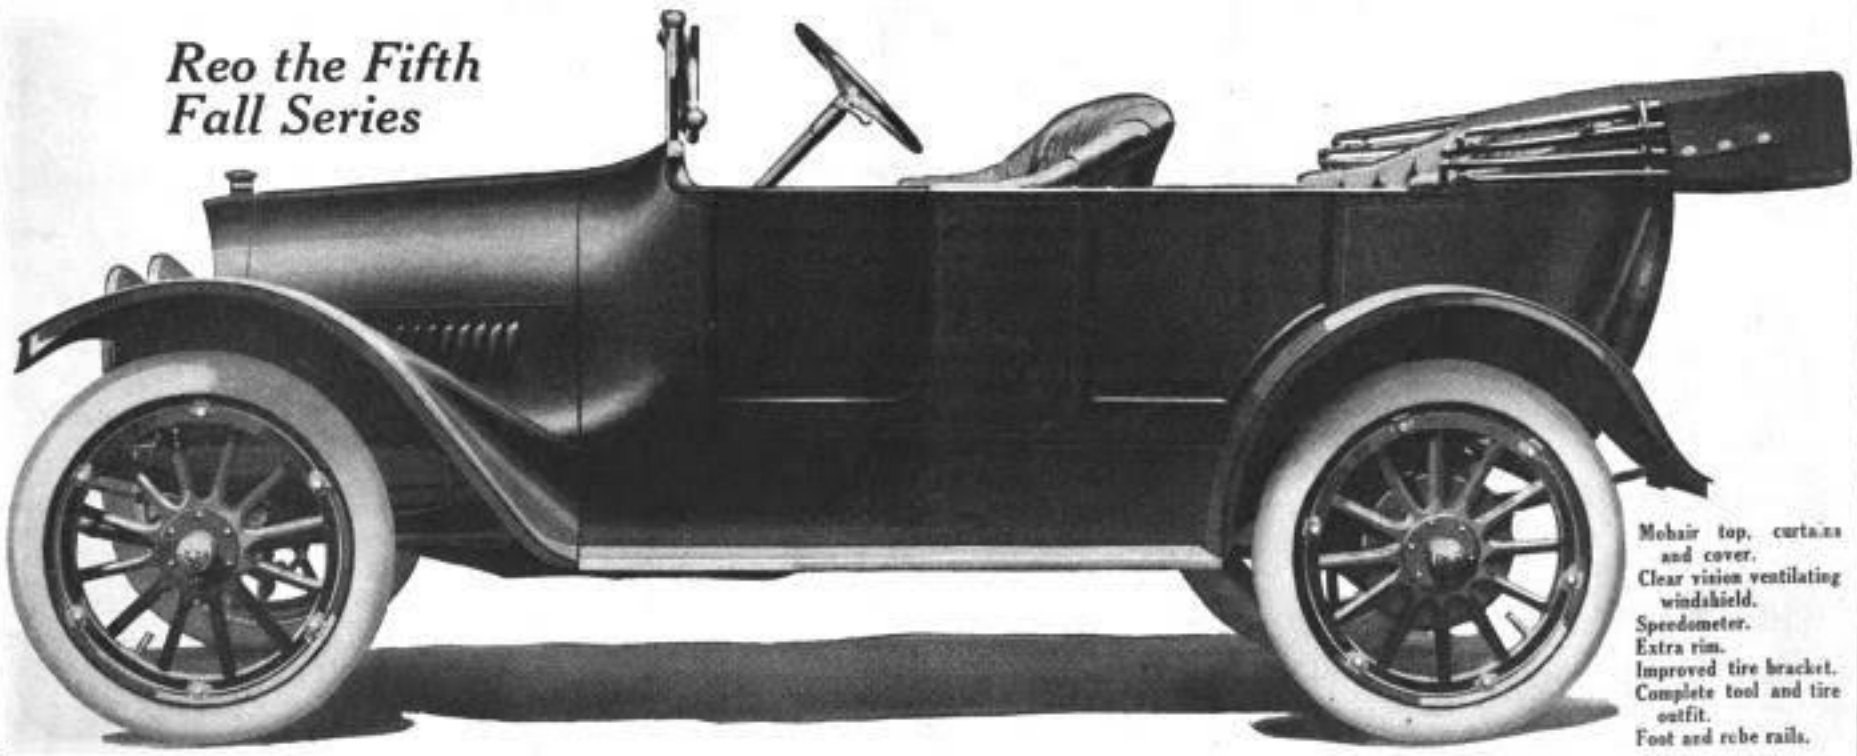
The car now has the latest streamline body. It has all modern equipment. It has every touch of elegance. It looks today—in every line and detail—the superlative car that it is.

The Lesson

We ask you now to learn the lesson which this car has taught. A car can't be built too well. All our extremes are essential if you want to save trouble and upkeep—if you want your car to stay new.

At the start, the chief distinction in Reo the Fifth will seem to be its perfect balance. Its smoothness first marks it the super-car.

Then you will learn that it keeps its newness. It maintains its perfections. Year after year, with proper care, it will render ideal service.



You will know this when you learn the details of the car. Or any owner can tell you. If you are buying this year a car to keep, this is the car you want.

We have dealers in 1,155 towns. Write for Reo Magazine which tells and pictures how this car is built in this model factory.

A Greater Paige For 1915 At The Unprecedented Price of $1195

One year ago the automobile fraternity said—"No manufacturer can produce a car like the Paige '36' for less than $1500."

But we *did* produce this car—for $1275—and, as a consequence, an entirely new standard of value in the moderate price field was established.

Right now automobile men are saying the same things about the Paige cars for 1915. They inspect the new "36" in frank amazement and wonder "how it can be done."

For their benefit—and yours—we can, perhaps, offer a convincing explanation.

Paige cars are "unusual" automobile values because the Paige Company is an "unusual" organization. In the entire industry there is no company that operates under such extraordinary advantages.

In the first place this is a *business* organization. The destinies of the Paige Company are guided by ten men who have won national reputation as Manufacturers, Bankers, Lawyers and Directors of Giant Industries.

These men—known as "The Ten Associates"—were the organizers of the Paige Company and they have directed every phase of Paige activity from the very beginning.

Their combined experience and judgment have been exercised to correct the thousand and one leaks, weaknesses, and general "mistakes" which characterize a youthful industry.

As a consequence the Paige Company has suffered from no serious blunders or costly errors in Administration, Manufacturing or Merchandising.

These men have insisted upon economical, efficient management.

They have kept the company clear of all bonded indebtedness—they have authorized only conservative capitalization—and they have guarded the quality of every cotter pin which goes into the construction of the Paige car.

With practically unlimited resources behind them, the "Ten Associates" have built well and strong.

They have made no compromises with their own convictions—they have deliberately started out to build the best car for the money in the world—and they have unfalteringly held to this ideal.

In the light of these facts is it strange that the Paige *should* have enjoyed an increase in production 300% greater than that of any other motor car manufacturer for the same period.

Is it strange that this company *can* achieve each year new standards of excellence which are impossible for the less experienced—less perfectly equipped—manufacturing organization.

Think it over carefully and let the local Paige dealer show you the new "36".

You will be surprised—just as others have been surprised—to see how much automobile value can be purchased for $1195.

Write for the "Story Of The Ten Associates"—one of the most interesting fact books of the year.

"How Is Business?"

By Isaac F. Marcosson

ILLUSTRATED BY WALTER J. ENRIGHT

TWO men met by chance in the club car of a train going from St. Louis to Chicago and, after the fashion of the road, fell into conversation.

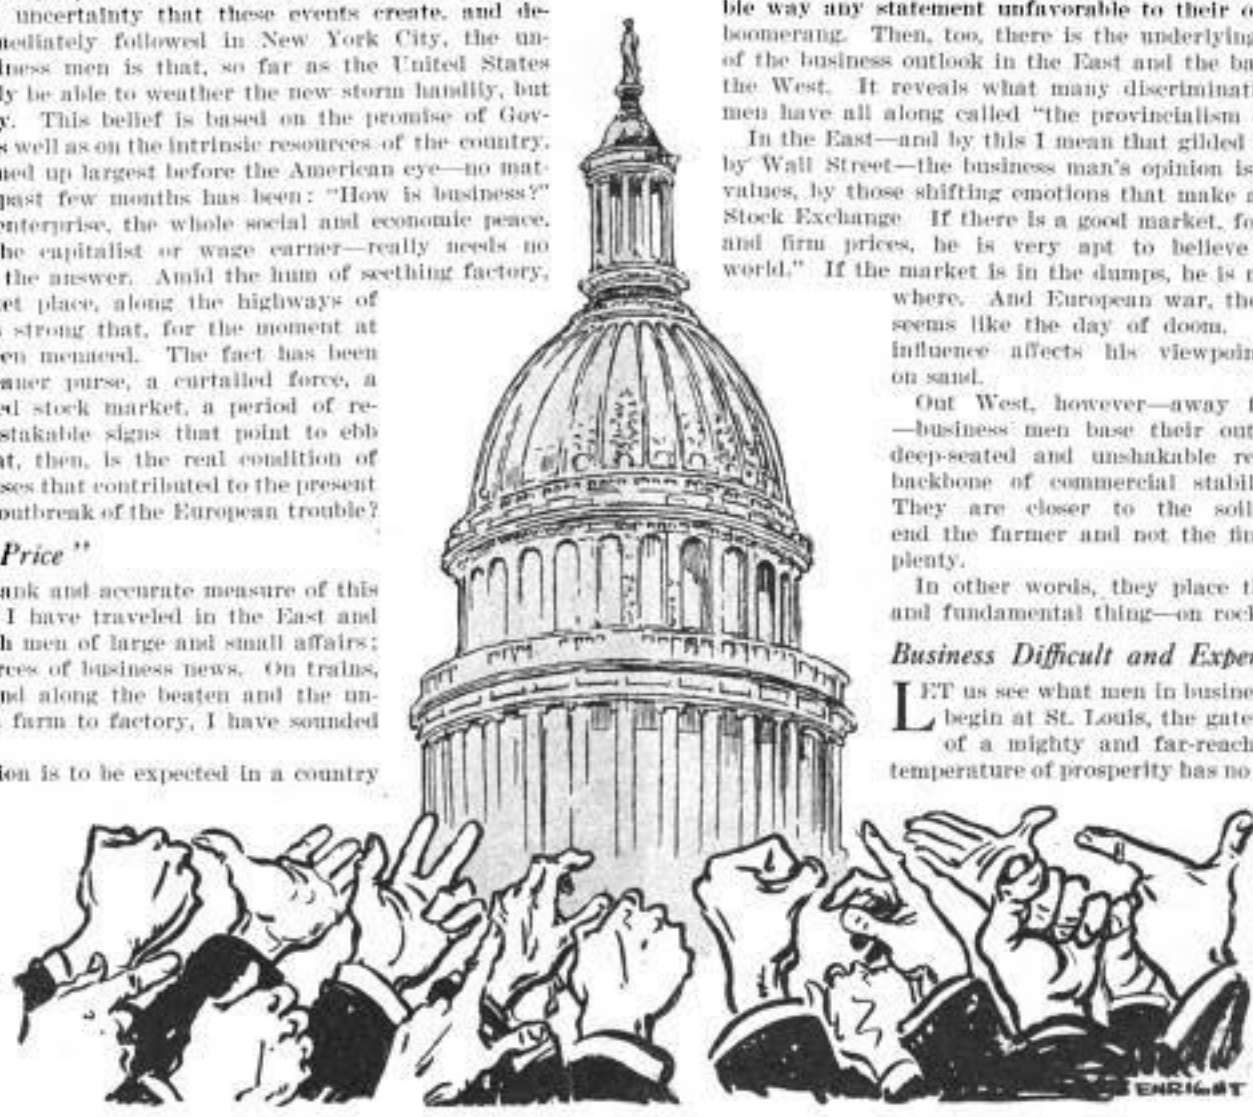
"How have you found business?" asked one.

"Pretty dull," was the reply.—"Do you think that the depression is psychological?" queried the first. His companion smiled and said: "When you have to spend more money and work harder to get trade than ever before, it strikes me that the condition is more material than mental."—"What of the future?" continued the initial speaker. "If Congress would adjourn for a year or two," he rejoined, "we would have the greatest wave of prosperity in our history, because conditions are ripe for good times. But they cannot mature with every legislative body—state and national—nagging at business and filling the public mind with apprehension. Because some corporations have abused their power, all are set down as undesirable. We make laws too fast and give too little time to digest and adapt them. In a word, we are paying a high price for misguided commercial uplift."

This dialogue is typical of what you hear all over the country. Everywhere the traditional question about the state of business—which vies with the weather as the unfailing first aid and inducer of conversation—has become invested with a more or less serious and, in some instances, a well-nigh ominous note. A year ago it would have drawn a swift and buoyant retort; now it is met with uncertainty, tempered by hope. Yet it is a tribute to the courage and resiliency of the American business man that, amid the encircling gloom of real or fancied depression, he faces the future unafraid. As these lines go to press his courage is being stimulated by cheering words from President Wilson after a conference in which he has heard the absolute truth concerning business conditions.

But coincident with this eleventh-hour reassurance comes the staggering possibility of European war, the actual closing of Continental Bourses, the London and New York Stock Exchanges and most other market places throughout the world. What effect this may have on the general American business situation no man can foresee at this time. It may mean a temporary flurry on this side or an even more profound depression than is recorded here. Most of the interviews for this article were obtained before the flaring up of the Austro-Servian hostility into conflict.

In the face of the added uncertainty that these events create, and despite the failures that immediately followed in New York City, the underlying feeling among business men is that, so far as the United States is concerned, we may not only be able to weather the new storm handily, but in the end gain economically. This belief is based on the promise of Government financial support, as well as on the intrinsic resources of the country.



The question that has loomed up largest before the American eye—no matter where projected—these past few months has been: "How is business?" On it hang large hope, big enterprise, the whole social and economic peace.

The average person—be he capitalist or wage earner—really needs no magazine article to tell him the answer. Amid the hum of seething factory, in the turmoil of the market place, along the highways of varied labor, the instinct is strong that, for the moment at least, our prosperity has been menaced. The fact has been registered in terms of a leaner purse, a curtailed force, a slackened output, a sterilized stock market, a period of retrenchment—all those unmistakable signs that point to ebb in the tides of trade. What, then, is the real condition of business? What are the causes that contributed to the present commercial feeling up to the outbreak of the European trouble?

"Give Us Rest at Any Price"

I HAVE tried to make a frank and accurate measure of this situation, and to do so I have traveled in the East and in the West; talked with men of large and small affairs; got in touch with many sources of business news. On trains, in trolleys, within stores, and along the beaten and the unbeaten paths of travel, from farm to factory, I have sounded men and women.

A striking conflict of opinion is to be expected in a country as big as the United States, with its astonishing intermixture of race and political conviction and vibrant with free and unrestrained speech. It is only when you dispassionately group a great mass of opinions of this sort and consider source and environment that you can get some definite appraisal.

You will find as you journey through this maze of expression that the lull in business up to now was the result of many things, local, national, and world-wide, in which a drought in Oklahoma touches the bloody upheaval of the Balkan war and claims kinship with the crumbling of the British aristocratic order. President Wilson is alternately praised and blamed, but mostly blamed. Whatever the difference of opinion on the larger and external causes, you discover unanimity of sentiment in regard to Congress. More than 80 per cent of the men I have interviewed attribute the unrest, decline in confidence, and general unsatisfactory business conditions to the fact that the statesmen at Washington have been working overtime. "Give us rest at any price and let us know where we stand," is the burden of their cry.

The Bedrock Basis of Prosperity

IN THE face of undoubted recession in many important instances, notably steel and lumber; notwithstanding, the fact that many wholesalers throughout the land have held to their normal volume of trade only at the price of unremitting effort and, in some cases, very drastic economy of operation; with many railroads—those unfailing barometers of commerce—either in the throes of receivership or trembling on the very edge of serious financial embarrassment, there has been an astonishing hopefulness. That we can stand up commercially erect—if not altogether serene—under such confidence-shattering blows as the H. B. Claflin Co. failure, the New York, New Haven & Hartford report, the delay in the railway-rate decision, to say nothing of the incessant onslaughts of the professional agitator, is just one more evidence of the basic soundness of our whole business structure.

But before we go into the reproduction of the various opinions that this investigation produced, it is first necessary to point out some of the difficulties that lie in the way of such a symposium.

To begin with, many business men are not altogether frank in discussing their affairs. By a curious psychological kink, they seem perfectly willing to admit that everybody's business is bad but their own. They feel that in some inscrutable way any statement unfavorable to their own business will react like a boomerang. Then, too, there is the underlying difference between the basis of the business outlook in the East and the basis of the business outlook in the West. It reveals what many discriminating and independent business men have all along called "the provincialism of New York."

In the East—and by this I mean that gilded area tributary to and affected by Wall Street—the business man's opinion is strongly affected by security values, by those shifting emotions that make and unmake conditions on the Stock Exchange. If there is a good market, for example, with strong action and firm prices, he is very apt to believe that "all is well with the world." If the market is in the dumps, he is not likely to see sunshine anywhere. And European war, though it may bring him profit, seems like the day of doom. Thus an intangible, unstable influence affects his viewpoint. It is, in reality, built on sand.

Out West, however—away from the lure of the ticker—business men base their outlook on the crops, on those deep-seated and unshakable resources which are the very backbone of commercial stability and national prosperity. They are closer to the soil; they know that in the end the farmer and not the financier is the begetter of our plenty.

In other words, they place their viewpoint on a concrete and fundamental thing—on rock, as it were.

Business Difficult and Expensive

LET us see what men in business think of business. We will begin at St. Louis, the gateway to the Southwest, capital of a mighty and far-reaching trade empire. Here the temperature of prosperity has no false accelerators or reducers.

The opinion of the head of one of the greatest department stores there may be regarded as typical of the attitude of most of his intelligent fellows throughout the Middle West. He said: "We are having a period of retrenchment rather than of economy. Rich women, who used to buy expensive model hats,

Digitized by Google

now wait for a 'sale'; instead of buying costly silk stockings they will shop around for bargains.

"Our business for the last thirty days shows a gross increase of $20,000, but the net profit is much smaller than the same amount would show for any time during the past five years. Why? Simply because it is more expensive and more difficult to get business. People buy in smaller quantities, and this adds to the cost of doing business.

"Out here we believe in the soil, and the soil now sends forth a cheering message of big crops, and if the uncertainty about business legislation is removed within a reasonable time, I am convinced that we will enter upon a winter of more than normal soundness.

"I believe that most business men will agree with me that President Wilson's attitude toward business up to this time has not been accurate. He has sight without vision; he sees what does not exist. He repeats the error that he made in handling the Mexican situation because he accepts his own ideals as conditions; he regards theories as facts.

"The slackness in trade is entirely due to excessive and persistent legislation. Nobody doubts the efficacy of regulation, but nobody wants the continual agitation and unrest that professional lawmaking imposes. I can best illustrate with a figure of speech. We live in a concrete age. Now concrete must settle before fresh concrete is poured on it. Otherwise it crumbles. So with business. We are piling law upon law before any one of them has a chance to work out; in other words, to find itself. First we had the tariff, then the currency law, and now the great mass of anti-trust bills. Heaped on all this has been the fret over the railway-rate decision. It is too much for the business stomach to digest in one meal. We must have a chance to masticate our laws, and then, and only then, will we have our old-time prosperity."

Certain Experiences the President Lacks

NOW let us turn to the opinion of the head of one of the greatest wholesale hardware houses in the country—a man of vision, whose characterization of President Wilson was echoed in many quarters.

"Our business," he declared, "for the past six months is exactly 85 per cent of what it was for the corresponding period last year. We made this record by the hardest kind of shedding and at a larger outlay than we have ever had to make to get trade. Our salesmen have found everywhere a feeling of caution among buyers. They seem to be afraid of something, and when you pin them down we find that they regard pending and promised legislation as dangerous to business expansion.

"I believe that President Wilson's determination to stick to his so-called 'business program' in the face of generally disquieting conditions is largely responsible for the decline or lack of advance in business. The trouble with the President (and I speak, I hope, as a hard-headed, practical business man) is that he knows nothing about actual business. He has always worked for a salary; the money that he administered as college president was begged or bestowed as a gift; his trustees relieved him of financial responsibility. In short, he has never known the travail of having to dig up the money in hard times to meet the pay roll on Saturday. In order to make measure of money values, you must first lose some money of your own. The President, with the best intentions, has tried to believe that he could argue business into an optimistic state of mind. But he can't. Business will hold its own in spite of him. The discontent is not psychological, but it strikes me has been induced by something very pedagogical."

The Inspiration of the Wheat Crop

ONE of his hardware colleagues, founder of an establishment of world-wide scope and importance, had this to say:

"The inspiration of the winter wheat crop, which will require half a million cars to move after making allowance for what is consumed on the farms, has put courage and life into the people all over the country. If nothing very drastic occurs in the way of adverse and threatening legislation to shake this spirit of hope and confidence, I feel absolutely certain that we will immediately have good business everywhere and that each succeeding month will show a vast improvement over the preceding one."

"If Congress Will Only Leave Us Alone!"

TURN to the wholesale dry-goods trade in St. Louis and you find a cheerful state of mind. In one of the largest houses I saw the following inscription at the head of the large bulletin board, labeled "Store News," which stands near the main entrance:

"Business is good. Our sales from December 1, 1913, to July 1, 1914, were the largest in our history."

Much money went into hiding to await developments. Whatever apprehension was felt, however, has been set at rest by bumper crops

I asked the general manager of this establishment how he felt about conditions, and he replied: "We have no complaints to make, as you will see from our bulletin board. I must say, however, that it is harder and more expensive to get business, because our customers are buying in smaller quantities. They replenish as they sell. We have more orders and, consequently, more work."

Another great wholesale dry-goods merchant said: "Our gross business is only 1 per cent less than last year, and if the President and Congress will only leave us alone I believe the worst is over and we can face the future with courage and confidence."

Take the wholesale shoe business, which is one of the dominant St. Louis activities. The head of the biggest footwear distributing house in the United States, which does a gross annual business of $30,000,000, told me that where heretofore his business had increased from 7 per cent to 9 per cent a year, it had suffered a loss of 4.6 per cent for the first six months of 1914. His explanation was not only illuminating, but typical of what I found all over the country.

"Our business has declined," he said, "in every section where the railroads are a factor. The railroads, as you well know, are the greatest buyers in this country, purchasing 40 per cent of the steel output and 42 per cent of the lumber output. The railroads are hard up; they buy only what they actually need, and they have been laying off men right and left. People must have food from day to day, but they can very easily put off buying shoes."

What Hangs Upon Railroad Prosperity

WHEREVER I went I found the railroads inseparably linked up with practically every estimate of business. "As the railroads go, so goes the rest of the country," seemed to sum up the attitude. A few years ago the average man's feeling toward the great steam common carriers was one of unfriendliness, even hostility. Nor was it confined to the investor whose bond interest had been defaulted or whose stock had depreciated. Now the ordinary citizen is not only friendly toward the railroads, but he wants them to be let alone, to have a fair chance for existence, and he feels that when the great systems undergo the pinch of poverty he, too, must suffer.

To return for a moment to the wholesale shoe business of St. Louis, I found that one great establishment sustained a 5 per cent loss on the preceding six months' business, while another, on the other hand, claimed an increase of 10 per cent. The head of the latter, however, said that it was entirely due to an abnormal speeding up among the salesmen, induced by special prize offers, holiday trips, and various other inspirers.

A leading St. Louis banker voiced the sentiment of the constructive banking interest of the whole Southwest when he said:

"I am a Democrat and I voted for Wilson, but I believe that he has made a vital and costly mistake in pushing his business program too hard. His procedure has caused a considerable lack of confidence in the whole Administration. When you stop to consider that we have revised our whole fiscal system with the tariff law, and changed our banking program with the new currency measure, the entire economic structure is undergoing a drastic change. Hence the folly of piling up more laws that will tend to unsettle conditions. It means that all business must proceed under great restraint, lack of initiative, and the utmost conservation."

Legislation and Prosperity

IN SUCH an investigation as this one you find that, as you journey eastward from the heart of our great agricultural domain, the optimism is likely to wane a bit. In Chicago, for example, I talked with the head of a wholesale business which leads the world in its line—a man of wide vision and frank outlook. His conviction is, likewise, the viewpoint of a score of equally representative business men with whom I talked in that city. This man said:

"We have only been able to hold our own—that is, not suffer any serious loss of business—by doing things that we don't like to do. By this I mean that we have been compelled to lay off people, forego salary increases, and practice most rigid and drastic economies all along the line.

"The pity of it is that business has missed a great opportunity. With such magnificent crop prospects, business any other year would face an enormous spurt. But the psychological moment for capitalizing this rosy prospect is gone. Business is very much like an athlete. Up to the time of the passage of the tariff and currency laws it was trained to the minute and ready to start on a winning race. The track seemed clear of obstructions. But what happened? Up cropped a whole nest of legislation aimed at business; the athlete has remained at the starting point all this time; and now to crown all comes the European war. The big crops, instead of giving what would have been an overwhelming boost, will only serve to stem the tide and enable us to escape serious trouble."

One Man Who Is Not Downhearted

JUST as it takes all kinds of people to make a world, so do you get various sentiments in sounding the business population. In sharp contrast with what has just gone before is the opinion of one of the greatest of American clothing manufacturers, who employs more than eight thousand people and whose name is known wherever the ready-made garment is worn.

"For the first six months of this year our shipments are ahead of last year," he declared, "and last year was one of the largest and best years in the history of our business. Therefore we have not been able to work up any hysterics around here over what we are not doing. In the same period our collections have been larger by practically the same percentage as the excess in shipments. These percentages of gain are not as large as we have been used to making, but the important thing is that we have gained during a time when black and indigo blue seemed to be the fashionable shades in business conversations. Our credit losses are not quite so large for the first six months of 1914 as they were in the same period of 1913, which is another way of saying that they do not amount to much of anything at all.

"A great New York banker in a recent address said that we no longer take old standards, such as crop statistics, money rates, and credit conditions, to gauge future business by, but look to politics. I believe that politics are only temporarily (Continued on page 26)

Initiations at Lockport

By Charles N. Sims—Part I

ILLUSTRATED BY WALTER D. GOLDBECK

SQUIRE BUCK, from the eminence of his own showy front porch, kept his sharp blue eyes in speculative approval on the jam of farmers' vehicles around the curb in front of Abraham Day's general store. One by one he watched the buggies and road wagons receive their burden of white paper bundles and rattle off up the village street.

"Abe's a slick business feller," he soliloquized in a loud voice, "and he 'pears to be gitting the lion's share of the threshing trade."

The Squire's eighteen-year-old daughter, a very pretty country girl, was working moodily in the warm July soil of a flower bed beside the porch. Her slender young body stiffened visibly at the mention of Abe and she gave the hapless roots of an innocent rosebush a vicious poke with her trowel, but she said nothing.

"Abe is a coming man," her parent went on; "he's public-spirited and knows where to ketch a holt. Look at the way he's worked and figured round and stirred up this here new lodge we're going to organize to-night, besides handling the threshing rush trade without a clerk—Abe's saving, too. A certain stiff-necked young person what don't 'pear to keer a snap about her pappy's political aspirations had ought to treat his trusty leftenant a leetle better," he complained.

RUTH looked up astonished. "Are you going to run for office, pappy?" she questioned in consternation.

"Abe asked me last night," he said proudly: "Township trustee."

"I wish you wouldn't," she said pleadingly.

"Oh, I'll be 'lected—never fear," the old man laughed confidently. "Can't help it twixt Abe and the Knights of Sahara. And, Ruth," he added generously, "if any of the neighbors wants to borrow anything, tell 'em it's broke, because I've got to be nice to folks till after the 'lection."

"Knights of Sahara," puzzled Ruth; "what are they?"

"A kind of a lodge Abe's hired some fellers down at the county seat to git up for us," explained her father. "We're going to git all the members we can; and, of course"—he winked cunningly—"all the Knights'll vote for a lodge brother without payin' much 'tention to party when the time comes."

After a silence the father returned to the matter he wished settled.

"Abe'll make some lucky girl a fine husband," he again began tactfully.

"Lots of folks getting their horses shod this morning." Ruth tried to say it dryly, keeping the triumph out of her voice, and not altogether succeeding. Her father shot a lightning glance at the blacksmith shop across the street and frowned like a thundercloud. A barearmed young giant of twenty-five came whistling out of the shop and took his time untying a barefooted farm horse hitched to the rack in front. His black, gay eyes strayed searching over the way toward the finest house in town.

The cheery song died on his widening lips and his sooty face lighted with pleasure as he unerringly picked out a coquettish sunbonnet bobbing about among the flowers.

FORTUNATELY the young smith caught sight of the hard-faced old man in time to stifle an affectionate greeting to Ruth, but he led the horse into the shop with a backward glance.

The Squire's tanned visage grew darker with rising suspicion. "Ruth," he asked severely, "have you been talking to Harry Baum since I told him to keep away from here?"

"No, pa," she replied sadly, "I haven't."

"I don't aim for you to," her father declared with aggravated vehemence.

"But there's no telling how soon I will," the high-spirited girl defiantly declared. The old man pretended not to hear. "Don't drive folks what's in debt too hard at first," was one of the Squire's own money-lending epigrams and he judged the present domestic crisis needed its application in a modified form.

"Harry's business ain't all his father's was when the old Erie Canal was agoing full blast," he said conciliatingly. "He'll never be, now, what I call a out-and-out rich man, will Baum—too much of a free giver. Now, there's that begging tramp boy that Abe give Nelty Driggs a see-gar to kick out of the store; what did Harry do but take him right home and keep him there till he could walk! Why only the other day, Ruthie," he continued in a shocked whisper, "Abe was telling me Harry went down to the county seat and bought his mother a silk dress fit fer a queen. I'd be half skeered to say what it cost him."

"When I'm done with Jim O'Bear—" he leaned over the fence and told her the whole plot in low, hilarious tones

Ruth bent lower over her trowel to hide the quick tears of happiness and approval shining in her eyes like the dewdrops on the grass at her feet.

"Look at that there diamond ring he gave you," the Squire indited triumphantly. "It must have stood him close to fifty cash."

Ruth thrust her left hand guiltily out of sight. Her father saw the stealthy movement and misunderstood.

"Good Lord, Ruthie! you didn't give that there ring back to Harry?" he gasped.

"Not yet, pappy," she replied in gentle tones of determination that should have settled the question forever. The old man heaved a mighty sigh of relief.

"That's right, daughter," he approved, "and don't you do it neither—at least not till I see Judge Calhoun O'Dell an' find out whether you hast to or not. The Judge is great on them kind of cases, though I reckon he don't know nothing much about law. This wasteful extravagance of Harry's 'll go a powerful sight toward paying for a good cow. Abe's got one already picked out—any woman can milk her."

RUTH gave a little hurt cry. "Oh, don't, don't, pappy," she begged.

"Harry means all right, I s'pose," the Squire reflected generously, "but he can't hold a taller candle to Abe Day. Abe's seen a slice o' the world 'fore he come to Indiany," he went on with good-natured envy—"born way out there in Salt Lake City, Utah, and had a lot of exciting experiences migrating round. Now, you never heard of Abe buying silk dresses and diamond rings for other people," he concluded victoriously.

Complacently the Squire picked up his stick and passed out of the gate, up the street. He found Abe in the rear of his store, his long foxlike face was buried, oblivious to all else, in some figures he had compiled in an idle moment. The calculation was convincing if not actually interesting.

Squire Buck's son-in-law will git a mighty perty girl and 1,000 acres of land worth $150 per.....		$150,000.00
Notes, bonds, and mortgages, numerous but unknown:		
Cattle, horses, hogs, and such like....		30,000.00
Not less than..		$180,000.00
Marriage license....	$2.00	
Ring.....	2.80	
Entertainment.....	3.00	7.80
Net.....		$179,992.20

THE Squire bore down on Abe in a playful mood, and before the disconcerted man could whisk the damaging evidence of his own high hopes out of sight, the other's spectacles were astride his nose.

"I wouldn't mind making a investment at this here rate myself," joked the Squire. Then: "Who do you reckon done this here figuring about my property, Abe?" he asked suspiciously.

"I haven't the slightest idea," Abe answered listlessly. "I found it down by the blacksmith shop on my way home from your house last night."

"You did?" the Squire interrogated sharply.

"In front of the door," said Abe. "I thought it might hide a conspiracy."

"It does," the other agreed with dark finality.

"I was going to take it down to your house the first thing this morning," Abe explained wearily, "but I've been feeling too much cut up to think of other folks' troubles."

"You ain't looking particular pert this morning," the Squire acknowledged.

"I don't expect I do," Abe agreed moodily. "I couldn't if I wanted to," he added bitterly. "It's a great disappointment to me, Squire," he confided sadly, "a vast disappointment," he concluded solemnly.

The Squire's arms dropped impotently at his sides. "The lodge ain't fallen through with?" he guessed in alarm.

Abe threw his one hundred and twenty-five pounds into an awe-inspiring six-foot figure of injured pride. "The doings I organize and push never fail, Mr. Buck," he said coldly.

"No harm meant," said the Squire. "I might have knowed we couldn't fail."

"Howsomever," Abe continued, following his purpose to make himself absolutely necessary to the old man's ambitions, "I must confess them Knights ain't going to be the howling success I've been expecting."

THE Squire's jaw fell like a plummet. "Then unless the Knights ain't a howling success, there ain't much chance of my gitting the nomination fer trustee next fall like you tole me last night?"

"I won't say that, Squire," Abe pondered deeply, "but it'll take a powerful lot of brain work."

"Money will do most anything," the Squire mused rather loudly.

"Good Lord, Squire," Abe broke out jadedly, "how I have worked for this here lodge so you could be nominated. It's come high, too," he smiled whimsically.

"How much?" asked the other.

"A dollar in the last two days," Abe answered impressively, "and it'll cost sixty cents more by the time the hall's lit up to-night."

"That's only the beginning, Abe," the Squire said lightly. "'Money makes the mare go,'" he quoted jocularly.

"I give a see-gar away just before you come in."

Digitized by Google

"Why don't you buy thirty, or say forty dollars worth of beer checks and let me pass them around to the boys?" the Squire suggested generously. "You can't expect to git me 'lected fer nothing, Abe."

"I don't believe in liquor," Abe said emphatically.

"Oh, that's all right," the old man said reassuringly, "nobody'll ever know you paid for it."

"If you don't git nominated," Abe dashed on with desperate irrelevance, "you'll have the meanness of certain folks to blame."

"I thought you said I was popular," the Squire reminded Abe sorrowfully.

"I did," Abe admitted truthfully, "but I'll take it all back now."

"Money—" the other began hopefully when Abe cut him off short.

"I never could have thought it of a feller like Harry Baum," he said mournfully, shaking his head in perplexity, like a thoroughly good man who fails utterly to comprehend wanton malice in another. "Never thought he had it in him to say those ghastly things he did," said Abe.

It was a full half minute before the scandalized old man could assimilate the appalling enormity of the charge. "Harry Baum talking about me?" he choked out in a perfect agony of rage.

ABE nodded gravely. "Awful."

"What did he say?" the other demanded hoarsely.

"I don't like to repeat it," Abe countered virtuously; "it ain't right."

"What did he say?" thundered the infuriated old man.

"He said," Abe began with a proper show of reluctance, "that you was so cussed tricky you hid your own watch every night before you went to bed for fear you'd steal it in your sleep. And he's been talking against the new lodge and his talk has kept twelve of the young fellers from putting down their names, and now they're talking, too."

The Squire pranced wildly up and down the store, brandishing his walking stick like a weapon of offense, all the while giving tongue to such ruthless threats that Abe found himself looking on the result of his own handiwork with mixed feelings of pride and alarm.

"I'll fix Harry Baum," raved the Squire. "I'll go right down to his shop this minute and beat him till we're both worn out."

"Violence has its uses," Abe said oracularly. "It will be a valuable lesson to Harry, coming from you that way, Squire," he agreed encouragingly. "Look at me," he continued excitedly, "people take me for a peaceable party—well, I ain't by nature and if folks only knew how I had to hold myself in sometimes when I hear Harry Baum telling around how much you and Ruth think of him, there'd be a detective here in two days looking in the cellar for dead bodies."

The Squire's purple face writhed into a terrible smile of senile ferocity. "Git your hat, Abe, and come on," he said murderously calm, "us two will show him what's what."

LITTLE beads of arctic perspiration stood out on Abe's ashen brow. There was not the slightest doubt in his mind that Harry would fight at the first word, but as far as he was concerned, he would rather talk on his fingers the rest of his natural life than be the one to utter it.

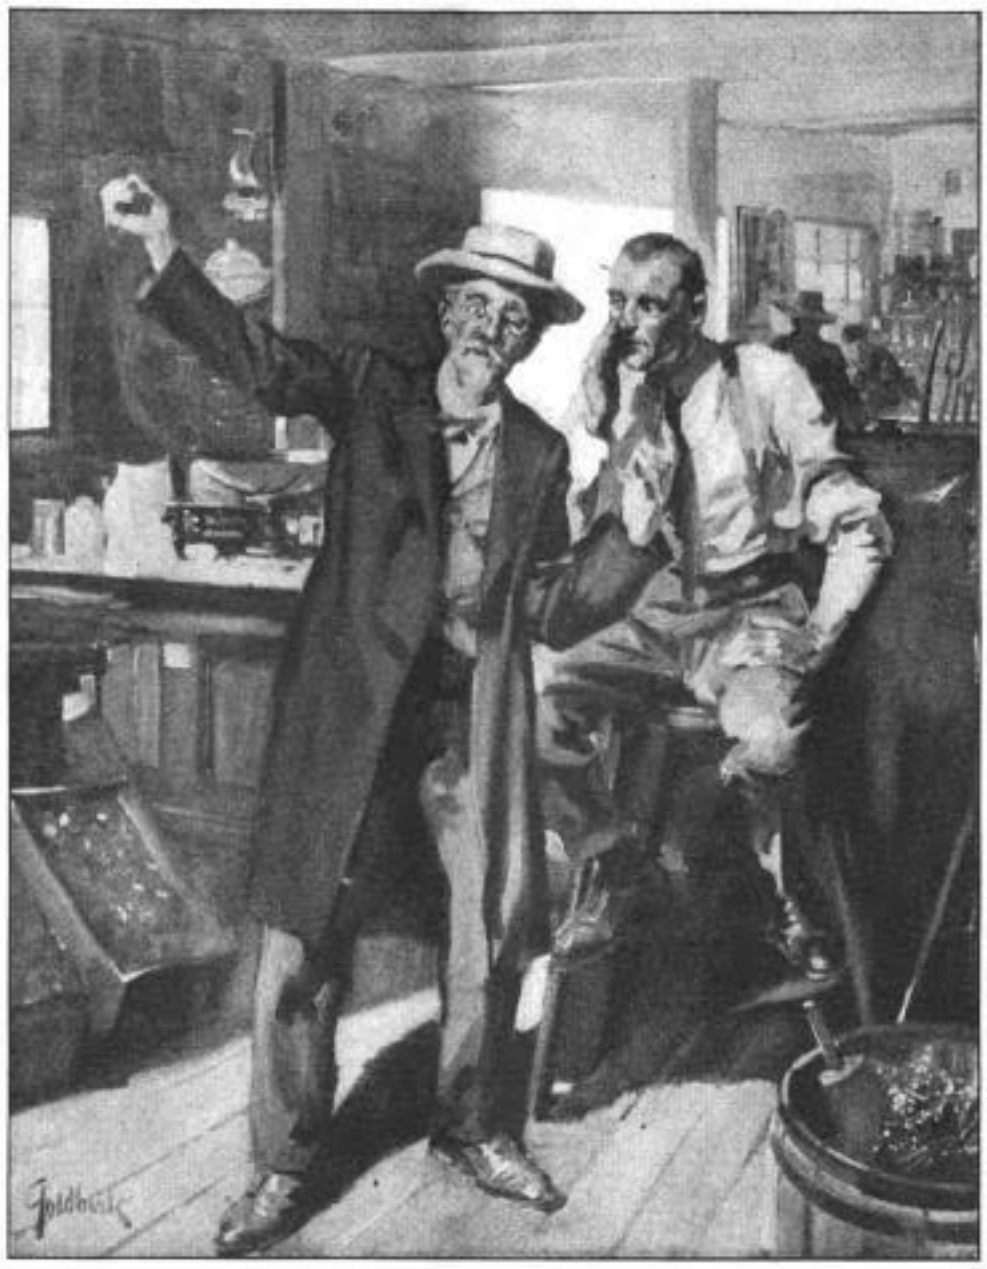
"I'm too high-tempered to go down there till I cool off," he objected hastily, "besides I've got to sweep out the hall for to-night."

"My temper's worse than yours," the Squire challenged quickly.

"Oh, no," said Abe, "you got diplomacy, more head than I have. Why don't you go down to the shop, Squire," he finally suggested, "and try to talk Harry and his crowd into the lodge? We've only got twenty-two names now counting ourselves."

The old man was too nonplused by Abe's change of front and proposal to make reply. "Even if you don't seem crazy for his company," Abe continued, "you'll need his vote next November. It would be slick politics, Squire, and I'd hate to see either of us up for murder."

The Squire stroked his chin whiskers meditatively. "I half believe you're right, Abe," he yielded slowly after a long moment of breathless silence on Abe's part. "I've just wound up counting ten," he explained sagaciously, "an' find I ain't half so mad as I thought I was—come to think of it."



"Squire," Abe chided gently, "you're too hoss-tile."

"A regular Indian fer revenge," the old man acknowledged modestly, "and if I'd gone down there all het up, no telling what I'd done. It would have been a monstrous unfriendly act in you to let me went," he finished with a touch of reproach.

"How could you expect me to keep you from going when I had such an awful struggle to hold myself back?" Abe said resentfully.

"But what do you think of my plan for gitting Harry into the lodge?" asked Abe. Abe shrewdly calculated that one more meeting between his rival and the Squire must end in a permanent rupture.

"It 'pears to hang about right," the Squire said approvingly. "As soon as you hand me them forty dollars for them beer checks for our campaign, I guess I'll just step around and talk Harry into our way of thinking. I'll claim to be on his side and tell him how people's been talking 'bout him—it won't be a bit hard fer me."

"I'll fix Harry Baum," raved the Squire. "I'll go right down now to his shop and beat him till we're both worn out"

"Be careful, Squire," the other warned nervously, "don't tell him everything you've heard—some of it might not be true."

"I won't," said the Squire, "only what's been tole me by reliable parties."

"I think I can trust your wonderful judgment," Abe said, still uneasy.

Abe had strong reasons, amatory and otherwise, for keeping in with the Squire, so reluctantly he fished out four crisp ten-dollar bills and passed them over to the old man with a sigh of resignation.

"It's a lot of money for a prohibition church member to spend at one time for drink," he said dolefully. "I didn't ever think I'd do it."

"Neither did I," said the Squire, who viewed the transaction from an entirely different angle. "But the means justifies the ends."

Squire Buck was a man of action. He pledged Abe that the belligerent blacksmith's name would be among the first of the B's on the lodge's charter roster and hurried out of the store to make good his word.

WHILE the two conspirators were plotting in the store, the object of their intrigues was more pleasantly engaged. As soon as the Squire was gone, Ruth concluded the rosebush near the gate required instant attention. Harry proved his ability to keep pace with events, for before the Squire was fairly out of sight he came out of his shop carrying a huge bundle under his arm and boldly crossed the street with the air of a man who has a special message, and the nerve to deliver it.

"Hello, Ruth," he cried joyously.

"Oh, Harry!" she groaned, on the verge of tears.

"Poor kid, you've been crying," he charged tenderly. Ruth dabbed her eyes guiltily with one corner of a snowy apron. "What's wrong, honey?"

"I guess it won't do any good for us to talk about my troubles any more," she began with exasperating resignation. Harry put down his bundle and extended a brawny arm that adroitly encircled her slim waist and swept the pathetic little figure as close to him as the fence between would permit.

"Folks will see us," she pleaded, wisely abandoning a struggle that was deliciously hopeless against such tremendous odds.

"Let them," Harry said recklessly. "I've got a right to hear your troubles. I'm going to kiss you, too," he warned her. "Now tell me what's wrong, honey," Harry petted, releasing her.

"Pappy's been at me again about you and Abe," she admitted sadly. "And I don't believe I can stand it much longer unless I promise to marry him," she said with a sly peep at Harry.

HARRY'S black eyes twinkled mirthfully, but he almost succeeded in smothering a deep-chested laugh. Ruth regarded her lover suspiciously and her rose-red lips settled into a tiny line of determination that promised punishment.

"Pappy's getting old," she said sentimentally, "and his heart's set on me having Abe. Abe's so well off and traveled," she went on innocently. "I wish I knew whether I'd ought to do it?" she puzzled conscientiously.

"If you wasn't so sweet and good, Ruth," Harry reasoned tactfully, "I'd advise you to marry me even against your better judgment, but the way things is, you ought to take Abe to please your pappy. Abe's got a way with him that women like." And Harry nodded his fine head like a man who will meet his fate with a smile, cost what it may.

"Harry Baum!" she cried, aghast. "What do you mean by wanting me to marry that long-nosed living skeleton?" she demanded with flashing eyes.

"I don't," he said sententiously.

"Yes, you do," Ruth held with stamping foot.

"I was only thinking of your happiness," Harry said generously. "I want to see the prettiest girl in Carroll County happy first and last."

"Pappy will never let us marry." She turned her head away and tried to speak drearily.

"Oh, yes, he will, honey, and that fast enough after *to-night*." Harry spoke out suddenly with a fine air of finality.

"*After to-night!*" Ruth repeated unbelievingly.

"After to-night," he echoed with marked emphasis, "your pappy will never lift a finger against us two hitching."

"How in the world?" Ruth marveled.

"It's a secret among twelve of us boys, and the initiation delegation from the county seat," he confessed. "That bundle," he continued mysteriously, pointing out the innocent-looking object on the grass at her feet, "is part of it."

RUTH regarded the package with lively interest.

"I don't know whether I ought to tell you or not. But you remember Abe and me was down at the county seat on the same day about three weeks ago"—Harry began his confidence seriously, then added with a laugh, "but we didn't go together."

Ruth remembered well, for it was on this trip he had bought the silk dress for his mother and that very night she had cried about it because he was so generous.

"Well, I learned things about this here new lodge they're going to start in town to-night," he went on. "Them organizers is just a wild bunch of young college fellers. That shyster lawyer, Jim O'Bear, is at the head of it. They don't mean any real harm," he extenuated; "they're only out for fun and a little spending money, and while I'm helping them to get both, they're going to help me get you without knowing it. Abe's slick in a way," he conceded; "he's hired O'Bear and his friends to git up a fake lodge—Knights of Sahara, so he can get all the Democrats and Progressives to join and make them vote the way he wants them to. When I found out about the Knights, I had a long talk with O'Bear myself. Jim's as crooked as a dog's hind leg, so it didn't take much coaxing to make him promise to double-cross Abe."

"But how, Harry?" Ruth asked, impatient to be a full sharer in the secret.

"You won't tell a living soul?" he cautioned.

"I just hope to die if I do," she promised solemnly. After a hasty glance up and down the street, Harry opened the mysterious package that seemed to contain yards and yards of unbleached linen and held an odd-looking garment up at arm's length for Ruth's inspection. "Why, it looks

The Art of Singin' Kid

By L. B. Yates

ILLUSTRATED BY W. OBERHARDT

THE Singin' Kid's spark had been "lifted." The glaring red necktie he wore was despoiled by the ruthless hand of a vandal. It was a three-carat stone at that. This, too, on the very first day that the Kid had landed in San Francisco. "O tempora! O mores!"

All these things happened on the crowded end of a street car. The Kid had felt a swift but scientific twitch as his chiefest adornment had left its abiding place. He only needed to glance sideways into the glass window at the rear of the car to assure himself that his diagnosis was correct, and, as he confessed afterward, he almost "hung his head for very shame."

Just think of it—he, the Singin' Kid, who yielded to no man when it came to spoiling the Egyptians on his own account, should be ticketed and labeled as a small town simp before he got two blocks away from the ferry! What booted it if the mate to that same diamond was now reposing in Morey Solomon's safe in Denver? Because it was from that city that the Kid for reasons which need not be made public had made a swift running jump halfway across the continent. Just think of it! Why, there wasn't a "gun" in the Middle West who did not pay glowing tribute to the Kid's prowess as an all-round buccaneer!

BUT the soft brown hat which the Kid wore concealed a brain working like a dynamo. His shifty eyes wandered quickly over the men about him, and, process of elimination aiding unerring experience, he singled out the culprit. The object of his suspicion was an undersized, pasty-faced youth who stood with his back against the railing, but never by the flicker of an eyelash did the Singin' Kid evidence that he had become cognizant of his loss.

"Well, well," he soliloquized to himself, "wouldn't that wake th' baby. What does anyone know about a hop-headed pirate like him tryin' to gimme th' hooks. Why, he's as full of coke now as th' bay is full of water, an' here I am just landed, willin' to declare myself in as a square guy. It's a crime, that's what it is."

At the second stop the pasty-faced young man stepped from the car. The Kid waited until he had turned his back to walk away, and as the car commenced to move again jumped lightly off and followed him. Unaware that he was being trailed, the thief proceeded nonchalantly down Sansome Street, pausing for a moment half a block away to look into a show window; but all at once he felt a grip of steel upon his shoulder—a grip that whirled him around with untoward velocity, then he found himself looking into the cold gray eyes of the Singin' Kid.

"Come through with it, come clean," hissed his victim. "I need it in my business. It's me front. I have an uncle in Sing Sing that sends me one out every Christmas, an' I prize 'em fur sentimental reasons. Come on, hand it over, or I'll trim yer like a drunken sailor."

"Hand over what?" quavered the sallow one. "I ain't got nothing of yours. Ain't you mistook in your party?"

"Mistook nothin'—I'm talkin' about me spark, you pink-eyed microbe. Gimme that rock, an' give it to me quick, or I'll tear yer hide off from the ears down."

"I didn't figure you was no 'gun' yourself," protested his prisoner. "I took you for a Mike."

"Never mind what I am," retorted the Kid. "Never mind what I am, or where I came from, or why I left that place. But just to give yer a touch of high life I'll save yer th' trouble of searchin' yerself for it." Suiting action to word he slipped a deft finger under the rolling collar of the young man's coat and drew forth the missing diamond.

"Now git," said the Kid, "an' let me tell yer somethin', if you native sons can't do no better than that, this tank is liable to have another earthquake. I want to say your work is as coarse as a nutmeg grater. That brand of hop you're smokin' ain't no good. Better throw it in th' discard an' buy a two-bit deck of th' old cracker dust: there's four good sniffs in it. I ain't strong for th' needle thing: it makes your lunch hooks wobble. Why, I 'made' you th' minute you started th' lift. You took me front as though you was haulin' up a deep-sea anchor. You oughta be ashamed of yerself, that's what. Now make yer gitaway before th' ice melts."

"I need it in my business. It's me front. I have an uncle in Sing Sing that sends me one out every Christmas, an' I prize 'em fur sentimental reasons"

THE Singin' Kid wheeled back toward Market Street, his whole being surcharged with indignation. It seemed to be in a way a bar sinister on his professional heraldry that a brother artist should have failed to accord him the recognition due his standing. For good and sufficient reasons the Kid had decided not to "work" in San Francisco, but now he felt that his reputation had been assailed, and it was up to him to rehabilitate himself.

Up the main thoroughfare he walked slowly, eyes well to the front, but slanting occasionally, however, so that he might take in everything to the right and to the left of him. Custom had taught the Kid to view the scene of his advent carefully in order that overofficious sleuths might not impede the dignity of his progress. He studied the big circus posters as he moved along, and endeavored by his bearing to create an impression among those who might be disposed to inquisitiveness that he was a tourist simply enjoying the sights of a great city.

BUT somewhere between Third and Fourth Streets the freebooter's attention became centralized upon an individual who, like himself, was moving aimlessly in the opposite direction. He was obviously of the West, Western. The Kid could have run his original habitat to earth in three guesses—Utah, Wyoming, or Colorado. He looked like "ready money." So, when the man of the mountains passed through the swinging doors of the café, the Singin' Kid followed after allowing a discreet interval to elapse.

The man from the Middle West was leaning against the bar toying with his second glass of red liquor. Men come to San Francisco every day and say the same thing to the bartender.

"Nothin' stirring, eh?" interrogated the stranger petulantly. "Town's on th' toboggan. Mightily changed since I was here in th' spring of '96. Say, brother, she sure then was marked with all the indications of speed. We used to light her up every night like a birthday cake—endless motion, that's what she was, nothin' else."

"Take it from me, I'm th' first guy that ever thought out th' plan of havin' bettin' in connection with th' hippodrome races"

THE Singin' Kid moved closer. "Gimme a short beer," he said gruffly to the bartender. Then to the stranger in tones of exceeding protest, "there ain't nothin' th' matter with Frisco," said he; "she's still on th' rails, an', take it from me, she ain't moved one inch. You ain't fixed yer dates right yet, that's what's th' matter with you. Turn yerself aroun' an' git a runnin' start at th' barrier. Looks to me as if you was headed th' wrong way of th' track."

"Don't take me fur no simp," interpolated the stranger hotly. "I was sittin' on th' fence watchin' 'em go by when a yard of cloth would 'a' made you a suit of clothes. Don't tell me. She's as placid as a bowl of milk. Hell, you can drive this town nowadays with th' reins tied round th' dashboard. Ain't yer race track closed up? Will yer be kind enough to inform me where they're dealin' th' bank? Why, there ain't nothin' left but a lot of cheap tin-horn short-card men, that's all. I want to bet mine on the ponies. I'm the custodian of a yen that would make a regiment of Jew bookmakers fall off the block. Been out on the desert for six years now. Ain't seen nothin' nor nobody. I come on down here for a little pastime, an' th' most exciting thing over at Emeryville is a funeral."

"Folks'll never stop bettin' on races so long as there's horses to run and jockeys to ride 'em," responded the Kid cheerfully. "There's more ways of killin' a dog than chokin' him to death. I kin put you wise to a game thet hez wandered so far from its parentage it ain't got no reg'lar name at all."

"Lemme git aboard an' pull in th' gangplank," responded the stranger affably. "I jedge by yer talk yer all right. Take th' bridle off an' go as far as yer like."

"Come on over here an' let's sit down," suggested the Singin' Kid. "Come on over, pardner, an' let's fan a while; I like yer an' yer style. I guess yer belong. Barkeep, ast th' gentleman what he wants." The Kid was in his element now.

"When an angel flies into th' coop, bo," said he after they had been seated comfortably, "when an angel flies into th' coop, it's a wise gink what knows enough to shut the door. Am I right, and do yer git me?"

THE man from Wyoming nodded solemnly. "Go on," said he, "I'm next."

"There's a circus comin' here this week," continued the Singin' Kid. "I'm inter-ested. Take it from me, I'm th' first guy that ever thought out th' plan of havin' bettin' in connection with th' hippodrome races. Th' agent as was runnin' th' privilege fur me las' year ain't showed up, an' I'm lookin' fur a feller just like you. We're goin' to play a five-day engagement here; we give two performances every day an' run sixteen races. There'll be ten thousan' people under the big top. Don't yer suppose some of 'em want to bet their money?"

Digitized by Google

"But where do I git off?" protested the stranger.

"Where do you land? Why, that's what I'm tryin' to tell yer," vouchsafed the Kid. "Ain't I here to sell yer the bookmaking privilege? All yer need is a pencil an' a pad of paper. I can't run it myself, bein' as I'm connected with th' show; but look what you could do to 'em! A sagacious anaraballs like you could run away an' hide from a game like this. Think of it! sixteen races a day fur five days, an' I'll sell yer th' bettin' privilege an' all that goes with it fur five hundred bones—a hundred down an' th' balance Wensday mornin', when th' show is on th' lot."

THE stranger hesitated a moment. "Kin I git by with it?" he queried.

"Kin a hen lay an egg?" retorted his companion. "Gimme th' kale."

The Kid's hypnotic eye did the rest. The man from the Middle West drew forth a plethoric pocketbook, and a brand-new yellow-back bill crackled as it journeyed from hand to hand across the table. Then the Singin' Kid rose and stretched himself wearily. "So long, ol' pal," said he; "so long, I'll see yer Wensday mornin'. I have to go down now an' meet th' agent of th' Pullman Company to order a few new sleepers fur th' show, but don't let yer foot slip; you meet me at nine o'clock, Wensday mornin', on th' lot corner of Twelfth an' Market. Take care of yerself, bo; don't take no bad money till yer see me agin."

"Putting One Over"

By W. D. Brenner

ILLUSTRATED BY S. J. WOOLF

YOU'D wonder how they all got there, wouldn't you, mister? Eh? Why, the ones with their names in the electric light signs! You go along Broadway and you look them over. Some of them's stars that shine and some of them's shines that star; but they're all pullin' down a percentage of the gate receipts, and you wonder how they do it. Well, mister, there's lots of ways of doin' it and lots of missin' it; but this here call boy's job puts me in a place to see things—and you take it from me, it's often luck both ways. Yep! Just plain luck. There was Cynthia.

It wasn't more'n a year and a half ago that she blew into this very theatre lookin' for a job.

One of them scorchin' days around the end of August, it was—just before the rehearsal started. The mob of actors and actor ladies was out in the greenroom waitin' for the stage to get cleared up, and the boss was out there tryin' to get a bunch of sceneshifters to do it—and usin' persuasive language on them—when Cynthia breezed in.

I GUESS it was her looks that took her past the door man. Believe me, she was some queen! One of them willowy dames, with eyes that the poet guys calls soulful. Wasn't nothin' fancy about her duds—but somehow you got the hunch that, if she had the happy frills, they'd be carried right.

Me? Oh, hully gee, mister! I fell in love with Cynthia then and there. But don't run away! This ain't no story of a call boy's hopeless love. This here is the plain, unvarnished tale of Cynthia's tryout.

'Course, mister, there wasn't nothin' for me to do around there that early in rehearsals; but then I'm a sort of fixture with the firm, and, besides, I'm aimin' to be a playwritin' guy myself one of these days. You can cop more straight dope on playwritin' at one of them late summer rehearsals than all the books on what the high-brows calls "dramatic technique" can ever learn you.

But I was tellin' you about Cynthia. You jack me up when I start to drift. She just stood there, glancin' around casual, while the boss was cuttin' loose on the fancy talk at them sceneshifters. Gee! He was some hot! Then he saw her.

"Well?" says he, snappy.

"I presume," says Cynthia, quietlike—"I presume, from your authoritative manner, that you are the manager?"

"I'resumin'," replies the boss—"presumin'—just for the moment—that I am that unfortunate individual, what then?"

"Then," says Cynthia, awful prompt, "I want a job!"

"A what?"

"A job," she repeats. "A part in the play you're rehearsin'."

The boss glares at her. "Any experience?" he snaps.

"Well, not professionally," she admits. "But I've often taken part in amateur performances."

"Indeed?" says the boss. And then he explodes. "Say!" he hollers, "how the blinkity blazes did you get in here?"

CYNTHIA seemed surprised. "Why, I believe I walked in," says she, real innocent.

"Past the door man?"

Cynthia nods.

"Billy," the boss yells, turnin' to me, "go out and tell Old Mike he's fired."

Mike was the door man. 'Course, mister, I didn't move, 'cause that's a stock joke—about Old Mike getting fired. It happens three times a day, regular. Besides, I wouldn't have missed Cynthia for anything!

The boss, by this time, is takin' in that there willowy figure I told you about.

"I didn't know," he remarks finally, "but what you glided in! You give one the idea of a glider." And that wasn't no idle dream either, mister. "I expect," he continues, sarcastic, "that you wish to utilize your talents by givin' imitations of Nazimova, the Russian Serpent, or of the Divine Sarah. And I regret that, as this show requires the services of ordinary human bein's, and not acrobats, there is nothin' doin'."

The assistant stage manager came tearin' in with a face the color of a boiled lobster. "Boss!" he yells, "Fanny De Voe's quit!" . . . Mister, I could have yelled for joy!

SAY, mister, you'd thought that would 'a' got her, wouldn't you? But it didn't. Nope.

"I expected," says she, soft and humblelike, "to take a very small part."

"Modest, ain't you?" asks the boss.

"I might add," she continues, "that I have real talent, which I inherited from papa."

The boss snorts. "Papa, hey? Where's he playin'?"

There's a little catch in Cynthia's voice. "He ain't playin'," says she. "He's an invalid."

"Oh, heavings!" he groans. "Same old story. Charmin' young girl with dramatic talent, inherited from papa—who is probably an acrobat in a circus. Papa down and out—charmin' young girl forced by cruel fate to the life of a play actress!"

'Course, mister, you got to remember that it was a hot day—and that a lot of things had happened to peeve the old man. And mebbe you think it was josh, mister, but, honest, it was an old, old story. Why, there's dozens of them spring the invalid father gag. Sometimes papa's been a famous clown—and if that's the case, he's pinin' away with a broken heart. Acrobats gets rheumatism, plain actors loses their voices, and so it goes. One buxom dame told the boss her dad was a stage manager. And what do you think had happened to him? He'd gone clean dippy! Somehow that one rung true, and the boss believed her.

You could see, though, that this little lady wasn't wise to the game, and them harsh words almost loosened her weep valves.

"My father," says she, real dignified, "was no acrobat. He was a tragedian!"

"Gee, no wonder he ain't playin'!" remarks the boss.

Cynthia glares at him.

"Until his health failed he was one of the best in England!"

"England, hey? Oh, to be sure! That's where they breed them. But you see, young woman, this here is a frivolous age, and tragedians ain't much in demand even when they're husky ones!"

Cynthia's eyes kinda drooped.

"Well," says she, "I got to do something. You see, the doctor said he'd have to go to some place like Colorado. But when we got to New York, our money gave out, and—"

I DUNNO, mister. Mebbe it was them two big tears that was tremblin' in her eyes. Brown eyes, I told you they was, didn't I? Yep. And with them tears hangin' to the lashes—well, you'd have to see them lamps to appreciate the situation, mister. Anyway, you know, the boss is a real gent, even if he does cuss them out every now and then.

It's funny how things happen, ain't it?

You see, she'd turned to go, and in another minute might have been out. Accordin' to all the rules of the game, it ought to have ended there. But it was just in that minute that it happened. Eh? Why, Derrickson, the assistant stage manager, came tearin' in with a face the color of a boiled lobster.

"Boss!" he yells, "Fanny De Voe's quit!"

Mister, I could have yelled for joy! Fanny De Voe was the French maid, and mebbe you don't know it, but these here society plays can't get along without one. They simply got to have a French maid. I dunno why—but they've got to!

Nope! I wasn't surprised when the boss beat it out after Cynthia.

"Say!" he hollers, abrupt, "can you do a French maid?"

Cynthia turns. "Yes, sir," says she. "I used to dote on French maid parts in the amateurs."

"Good!" says the boss. "You're hired. Twenty per."

Gee, wimmin's funny, mister! You'd thought she'd been glad, wouldn't you? But if she was glad, then why did she turn on the weeps? Hey?

"There, there!" says the old man, soothin'. "For the love of Pete," says he, "can the weeps! Here, Derrickson, take her in and let her meet the bunch. And, by the way," he adds, turnin' to Cynthia, "here's a week in advance. It might come in handy."

But that's the old man, mister. It ain't always the smooth ones that's the real gents.

HE TURNS to the sceneshifters. "Hey!" he hollers, "d'ye think this is a rest cure? Run along now," says he, turnin' to Cynthia, "this ain't no place for you, miss—"

Then she told him her name, mister—Cynthia ain't the main part of it, but I'll tell you more about that later on.

Now, mister, I ain't goin' to bother you tellin' about them rehearsals. Anyone that's got a good imagination and has ever meditated on future punishment

Digitized by Google

can guess what them late summer rehearsals is like. But mixed in with it was some mighty pleasant things, and the pleasantest was Cynthia. Yep! Her and me got real chummy. I dunno what it is, but they tell me I got a takin' way with the wimmin. Anyway, we got to be real pals, and that was the start of the mortal feud between Bruce MacRea and me. Bruce played the genteel heavy parts. Did you ever have a real genteel heavy glare at you, mister? Hully gee! the look he give me the night Cynthia and me went home under the same umbrella nigh scared me out of a month's growth!

It was rainin' pitchforks that night. One of them summer surprises, it was, and I was the only one that had a umbrella. I guess you can see me doin' the gallant act, mister? And, of course, after I'd piloted her up on the elevated to the little two-by-four apartment where her and her dad lived, she had to have me in, didn't she? Yep! That's how I came to meet her dad.

Mister, he was a real highbrow! One of them Shakespeare bugs—like you read about. But talk about wrecks! Honest, mister, I ain't much on the gloomy stuff; but just thinkin' about Cynthia's dad used to give me that weepy feelin'.

I wonder if you get the picture? Can you see that poor old ham, sittin' up there in a stuffy little room, coughin' and chokin' all day long for the want of a little air like they make out in the Rockies? 'Course, it wouldn't took much to send him out there; but with Cynthia doin' the French maid act at twenty per, and the price of things in New York, it didn't look like an even chance.

Yes, sir, I used to think about it an awful lot. The idea kinda stuck in my bean; and sometimes, when I'd see them Wall Street guys and the flossy broilers from the choruses scatterin' the stuff regardless in the cabaret joints—well, it kinda seemed like them Socialist guys wasn't nutty after all!

BUT Cynthia never whimpered. No, sir! Just stuck to her business, cheerful and smilin'; and mebbe she wasn't some French maid! I never was strong for the frog eaters; but after I saw Cynthia doin' the polly-voo act I got to havin' pipe dreams about a trip to gay Paree. Hully gee! If the real French maids is like the one Cynthia done, it ain't no wonder the French chefs follow them over to New York!

Eh? Oh, yep! I will get to driftin'. Well, everything comes to an end some time—though it don't seem possible with rehearsals. But they did. The last Monday in September it was when we woke up and realized that the big night had come.

'Course, mister, if I was a literary guy like you I'd stop right here to work up interest in the scene. You got it! Atmosphere! I'd tell about the mob of first-night come-ons that was out in front of the curtain, and how the S. R. O. sign was up in front of the theatre. Then I'd spend a little time dwellin' on how the orchestra was tunin' up; and finally, mister—if you hadn't beat it—I'd come down to that there breathless hush business that always comes just before the auditorium lights go out.

But, hully gee, mister! I ain't no novelist. I'm just tellin' you about Cynthia. Besides, you know whata rep the old man has. You've been to some of his first nights. So I guess you get the picture—even to the breathless hush! I always did think they overdo that part of it. 'Course, it's kinda excitin' to be out in front there, waitin' to see what's goin' to happen in the show. But, believe me, it ain't nothin' to bein' on the other side of the curtain—waitin' to see what's goin' to happen *to* the show!

AND right here I want to remark that it was plenty—what happened to that particular show. Honest, if Cynthia hadn't been there when the leadin' lady took sick so sudden— What! You didn't know that Cynthia was goin' to step in and take the leadin' lady's part? Oh, hully gee, mister! And you writin' stories for a livin'!

Why, there ain't none of this stuff that's new. Them playwritin' guys and novelists all uses the same old dope. It's all in the way it's served up. Changin' the scene, bringin' old ideas up to date, and introducin' what the critics calls "the element of surprise" is what does the trick. 'Course, this here is a true story; but then all the old ideas first come from real life, mister, so the rules of the game holds good.

In this here case of Cynthia, it was that element of surprise I told you about that made it different.

Nope, the leadin' lady gettin' sick wasn't surprisin'. Leadin' ladies is awful funny that way. Sometimes you'd almost think they was human! 'Course, she might have had a understudy. Some does. But this one didn't believe in understudies. Said she simply wouldn't stand for it. And when a leadin' lady says she simply won't stand for a thing—then that's all there is to it, mister.

Neither was it surprisin' that Cynthia, without anyone knowin' it, had memorized that part and was ready to step in. All that stuff had been pulled off before by charmin' young ingênues—if you want to take the press agent's word for it. But the surprise—the thing that made the big noise—come afterward.

'Course, the beginnin' of it was kinda excitin' for a while. The fiddles was just beginnin' to tune up when the cruel blow fell. When they brought the news to the boss—but I'm goin' to skip that part of it. He's awful excitable, mister. And it was right in the midst of them scathin' remarks that Cynthia did the grand-stand act.

"I can play the part," says she.

THAT was all, mister. No wild pleadin'. No "Oh, gimme a chance, kind sir!" gush—just them simple words: "I can play the part."

'Course, the boss didn't believe her; but then there'd been fifty thousand dollars put in the show before they were ready to raise the curtain, and there was three thousand people out in the audience. Besides, the boss had a reputation for never turnin' a crowd away. So what could he do? Gee! it all happened so sudden, I don't believe he knew what was coming off!

Somehow or other they got the beauteous ball gown pulled off the disabled leadin' lady, and Cynthia done a lightnin'-change act. Then, with the whole company turnin' in to help, they got the Mistress of the Wardrobe laced into a French maid outfit that was three sizes too small for her, and give her orders to fake the lines.

The orchestra had stopped playin' and the boss walked over to where Cynthia was standin'. I thought he was goin' to say somethin'—but he didn't. He just looked at her; but, mister, that there look was more'n if he'd made a speech! Then—well, I guess there was a breathless hush outside, 'cause a second later the curtain went up.

LOOKIN' back on it now, I dunno how I lived through them first three acts. 'Course, Cynthia knew the lines and all that. I found out afterward that she'd been studyin' them ever since the first week of rehearsals. More'n that, she'd rehearsed the business in front of a glass at home, with her dad helpin' out and coachin'. But, hully gee! I didn't know then? I just kept thinkin': "Can she pull it off? Can she get it across?"

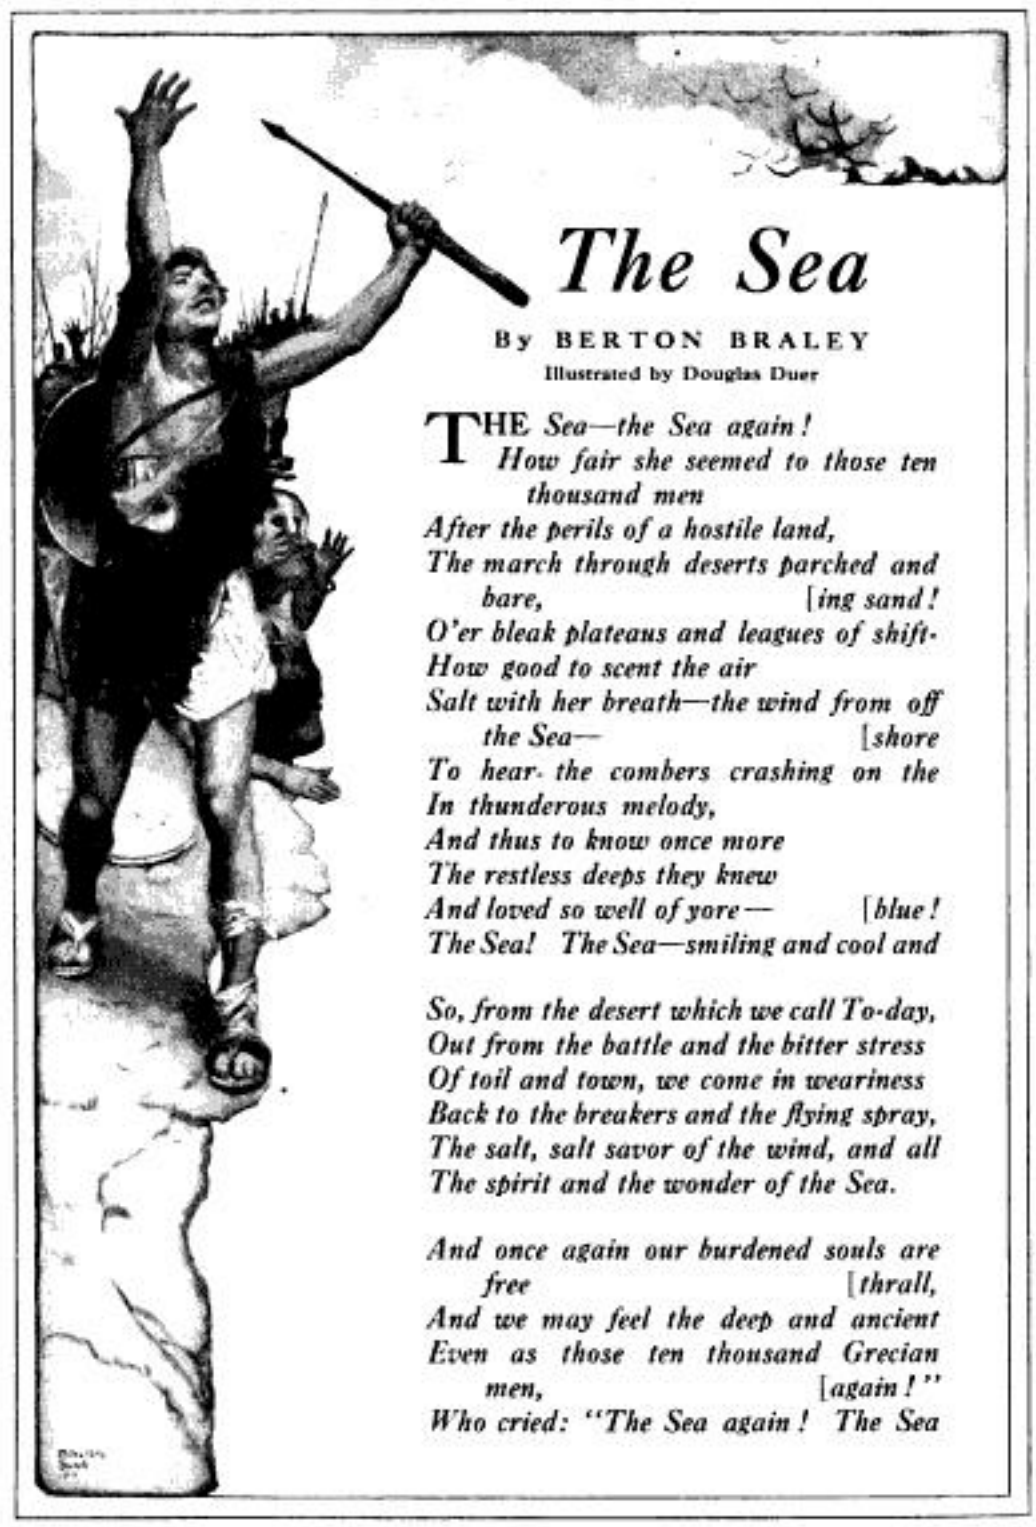
I was thinkin' of her dad—that poor old Shakespeare bug, sittin' up there in the little cubby-hole where they lived; sittin' there livin' on hope and Cynthia's nerve. Gee! I've got to be a pretty hard nut; but I managed to frame up some kind of a prayer back there in the wings.

Mebbe the boss was prayin', too; but if he was it was the silent kind—'cause he just sat there chewin' the end of a unlit cigar. Just that, mister—just sat and chewed and stared, like he was dreamin'. And, honest, it was enough to make him think he was dreamin'—to see Cynthia standin' out there, reelin' off the leadin' lady's lines like she was born to the part. There wasn't much noise out front; but that was the fault of the show. They'd all seen stuff like it before; and it takes either a mighty good drammer or a awful rotten musical show to get a Broadway crowd goin'. This here was only a middlin' good drammer. So you couldn't blame Cynthia if there was only scatterin' applause after each of the first three acts.

AT THAT the first three acts didn't matter, 'cause it was in the fourth that it happened. Yep! In the last—right before the curtain. And here I got to stop to give you the frame-up for that scene.

'Course, you know what these here society plays is like. This one wasn't much different from the rest of them. It was called "The Second Mr. Tankerplay," and the name exactly described the play. The second Mr. Tankerplay was just what his name said; 'cause he spent his time either tankin' or playin' the ponies—and mostly both at once. See? And, of course, mister, when Mrs. Tankerplay wakes up to what kind of a prize she's drew in the second raffle there's a awful time.

First hubby, as is always the case after they're dead, seems to have been a kind of a saint, mister, and, natcherly, his lamented virtues is flung in the teeth of number two. Gee! You've seen it all before. You know that them first three acts finds them driftin' toward Reno, and you know that, along about the middle of the second, there's a fine, smooth-talkin' genteel heavy falls in love with the abused wife. And, of course, there's a French maid and a English butler—and a open fireplace!



Now, mister, I told you that Bruce MacRae was that smooth-talkin' love pirate; and when he heard that Cynthia was goin' to play the part of the abused wife he sure was glad. Why? 'Cause right at the end—in this here scene I'm goin' to tell you about—he has to take her in his arms; and, with Cynthia doin' the part, that sure was a treat for Bruce MacRea, cusses on him!

He's declared his love; but, bein' one of them smooth guys, he turns to her and says, in a holler, broken voice that "He'll go away and try to forget her." You know how they do that—kinda swallerin' the words to make them sound holler? But does he go? Nope, he don't. 'Cause right at that moment his turrible passion overwhelms him, mister, and he grabs her in his arms. Yep! Right in his strong, young ar-rrrms! And then, while they're doin' the clinch act, the center doors is opened very dramatic, mister, and the second Mr. Tankerplay "stands framed in the doorway." Them's the exact words of the stage directions.

OH, no, there ain't no fight. Get them rude ideas out of your head, mister. A fight ain't dramatic at all. That's mellerdramer. He just turns to the villain and points to the door.

"Go!" says he, in a awful voice. Exit genteel heavy. The other boy turns to wife. "Woman, this is the end. After to-night I

(*Continued on page 25*)

The Sea

By BERTON BRALEY

Illustrated by Douglas Duer

THE Sea—the Sea again!
How fair she seemed to those ten thousand men
After the perils of a hostile land,
The march through deserts parched and bare, [ing sand!
O'er bleak plateaus and leagues of shift-
How good to scent the air
Salt with her breath—the wind from off the Sea— [shore
To hear the combers crashing on the
In thunderous melody,
And thus to know once more
The restless deeps they knew
And loved so well of yore— [blue!
The Sea! The Sea—smiling and cool and

So, from the desert which we call To-day,
Out from the battle and the bitter stress
Of toil and town, we come in weariness
Back to the breakers and the flying spray,
The salt, salt savor of the wind, and all
The spirit and the wonder of the Sea.

And once again our burdened souls are free [thrall,
And we may feel the deep and ancient
Even as those ten thousand Grecian men, [again!"
Who cried: "The Sea again! The Sea

The German War Machine

By Dr. Armgaard Karl Graves

ILLUSTRATED BY LOUIS FANCHER

THE numerical strength, disposition, and efficiency of the German army are more or less well known. The brain and all-prevailing power controlling a fighting force of 4,500,000 men—or, taking the Triple Alliance into consideration, the forces of which would in the event of war be controlled from Berlin: a force in round numbers of 9,000,000 men—is, however, *not* known. Here for the first time is published an account of the inside workings of the German War Machine so far as it is possible for any one man to give them. Through my intimate connections with the German and other Secret Service systems, through constant contact with prominent army and navy officers, I have enjoyed special facilities, of which I have availed myself to the full, to gain the inside knowledge which I here commit to paper.

The Fighting Force

THE most efficient and elaborate system ever devised by the ingenuity of man, used not only for war and destruction, but as an intelligence clearing house for the whole of the Empire, is the German War Machine. Conceived by General Stein in the days of the Napoleonic wars, added to and elaborated by successive administrations, solely under the control of the ruling house, its efficiency and perfect and smooth working are due to the total absence of political machinations or preferences. Brains, ability, and thorough scientific knowledge are the only passports for entrance in the Grosser General Stab, the General Staff of the German Empire. You will find blooded young officers and gray-haired generals past active efficiency, experts ranking from an ordinary mechanic to the highest engineering expert, all working harmoniously together with one end in view, the acme of efficiency. Controlled and directed by the War Lord in person through the Chef des Grossen General Stabs—at present General Field Marshal von Heeringen—this immense machine, the pulsing brain of a fighting force of 4,500,000 men, is composed of from 180 to 200 officials.

At the Peace of Tilsit, after the crushing defeat of the Prussian armies at Prussian Eylau and Friedland, Bonaparte had Prussia and the whole of central Europe at his mercy. Contrary to the advice of his generals, especially the succinct advice of his often unheeded mentor Talleyrand, completely to disintegrate Prussia, Napoleon through his fondness for pretty women let himself be tricked by Louise of Prussia. The interesting historical story of this incident may be apropos here, showing how the world's history can be changed by a kiss. At the Peace Conference in Tilsit, Napoleon on the verge of disintegrating Prussia met the beautiful Queen Louise of Prussia. Through her pleadings and the imprint of his kiss on her classic arm Bonaparte granted Prussia the right to maintain a standing army of 12,000 men. That in itself did not mean much, but it gave able and shrewd Prussian patriots the opportunity to circumvent and hoodwink Bonaparte's policy.

The Beginnings of the German Army

PRUSSIA has always been fortunate in producing able men at the most needed moments. A man arose with a gift for military organization. He had every province, district, town, and village in Prussia carefully scheduled and the able-bodied men thereof put on record. He selected the 12,000 men permitted Prussia under the Napoleonic decree and drilled them. No sooner were those men drilled than they were dismissed and another 12,000 called in. From this point dates modern conscription—the father of which was General Stein—and this also inaugurated the birth of the War Machine. In three years Prussia had 180,000 well-drilled men and 120,000 reserves, quite a different proposition from the 12,000 men Napoleon thought he had to face on his retreat from Moscow, and which played a decisive factor in the overthrow of the dictator of Europe.

Through the wars of 1864 and 1866 to 1870, the Franco-Prussian War, the War Machine of Prussia was merged into that of the German Empire and is a record of increasing efforts, entailing unbelievable hard work, and a compilation of the minutest details. The modern system of organization—especially the mobilization schedules—is the work of Helmuth von Moltke, the "Grosse Schweiger," the Great Silent One, the strategist of the campaign of 1871.

Its Present Head

IT IS curious that there is a great similarity between the late Moltke and Heeringen. They have the same aquiline features, tall, thin, dried-up body, the same taciturn disposition, even to their hobbies—Moltke being an incessant chess player, Heeringen using every one of his spare moments to play with lead soldiers. He is reputed to have an army of 30,000 lead soldiers with which he plays the moment he opens his eyes—much in the same manner as Moltke, who used to request his chessboard the first thing in the morning. In military circles Heeringen is looked upon with the same respect and accredited with quite as much strategical knowledge as Moltke was. It is a significant fact that, whenever there is any tension in Europe, especially between Germany and France, General von Heeringen or his comrade in arms, General von Hülsen-Haeseler—also a great strategist and an iron disciplinarian—immediately takes command of Metz, the most important base and military post in the Emperor's domain.

There is no man alive who knows one-half as much about the strategical position of Metz and the surrounding country as General von Heeringen. Often on stormy, bitter cold winter nights, sentries on outposts stationed at and guarding the approaches of Metz are startled to find a gaunt, limping figure, covered by a gray army greatcoat with no distinguishing marks, stalking along. Accompanied by orderlies carrying camp stools and table, night glasses and electric torches, halting repeatedly, his men taking down in writing the short, croaking sentences escaping between the thin compressed lips, the "*Geist* of Metz" prowls round measuring every foot of ground fifty miles east, west, north, and south of his beloved Metz. The steel-tipped arrow ever pointing at the heart of France is safe in the hands of such guardians.

The visible head of this vast organization is called Der Grosse General Stab with headquarters in Berlin. Each army corps has a "Kleine General Stab" which sends its most able officers to Berlin. These officers, in conjunction with the most able scientists, engineers, and architects the Empire can produce, compose the Great General Staff. The virtual head is the German Emperor. The actual executive is called "Chef des Grossen General Stabs."

The Maker of War

THERE is a small, dingy, unpretentious room in the General Stabs Gebäude where, at moments of stress and tension or international complications, assemble five men: His Majesty, at the head of the table; to the right the Chef des Grossen General Stabs; to the left his Minister of War; then the Minister of Railways, and the Chief of the Naval Staff. You will notice the total absence of the Ministers of Finance and Diplomacy. When these five men meet, the influence of diplomatic and financial affairs has ceased. They are there to *act*. The scratching of the Emperor's pen in that room means war, the setting in motion of a fighting force of 4,500,000 men.

Here is another instance:

When the feeling and stress over the Moroccan question was at its height, General von Heeringen on leaving his quarters for his usual drive in the Thiergarten was eagerly questioned by a score of officers awaiting his exit.

"Excellency! Geht's los?" ("Do we begin?")

Grimly smiling, returning their salutes and without pause, limping to his waiting carriage, he gave his answer:

"Sieben Buchstaben, meine Herren!" ("Seven letters, gentlemen!")

In German military parlance this means the Emperor's signature, Wilhelm II, to the mobilization orders.

In order to give the reader a fairly correct view of this mighty organization, I have to explain each group separately. The whole system rests on the question of mobilization, meaning the ability to arm, transport, clothe, and feed a fighting force of 4,500,000 men in the shortest possible time at any given point in either eastern or western Europe. For let it be clearly understood that the main point of the training of the German armies is the readiness to launch the entire fighting force like a thunderbolt to any given point of the compass. Germany knows through past experience the advisability and necessity of conducting war in an enemy's country. The German army is built for aggression. There are four main groups:

1. Organization.
2. Transportation.
3. Victualization.
4. Intelligence.

Each of these groups is, of course, subdivided into numerous branches which we shall go into under each individual head.

The Far-Reaching Organization

FIRST comes organization. The German army is composed of three distinct parts: the standing army, the reserves, and Landwehr, or militia.

The standing army comprises 790,000 officers and men. This body of men is ready at an instant. It is the reserves who need an elaborate system of mobilization. The reserves are divided into two classes, first and second reserves. So is the Landwehr, having two levies—the first and second Aufgebot. Every able-bodied man on reaching the age of twenty-one may be called upon to serve the colors. One in five only is taken, as there is more material than the country needs—the fifth being selected for one of five

Digitized by Google

branches: infantry, cavalry, artillery, Genie corps, or the navy. The time of service in the infantry is two years; in the cavalry three, in the artillery three, in the Genie corps two, and in the navy three. Well-conducted men get from two to four months of their time. This is by no means a charity on the part of the authorities, but a well-thrashed and deep-laid scheme to circumvent the Reichstag, for it gives the Emperor another 75,000 men. A certain class of men passing an examination called Einjähriges Zeugniss or possessing a diploma called Abiturienten-Examen (the equivalent of a B. A.) serve only one year in each branch. This class provides most of the reserve officers. The active officers, usually the scions of aristocratic houses or the sons of the old military or feudal families of Germany, are mostly educated in one of the state Kadetten-Anstalten, military academies, of which Gross-Lichterfelde-bei-Berlin is the most famous. The real backbone and stiffening of the German army and navy are the noncommissioned officers recruited from the rank and file. In fact, this body of men is the mainstay of the thrones in the German Empire, especially of Prussia. These men, after about twelve years of service in an army where discipline, obedience, and efficiency are the first and last word, are then drafted into all the minor administrative offices of the state, such as minor railway, post, excise, municipal, and police. The reader will see the significance of this when it is pointed out that not only the Empire but the War Machine has these well-trained men at its beck and call. The same thing applies to the drafting of officers to most of the higher and highest administrative positions in the state.

Lightning Change of Citizen to Soldier

THERE are twenty-five army corps, all placed in strategical positions. The strongest is in Alsace-Lorraine and along the Rhine, the second in importance garrisoning the Prussian-Russian border. The whole country is subdivided into Bezirks commandos (district posts) whose business it is to have on record not only every able-bodied man—reservists—but every motor, horse, and vehicle available; also food and coal supply—in fact, everything likely to be wanted or useful to the army. Every German reservist, or otherwise, knows the reporting place of his district and has to report there when notified within twenty-four hours. The penalties for noncompliance are high even in peace times. In the event of war or martial law they are absolutely stringent. The commandos are so placed that they could forward their drafts of men and material to their provincial concentration points at the quickest possible notice. These provincial concentration points being railway centers are so located that the masses of men and materials pouring in from all sides can be handled and sent in the selected and needed direction without any congestion. How this is done I shall explain when I come to transportation. In each of those district commandos are depots, Montirungs-Kammern (arsenals) where a full equipment for each individual on the roll is kept. The marvelous quickness with which a civilian is transferred into a fully equipped military unit must be seen to be believed, and is only made possible through systematic training and constant maneuvers. These maneuvers are costly, but have long been recognized in German military circles as essential in training the units and familiarizing the commanders with the handling of enormous masses of men. In the last Kaiser maneuvers over half a million men were concentrated and massed; in fact, shuttlecocked from one end of the Empire to the other without a hitch.

The control of the army in peace or in war lies with the Emperor. He is the sole arbiter and head. No political or social body of men has any control in army matters. No political jealousies would be permitted. Obedience and efficiency are demanded. Mutual jealousies and political tricks such as we have seen in the Russian campaign in the East and lately in France are impossible in the German system, for the Emperor would break instantly—in fact, has done so—any general guilty of even the faintest indication of such an offense. And there is no appeal to a Congress, a Chamber of Deputies, or political organ against the Emperor's decision.

The War Chest

LAST but not least under the heading of Organization comes the financial aspect. Out of the five milliards of francs, the war indemnity paid by France to Germany in 1871, 200,000,000 marks in gold coins, mostly French, were put away as the nucleus of a ready war chest. In a little medieval-looking watch tower, the Julius Thurm near Spandau, lies this ever-increasing driving force of the mightiest war engine the world has ever seen. It is ever increasing, for quietly and unobtrusively 6,000,000 marks in newly minted gold coins are taken year by year and added to the store. On the first of October each year since 1871 three ammunition wagons full of bright and glittering twenty-mark pieces clatter over the drawbridge and these pieces are stored away in the steel-plate subterranean chambers of the Julius Thurm, ready at an instant's notice to furnish the sinews to the man wielding this force. This is a tremendous power in itself, for there are now close to 500,000,000 marks ($120,000,000) in minted gold coinage in storage there. This provides the necessary funds for the German army for ten calendar months. The authorities have no necessity to ask the country, warring politicians—in this instance the Reichstag—for money to start a campaign. They have got it ready to hand. Once war is declared and started they will get the rest if they need it.

This money is under the sole control of the military authorities. It has often been declared a myth. I know it to be a fact. Notwithstanding the financial straits Germany has gone through at times, or may go through, this money will never be touched. It is there for one purpose only and that purpose is war. Needless to say, it is amply guarded. Triple posts in this garrison town, devices to flood instantly the whole under fifteen feet of water from the river Havel, are but items in the system of protection. Twice a year the Emperor, or his heir apparent, personally inspects this war chest. Mechanically balanced devices are employed to check the correct weight. It is a marvelously simple mechanism by means of which in less than two hours the whole of this vast hoard of gold can be accurately checked and the absence of a single gold piece detected.

Almost Perfect Transportation Facilities

ONE of the most important parts of the organization is the question of transportation. Hannibal's campaigns against Cæsar and Napoleon's central European wars owed their success in a great measure, if not wholly, to their quickness of motion. This applies about tenfold in modern warfare. In actual armament the leading powers of Europe are practically on a par. The personnel, as regards personal courage, stamina, élan, or whatever you wish to call it, is fairly equal also. There is little difference in the individual prowess of French, Russian, English, and German soldiers. This is well known to military experts. The difference is mainly a question of discipline, technique, and preparedness, the main factor being, as indicated, the ability to throw the greater number of troops in the shortest possible time against the enemy at any given point, without exhausting man and beast unnecessarily and enervating the country to be traversed. It is therefore necessary to have numerous arteries of traffic at disposal. This will lead us later to the question of victualization. Germany following closely one of Moltke's axioms: "March separately, but fight [illegible]"

Only in a country where all railroads, highways, and waterways, and where post and telegraph are owned and controlled by the state is it possible to evolve and perfect a system of transportation such as is at the disposal of the German General Staff. Every mile of German railroads, especially the ones built within the last twenty years, has been constructed mainly for strategical reasons. Taking Berlin as the center, you will find on looking at a German, more especially a Prussian, railroad map close similarity to a spider's web. From Berlin you will see trunk lines extending in an almost direct route to her French and Russian frontiers. Not single or double, but triple and quadruple lines of steel converging with other strategic lines at certain points such as Magdeburg, Hanover, Nordhausen, Kassel, Frankfort-on-the-Main, Cologne, or Strassburg—to name but a few. Places such as these enumerated are invariably provincial commandos, having garrisons, arsenals, and depots on a large scale.

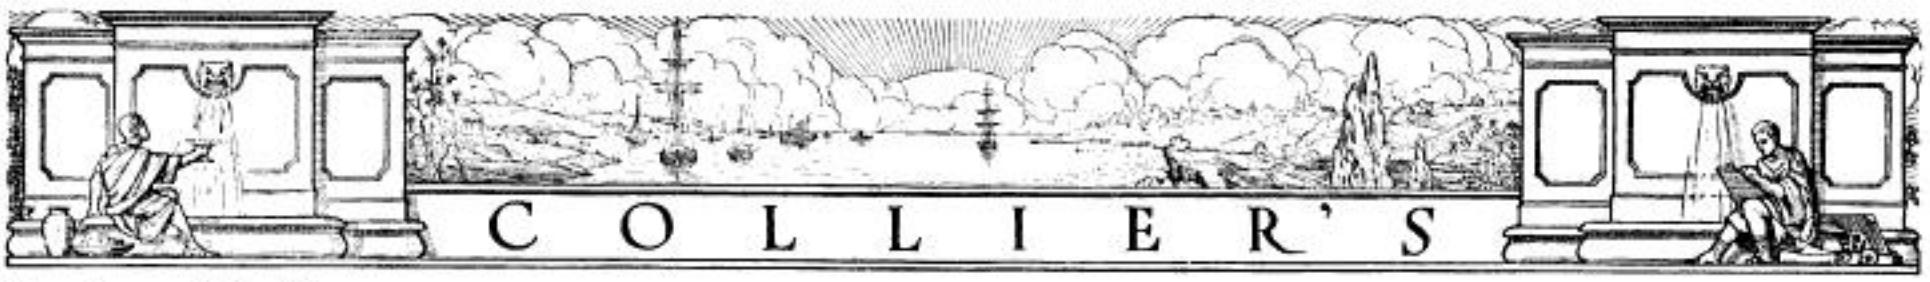
The capacity of the railroad yards for handling large bodies of men and vast amounts of goods swiftly is judiciously studied. At any given time, especially at tense political moments, at every large strategical railway center in Germany there are a certain number of trucks and engines kept for military purposes only—sometimes, as in the Rhine division during the acute period of the Morocco question—with steam up.

As previously related 90 per cent of all the railway officials are ex-soldiers. Five minutes after the signing of the mobilization orders by the Emperor, the whole of the railway system would be under direct military control. Specially trained transportation and railway experts on the General Staff would take over the direction of affairs. Besides this, there exists in the German standing army a number of Eisenbahn Regimenter (railway corps)—all trained railroad builders and mechanics. Elaborate time-tables and transportation cards are in readiness to be put into operation on the instant of mobilization, superseding the civil time-tables of peace. Theoretically and practically the schedules are tested twice a year during the big maneuvers.

Can Operate the Railways from One Room

THE same applies to the waterways and highroads of the Empire. A keen observer will often wonder at the broadness, solidness, and excellent state of repair of the chaussées and country roads, out of all proportion to the little traffic passing along. They are simply strategical arteries kept up by the state for military purposes. The heads of the transportation and railway corps in Berlin sit before huge glass-covered tables where the whole of the German railway system to its minutest detail is shown in relief, and by pressing various single buttons they can conduct an endless chain of trains to any given point of the Empire.

To show the accurate workings of this system I shall relate an incident. During the Kaiser maneuvers in West Prussia, a few years ago, I happened to be at headquarters in Berlin delivering some plans and records of the English Midland Railway system, when a General Staff officer entered the signal hall and made inquiries as to the whereabouts of a certain train having [illegible] on board destined to a certain part of the [illegible]. One of the operators through the [illegible] and [illegible] some (Continued on page 20)



Often on stormy, bitter cold winter nights, sentries on outposts are startled to find a gaunt, limping figure, covered by a gray army greatcoat, with no distinguishing marks, stalking along

America and the War

ASIDE FROM SUCH REFLECTIONS as may be uttered upon our happy immunity from Europe's war, we know nothing to say upon the crisis more important than the following words. They were written by Sir GEORGE PAISH, editor of the London "Statist" and probably the most distinguished English economist, several weeks before the European war was in sight:

> A great war in Europe will enable the United States to sell its crops in places which will give a much greater income than if there was no war. Almost every industry will derive more or less advantage. . . . Should the American people take advantage of the golden opportunity afforded them by the outbreak of the war, it will mean not diminished but increased prosperity for the United States.

Wilson's Good Appointment

OCCASIONALLY both parties to a disagreement are right. WARBURG was well within his rights in declining to be heckled by the Senate Finance Committee. He had not sought the job. He was making very large personal sacrifices to accept it. It is not too much to say that he was conferring a favor upon the public and the Government. On the other hand, those Senators were well within their rights who insisted that WARBURG appear before them. One could make out a very good brief for Senator HITCHCOCK. One could imagine him saying to President WILSON something like this: "You say Mr. WARBURG is a good man, and I believe you, but I want to be in a position to say so of my own knowledge. I am coming up for reelection this fall, and my constituents will question me about this appointment. It is right that they should. For years you, Mr. President, and other Democratic leaders, including myself, have been telling the people of Nebraska that the big New York bankers are a menace to the public good. Now you say that Mr. WARBURG is an exception. I think you are right, but I want to satisfy myself. I want to be in a position to say to my constituents that I have examined this man myself before passing on his appointment and have found him satisfactory."

Rights and Wrongs

OF COURSE the reasons for WARBURG's hesitation to appear and be questioned by the Senate committee do not all appear on the surface. Mr. WARBURG's firm—Kuhn, Loeb & Co.—took part in some financial transactions ten or fifteen years ago which would not measure up to the standard of ethics in such matters which has since arisen and been accepted. Mr. WARBURG undoubtedly would not now approve of these transactions. As a matter of fact, he was in Europe when they took place. To cross-examine him about these transactions would embarrass him. He could not and would not approve them. At the same time, he naturally did not wish to go on the stand and express public disapproval of the acts of his associates and relatives. That he did finally submit to examination, through the pressure of a crisis, is in the highest degree creditable to his public spirit. The right way to look at these old transactions of Mr. WARBURG's firm, of course, is to recognize that they belong to an epoch that is past. They were just as good as the accepted business morality of the times. Times have changed, and Mr. WARBURG's firm has changed with them. A moral statute of limitations, so to speak, should be recognized in such cases. In the same year when Kuhn, Loeb & Co. were financing the Alton most of the editors and politicians who are now yawping about Mr. WARBURG were using railroad passes. If they were to use them now they would be indicted as criminals.

Hitchcock

IT IS USELESS for the thick-and-thin supporters of the Administration to attempt to cast discredit on Senator HITCHCOCK. He is a good man. His ability and his integrity have been under observation in Washington for sixteen years, and there is nothing against them. In so far as his differences with the Administration may be inspired by considerations of Nebraska politics, his belligerency is readily excused on grounds that are creditable to his manliness. Senator HITCHCOCK is entitled to the Nebraska patronage by rigid custom if not by constitutional prerogative. This patronage has been given, not to Senator HITCHCOCK, but to Secretary BRYAN, presumably as a part of the price WILSON is constantly paying for BRYAN's good will. If Senator HITCHCOCK did not resent this he would be more than human.

Democratic Finance

WE HAVE REFERRED BEFORE to the practical difficulties encountered in working the income-tax law. It appears now that neither is it a success as a money raiser. Representative CORDELL HULL of Tennessee, author of the act, prophesied a yield of $82,000,000 for this fiscal year (ten months). The Treasury experts cut this hopeful estimate to $54,000,000, and now Secretary of the Treasury MCADOO says $30,750,000, so Mr. HULL and the experts were only three-eighths and five-eighths correct respectively! The talk now is of drastic collection measures which will be certain to run the expense of collection far above the original estimate of $1,200,000. As we have said before, the income tax is a good measure which should be upheld and extended, but the Democratic leaders have shown no striking business sense or administrative ability in dealing with it. They must do better than this.

Try This Prescription!

AN ASSISTANT PROFESSOR OF MEDICINE at Harvard University, Dr. RICHARD C. CABOT, in his book, "What Men Live By" (published by Houghton Mifflin Company), cites the science and philosophy of our age to prove—what we all know. The essential things have not changed, despite the glitter and sham of all the Broadways on earth. The real values for the human soul are what they have always been: work and play, love and worship. To the first three of these enduring realities parents and other betterers are now turning with confidence, "while over their shoulders they glance wistfully toward worship." For sense and thoughtfulness, held to the line and free from fads, this book is worth your while in summer or any other time.

A Medical-Political Prediction

SENATOR SORGHUM of the Washington "Star" has discovered that the prevalent acute political indigestion is due, in the cases of many statesmen, to overindulgence at the pie counter and the pork barrel. We predict severe cramps for these Congressional sufferers some time early in November, followed by much-restricted diet and a long course of patient Fletcherizing. It may restore health and is sure to cut the waste line.

This Is Worth While

LAST SEPTEMBER we devoted a whole page of photographs and description to the annual Field Day at Amenia, N. Y. You may recall that this is the town which is making an earnest effort for "cooperative recreation." The organizers of the Field Day are awake to the fact that the way to check the exodus from country to city is to add to the social attractiveness of country life. The booklet issued by the association in charge of Amenia's Field Day enunciates these principles:

> 1. You have got to make the country as attractive socially as the city if you want to keep the young folks on the farms.
>
> 2. There's a good deal of work in the country, but most of our boys and girls have forgotten how to play.
>
> 3. Baseball is a splendid game, but it isn't the only one. Every healthy boy should be interested in at least half a dozen others. Don't merely watch others play games; play them yourself!
>
> 4. You can't drink strong drink and be an athlete. Get your boys interested in honest and healthy sports, and save them from drink and dissipation.
>
> 5. Contests and competitions are not the main thing. "The strong compete and grow stronger; the weak look on and grow weaker." The main thing is *play*. Learn the great lesson that play is just as necessary for your sons as work.
>
> 6. The community should help to run its own recreations. Its festivals should be, not only *for* the people, but *of* and *by* the people.

Amenia's Field Day this year takes place on August 15. We wish it luck. Still more, we wish that the movement for such "cooperative recreation" may become country wide.

Another Literary Referendum

THE NEW YORK "TIMES" has put to a number of distinguished authors the question: What is the best short poem in English? Judging by the answers (some of them really intelligent), the adjective "short" is used, not to limit the choice to quatrains and limericks—Mr. CHESTERTON names "There Was a Young Lady of Niger" for first choice, BLAKE's "Tiger, Tiger, Burning Bright" as number two—but to frighten off those whose predilections run to MILTON's "Paradise Lost" and BAILEY's "Festus." As it is, KEATS scores heavily in the "Times's" symposium, and SHELLEY's "Skylark" wins four ballots out of twenty-five (some of them blank); and WORDSWORTH, of course, is in the running. It serves as a pretext for filling two newspaper pages in midsummer—and for reprinting some beautiful uncopyrighted verse. But as THOMAS HARDY remarks, there is no "best" poem in English, long or short. It would be more to the point to ask persons of judgment what is their *favorite* poem. And this question might be expected to draw forth a larger number of answers, titles chosen from a

Digitized by Google

THE NATIONAL WEEKLY

wider range of verse. Reading in EDWARD DOWDEN's letters the other day (two volumes of them have just been issued, and they are well worth reading), we happened on this thought upon this very subject—a thought registered in 1865 at Cork:

> MR. ROBERT BROWNING has a new poem forthcoming. Still, with quite enough of admiration for ROBERT BROWNING, I find out every year more how the greatest men are the ones to live by—SHAKESPEARE, GOETHE, and (from the little I have read in CAREY) DANTE, and by all means CERVANTES—then WORDSWORTH, SPENSER, CHAUCER, MILTON, BURNS, KEATS, TENNYSON, BROWNING, SHELLEY—and then every honest poet, who need not be great but must be sincere, as CLOUGH, CRABBE, and twenty more. . . . One always begins with the second class where one can have favorites, which is impossible with the four or five tiptop human beings—anyone can't make a favorite of the ocean or the sky, although they are infinitely more to us than forest trees or flowers. "Deep-browed HOMER" should have been put among my first men.

DOWDEN was writing informally to his brother, and this was before he made WALT WHITMAN's acquaintance, or the American's name would surely have made its appearance in his list—as it doesn't in the New York "Times's." But these lists are midsummer madness at best.

More Talk About Books

SPEAKING of these selections of the "best" books, what do you think of Professor LEONARD, who is, some one tells us, a Harvard lecturer? Professor LEONARD announces that the United States has produced in twenty-five years only three novels entitled to rank as classics. The three he names are: "The Conqueror," by GERTRUDE ATHERTON; "The Octopus," by FRANK NORRIS, and "The Call of the Wild," by JACK LONDON. We should hate to have to defend Professor LEONARD's thesis before a well-read audience.

Nothing in It

ANDREW CARNEGIE, a successful business man of Pittsburgh, recently gave out four rather ordinary precepts under the heading: "My Rules for Manufacturers." The final clause of the second rule deserves attention: "Avoid resort to law; compromise." Remember that this comes from the long experience of a man of wealth and power who was able to enlist for himself litigation's every possible advantage. *There is nothing in it.* As applied to business, the whole apparatus of law, lawyers, and courts is slow, expensive, inefficient. We would like to hear some lawyers explain Mr. CARNEGIE's precept in terms reflecting credit on the dignity and social service of the legal profession. Can it be done?

Getting Old Youthfully

WE HAVE ALL HEARD a great deal about the tireless rush and change of modern mechanical engineering, how the young grow old and the old grow obsolete. One of the greatest of these marvels of this breathless age is, of course, the Ford automobile factory at Detroit. It is interesting to note, then, that when the editor of "The Engineering Magazine" (New York) wanted some one to write a series of articles on "Ford Methods and the Ford Shops," he called on Mr. HORACE L. ARNOLD, listed in the publisher's announcement as "born near Rochester, N. Y., June 27, 1837." Here is one old man who seems to have kept up with the swiftest of the procession.

There's Money Out of It!

THE PITTSBURGH "POST" calls attention to the fact that some of our first authors have quit drinking and seem to be making big money telling how they did it.

This seems to refer, among others, to SAMUEL G. BLYTHE, WILL LEVINGTON COMFORT, and JACK LONDON, all of whom have renounced John Barleycorn in print and at some length during the past year. But any plain citizen can profit by doing so. There's no money in booze unless you sell it, and that's getting more uncertain every day. Quit and get ahead (not a head) some other way!

Sh-h-h! Peace at last!

Cartoon by F. G. Cooper

"The Standard Forms"

WHENEVER YOU USE a lengthy railway ticket or a mileage book it is likely to be one of the inventions of JOHN SEBASTIAN, who died last spring after forty-four years of railroad service that began with a small clerkship and ended with a vice presidency. SEBASTIAN solved problems ranging from the colonization of wild lands to the dense suburban traffic in and out of Chicago, and they said of him: "In his entire range of duty he has acquitted himself with vigor and honor." Could a man have a better epitaph?

Dreamers and Sleepers

ON A SUBURBAN trolley car we met a pleasant-faced butcher who ascribed his success in life to the fact that he sleeps soundly all the time he is abed, except sometimes for the first three minutes. Successful men in this world might be divided into two sorts—the dreamers and the sleepers. The success of a nation depends indeed upon the right proportion being maintained between these two classes in the community; if the sleepers achieve too complete a dominance, that nation becomes Boeotian in its stolidity and conservatism—prosperous, perhaps, in the things men buy and sell, but without leadership or initiative or beauty. If, on the other hand, your nation runs to dreamers—and even your plodding clerks and butchers dream o' nights instead of sleeping all but the first three minutes—then, as the old-fashioned almanacs used to say, look out for storms, revolutions, upheavals in art and letters, the invention of new forms of depravity, excess in everything except the durable satisfactions of life. It is a curious business, this matter of dreaming. If we dreamers succeed we owe it to "superior imagination." If we ignobly fail we are visionaries and unpractical idealists and well-meaning theorists. The child is a dreamer; as we grow older and approach more closely the beasts of the fields or the king in his counting-room, counting out his money, the farther we get from childhood and from dreams. And yet it is only the imbecile or the hardened criminal that does not dream at all—and this is not an editorial theory either, but science out of a book.

A Young Woman's Daring Ride on an Aquaplane

MISS RUTH FRAWLEY of Astoria, Long Island, proved herself to be America's foremost woman aquaplane rider the other day by making a successful trip through the perilous tides of Hell Gate, where it is extremely difficult even to navigate a motor boat. Miss Frawley, who is seen in the snapshot above, undertook the daring exploit after she had been trained for a month by Commodore Rudolph Moucha of the United States Volunteer Life Saving Corps. The aquaplane is a board five feet long and two and a half feet wide, and is drawn by a fast motor boat. The sport is comparatively new in this country. Commodore Moucha, who is stationed at Hell Gate, is one of its leading exponents. Moucha teaches his friends to ride.

A Girl Finds a New Vocation

MISS RUTH TIMME of Chicago is an expert with automobiles, and recently she advertised for a position as "automobile maid," to take out for drives the children of car owners too busy to go out themselves. She found plenty of work.

Trying Sunshine as a Cure for the White Plague

THE thirteen little girls in the photograph above are receiving the Rollier sun treatment for tuberculosis. Their nurse has them out for a walk for exercise, which is a part of their daily routine. They are required to spend as much time as possible in the sun, and when the weather is fair they go out on the country roads or to the woods and fields. They enjoy the outdoor life immensely. The children are patients at the J. N. Adam Memorial Hospital at Perrysburg, N. Y., an institution built and maintained by the city of Buffalo.

The Rollier treatment is mostly confined to children with tuberculosis in the incipient stage. It had its first trial in the Alps in Switzerland. That was several years ago. Now thousands of patients are receiving the treatment at hospitals and camps in the Swiss Alps, where it is applied all the year round. Leading physicians on both sides of the Atlantic say the sun treatment has been successful in hundreds of cases in the Alps.

The Buffalo test is the first to be made on a large scale in this country, and if any cures are effected, the remedy will become widely popular. If it proves to be successful at a comparatively low altitude, such as that at Perrysburg, it probably will work wonders in the high mountains and in the dry climate of the Southwest.

A Famous Indian Aged 128

THE seamed and wrinkled face in the circle is that of Wa-be-ne-gew-wes, chief of the Chippewa Indians for more than a century. He is called John Smith by the whites. While on a visit to Minneapolis the other day he said he was 128 years old. His existence as a boy 116 years ago is vouched for by Government records. His eyesight and hearing are good and his mind is as acute as that of a man of seventy.

Digging Trenches to Stop an Army That Crawls

THE men in our snapshot above are preparing for war against the army worm. They are digging a trench around a field of young corn. About every ten feet along the bottom of the trench they dig a hole and pour kerosene into it. The worms, every one of which eats 150 times its own weight in a day, come in hordes and fall into the trench. Unable to get out, they crawl along the bottom and tumble into the holes. Then the farmers set the oil on fire. In the last few weeks the pests have eaten up thousands of acres of crops in Ontario, where the photograph was taken, and in the North Atlantic States. The worms can advance and totally consume crops at the rate of one-eighth of a mile an hour.

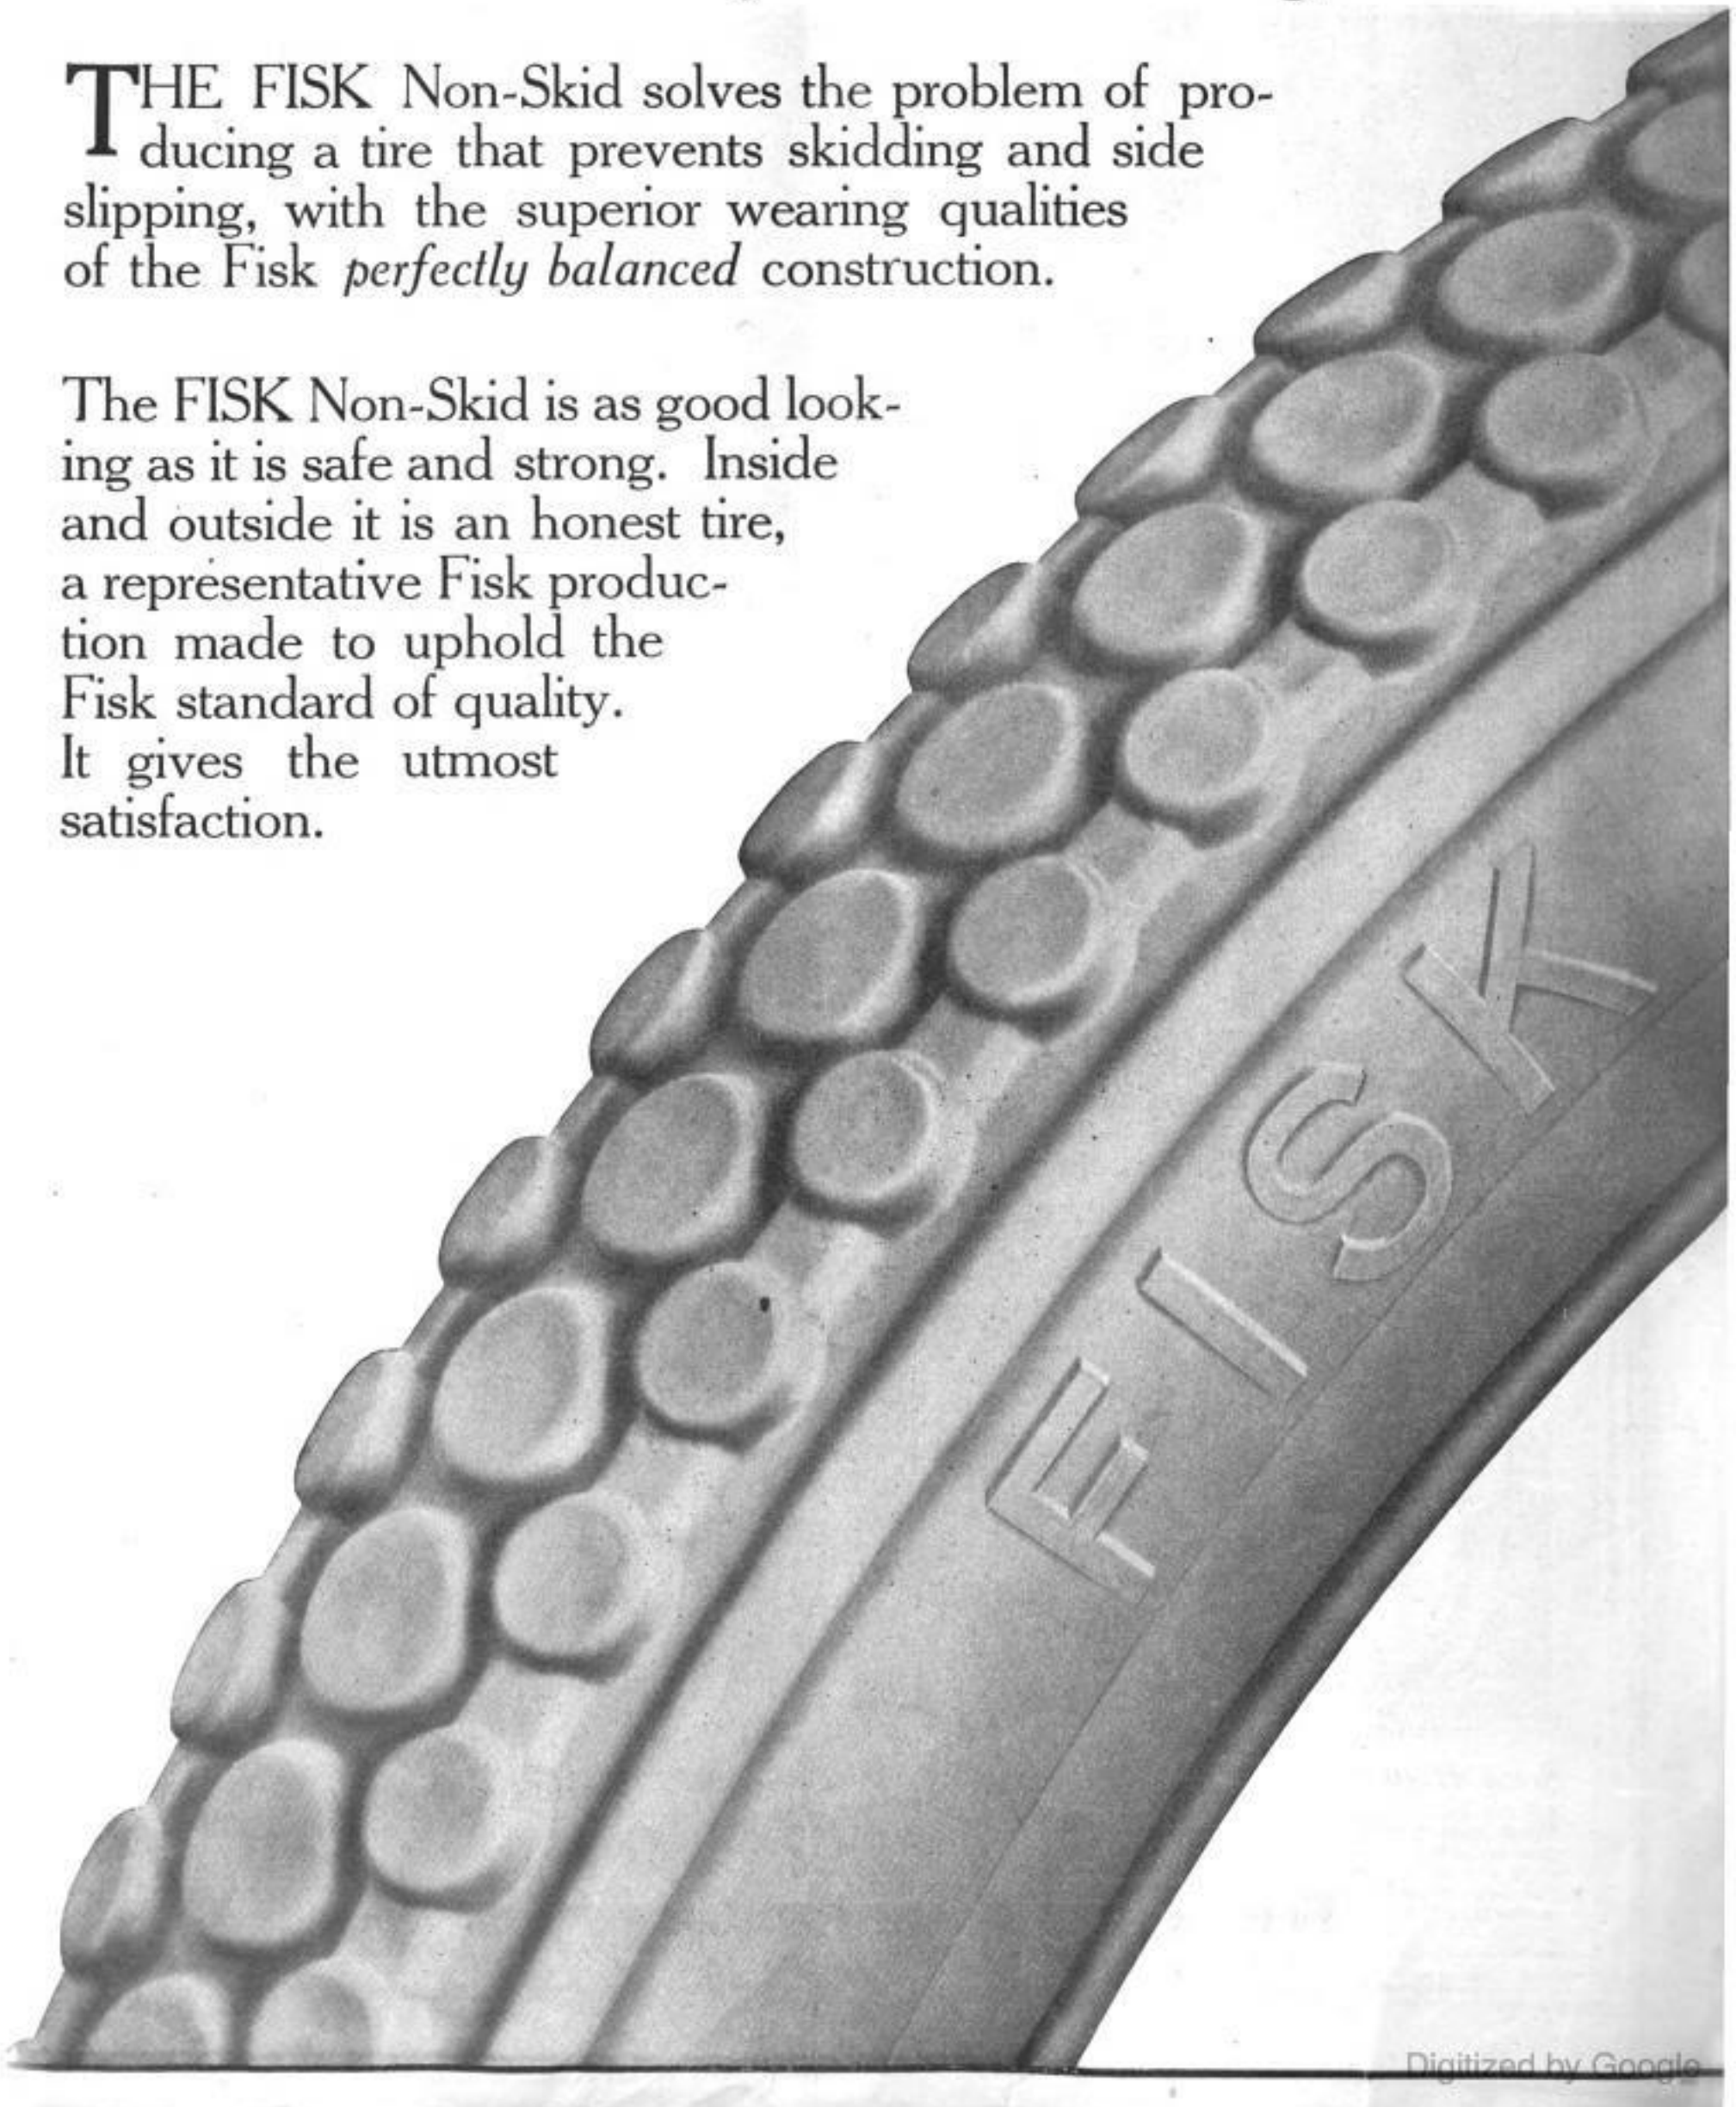
Opening the $10,000,000 Cape Cod Ship Canal

A DREAM two centuries old was realized the other day when the $10,000,000 Cape Cod Ship Canal was formally opened to traffic. August Belmont, chief owner of the canal, conducted the ceremonies, and a score of other distinguished men participated. The *Rose Standish* led the procession of steamers. The photograph above was snapped as she was starting on the trip. A torpedo boat destroyer, three revenue cutters and many private yachts followed in line. The canal connects Buzzards Bay with Cape Cod Bay and shortens the sailing distance between New York and Boston by seventy-four miles. The channel is thirteen miles long and varies in width from 100 to 250 feet. It will float craft drawing twenty feet of water. Thousands of vessels are expected to pass through it annually, thereby avoiding perils of the cape.

Some High Speed in Railroad Bridge Moving

IF the snapshot above were a motion-picture film, it would take only four minutes and fifty seconds to throw the story on a screen, for the incident lasted just that long. An old high steel bridge (center) on the Lehigh Valley Railroad near Buffalo, N. Y., was moved off the right of way in two minutes, and was replaced by a new 650-ton steel and concrete girder span in two minutes and fifty seconds. The new bridge, a single-span structure 100 feet long, was already fitted with ballasted tracks.

Pinchot Tries Something New on the Pennsylvanians



KEYSTONERS are becoming personally familiar with a brand of politics that is new in Pennsylvania State-wide campaigns. Gifford Pinchot, ex-Chief Forester of the United States and famous as a conservationist, is doing all in his power to overthrow the old boss system and make the number of bosses equal the number of voters. He is making a personal canvass in every county and conversing with about a thousand persons a day in an effort to get enough Progressive votes to defeat A. Mitchell Palmer, Democrat, and Boies Penrose, Republican, for United States Senator. In the photograph above Mr. Pinchot is seen chatting with coal miners in Mayfield.

This New Fisk Non-Skid Tire Is Built for Safety and Mileage

THE FISK Non-Skid solves the problem of producing a tire that prevents skidding and side slipping, with the superior wearing qualities of the Fisk *perfectly balanced* construction.

The FISK Non-Skid is as good looking as it is safe and strong. Inside and outside it is an honest tire, a representative Fisk production made to uphold the Fisk standard of quality. It gives the utmost satisfaction.

Digitized by Google

Enthusiasm And Quick Purchases Follow The Fisk Non-Skid Wherever Shown

TIRE USERS who adopted the Fisk Non-Skid when it was first introduced became enthusiastic over it. Car owners everywhere wanted this famous new tire that really prevented skidding and gave such remarkable mileage. As a result, the demand soon outgrew the supply.

We stopped advertising and began enlarging our plant. Now, at the end of two years, with trebled facilities, we are prepared to furnish real non-skid equipment to tire users everywhere. If you want a non-skid tread that is positive in action and an effective guard against loss of traction and side slipping, adopt the Fisk Non-Skid Tire now and use it *all the year 'round.* It's the handsomest tire that ever went on a car wheel.

REMEMBER, when you purchase Fisk Tires you not only get actual and heaping tire value, but you get the benefit of a Service which caters to your satisfaction, your comfort and your sense of fair play.

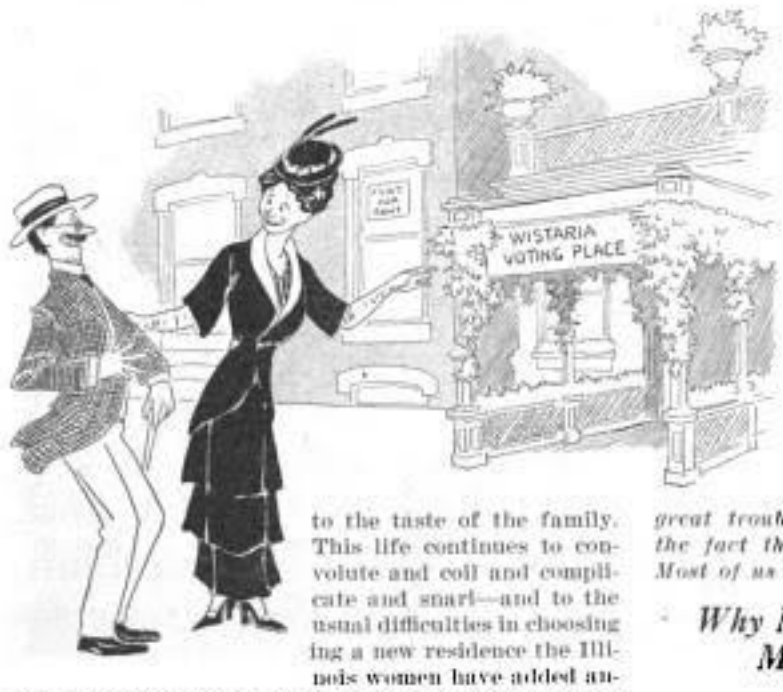
Sonnets on Most Anything

NIGHT'S EYES



Now comes soft summer when the stilly night
Hath lately gained ten thousand extra eyes.
Blinkless and restless, and of hideous size,
They roam the streets, a most appalling sight.
Pair after pair they bore, with shafts of light,
Deep tunnels through the tender, velvet dark
At whose far end rise sounds of rage and fright
From many a beach, half hidden in the park,
From many a porch where Cupid's rosy mark
Is far too brightly blazoned in the gleam.
Thus dazzling splendor drowns the timorous spark
And puts an awful crimp in love's young dream.
Ah, these sad times when night, mischievous elf,
No longer keeps her eyes unto herself!

Another Complication in Illinois Life

IN ILLINOIS husbands and wives now march to the polls arm in arm on election day. This has not only produced results that are perplexing and sometimes terrifying to the leaders of the various parties, but it has introduced some interesting complications in the great American pastime of house hunting.

Many of the Illinois women have been compelled thus far to vote in polling places which are dirty and disagreeably infested with unlaundered politics. They have had to push their way through drunken and fighting men, and have looked with envy upon their more fortunate sisters who live in precincts where polling places resemble a neighborhood party on election day.

As a result of this condition many Illinois women have already announced to their husbands that before the next election day they are going to move into some neighborhood whose polling place measures up to the taste of the family. This life continues to convolute and coil and complicate and snarl—and to the usual difficulties in choosing a new residence the Illinois women have added another. We may expect in the future to see the following very often on the want ad pages of the newspapers:

FOR RENT

Modern house, hot water, bath, hardwood floors, fine neighborhood, precinct polling place clean and respectable.

Hints for Our Worst Golfers

The Only Existing Department Conducted in Their Interest

TO AVOID lifting the off foot from the ground while driving, pound a croquet wire deep into the earth and stick the toe under it.

When playing out of woods, aim directly at the tree in front of you and bet your opponent that you can hit it.

It is best, when putting, to assume a position like a rheumatic camel and to go through the ceremony of aiming along the length of the club. This will not help your putting any, but it will scare your opponent half to death.

Answers to Correspondents

ADAMS, New York—*You have a perfect right to yell "Fore" at the party which is 250 yards ahead of you. It was guaranteed you by the Declaration of Independence.*

A. L. P., Detroit—*The difference between a good player and a bad player can be most easily reckoned by divots. A good player propels his ball 200 yards and his divot 10 yards, while a bad player drives his divot 100 yards and the ball 6 inches.*

DISCOURAGED, Los Angeles—*You stand too stiffly while driving. This is what causes your suspenders to break so often.*

C. R., Springfield, Ill.—*Your complaint that whenever you are pushing your expert friend on a hole he tells you to keep your eye fixed on the spot where your ball was when you hit it is a common grievance. He does that in order that you will lose your ball and also the hole. Keep your eye fixed on the most likely place to lose a ball and decline to take advice from him.*

What's the Use?

Since leaving the President's chair, Mr. Taft has lost sixty pounds. The great trouble with most of these fine new cures is the fact that they are out of reach of the masses. Most of us cannot even get into the President's chair.

Why Not Share This Old Master with Its Purchasers?

THE man who handed Philadelphia the traction system which for many years compelled its patrons to pay three cents extra whenever they changed cars has recently paid seven hundred thousand dollars for a single product of another old master.

This old master, however, produced paintings instead of public-service corporations.

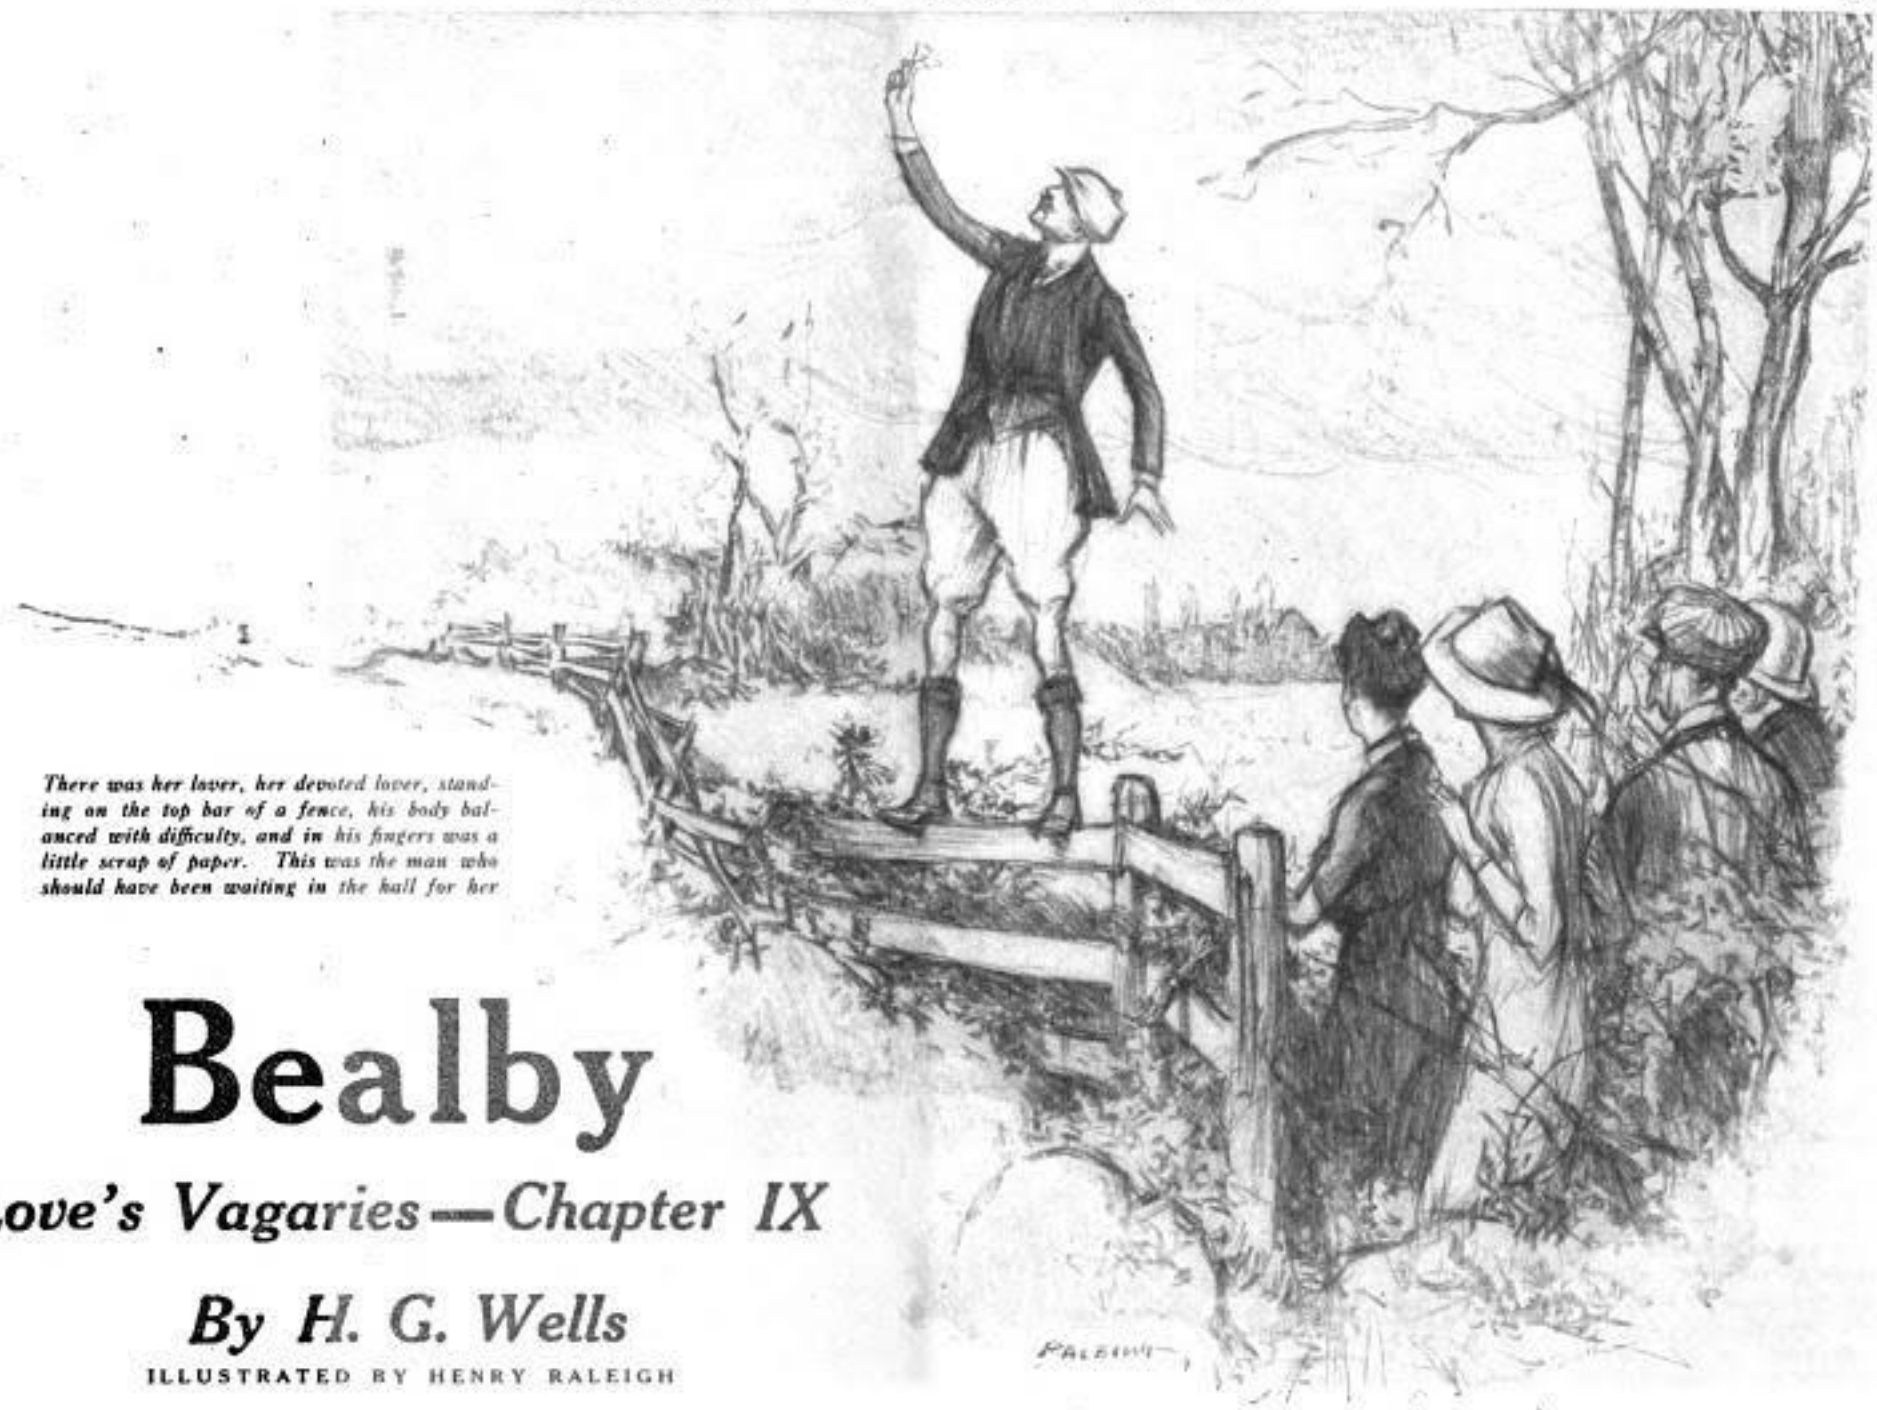
The great painting, which represents the price of fourteen million street-car tickets, probably will be brought to Philadelphia, and we suggest that, in order that the people who paid for it may enjoy their purchase, reproductions of the masterpiece be printed on the backs of all street-car transfers used in the City of Brotherly Love.

Why Not Use Modern Conditions in Our Novels?

WE DO not believe that modern novel writers are taking full advantage of the opportunities of the times. If there is a fault of modern romance literature, it is the fact that it is too conventional, sticking closely to the well-worn grooves and doddering peacefully along past the present equipped with blinders.

To be sure, adventures in love have been brought up to date and a trifle ahead, but even these adventures are cast in hopelessly archaic scenes. If a writer so much as gets a heroine into an aeroplane for a few short minutes, he sinks back exhausted and afraid—trembling for fear he will be condemned as sensational.

What we need is a modern novel—one which will portray the life of a citizen of to-day with a keen eye toward its possibilities. We would enjoy writing some such review as the following:



"'Up, Down, and Elsewhere from the Depths,' by O. N. Looker.—This novel, which not only grips the reader but refuses to release him except under heavy bail, tells in a quiet but convincing manner the life of Henry Haggard, who was born in New York with a full equipment of gold-plated tableware in his mouth. He had a beautiful mother and four fathers in quick succession, with the third of whom he became quite well acquainted. It was this father who brought Henry an aeroplane, four automobiles, and an English valet and sent him to a celebrated Eastern college where he served three months in jail for stealing a steam roller, and had just been elected president of the junior class when his mother died, thus cutting off Henry's supply of fathers and reducing him to $7,500 below abject poverty.

"Our hero, being thus compelled to start on life's race several yards back of the line, wasted no time. In another month we find him playing professional ball with the Giants. He toiled in this humble occupation until October, when, thanks to the fact that his team played in the World Series, he was able to write his views on each game for a syndicate for $1,000 a view. By Christmas he had accumulated enough to pay all of his debts and during the next year he purchased an orange ranch in California.

"At this period a great misfortune befell Henry. An uncle died and left him a railroad which had formerly been owned by a great financier. This swallowed up his little orange farm, and three years later, when the receivers had done their duty, he emerged with $3,000,000 of debts and a sack of peanuts which had been overlooked by the court. On the advice of an advertising man to whom he gave one of the peanuts, he borrowed $100,000 and began selling pure Alaska Goobers in airtight cartons, one-half of a sackful for 10 cents. In three years he was a multimillionaire and had served a term as Governor of Massachusetts. With this auspicious start. (*Concluded on page 31*)

There was her lover, her devoted lover, standing on the top bar of a fence, his body balanced with difficulty, and in his fingers was a little scrap of paper. This was the man who should have been waiting in the hall for her

Bealby

Love's Vagaries—Chapter IX

By H. G. Wells

ILLUSTRATED BY HENRY RALEIGH

WHEN at last he (Captain Douglas) rejoined the other three his hands were sandy red, his knees were sandy red, his feet were of clay, but his face was like the face of a little child—like the face of a little, fair child after it has been boiled red in its bath and then dusted over with white powder. His ears were the color of roses, Lancaster roses. And his eyes, too, had something of the angry wonder of a little child distressed. . . .

"I was afraid you'd slip into the pond," said the Professor.

"I didn't," said the Captain.

"?"

"I just got in to see how deep it was and cool my feet—I hate warm feet."

HE LOST that hole, but he felt a better golfer now; his anger, he thought, was warming him up so that he would presently begin to make strokes by instinct and do remarkable things unawares. After all there is something in the phrase "getting one's blood up." If only the Professor wouldn't dally so with his ball and let one's blood get down again. Tap!—the Professor's ball went soaring. Now for it. The Captain addressed himself to his task, altered his plans rather hastily, smote and topped the ball. The least one could expect was a sympathetic silence. But the Professor thought fit to improve the occasion.

"You'll never drive," said the Professor—"you'll never drive with that *irritable* jerk in the middle of the stroke. You might just as well smack the ball without raising your club. If you think—"

The Captain lost his self-control altogether.

"Look here," he said, "if *you* think that *I* care a single rap about how I hit the ball—if you think that I really want to win and do well at this beastly, silly, elderly, childish game—"

He paused on the verge of ungentlemanly language.

"If a thing's worth doing at all," said the Professor, after a pause for reflection, "it's worth doing well."

"Then it isn't worth doing at all. As this hole gives you the game—if you don't mind—"

The Captain's hot moods were so rapid that already he was acutely ashamed of himself.

"Oh, *certainly*, if you wish it," said the Professor.

WITH a gesture the Professor indicated the altered situation to the respectful caddies, and the two gentlemen turned their faces toward the hotel.

For a time they walked side by side in silence, the caddies following with hushed expressions.

"Splendid weather for the French maneuvers," said the Captain presently in an offhand tone—"that is to say, if they are getting this weather."

"At present there are a series of high-pressure systems over the whole of Europe north of the Alps," said the Professor. "It is as near set fair as Europe can be."

"Fine weather for tramps and wanderers," said the Captain after a further interval.

"There's a drawback to everything," said the Professor. "But it's very lovely weather."

THEY got back to the hotel about half past eleven and the Captain went and had an unpleasant time with one of the tires of his motor bicycle which had got down in the night. In replacing the tire he pinched the top of one of his fingers rather badly. Then he got the ordnance map of the district and sat at a green table in the open air in front of the hotel windows and speculated on the probable flight of Bealby. He had been last seen going south by east. That way lay the sea and all boy fugitives go naturally for the sea. He tried to throw himself into the fugitive's mind and work out just exactly the course Bealby *must* take to the sea. For a time he found this quite an absorbing occupation.

Bealby probably had no money or very little money. Therefore he would have to beg or steal. He wouldn't go to the workhouse because he wouldn't know about the workhouse, respectable poor people never know anything about the workhouse, and the chances were he would be both too honest and too timid to steal. He'd beg. He'd beg at front doors because of dogs and things and he'd probably go along a highroad. He'd be more likely to beg from houses than from passers-by because a door is at first glance less formidable than a pedestrian and more accustomed to being addressed. And he'd try isolated cottages rather than the village street doors; an isolated wayside cottage is so much more confidential. He'd ask for food—not money. All that seemed pretty sound.

NOW this road on the map—into it he was bound to fall and along it he would go begging. No other? . . . No.

In the fine weather he'd sleep out. And he'd go—ten, twelve, fourteen—thirteen, thirteen miles a day.

So now he ought to be about here. And to-night—here. To-morrow at the same pace—here.

But suppose he got a lift? . . .

He'd only get a slow lift if he got one at all. It wouldn't make much difference in the calculation. . . .

So if to-morrow one started and went on to these crossroads marked *Inn*, just about twenty-six miles it must be by the scale, and beat round it, one ought to get something in the way of tidings of Mr. Bealby. Was there any reason why Bealby shouldn't go on south by east and seaward? . . . None.

And now there remained nothing to do but to explain all this clearly to Madeleine. And why didn't she come down? Why didn't she come down?

But when one got Bealby, what would one do with him? Wring the truth out of him—half by threats and half by persuasion. Suppose after all he hadn't any connection with the upsetting of Lord Moggeridge? He had. Suppose he hadn't? He had. He had. He had.

And when one had the truth?

Whisk the boy right up to London and confront the Lord Chancellor with the facts. But suppose he wouldn't be confronted with the facts? He was a touchy old sinner. . . .

FOR a time Captain Douglas balked at this difficulty. Then suddenly there came into his head the tall figure, the long mustaches, of that kindly, popular figure, his adopted uncle, Lord Chickney. Suppose he took the boy straight to Uncle Chickney and told him the whole story. Even the Lord Chancellor would scarcely refuse ten minutes to General Lord Chickney.

The clearer the plans of Captain Douglas grew the more anxious he became to put them before Madeleine—clearly and convincingly. . . .

Because first he had to catch his boy. . . .

Presently, as Captain Douglas fretted at the continued eclipse of Madeleine, his thumb went into his waistcoat pocket and found a piece of paper. He drew it out and looked at it. It was a little piece of stiff note paper cut into the shape of a curved V, rather after the fashion of a soaring bird. It must have been there for months. He looked at it. His care-wrinkled brow relaxed. He glanced over his shoulder at the house and then held this little scrap high over his head and let go. It descended with a slanting flight, curving round to the left, and then came about and swept down to the ground to the right. . . . Now why did it go like that? As if it changed its mind. He tried it again. Same result. . . . Suppose the curvature of the wings was a little greater? Would it make a more acute or a less acute angle? He did not know. . . . Try it.

HE FELT in his pocket for a piece of paper, found Lady Laxton's letter, produced a stout pair of nail scissors in a sheath from a waistcoat pocket, selected a good clear sheet, and set himself to cut out his improved V. . . .

Digitized by Google

As he did so his eyes were on V number one on the ground. It would be interesting to see if this thing turned about to the left again. If, in fact, it would go on zigzagging. It ought, he felt, to do so. But to test that one ought to release it from some higher point so as to give it a longer flight. Stand on the chair? . . .

Not in front of the whole rotten hotel. And there was a beastly looking man in a green apron coming out of the house—the sort of man who looks at you. He might come up and watch; these fellows are equal to anything of that sort. Captain Douglas replaced his scissors and scraps in his pockets, leaned back with an affectation of boredom, got up, lit a cigarette—sort of thing the man in the green apron would think all right—and strolled off toward a clump of beech trees, beyond which were bushes and a depression. There, perhaps, one might be free from observation. Just try these things for a bit. That point about the angle was a curious one; it made one feel one's ignorance not to know that. . . .

THE ideal king has a careworn look, he rules, he has to do things, but the ideal queen is radiant happiness, tall and sweetly dignified, simply she has to be things. And when at last toward midday Queen Madeleine dispelled the clouds of the morning and came shining back into the world that waited outside her door, she was full of thankfulness for herself and for the empire that was given her. She knew she was a delicious and wonderful thing, she knew she was well done: her hands, the soft folds of her dress as she held it up, the sweep of her hair from her forehead pleased her; she lifted her chin, but not too high, for the almost unenvious homage in the eyes of the housemaid on the staircase. Her descent was well timed for the lunch gathering of the hotel guests; there was "*Ah!*—here she comes at last!" and there was her own particular court out upon the veranda before the entrance, Geedge and the Professor and Mrs. Bowles—and Mrs. Geedge coming across the lawn—and the lover?

She came on down and out into the sunshine. She betrayed no surprise. The others met her with flattering greetings that she returned smilingly. But the lover—

HE WAS not there! It was as if the curtain had gone up on almost empty stalls.

He ought to have been worked up and waiting tremendously. He ought to have spent the morning in writing a poem to her or in writing a delightful poetical love letter she could carry away and read, or in wandering alone and thinking about her. He ought to be feeling now like the end of a vigil. He ought to be standing now a little in the background and with that pleasant flush of his upon his face and that shy, subdued, reluctant look that was so infinitely more flattering than any boldness of admiration. And then she would go toward him, for she was a giving type, and hold out both hands to him, and he, as though he couldn't help it, in spite of all his British reserve, would take one and hesitate—which made it all the more marked—and kiss it. . . .

Instead of which he was just not there. . . .

No visible disappointment dashed her bravery. She knew that at the slightest flicker Judy and Mrs. Geedge would guess, and that anyhow the men would guess nothing. "I've rested," she said—"I've rested delightfully. What have you all been doing?"

JUDY told of great conversations: Mr. Geedge had been looking for trout in the stream; Mrs. Geedge, with a thin little smile, said she had been making a few notes and—she added the word with deliberation—"observations," and Professor Bowles said he had had a round of golf with the Captain. "And he lost?" asked Madeleine.

"He's careless in his drive and impatient at the greens," said the Professor modestly.

"And then?"

"He vanished," said the Professor, recognizing the true orientation of her interest.

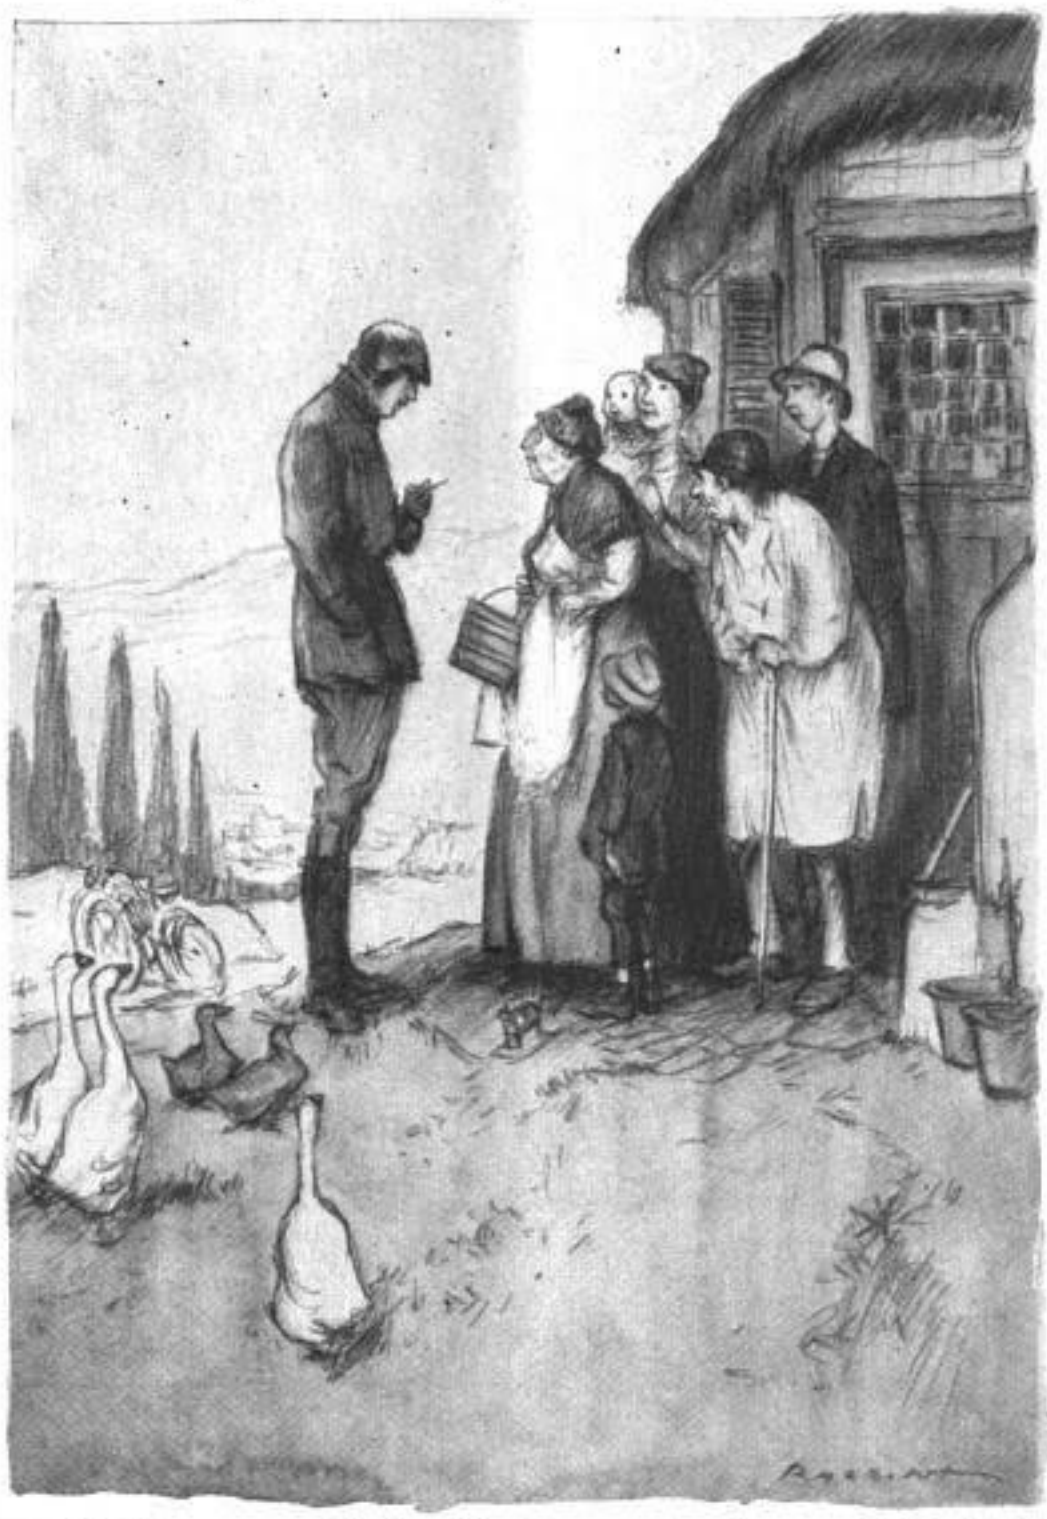
There was a little pause and Mrs. Geedge said: "You know—" and stopped short.

Interrogative looks focused upon her.

"It's so odd," she said. Curiosity increased.

"I suppose one ought not to say," said Mrs. Geedge, "and yet—why shouldn't one?"

"Exactly," said Professor Bowles, and everyone drew a little nearer to Mrs. Geedge.



"One can't help being amused," she said. "It was so—extraordinary."

"Is it about the Captain?" asked Madeleine.

"Yes. You see—he didn't see me."

"Is he—is he writing poetry?" Madeleine was much entertained and relieved at the thought. That would account for everything. The poor dear! He hadn't been able to find some rime!

BUT one gathered from the mysterious airs of Mrs. Geedge that he was not writing poetry. "You see," she said, "I was lying out there among the bushes, just jotting down a few little things—and he came by. And he went down into the hollow out of sight. . . . And what do you think he is doing? You'd never guess? He's been at it for twenty minutes." They didn't guess. "He's playing with little bits of paper—oh! like a kitten plays with dead leaves. He throws them up—and they flutter to the ground—and then he pounces on them."

"You haven't, I suppose, seen or heard anything during the last two days of a small boy—little chap of about thirteen—wandering about?"

"But—" said Madeleine. And then very brightly—"let's go and see!"

She was amazed. She couldn't understand. She hid it under a light playfulness that threatened to become distraught. Even when presently, after a very careful stalking of the dell under the guidance of Mrs. Geedge, with the others in support, she came in sight of him, she still found him incredible. There was her lover, her devoted lover, standing on the top bar of a fence, his legs wide apart and his body balanced with difficulty, and in his fingers, poised high, was a little scrap of paper. This was the man who should have been waiting in the hall with feverish anxiety. His fingers released the little model and down it went drifting. . . .

HE SEEMED to be thinking of nothing else in the world. She might never have been born! . . .

Some noise, some rustle, caught his ear. He turned his head (quickly, guiltily) and saw her and her companions. And then he crowned her astonishment. No love light leaped to his eyes; he uttered no cry of joy. Instead he clutched wildly at the air, shouted, "Oh, *damn!*" and came down with a complicated inelegance on all fours upon the ground.

He was angry with her—angry; she could see that he was extremely angry.

SO IT was that the incompatibilities of man and woman arose again in the just recovering love dream of Madeleine Philips. But now the discord was far more evident than it had been at the first breach.

Suddenly her dear lover, her flatterer, her worshiper had become a strange, averted man. He scrabbled up two of his paper scraps before he came toward her, still with no love light in his eyes. He kissed her hand as if it was a matter of course, and said, almost immediately: "I've been hoping for you all the endless morning. I've had to amuse myself as best I can."

His tone was resentful. He spoke as if he had a claim upon her—upon her attentions. As if it wasn't entirely upon his side that obligations lay.

She resolved that shouldn't deter her from being charming.

And all through the lunch she was as charming as she could be, and under such treatment that rebellious, ruffled quality vanished from his manner—vanished so completely that she could wonder if it had really been evident at any time. The alert servitor returned.

She was only too pleased to forget the disappointment of her descent and forgive him, and it was with a puzzled incredulity that she presently saw his "difficult" expression returning. It was an odd little knitting of the brows, a faint absent-mindedness, a filming of the brightness of his worship. He was just perceptibly indifferent to the charmed and charming things he was saying.

IT SEEMED best to her to open the question herself. "Is there something on your mind, Dot?" "Dot" was his old school nickname. "Well, no—not exactly on my mind. But— It's a bother, of course. There's that confounded boy . . ."

"Were you trying some sort of divination about him? With those pieces of paper?"

"No. That was different. That was—just something else. But you see that boy— Probably clear up the whole of the Moggeridge bother—and you know it *is* a bother. Might turn out beastly awkward . . ."

It was extraordinarily difficult to express. He wanted so much to stay with her and he wanted so much to go.

But all reason, all that was expressible, all that found vent in words and definite suggestions was on the side of an immediate pursuit of Bealby. So that it seemed to her he wanted and intended to go much more definitely than he actually did.

That divergence of purpose flawed a beautiful afternoon, cast chill shadows of silences over their talk, arrested endearments. She was irritated. About six o'clock she urged him to go; she did not mind, anyhow she had things to see to, letters to write, and she left him with an effect of leaving him forever. He went and overhauled his motor bicycle thoroughly, and then an aching dread of separation from her arrested him.

DINNER, the late June sunset, and the moon seemed to bring them together again. Almost harmoniously he was able to suggest that he should get up very early the next morning, pursue and capture Bealby and return for lunch.

"You'd get up at dawn!" she cried. "But how perfectly Splendid the midsummer dawn must be."

Then she had an inspiration. "Dot!" she cried, "I will get up at dawn also and come with you. . . . Yes, but as you say he cannot be more than thirteen miles away, we'd catch him warm in his little bed somewhere. And the freshness! The dewy freshness!"

And she laughed her beautiful laugh and said it would be "Such *Fun!*" entering, as she supposed, into his secret desires and making the most perfect of reconciliations. They were to have tea first, which she would prepare

Romance and Radishes

By C. J. Manning

OUT Sioux City way—there is only one Sioux City in the world and it is in Iowa—they have a story entitled "Romance in Radishes," which is being told to every likely looking young chap who comes to commercial organizations for advice as to business openings.

"Romance in Radishes" has onion, lettuce, cucumber, and cauliflower chapters, and a moral that takes one back to Mother Earth, rather than to the end of a rainbow, in the search for the pot of gold.

Now you can't have a romance without a hero; you can't have a romance without a heroine. In the case of the radish romance, one Peter Reard, an upstanding, double-fisted gardener, is the hero. Mother Earth is the heroine. How Peter Reard wooed and won Mother Earth with her dowry of $250,000 is the pith of the romance in radishes.

When an editor in COLLIER'S WEEKLY recently gave printed sanction to the thought that a penniless man could drop off a freight train at most any station in the Middle West and within five years could own a farm, he must have created mentally just such a man as Peter Reard. While it may have occurred to many to dispute the claim of the editorial in real life, Peter Reard sustains the burden of the writer's theory—in fact, actualizes the theory.

"I've got to stay with my radishes and onions"

Mr. Reard came to Sioux City from Denver a penniless young man. That was twenty-nine years ago. Within five years he owned an 80-acre farm, three town houses, and had a neat bank balance. To-day Mr. Reard is known as the "Millionaire Gardener." He has farm land covering an area of 480 acres and owns fifty-seven houses and two store buildings. His fortune grew in a garden in radish, onion, and cucumber form because Mr. Reard's wooing of the earth was ardent.

When Mr. Reard came to Sioux City from Denver he was given employment in a small grocery at the modest wage of $5 a week. He was then comparatively unacquainted with American or American customs, having been in this country but a few months. Of German extraction, he took a natural interest in the garden wares that were being handed over the counter. One day, when a small bunch of radishes brought what looked to the young German like an outrageous price, he ejaculated to his employer: "Es gibt Geld!"

"Come again, Pete," or something equally elegant was the response elicited from the grocer.

Capital—$25

YOUNG Reard, in broken English, explained that the radishes had inspired him to do garden work, because there was money in the business. So Reard worked on for a few weeks and accumulated $25, with which he bought what approximated a horse. His employer, a kindly man, donated a broken-down wagon. Reard drove out into the country, sighted a likely looking strip of land, found the owner, and rented 7 acres at a cost of $117. The owner agreed to wait for the rent until the end of the garden season.

A small shack was built of lumber collected in trips about town in the dilapidated wagon. Grocery boxes were patched together into house form. Reard began his garden career. All about him were evidences of waste of land and natural resources. The thrifty young German, born to intensified farming, was shocked at the waste. He had 7 precious acres out of 180 acres that ran to weeds. What would he do with his holdings? He early resolved that even path edges would be made to bear their share of profit. So radish, onion, beet, cucumber, and lettuce seed began to fly. Not an inch of space was left for weeds, not a minute's time in a working day of twenty hours was lost. There were countless mouths to be fed in the city, and fortune lay with the man who held the spoon.

Just at this period Sioux City was feeling the effects of a boom, that grew and grew in size until enthusiastic boosters set up a claim that the Missouri River metropolis would soon rank with Chicago in population and commercial importance. The forty bankers of Boston were beginning to unload golden treasure in the town. An elevated railway system, the third to get under way in the world, was under construction. Vast factory and residence districts were being laid out. Foundations for the largest stove and starch works in the world had been laid. Eastern men of wealth were frequent visitors and banquets were numerous. Money was coming rapidly and was being spent with abandon. Peter Reard set out to capture the boom banquet trade.

Toil and Its Fruits

THE game was worth the candle. While the frenzied-finance coteries were eating $125 worth of Reard vegetables each day, and were spending fortunes that were just over the hill, the young German gardener was "salting" his earnings and waiting for an opening. Stores in this period kept open from four o'clock in the morning until one o'clock the next morning. Peter Reard opened and closed the stores. He was waiting with a wagonload of produce at each end of the store day, and he got his sleep riding to and from market. Between sales he was busy fighting weeds.

Town boomers laughed at the plodding gardener. Everyone was buying and selling real estate and making fortunes in a night. But Reard continued to nurture the radish and the onion on rented ground, and then, after a period of three hard years, with no amusement intervals, no pauses to complain of his adopted course of action, he took a little flyer in real estate, purchasing 80 acres of ground.

The Plodder's Triumph

EVERYONE was going into debt. Reard did the same thing. He mortgaged his holdings to the extent of $7,000, used the $6,000 he had made in the first three years of gardening for greenhouses, hotbeds, and farm machinery, and then began to hire men to help him. The first year he made enough to pay off the debt on his farm, but he did not call in the mortgage because the lure of the boom had attracted him. He purchased two houses in the suburb of Greenville. The second year he added to his field forces, doubled his earnings, and bought more houses. The third year he removed the farm mortgage, bought other houses, and added to his acreage. In six years he had gained property worth nearly $60,000! The writer who penned the article in COLLIER'S was not wrong!

When the Sioux City bubble suffered a financial pin prick in 1893, and fortunes came tumbling down, Reard was in a position to buy land and houses, and he bought. His acres grew in fertility under a watchful eye. He continued his program of twenty to twenty-two hours' work. People had to eat whether they had lost a million overnight or not. So they paid Reard and ceased laughing at the plodder.

"Health and Wealth in the Land"

IN the heart of his family Mr. Reard is as much the sovereign as is William of the fatherland. Mr. Reard has eight children, ranging in age from four years to twenty-six years, and all know that his word is law. From their father they have learned the lesson of toil and the reward of service. Four of the group are girls. They give service in the household, in the field, and on the produce-laden wagons that ply back and forth between the main farm and the city. Two of the boys are foremen and help in management. During all the years Mrs. Reard has helped in the business of producing crops. It has been Mr. Reard's theory that a family united in its effort to wrest wealth from radishes and restaurants can more quickly attain the golden goal—there are no middlemen to abscond with the consumer's cash because the family is a close corporation.

A short time ago a boom-time millionaire, now in straitened circumstances, met Reard on the street and chided him for not retiring. "They call you the millionaire gardener; now why not sell out and live on the interest of your money? Why not take things easy, Mr. Reard?"

"You had your pot of gold, but didn't retire. The garden game holds me, and it's a healthier mania than selling additions in boom time," Reard answered.

"I wouldn't retire for all the money in the world. I've worked hard all my life. Retirement would kill me in two weeks. I've got to stay with my radishes and onions, or I'd lose my mind. I've never been to an all-day picnic in my life. Once I took a half day off and went to Riverside Park. Was I amused? No. I was anxious about the garden and my 40 men. I've slept on the wagon during boom and panic times. I've worked too hard to relish banking hours. I'm fifty-three years old, as hard as a nail, and there's eighteen hours' work in my system for every day I live. I'm up at four-thirty in the morning. I work until eight, nine, or ten o'clock at night. I sleep well. I eat three big meals a day. I'm happy.

Others Can Do It if They Will

"THE boys that made millions in the boom and lost them in the panic are dyspeptic, broken men. They spend their time wastefully. There's health and wealth in the land, and I'm going to stay with it. I can pitch as much hay as any of my men. I can paint houses faster and as well as any man that ever held a union card. If I tire of farm work I spend my time collecting rent and repairing my 57 houses. Some people say I am crazy to keep pounding away at my gardens. I may be, but I know where my interest lies and where I am best suited to be. What I have accomplished in the way of amassing a fortune others can do if they work hard, pass up liquor and tobacco, and tie to the garden or the farm."

A TIP TO THE "KNIGHTS OF THE GRIP"

What is it makes us cheerful in the midst of ups an' downs,
An' helps to pass the hours on slow trains an' in slow towns,
Adds savor to a story, an' charms away the frowns?
It's a cool, contentful, mellow VELVET smoke.

Thar's a fren'ly sorter somethin' in ev'ry VELVET tin,
Thet kinder melts away the ice, an' of'en helps you win
A record breakin' order an' a "Drop aroun' agin,
An' we'll have another fren'ly VELVET smoke."

Velvet Joe

YOU have customers that you can't impress with a big cigar. But ask them to smoke VELVET with you—well, that's different.

It's the same difference between taking a man to dinner at a hotel, and taking him home to supper with your family. There's nothing like potluck or pipe smoking to make a man feel downright friendly towards you—glad to do you a good turn or give you an order.

Next time you size up a prospect as a pipe smoker, try this:

"You don't mind if I light up my pipe, do you? And won't *you* dip into my VELVET, yourself?"

He will like VELVET for its fragrance, and its full flavor. He will enjoy the mellow friendliness of VELVET, The Smoothest Smoking Tobacco, Kentucky's *Burley de Luxe*, with the aged-in-the-wood smoothness.

Elgin Wonder Tales

"Wear an Elgin —or be shot!"

LORD ELGIN

NOTICE

"Every conductor or engineer found without an Elgin watch, from 17 to 23 jewels, such as the railroad inspection demands, will be shot for the penalty of hiding valuables."

Liberty and Equality, Plan of Ayala, issued in Salazar, State of Mexico, on the 25th day of October, 1913.

(Signed) EMILIANO ZAPATA

(By the colonel of the Front Regiment)

JOSE LIMON

SOME time ago the Zapatistas of Mexico took Salazar, the junction on the Pacific division of the National Railroad where the Toluca branch joins. All railroad men were robbed, and the station and cars were burned. Several of the railroad men were carrying "cheap" watches, as such hold-ups had been frequent. Upon leaving, the Zapatistas posted the above notice.

A severe ultimatum—conclusive evidence that the leaders of insurrection-torn Mexico know the watch which serves best in war and in peace. And it is evidence of the world-wide renown and use of

Initiations at Lockport

(*Concluded from page 8*)

exactly like a girl's nightgown with a queer kind of a hood," she giggled.

"It's a pattern," chuckled Harry, "I swiped it from O'Bear's office last night while he was showing me the lodge organizers' paraphernalia, and I want you to make eleven more like it. Can you?"

RUTH nodded comprehendingly. "But Harry," she asked, growing grave all at once, "is it just right to help those stuck-up county-seat folks to make fun of Lockport?"

"Don't worry about that," Harry reassured her, "for when I'm done with Jim O'Bear—" he leaned over the fence and told her the whole plot in low, hilarious tones. At the conclusion Ruth caught up the package and ran laughing to the house.

"Remember—eleven of them," he called after her and turned back across the street chuckling to himself.

Squire Buck made his advance on Baum's shop with commendable circumspection. Harry was hard at work over the anvil when the Squire showed himself timidly in the doorway.

"Good morning, Squire," Harry greeted his visitor cordially. "A fine day, but hot," he advanced with friendly communicativeness meant to bridge a coolness that had lasted months.

"Good morning, Harry," the Squire returned in a voice he strove to make convey boundless good feeling. "Yes, a fine day," he concurred quickly, pausing to give his perspiring countenance a vigorous grooming with his bandanna, "but hot."

"Come in out of the sun and have a seat," Harry said hospitably, jerking his thumb toward a stool in the rear of the shop. "I'm all right," the Squire assured him apprehensively. "I'm cooler than I look. How's business?" he added courageously.

"Good," the younger man replied with enthusiasm. "I've got all I can break off, and I've got an extra man coming Monday week. There's going to be a big jump in the business this fall, too, with the new Interurban going through the south end of the county," he concluded confidentially.

"I'm glad you're doing well. You've got a sight of business 'bout you, Harry—you have," he flattered.

"It makes me feel good all over to hear you say so," Harry answered gratefully. "If anybody else but you would come around here talking like that, I'd think they wanted a favor."

"Us Knights of Sahary has got to stick up for one another if we expects to nominate a trustee next fall," the Squire said loyally.

"The Knights nominate anybody, let alone elect a man!" Harry smiled incredulously. "I wish I could tell a joke like you can, Squire," he said downright enviously. The old man flushed a bright, brick red, but he had the presence of mind to bridle his rising ire. "You don't 'pear to think much of the new lodge?" he began a trifle stiffly.

"I don't that," Harry said quietly. The Squire shook his head hopelessly. "Youthful ignorance," he smiled sadly.

"The Knights," Harry went on frankly, "are a humbug from the ground up. I've been looking high and low for a chance to tell you so, and now I got it, let me warn you. Joining them Knights is bound to cost you good money, no end of trouble and make folks laugh at you into the bargain. If I ain't mistook, the whole blamed thing was fixed up between two certain parties just to make a goose out of you."

"You're knocking a noble institution," the other said warmly.

"I don't think so," Harry said fairly, "for my conscience wouldn't let me sleep nights till I got a holt of Abe's list of names and talked to every man on the list. Five dollars a piece is too much money for poor men to throw away on a rotten fake," he concluded earnestly—"this town's always run to lodges too much."

"Much obliged for the warning, Harry, same as if I was risking something," the Squire said sarcastically, "but I ain't," he crowed.

"Ain't you joining?" Harry asked quickly, voicing a keen disappointment that should have aroused the self-centered old man's active suspicion.

"Of course," the Squire yawned languidly, "but as a leadin' citizen it ain't going to tax me a cent. A certain business man, who is head and tail of all big doings in Lockport pays my 'nitiation fees." Harry thrust a bit of piecework into the forge and grasped the bellows handle. "Well, I guess there ain't much use in warning a man against a thing when he's going into it feeling like you do," he said with philosophical resignation. "It's like shoeing a mule," he observed abstractedly, "the better you treat him the worse he kicks."

"What do you mean," snarled the Squire, backing through the door to safety, "by—by calling me a mule?"

"I didn't aim to," Harry objected in surprise.

"You did, too—just now," insisted the other.

"It wasn't intentional," Harry said regretfully.

"You hinted I was like one," fumed the Squire.

"It's your own fault," Harry said meekly. "It was you that thought it first."

"There!" charged the elated old man, "you said I was like one."

"What if I did," the other admitted innocently, "while you ain't got four legs, long ears, nor a tail, nobody would miss them."

The Squire opened his mouth to a stinging retort, but closed it again rather blankly, when he suddenly remembered Harry would have a vote, whether he belonged to the Knights or not. "You've got a tongue like a hoof rasp," he complained facetiously. "I see the joke. Ha! ha!" laughed the Squire, "you're a good one," he finished jocosely and turned away. "Squire Buck!" Harry called after him. The Squire faced about. "Can I marry Ruth?" Harry asked respectfully. It was the old man's moment of grace, but he did not know it. Shaking with wrath he felt blindly for the building at his side. "*No!*" he shouted at the top of his lungs. "She's going to marry Abe Day the day after 'lection in the township trustee's office."

THE corners of Harry's mouth twitched as he joined twelve brother conspirators at the rear of the shop: they had been waiting impatiently for his visitor to depart.

"Look here, fellows," Harry began seriously, "this is ticklish work, queering the Knights and fixing O'Bear's crowd so they can't go away laughing at Lockport for a nut town. Well, that's what we've got to do. Understand?" The young fellows grinned and nodded. "Then let's get down to business," Harry advised. With much talk and a great deal of laughter the last detail of the big plot was arranged satisfactorily.

"I took the goods over to Ruth's a while ago," Harry said as his visitors arose to go. "She's promised to have them done by five this evening. Be sure to meet me in front of Abe's store by seven-thirty," he concluded.

COLLIER'S, The National Weekly, has approximately 2,500,000 readers. It is a vehicle for contemporaneous thought on political and social subjects, and it addresses the most intelligent large audience in the world. There is no other publication with an influence comparable to that of COLLIER'S, an influence gained by sincerity and singleness of purpose.—Bakersfield (Cal.) *News.*

"Putting One Over"

(Continued from page 11)

do not care to live!" Exit him. Wife turns to fireplace. Business of lookin' thoughtfully into the flames. A dramatic pause, mister, and then a muffled pistol shot off stage. Enter the English butler.

"Great 'eavens, madam!" he yells. Then the leadin' lady is supposed to let out a awful screech and then yell and talk hysterical for about five minutes, after which the curtain is mercifully pulled down over her sufferin's. You see, the guy that wrote this wasn't no ordinary playwriter. He was a drammertist, mister, and he wanted to make the audience think. See the cunnin' idea back of it all? They go home tryin' to dope out whether the guy reely shot hisself, or some careless sceneshifter out in the wings dropped a brick! It's what they call a emotional climax, with a suggested endin'.

Anyway, that was the frame-up. The fatal words had been spoke, the villain and the second Mr. Tankerplay had beat it off the stage, and Cynthia, alone on the stage, was doin' the fire-gazin' act.

The shot rung out. The butler come tearin' in. "Great 'eavens, madam!" he yells. And then, mister, it happened.

Cynthia turned—kinda startled like—and a awful look come over her face. For a couple of seconds she stood there swayin', and then—flopped! Yep! Keeled over. Fainted dead away!

MISTER, the look on that there English butler's face wasn't actin'. Neither was the yell he give. 'Course, they rung down the curtain—and I just sat back and waited. I know I ought to run to Cynthia; but, mister, I couldn't move! Just one look I got of the boss—he was still chewin' the end of the cigar. And grinnin'! But, holy gee! it was a awful kind of a grin—like his face was froze in it. There was turrible silence everywhere. I'll bet you could heard a pin drop out in front. How long it reely lasted I dunno know; but it seemed like a age. And then it broke!

Mister, did you ever hear what the

The Extra Guarantee

Extra Experience
Extra Value
Extra Security
Extra Organization

INTO the crucible go the ideas of many men—of many firms—many great manufacturing centers—many countries. They melt and blend, and from their fusion comes a motor free of the dross of inexperience, of guesswork, of freakishness,—comes a fusion, clean, refined—a Continental Motor.

Continental Motors

Over one-hundred firms—American and European—use the Continental Motor in some of its several models. Weigh the importance, the significance, of their combined OKay! Judge the soundness of design that passes more than a hundred censorships; of the sureness of construction that five-score companies link their reputations with!

All the ideas of these skilled manufacturers are gathered. All that the leading engineers of two continents devise. Into the melting pot they go—ideas American, English, French, Italian, German—ideas of firms large and small, Continental ideas—all!

And from it comes a Continental Motor.

No motor ever designed has had so broad a foundation in experience. Has had so many years of success behind it. Has drawn so to itself the finest flower of the automobile industry since its very beginning.

This is the *extra* guarantee of experience that is back of every Continental Motor. Demand it in the car or truck you buy.

Service First

GAS companies were among the first public servants to adopt as their guide the idea of *Service.*

¶ They recognize that the same principles apply to the sale of Gas as apply to the sale of any other commodity; that it is to their own advantage to supply Gas of the best quality and at the lowest possible price.

¶ They early realized that their best asset is a satisfied customer, because satisfaction to the public means more Gas used, and more Gas used means greater satisfaction to the public.

¶ Upon these principles the National Commercial Gas Association was formed. The objects of the Association are to perfect Gas service; to bring your Gas company into closer touch with *You;* to tell you of the many valuable and attractive qualities of Gas, of its efficiency and economy; to see to it that Gas appliances placed on sale for you to buy are the best and most satisfactory in every way.

¶ Each year the use of Gas increases. Each year the quality of *Service* improves. Each year the public better understands that its Gas company is composed of business men—merchants—whose success depends upon honest, modern business methods, who desire to serve and who ask, in all good faith, the hearty coöperation of the public in their endeavors.

¶ A thriving Gas Company is evidence of a thriving community—both prosper through coöperation and an intelligent use of Gas.

¶ In order to bring the varied uses of Gas clearly before you we have prepared some interesting booklets.

¶ *For Manufacturers,* "A Thousand Uses for Gas." It lists the efficient and economical uses for Gas in over 60 industries.

¶ *For Every Mature Person,* "The Hygienic Value of Gas." It explains the hygienic effect of Gas lighting and dispels many fallacies that have heretofore passed unchallenged.

¶ These booklets will be sent *Free* upon request. Write at once.

It's Waiting for You "The Story of Nancy Gay" Free. Send for it

Nancy says: "Do you remember how charmingly our house was lighted at my wedding and how cool and well ventilated it was? Well, that was due to a happy thought of mine, and the wonderful service we get from the Gas Company. Just the day before, I realized that we were only equipped with old fashioned burners, except for our reading lamps, so I telephoned the Gas Company and they promptly sent a man out and he changed them all to those wonderful new inverted incandescent lamps in almost no time and without interfering in any way with all the other preparations that were going on. You may be sure we will never live where we can't get Gas Company service. We know how good it is."

National Commercial Gas Association

29 West 39th Street, New York City

papers call salvos of applause? Well, salvos wasn't in it with the noise that broke loose in that there audience! I run to the curtain peephole and there, out in the parquet of a two-dollar house, them books was on their feet—cheerin' like it was the end of the lucky seventh up at the Polo Grounds! Eh? Sure, mister, you got the idea! Thought the realistic plot was part of the show! Can you beat that for luck?

WHILE they were still hollerin', Cynthia come out of her faint, just as the boss come out of his grinnin' trance. Yep! It was him that dragged her out in front of the curtain. And after that—well, the papers, next day, said that "pandemonium reigned." I dunno what that means, mister; but if it's noise, it sure did reign. And while it reigned, there was only one sore guy in the house. He was a little runt that was sittin' in one of the lower right-hand boxes; but he was also that certain big playwritin' guy I told you about—the drammertist, mister, that had wrote the show. And he loved that last, spoiled speech like it was a only chee—ild!

Oh, hully gee! I dunno what reely done it. First, I thought mebbe Bruce MacRea had busted some of her ribs in the clinch act. Afterward they told me it was the turrible strain on her nerves. But if it was the turrible strain on nerves, why didn't I faint too? And why didn't the boss go dippy? I guess the answer is, that Cynthia was a woman; and with wimmin you never can tell what'll happen. But the wise ones never knew. You should read the papers next day! It was killin'. They told all about the awful look that come over her face, and how she turned white under the paint, and said it was the most realistic thing they'd seen pulled off in ten years.

SO it wasn't queer, mister, that when Broadway lit up next night there was a new electric light sign—and Cynthia was star. They cut out the hysteric speech and, in its place, Cynthia had to do the flop regular—every night and at two matinées during the year's run.

The leadin' lady? Oh, hully gee! she got canned. You don't suppose they'd stood for her after what the critics said about Cynthia, do you? Yep, it cost the boss a lawsuit to do it; but they canned her. Tough? Well, sure it was tough; but then this whole theatrical game is a tough proposition, and the stage ain't no place for cripples.

Cynthia's dad? Did he go West? What—with Cynthia pullin' down a percentage of the gate receipts? Yep, he went! And did he get better? Oh, hully gee! mister, you're provokin'! You're goin' to write this up, ain't you? Well, you take a tip from me, mister; take it from me, the happy endin's the stunt.

THEY figured it out that "Cynthia" wasn't the right one of her names for art and ads, but the rest of them is the ones you know so well on them three-foot electrics over the door this minute; and her dad's figurin' on playin' Hamlet in his own production—no harm in figurin'; so don't be a drammertist; give them the happy endin' belongin' to the fact that Cynthia sure put one over.

Yachtsman—*And, by Jove! we hadn't been out ten minutes before a squall struck us and over we went.*
Landlubber—*Can't you talk about something pleasant? Are you fond of gardening?*

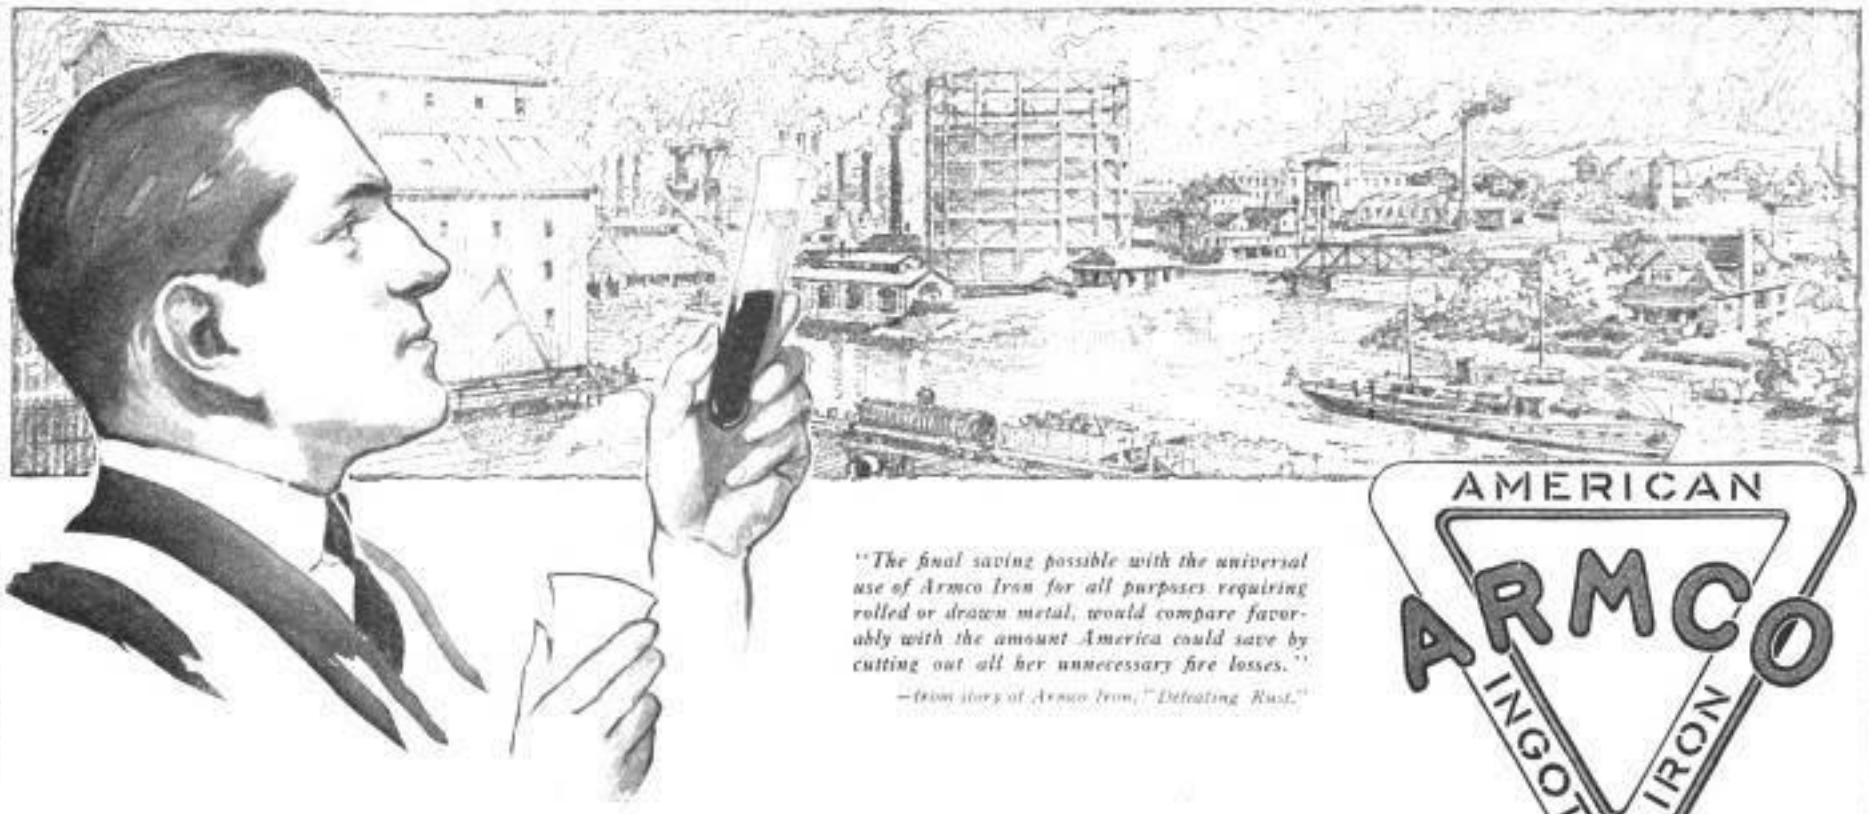
How Is Business?

(Continued from page 6)

a greater factor than the vital statistics upon which we have been accustomed to rely. Gradually the public mind will turn away from Washington and legislation to the immense crops which are now being harvested. They can only mean a wide prosperity.

"An ill wind often blows good, and the business recession through which we have been passing is no exception. In prosperous times merchants are tempted to dabble in many lines of merchandise, and this inevitably results in overstocking. Now their buying is much more concentrated and effective."

Not all Chicago men, however, share in this opinion about the crops. A very eminent lawyer whose business interests run into the many millions made this very epigrammatic observation on the subject: "The effect of the big crops on business will be like a cocktail on an empty stomach. They will exhilarate for a moment and then will come a profound reaction."



But for one pessimistic comment about the crops there are a hundred rosy ones. A leading Chicago wholesale hardware merchant said: "The depression of the summer has been due to lack of confidence on the part of capital. Much money went into hiding to await developments. Whatever apprehension was felt, however, has been set at rest by the bumper crops. The next move is the distribution of products and money, so that prosperity will be brought to every individual.

"The very moving of the crops will help to swing the tide of business. Such movement means action to the railroads and an increase of earnings for them, and this in turn has a distinct effect on the general situation."

There is a great variety of opinion among Chicago bankers. You discover the president of one of its greatest trust companies saying: "Our trouble has been economic, not political. The United States has been taking a breathing spell: we are cleaning house in credits and when we emerge all finance will be more stable than it has been in years."

Yet his colleague just around the corner, head of one of the strongest financial institutions in the country, told me that the source of all our business ills lay in the fact that political econo-

"The final saving possible with the universal use of Armco Iron for all purposes requiring rolled or drawn metal, would compare favorably with the amount America could save by cutting out all her unnecessary fire losses."

—from story of Armco Iron, "Defeating Rust."

AMERICAN ARMCO INGOT IRON

The trademark **ARMCO** carries the assurance that iron bearing that mark is manufactured by The American Rolling Mill Co. with the skill, intelligence and fidelity associated with its products, and, hence, can be depended upon to possess in the highest degree the merit claimed for it. It has behind it the guarantee of that company concerning the purity of the iron and the accuracy and thoroughness with which each step in its manufacture has been conducted.

ARMCO Iron Resists Rust

Our chemists save millions for the public

OVER one hundred million dollars' worth of sheet metal is made each year in this country. Most of it disappears shortly on account of rust. This is due to the fact that most sheet metal of the present day contains impurities such as carbon, manganese, silicon, copper, sulphur; therefore it cannot help rusting when exposed to air, moisture or corrosive gases.

Our chemists are saving millions of dollars for the public as a result of the discovery of two things: first, government experts proved that the rapid corrosion of steel was caused by the presence of impurities, especially manganese; second, we found the way to make pure iron. Either of these discoveries ranks as one of the greatest achievements in metallurgy.

Pure Rust-Resisting Iron Will Save Millions

Let us illustrate this saving of millions, literally. In a decade, most of the impure sheet metal made in 1914 and used in exposed situations will have been destroyed by rust. The sheet steel made in 1904 has mostly rusted away. There you have a complete, annual loss of nearly one hundred million dollars.

As soon as the public realizes and accepts the great truth that pure iron is a resistant to rust, there will of course be little sheet metal used except pure iron. When that time comes, this terrific waste of millions of dollars will be wiped out.

These are big figures, big claims—but they are true. Perhaps little figures will mean more to you. Let us say it will cost you $100 to roof a building with metal shingles or sheet metal. Ten years is about as long as you can count on modern impure metal roofing lasting. That is a cost of $10 a year. Pure iron roofing should last many times ten years. Even the old-fashioned charcoal iron roofs lasted forty to seventy years, and that iron was not as pure and not as rust-resisting as the pure iron which we are making. So instead of $10 a year, the cost of your roof will be nearer $2 a year.

Apply the same method of figuring savings to other sheet metal products; to metal window frames, metal lath, ventilators, gutters, pipes; especially to stoves, boilers, ranges and furnaces, which are peculiarly subject to rust, owing to condensation of moisture and to corrosive gases; to refrigerators; to road culverts, metal cars, boats, flumes, smoke stacks, tanks, woven wire fences and the thousand and one other things made from rolled or drawn metal.

ARMCO Iron Is Pure

Armco Iron is not only pure, rust-resisting—it is an exceedingly fine quality of metal for other reasons. Every process of manufacture is handled with extreme care and is under the supervision of very highly trained metallurgists. For instance, each sheet, after rolling, undergoes a slow annealing process which takes a week, although ordinary sheet metal is often annealed in a day. Slow annealing restores all of the original strength and evenness of texture and removes molecular strains caused by rolling. For this reason, Armco Iron is very ductile.

Armco Iron, when galvanized, shows practically no dissolution when the zinc is applied; therefore the zinc is not impregnated with iron particles and lasts much longer than the coating on an impure base.

Terne Plate Roofing

Armco Old Style Terne plate, with its Armco Iron base, is made by the Morewood hand dipped, old style, pure palm oil process. No acids are used. The coating is pure lead and tin—two almost indestructible metals.

There are seven operations. No higher grade metal roofing is made in the whole world. Each sheet is stamped Armco.

How To Get ARMCO Iron

Armco—American Ingot Iron—is sold through distributors of sheet metal. It is specified by architects and engineers and is used for making sheet metal products by many manufacturers. You can buy finished products of Armco Iron from hardware dealers, tinners and sheet metal workers. If you have any difficulty getting Armco Iron write us for names of dealers and manufacturers who use Armco. For example, the Page Woven Wire Fence Company uses Armco Iron.

Write for Free Book "Defeating Rust"

This book, "Defeating Rust," contains more real information about sheet metal than ever before has been put between two covers. It tells the complete story of pure iron—Armco Iron. It gives processes by which Armco Iron is produced. It shows how Armco Iron compares with other sheet metals in analysis, in tests, in actual use. This book gives the experiences of manufacturers in regard to welding, stamping, forming, enameling and polishing Armco Iron. It tells why stoves and refrigerators made of Armco Iron last longer.

Our Service Department will advise you regarding the use of Armco Iron. Our staff of metallurgists, chemists and practical field men is at your service.

mists were trying to run the business of the country and that unless there was a let-up in business baiting, no man could tell what would happen.

I will supplement these Chicago expressions with a statement made by the president of a bank that vies with some of the greatest of Wall Street institutions in prestige and power. "You can't legislate a country *into* prosperity," he said, "but you can legislate a country *out* of prosperity. If it were not for some of our overzealous statesmen we would be in an almost impregnable position, because, when all is said and done, a great many of our business ills are imaginary. It is easy to howl calamity. Some men in the present situation remind me of a sign that I once saw in a Pittsburgh club. It showed the portrait of a grouchy-looking old man, and under this portrait were the words: 'I'm an old man and I've had many troubles, but many of them never happened.'"

One more view will round out this Chicago group. It is the comment of a very remarkable man whose immense wealth and business career are familiar to most newspaper and magazine readers. He put his finger on the American sore spot, because, when I asked him to size up the business situation, he said: "There is a great deal of talk about legislative, psychological, and various other reasons for hard times in the United States. Some of these may be true, but it strikes me that the chief trouble of the American people is extravagance. They spend more than they make. There will never be any permanent prosperity in this country until the great mass of the population has learned the lesson of thrift."

Optimism Unquenched

AS you go from city to city searching the business map, it is inevitable that comment, like history, should repeat itself. This is due to the fact, as I discovered, that the causes of our business setback are few in number, and the effects are approximately the same in nearly every locality.

You have only to go to Cleveland to find this out. Here I talked with more than a score of representative men—manufacturers, jobbers, retailers, bankers, and citizens generally. While they strenuously denounced the evil of excessive and continuous legislation, nearly all of them had at least held their own in business and some showed increases.

I found a characteristic example of American optimism in a huge foundry in Cleveland. When I visited this establishment it was shut down; the great furnaces were black and cold; the mighty hammers were idle; silence brooded. But, curiously enough, it was not the silence that portends disaster. I found this out when I saw the president in his office, a big, amiable, open-faced man, whose very presence and manner proclaimed the spacious outlook.

"Yes," he said, "I am closed down, but not for long. I wanted to make some changes in the plant, and business has been a little slack. But I am going to start up in a week, and I am going to put in the biggest stock that I have carried in years, because I believe that the great crops about to be harvested—and our business is closely allied with agriculture—means that we are going to have a wonderful prosperity."

Cramping the Living Body

HERE, as elsewhere, I found bitter protest against excessive and insistent legislation. The situation with regard to the antitrust bills is cleverly summed up in the report made to the Cleveland Chamber of Commerce on the antitrust bills, which said among other things:

"It would be the height of folly to put the entire body in a plaster cast because some fingers were out of joint."

Certainly there are no signs of distress in Cleveland. When you look, for instance, for those two unfailing measures of progress in any community—the bank clearings and the building permits—you find here, as I found in St. Louis, Chicago, Detroit, and various other places, a steady increase over last year.

Pass on to Detroit, where you find less of the spirit of pessimism than in almost any other American city. One reason, of course, is that the automobile business, which forms its dominant activity, has passed through a period of weeding out and standardization, and has taken its place as a militant and stable industry.

The Thing Called Business Fear

AN automobile maker—a man of keen insight and resources—sums up the causes of the business reaction in a striking way. He said:

"One reason why business men have been in trouble this year is their lack of vision. The case of some motor manufacturers will illustrate. When their business began to boom they were overwhelmed by what the moment seemed to hold out. On the strength of orders for a day they rushed in to build for a year. The net result was overexpansion. Many men in many industries found this out to their sorrow this year.

"Then, too, there is the thing which I would call Fear in business. President Wilson probably meant this when he spoke of the depression being psychological. The truth of the matter is that most business men are the biggest cowards in the world. Like Wall Street, they accept rumors without investigation, and it is this kind of emotion that starts runs on banks, puts money away in stockings and tin boxes where it is of no use to anybody and helps to bring about calamity talk. Personally I think that fully a third of the prevailing depression has been due to this."

The Springs of Wealth

OUT of Detroit came a statement on the situation that seems to set a new mark for patriotism in business. It was made by a man young in years and brilliant in achievement, who is one of the foremost figures in the automobile world.

"There is no question that we have had a decided lull in business," he said, "but I am optimistic about the outlook. All our wealth really springs from a few sources—the ground, the lakes, the rivers, and the sea. Therefore the basis of prosperity is certain. If business is bad the only way to overcome it, as I learned many years ago when I was a salesman, is by hard work.

"I think, as many other business men think, that there is too much politics in business. We are trying to run our commercial affairs from the political end, for political effect. While I am not in accord with all the things that President Wilson and Congress advocate, after all is said and done we are Americans at bottom, and I am more concerned in the ultimate success and prosperity of the country than in the rehabilitation or downfall of any party. What we want is prosperity, and if we can get it from the Wilson Administration, I am for it, and so are all fair-minded men.

"I have been a Republican all my life and I am loyal to my political convictions, but I am an American first. We must get the 'hard-times bug' out of our system. When we do this and capitalize the tremendous crop prospects before us nothing can stop the country. I believe Congress should remain in session and finish the work in hand, no matter if it takes sixty or ninety days. Whatever it may do has already been discounted. Let us know where we stand and we can go ahead under full steam, if we relieve the uncertainties, to a triumphant prosperity."

When you come to analyze business in New York City, you attack a problem which does not exist in any other American community. Here is a domain all its own, at once financially self-sufficient and yet commercially dependent upon the rest of the country.

You need no search warrant to discover that Wall Street is in its darkest depression since 1861. Fortunately Wall Street no longer represents or expresses the financial mind of the country. Each year the rest of the United States asserts an increasing economic independence of that one-time throne room of the monarchs of money.

Lady—*Have you been working ever since I gave you the pie last summer?*
Tramp—*No, ma'am. I just got out of the hospital.*

Wilson and Wall Street

WHAT might be considered the Wall Street attitude toward business, and this inevitably means the Wall Street attitude toward President Wilson (so closely have business and politics become entwined), may be summed up as follows:

"Four months ago President Wilson stood at the high tide of his popularity with business. He had achieved for the moment what few American Presidents have achieved—the admiration, respect, and much of the support of the financial district. Even a great majority of the members of the Stock Exchange were behind him. He had written two constructive pieces of legislation, the tariff and the currency laws, on the books of the nation. Big and little business stood ready to back him up. But instead of giving the country a chance to fulfill its natural expansive destiny, he instigated hostile legislation, creating discontent and lack of confidence in all large financial enterprise. He has stifled initiative and taken the courage out of Big Business. All that Wall Street can do is to indulge in some watchful and costly waiting, hoping that the 'fit' on which it exists will not give out."

"Corn-fed" Statesmen

THE plain, unvarnished truth is that Wall Street does not expect a rebound for a considerable time. No matter how quickly the country "comes back," it cannot be restored to anything like its normal activities until the railroads get on their financial feet, and this state of affairs has come to be regarded as full twin to the millennium.

Quite naturally that part of business dependent upon or related to Wall Street is in similar somber mood. The extreme view is expressed by the president of a great bank within a stone's throw of the Stock Exchange, who said: "We are absolutely standing still and we will be lucky if we don't go back with a bump. With the interest on half a billion dollars of bonds defaulted since the first of this year, and with the stock of only fourteen railroads selling above par, we are in a dangerous situation. It is all due to the pernicious activities of a lot of 'corn-fed' statesmen, who are writing their grievances, resentments, personal and political prejudices in laws that control, disconcert and disaffect business. We never know what the next day will bring forth. Until the status of business is defined we are helpless."

A More Judicial View

ANOTHER great Wall Street banker, more judicial than the one I have just quoted, expressed himself as follows:

"The trouble with Washington is that it does not estimate the *effect* of legislation. It does not realize that the drastic cure for business may also kill. Still, I have more faith in the resources of the country than in the intent of its lawmakers. Sooner or later the people, who cannot be fooled all the time, will rise up and make a change."

Leaving the Wall Street influence and founding actual New York commerce we find a less depressing outlook. As a

Digitized by Google

matter of fact—so far as the general mercantile situation is concerned—it is no different from the conservative view in New Orleans, St. Louis, Chicago, Detroit, or Cincinnati. The huge jobbing houses have barely held their own by the hardest kind of effort and a larger cost than ever before. The president of the largest wholesale grocery establishment in New York echoed this sentiment, and also crystallized what is seething in the average big business mind, by saying:

"If we must have new laws governing business, let them at least be written so clearly that the average intelligence can comprehend them. Why should Congress impose the added burden of making us hire a corporation lawyer to interpret the statutes?"

When you sum up the mercantile situation, based on the nation-wide reports received by such agencies as Dun's and Bradstreet's, you find this to be the case:

Conditions were no worse at the end of July than during the four weeks preceding. Needed rains have fallen in many districts; the general crop situation has improved; clearance sales and hot weather have enlarged the turnover of summer goods; reports from iron, steel, and allied lines, such as agricultural implements, car building and repairing, show betterment; bank clearings, especially in New York, continue to improve, and the settlement of various labor troubles add to the gradual elimination of unrest. More encouraging than all this is the normal number of failures and the fact that in cities like New York, Chicago, and Philadelphia savings deposits are increasing.

The Case of New England

THE business face of New England has the look of the granite rock on which the Pilgrim Fathers stepped, as may be expected in a region hard hit by the tariff, and with its financial peace shaken by the New Haven collapse. The struggle to keep business up to its normal has wiped out party lines altogether. Here is a Boston view, which finds a responsive echo in every manufacturing center:

"Business is bad and it will be a miracle if it does not become worse. President Wilson's whole attitude toward business has been wrong. When he emerged for a moment from his self-satisfied shell and began to send for business men to talk over the situation, at the outset he summoned only those persons who he knew would tell him what he wanted to hear. He simply repeated what he did with the Mexican situation: he refused to have an open mind; he does not want all sides of a question. The result of the misinformation poured into his ear is that he has adhered to a policy that disrupts confidence and plays havoc with trade."

The shoe industry, one of the mainstays of Massachusetts business, will serve to illustrate. I asked an officer of one of the great shoe machinery concerns to sum up the situation. He said:

"With the exception of one large shoe manufacturer, who makes a low-priced shoe, I don't know of a single manufacturer, large or small, who does not say that his business to-day is at a lower ebb than at any time for many years.

"What is true of the shoe industry is true of every other industry which has come to my attention. Merchants report that those who have been carrying charge accounts are buying hardly anything, while those who hitherto have been in the habit of paying cash are asking for credit. There is no fundamental reason why this should be so. Ordinarily, with the prospects of such crops as are reported to be in sight, all industry would be picking up, but that is not the case to-day.

"The uncertainty with regard to the working of the new currency law, controlled as it will be by political appointees like McAdoo and Williams, is an element to be considered; but, worst of all, is the dread of undigested legislation which the Administration is trying to wring from Congress. Without regard to the ultimate merits of this legislation, one thing is certain: it opens up a new period of litigation where business men had thought they might be able to adjust themselves to the Sherman Law as interpreted by the courts. The enactment of any of the bills now before Congress means years of uncertainty.

"Specifically, the enactment of the Trade Commission Bill would establish a system of government spies over every business, large or small, which honest business men believe would be intolerable. It would place every business man under suspicion and would discourage enterprise. The President's assurance that after this legislation has once been passed, business need fear no further legislation while he is in the White House, is of no significance whatever, for there is no legislation conceivable which would leave a feeling of greater uncertainty in all lines of business than that which Congress is now considering."

Throughout New England, there is much pessimism. From New Haven comes this word: "In industries where textiles are more or less used, business is somewhat better than in the metal lines, but in spite of every effort to get more business at cost or little better, there is no encouragement."

The head of a large business in Springfield says: "Our business for the last six months shows a 5 per cent increase over the corresponding months of last year. The bulk of buying is in small orders, and indicates 'a hand to mouth' policy."

I can best sum up the whole New England situation by quoting a very conservative Boston banker who said:

"We have had about all the liquidation in securities that we can stand. Let us now have a liquidation of legislation."

A Swing Around the Country

SO limited is the remaining space that it is only possible to take a swift swing around the rest of the country. Take first the Pacific Coast, that bulwark of an indomitable optimism. Here, the opening of the Panama Canal vies with the crop prospect as a favorable factor for the future.

Spokane, which also speaks for eastern Washington, northern Idaho, and western Montana, reports slow, but steady revival, the biggest small grain crop in its history, a system of cooperative marketing that will double the fruit and berry output. So, too, with Portland and Seattle, where, in addition to the natural uplift caused by the crop situation, the deepening of waterways and the construction of the Government railroad in Alaska stimulate the business pulse. Sacramento reports "fundamental conditions sound," but a conspicuous absence of a speculative desire.

Several distinctive reasons—but particularly the approaching Panama-Pacific Exposition—give San Francisco a stimulation that fills the community with high hope. Preparations for the fair have caused much activity in building and in real estate and the result is that bank clearings, building operations, and imports show a considerable increase over last year.

Los Angeles suffers: a slump in her principal winter commodity, which happens to be tourists. But the feeling in the capital of southern California, despite a vast army of the unemployed, is one of courage and faith, which is typical of the attitude of that whole section of the nation.

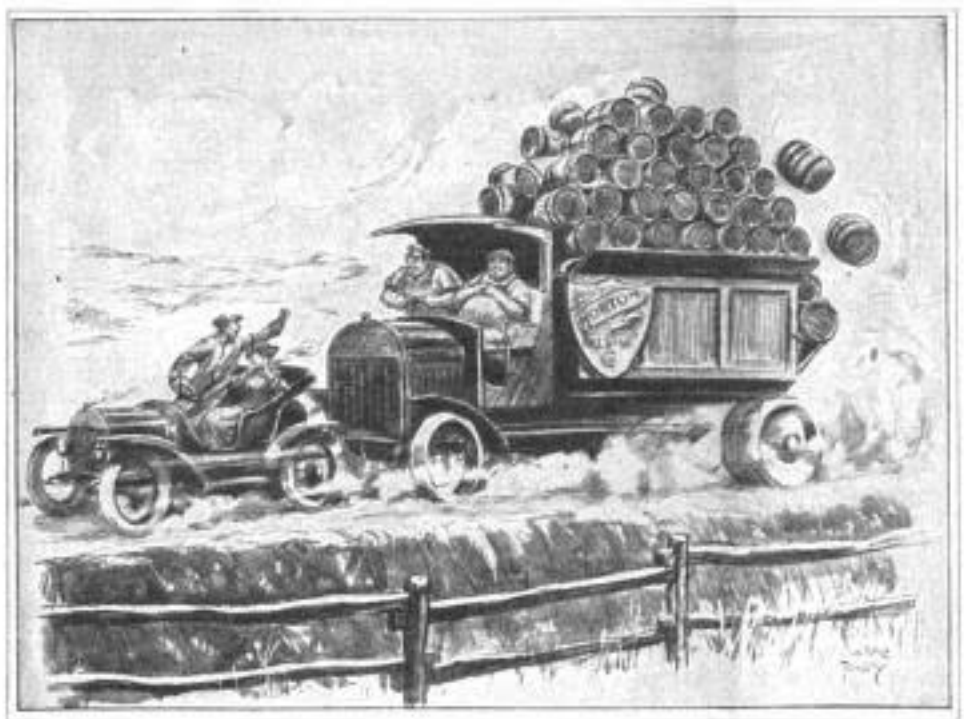
The South Prospering

THE situation in the Southwest, of which Texas is the largest single unit, is one of the most satisfactory in the whole country, for the reason that here the general prosperity is almost altogether dependent upon the crops, led by King Cotton.

Continuing through the South you find slow improvement, always attributable to the soil. In States like Alabama, North Carolina, Georgia, and Arkansas much of this uplift is due to the movement for better farming among the "poor whites." Savannah, Charleston, Atlanta, Jacksonville, Little Rock, have increased bank clearings and a slight boom in manufacturing and jobbing. New Orleans provides a refreshing relief from the legislation-produced depression of the rest of the country by reporting a distinct impetus to trade due to a bill just enacted by the State which exempts money in hand and on deposit from taxation. Perhaps the most striking feature of the whole Southern situation is that the number of unemployed is less than in any other section.

In the Middle West where throbs the heart of the steel industry—the problem of idle labor strains even the highest faith. Every community from Cincinnati to Grand Rapids, considers itself fortunate to hold its own.

In the Near and Far West, there is more activity: cities like Kansas City, Denver, Salt Lake City, Des Moines, reporting gradual increases and somewhat buoyant prospects. But the burden of every letter is: "We are being legislated todeath. Why doesn't Washington let up?"



The Big Significance

YOU have now seen something of the business situation. How does it sum up—what is the real significance; what does it hold out for the future?

Perhaps in no other similar crisis in our country has responsibility been so unanimously fixed. The majority verdict irrespective of party puts it squarely and fairly up to the President's determination to force a corrective and constantly changing program of legislation upon a commerce already law weary and anxious to be let alone. So much for the cause.

The net result has been a far-flung depression that more than once verged perilously near panic. Only the courage and resource that lie at the very roots of American business have enabled the country to resist surrender until nature—more consistent than man—came to the rescue with bounteous crops. These crops, therefore, are the hope of the business to-morrow. Without them the outlook would indeed be dark.

But with the many-sided plenty that they bring; with pending legislation partially discounted; with some kind of settlement of the railway rate case, the conviction grows in most quarters that perhaps the worst is over and that *despite* Washington, a European war and all that war means, the country will march on to its natural destiny of ever-widening prosperity.

The Dealer Holds This Up Because it Upholds Him

He Safely Recommends it because of This Trade Mark

TRADE K-W MARK

Road Smoothers

REG. U.S. PAT. OFF.

Quickly applied to your Ford Car

¶ Even if the dealer did not know that on tens of thousands of Ford cars these Road Smoothers render the best and longest comfort, he would stake his reputation upon it just because it is a K-W. This mark of quality means reliability without a doubt, otherwise it would not be a K-W.

¶ Tell your dealer to put a set on *your* car today, then and only then, will you realize how K-W Road Smoothers smooth out the roughest roads.

¶ What you demand first is comfort. The reasons you get it are—the helical spring that takes up shock; the air chamber that checks rebound; and the anti-side-motion links that prevent side rocking and the chassis from getting out of alignment.

¶ Next, you demand that this comfort be reliable and lasting. The reasons it is permanent are also K-W reasons—high grade heat-treated drop forgings; electric smelted chrome Vanadium steel springs (not ordinary spring steel); extra heavy phosphor bronze bushings, and all thoroughly tested and perfectly built.

¶ Beware of imitations. The K-W is the **only** Road Smoother. K-W Road Smoothers are sold by dealers who know the difference, everywhere, **at one price.**

"Advertising is today the mightiest factor in the business world. It is an evolution of modern industrial competition. It is a business builder, with a potency that goes beyond human desire. It is a positive creative force in business. It builds factories, skyscrapers and railroads. It makes two blades of grass grow in the business world where only one grew before. It multiplies human wants and intensifies human desires."

The German War Machine

[Continued from page 13]

ivory keys in the short space of two and a half minutes (as I was keenly interested, I timed it) could show the exact spot of the train between two stations, the train being over 500 kilometers distant from Berlin.

As every class A1 vessel in the merchant marine of Germany, especially the passenger boats of the big steamship lines, can be pressed into government service, so can all motor vehicles, taxis, and trucks owned either privately or by corporations be called upon if considered necessary.

Through this vast and far-reaching system of transportation, Germany is enabled to throw a million fully equipped men on to either of her frontiers within forty-eight hours. She can double this host in sixty hours more.

Victualization

NAPOLEON'S dictum that an army marches on its stomach is as true to-day as it was then, adequate provisions for man and beast being the most important factor in military science. The economic feeding of three-quarters of a million men in peace time is work enough. It becomes a serious problem in the event of war, especially to a country like Germany, which is somewhat dependent on outside sources for the feeding of her millions. The authorities, quite aware of a possible blockading and consequent stoppage of imports, have made preparations with their usual thorough German completeness. At any given time there is sufficient foodstuff for man and beast stored in state storehouses and the large private concerns to feed the entire German army for twelve months. This might seem inadequate, but it is not, the authorities being well aware that war in Europe at the present time could not and would not last longer than such a period.

Once a year these storehouses are overhauled and perishable or deteriorating provisions replaced. Tens of thousands of tons of foodstuffs, especially fodder, are sold far below their usual market prices to the poorer classes, notably farmers. Likewise the material used by the army is as far as possible supplied by the farmer direct.

The total absence of bloated, pudgy-fingered army contractors in Germany is pleasant to the eyes of those who know the conditions in some other countries I could mention.

Besides, the whole of the German fighting machine is so organized that in all probability decisive battles would be fought in the enemy's country, in which case the onus of feeding the troops would fall on the enemy, by the military devices "requisitioning" and "commandeering."

In this German, and especially Prussian, quartermasters are in no way behind their English confrères, of whose activity in the Boer War I know from personal experience.

Special Foods

TO give but another instance of the scientific thoroughness in detail, take a single food preparation—the Erbsenwurst (pea-meal sausage)—a preparation of peas, meal, bacon, salt, and seasoning, compressed in a dry state into air and water tight tubes in the form of a sausage, each weighing a quarter of a pound.

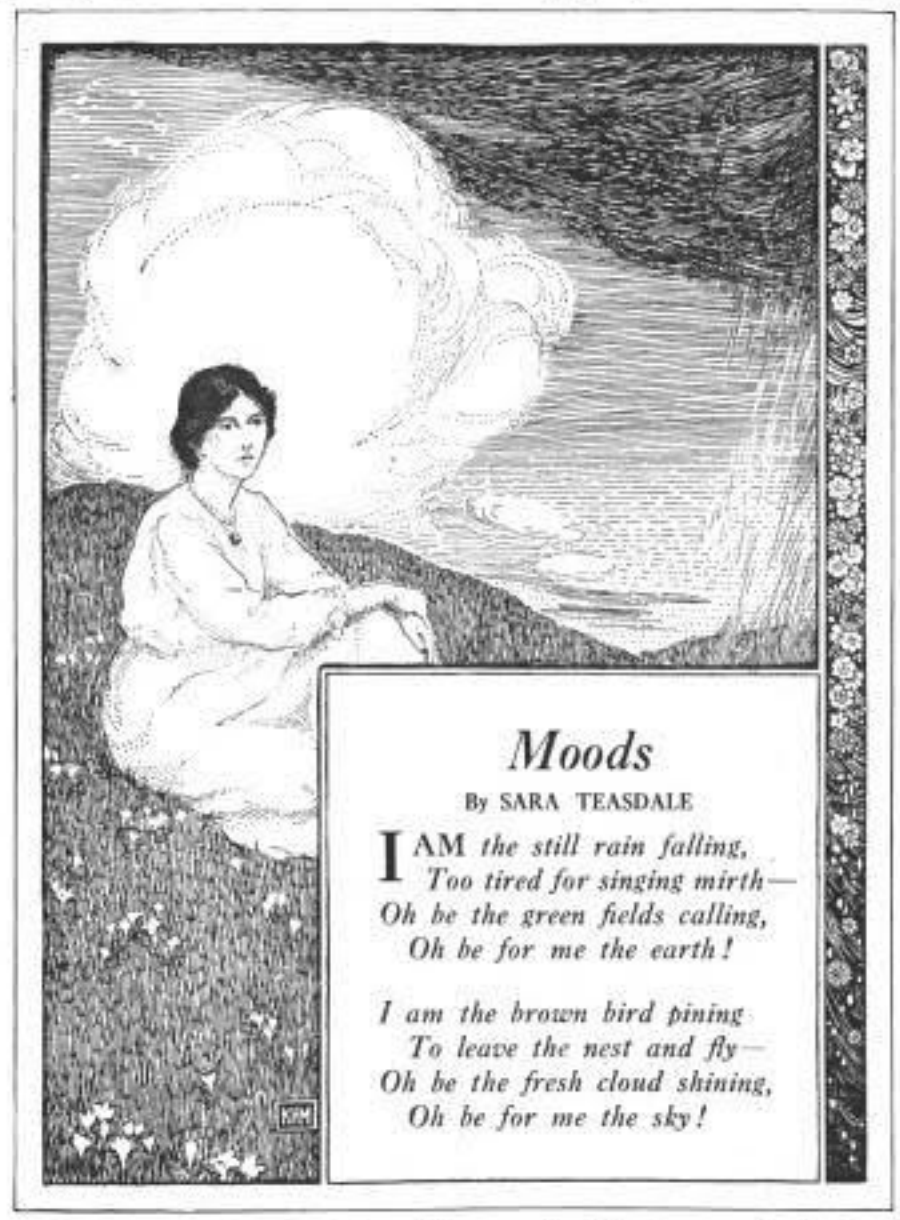
Highly nutritious, light in weight, practically indestructible, wholesome, this is easily prepared into a palatable meal with the simple addition of hot water. Of this preparation huge quantities are always kept in stock for the army.

Intelligence

WITHOUT doubt the most important division of the General Staff and upon whose information and efforts the whole machine hinges is the Intelligence Department, really covering many different fields—for instance, general science, especially strategy, topography, ballistics, but mainly the procuring of information, data, plans, maps, etc., kept more or less secret by other powers. In this division the brightest young officers and general officials are found. The training and knowledge required of the men in this service are exacting to a degree. It requires in most cases the undivided attention—often a life study—to a single subject.

It has been the unswerving policy of the Prussian military authorities to know as much of the rest of the European countries as they know of their own. In the war of 1870-71, German commanders down to the lieutenant leading a small detachment had accurate information, charts and data of every province in France, giving them more accurate knowledge of a foreign country than that country had of itself. It is a notorious fact that, after the defeat of the French armies at Weissenburg and Wörth and later at Metz, the French commanders and officers lost valuable time and strategical positions through sheer ignorance of their own country. This is impossible under the Prussian system. To-day there is not a country in Europe of which there are not the most elaborate charts and maps, topographically exact to the minutest detail, docketed in the archives of the General Staff. This applies as a rule to the General Staff of most nations, but not to such painstaking details.

Exhaustive Knowledge of Enemies



WHILE undergoing instructions in the Admiral Stab in the Königgrätzer Strasse 70 previous to my being sent on an English mission, a controversy arose between my instructor and myself as to the distance between two towns on the Lincolnshire coast. He pushed a button and requested the answering orderly to bring map 64 and the officer in charge. With the usual promptness both map and officer appeared. The officer, who could not have been more than twenty-five years of age, discussed with me in fluent colloquial English the whole of this section of Lincolnshire. Not a hummock, road, road house, even to farmer's residences and blacksmith's shop, of which he did not have exact knowledge. I expressed astonishment at this most unusual acquaintance with the locality, and suggested that he must have spent considerable time in residence there. Conceive my astonishment when informed that he had never been out of Germany and the only voyage ever undertaken by him led him as far as Helgoland. Subsequently through careful inquiries and research—my work bringing me into constant contact with the various divisions—I found that the whole of England, France, and Russia was carefully cut into sections, each of those sections being in charge of two officers and a secretary whose sole duty it was to acquaint and make themselves perfectly familiar with everything in that particular locality. Through the far-reaching system of espionage, the latest and most up-to-date information is always forthcoming, and time and again I myself, often returning from a mission like one of those to the naval base in Scotland, have sat by the hour verbally amplifying my previous reports.

A part of the intelligence system is the personality squad, whose duty it is to acquaint themselves with the personality of every army and navy officer of the leading powers. I have seen reports as to the environments, habits, hobbies, and general proclivities of men such as Admiral Fisher, commanding the Channel Squadron of the British Navy, down to Colonel Ribault, in charge of a battery in Toulouse. To military or naval officers and men of affairs the reason and benefit of such a system are obvious. The general reader, however, may not quite see the point. The position of a commander in the field is analogous to the executive head of a big selling concern. A semipersonal knowledge of the foibles and characteristics of his customers without doubt gives him an advantage over a rival concern, neglecting the personal equation being really more important than is generally understood. This has long been recognized and fully taken advantage of by the German Army authorities.

Aerial Weapons

WITHIN the last few years an entirely new, and, according to German ideas, most important factor has entered and seriously disturbed the relative military power of European nations. This is the aerial weapon.

Since the days of Otto Lilienthal and his glider, it has been the policy of Germany to keep track of all inventions likely to be embodied and made use of in the War Machine. It is a far cry from Lilienthal's glider to the last word in aerial construction such as the mysterious Zeppelin-Parseval sky monster that, carrying a complement of twenty-five men and twelve tons of explosives, sailed across the North Sea, circled over London, and returned to Germany. Lilienthal's glider kept aloft four minutes, but this new dreadnought of Germany's flying navy was aloft ninety-six hours, maintaining a speed of

Oh be the fresh cloud shining,
Oh be for me the sky!

Digitized by Google

thirty-eight miles an hour, this even in the face of a storm pressure of almost eighty meters. Such feats as this are significant. They are at the same time the outcome and the cause of the development of this part of the War Machine.

It is my purpose here to tell you how far Germany has advanced and progressed in this struggle for mastery of the sky. I shall disclose facts about her system that have never appeared in print—that have never been heard in conversation. They are known only to the General Staff at Berlin, not even in the cabinets of Europe.

Secret Aerial Strength

GERMANY without doubt has the most up-to-date aerial fleet in the world. The budget of the Reichstag of 1908-1909 allowed and provided for the building and maintenance of twelve dirigibles of the Zeppelin type. So far as the knowledge of the rest of the world is concerned this is all the sky navy that Germany possesses. It is a fact, though, that she has three times the number that she officially acknowledges.

The dirigible-balloon centers in Germany are five and they are situated at vitally strategic points. There are two on the French border, one on the Russian border, one on the Atlantic Coast, and a central station near Berlin. The exact places are Strassburg, Frankfort on the Main, Posen, Wilhelmshafen, and Berlin. This does not include the marvelous station at Helgoland in the North Sea, this being a strategic point in relation to Great Britain. Nothing is known about this Helgoland station. None but those on official business are permitted within a thousand yards of it. I shall tell things concerning it.

Little Mothers

Besides these purely military posts there are a number of commercial stations necessary as depots of the regular transportation aerial lines that operate for the convenience of the public. Like Germany's commercial steamers, however, they are controlled and subsidized by the Government. At a few hours' notice they can be converted and made use of for Government purposes. Taking these transportation lines into consideration, it is safe to state that by now Germany could send fifty huge airships to war.

Revolutionizing Discoveries

IT may be a puzzle to Americans why, in the face of disasters and accidents to these Zeppelins, Germany is spending about $4,000,000 on her aerial fleet. Now we come to a very significant point. I know, and certain members of the German General Staff know as well as trusted men in the aerial corps, that there are two conditions under which airships are operated in Germany. One is the ordinary more or less well-known system which characterizes the operation of all the passenger lines now in service in the Empire. It is the system under which all the disasters that appear in the newspapers occur. Airships that are used in the general army flights and maneuvers are also run under the same system as the passenger dirigibles—for a reason.

The other system is an absolute secret of the German General Staff. It is not used in the general maneuvers, only in specific cases, and these always secretly. It has been proved to be effective in eliminating 75 per cent of the accidents which have characterized all of Germany's adventures in dirigibles and heavier-than-air machines. These statistics are known only among the German General Staff officers.

Let us go into this further. Critics of the German dirigible who foolishly rate the French aeroplane superior point out that the Zeppelins have three serious defects—bulk and heaviness of structure, inflammability of the lifting power—the gas that floats them—and insufficiency of fuel carriage. In other words, they cannot ship enough gas to stay in the air a desirable length of time without coming down. The secret devices of the German war office have eliminated all these objectionable features. They have overcome the condition of bulk and heaviness of structure by their Government chemists devising the formula of a material that is lighter than aluminum, yet which possesses all of that metal's density and which has also the flexibility of steel. Airships not among the twelve that Germany officially admits are made of this material. Its formula is a Government secret and England or France would give thousands of dollars to possess it.

The objection of inflammability of the lifting power has also been overcome. The power of the ordinary hydrogen gas in all its various forms has been multiplied threefold by a new gas discovered at the Spandau Government chemical laboratory. This gas has also the enormous advantage of being absolutely uninflammable. I have seen experiments made with it. It cannot be used for illuminating purposes. Dirigibles that are equipped with it are not liable to the awful explosions that have characterized flights under the ordinary system. The new gas has also the enormous advantage of having a liquid form. To produce the gas it is only necessary to let the ordinary atmosphere come in contact with the liquid. Carried in cylinders two feet long and with a diameter of six inches it is obvious that enough of this liquid can be carried aboard the big war dirigibles to permit their refilling in mid-air. So, you see, all the objections to the commonly known system of operation have been overcome by the War Office.

The last dirigible tried by the War Office in 1912, the mysterious *Zeppelin X*, made a continuous trip from Stettin over the Baltic to Upsala in Sweden, thence across the Baltic again to Riga in the Gulf of Finland, where it doubled and sailed back to Stettin. This was a journey of 976 miles. The airship had a complement of twenty-five men and twelve tons of dead weight. It traveled under severe weather conditions, the month being March, and snowstorms, hail, and rain occurred throughout the voyage. The significance of this flight can be easily understood if you consider that the distance from Strassburg or Düsseldorf to Paris or other strategical points in France is approximately 480 kilometers. A ship like the *Zeppelin X* could sail over the French border, dynamite the fortifications around Paris and return, the journey being roughly about 1,000 kilometers or some hundreds of kilometers less than the actual trip made by the *Zeppelin X*. Moreover the German military trials have shown the possibility of an aerial fleet leaving its home ports and cruising to foreign lands and returning without the necessity of landing to replenish its gas tanks or fuel.

The Aerial Corps

LET me show you how the German aerial corps is made up. It is called the Luftschiffer Abteilung and is composed of ten battalions, each consisting of 350 men. They are all absolutely trained for this branch of the service. Only the smartest mechanics and artificers are selected. In the higher positions the most intelligent and bravest officers hold command. Comparing the usual pay in continental armies, the wages of the men in the German aerial corps are exceptionally high. In fact they are the highest paid in the German army. They are not ordinary enlisted men, meaning that they serve only their two years' time. Most of them have agreed to serve a lengthy term. Married men are not encouraged to enroll in this branch of the service. It is obvious from the nature of the work that the hazards are often great. The wonderful system of the German War Machine has been installed with rare detail in the aerial corps. The

A Case *of* Lubrication In The Highest Degree

HAVOLINE OIL

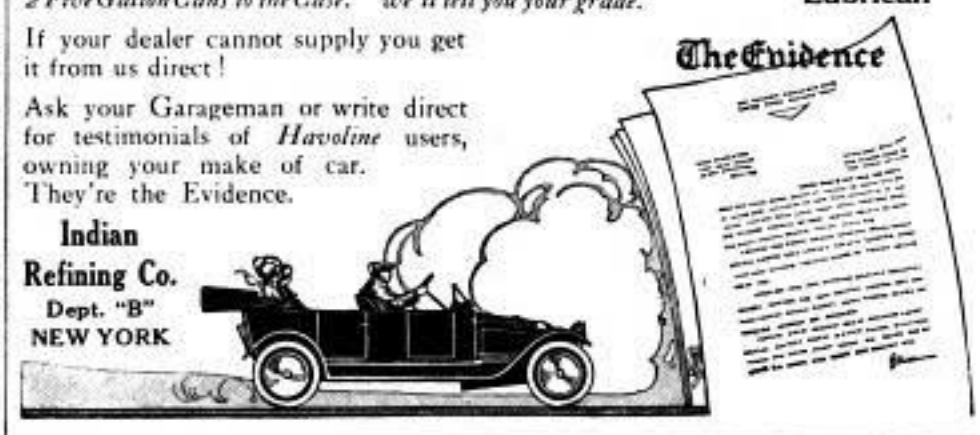
"It makes a difference"

because it prevents frictional losses, promotes maximum efficiency in the motor and increases its serviceability.

The Facts In the Case

HAVOLINE is refined only from *one uniform base crude oil* of correct gravity and high quality. By our special process of manufacture the floating carbon and impurities are entirely removed, yet the life of the oil is preserved and its lubricating value enhanced, *because the individual molecules are left intact.* It burns up cleanly and evenly.

The Motorist's Verdict—Proper Lubrication!



Because it forms an equally thick "cushion" of oil between the moving metals, decreasing the frictional loss and enabling the motor to generate its maximum power.

Buy the oil in the Blue Can 2 Five Gallon Cans to the Case. *Tell us your make and we'll tell you your grade.*

Write for the "Lubrican"

If your dealer cannot supply you get it from us direct!

Ask your Garageman or write direct for testimonials of *Havoline* users, owning your make of car. They're the Evidence.

Indian Refining Co.

NEW YORK

The Biggest Profit Season Is Right Now!

Took in $679.45 in one month in a Chicago Department Store.

$50 a Week Extra For Retailers

Every month is pop-corn time with the Butter-Kist machine but the season is at its best right now. Get in on the flood tide. Grasp this money-making opportunity at once. In scores of stores *extra* profits of $25 to $60 weekly, and in some places twice that much is being made with our latest *automatic* machine for making "Butter-Kist" popped corn—crisp, crackling, melt-in-your-mouth, pure creamery-buttered corn—the kind that people will walk blocks to buy. This is a high-class machine built for high-class stores. It's as handsome as the finest soda fountain or show case.

Increase General Store Sales

This machine draws nickels like magic. In many stores it is not only paying handsome profits itself but *has increased general store sales as high as 15 per cent!* The "Butter-Kist" Popper *looks* different—works different from any pop-corn machine you ever saw. A machine you will be proud to own. Superbly built of plate glass; metal parts of polished German silver and nickel; cabinet of mahogany, oak or ivory white enamel. Occupies but 30x24 inches of floor space. Stands six feet high.

"Butter-Kist" Corn Popper

In all Electric or with Gas for Hot Plate. Does everything but make change. Everything works automatically. Simply fill the feed-box, light the gas (if combination) turn the motor switch. The "Butter-Kist" Popper does the rest. It feeds the corn in proper quantity, pops it, separates unpopped grains, if any, carries the popped corn to a buttering device, butters it, and drops it down ready to be scooped, piping hot, into bags. Capacity can be regulated as desired. No labor, no watching, no time wasted.

Advertises Your Store

The "Butter-Kist" Popper will make your store the most talked-of on the street. Everybody mystified by the fascinating moving mechanism. Fills crowds like magic. Be first in your section with this spot-cash money maker! Two minutes time and a 1c stamp get all the facts before you.

The Coupon Brings Everything

Simply fill out the coupon on the right and mail it to us. Then we will send you a big budget of facts, figures and photos that explain everything. Read how other merchants are cleaning up big profits every week. Sell on easy terms. It will pay its way from the very first day. Makes big money all the year 'round, but the best season is now opening.

Write now and get full information by return mail. Use the coupon. (66)

ROBB & ROBB, 295-298 Southern Building, Washington, D. C.

equipment of the different stations is really marvelous, for everything human ingenuity has been able to devise concerning the dirigible you will find in application. Each station is fully equipped and is an absolutely independent center in itself. Take the base at Helgoland. It is the newest and the one that is always cloaked with secrecy.

Guarding the Dirigibles

AT the extreme eastern corner of the island of Helgoland one sees, amid the sandy dunes, three vast oblong iron-gray structures. At a distance they are not unlike overgrown gasometers. I say at a distance, for it is impossible for any visitor to get within a thousand yards of the station. The solitary approach is guarded by a triple post of the marine guard. If you walk toward the station, before you come within a hundred yards of the guard, you will find large signs setting forth in unmistakable and terse language that dire and swift penalties follow any further exploration in that direction. Not only English but German visitors to Helgoland have found out that even the slightest infringement of the rules of these signs is dangerous. I shall, however, take you a little closer.

Walking on until you are within fifty yards of the great balloon sheds, you pause before a tall fence of barbed wire, this connected with an elaborate alarm-bell system that sounds in the two guardhouses. For instance, if an enterprising secret agent of France were to try and steal up on the station, if he came by night and cut through the barbed wire, a series of bells would immediately sound the general alarm. Having passed through the six strands of barbed wire a tall octagonal tower meets the eye. In this tower are installed two powerful searchlights as well as a complete wireless outfit. All the Zeppelins carry wireless. By means of elaborate reflectors, it is possible with the searchlights to flood the whole place with daylight in the middle of night. Thus ascensions can be made safely at any hour of the twenty-four. The three oblong sheds stand in a row, the middle being the largest, having spaces for two complete dirigibles, while the other sheds house but one each. They are about 800 feet long, 200 feet broad and 120 feet high. The whole structure itself can be shifted to about an angle of forty degrees, this being worked on a plan similar to the railroad engine turntable. The reason for it is that with the veering of the wind the sheds are turned so that the doors will be placed advantageously for the removal of the airship.

Dirigibles Replace Forts

THE whole layout and the vast area of space show that it is the Government's intention still further to increase the plant. In fact, on my last visit to Helgoland—and it was nearly three years ago—I saw the evidence of another shed about to be built. At the station is the most efficient meteorological department of all the stations. The most sensitive and up-to-date instruments connected with this science are there in duplicate and the highest experts such as only Germany can produce are in charge of the department.

When I was at Helgoland I noticed a vast difference in the strength of the fortifications compared to what they had been. They used to be tremendous, but since the addition of the naval base they have become secondary. Half the soldiers on duty there have been transferred elsewhere; so with the big guns. There is no longer any need of them. As I stated, I saw a fourth big balloon shed in the course of construction. I have not been on the island for nearly three years. Nobody has been near the extreme eastern end except those closely identified with the service. Considering that Germany has not built more than one extra shed, that means five dirigibles, and there is nothing on earth that could stand up against them. Helgoland does not need forts any more. The new forts float in the sky and can rain death.

Helgoland has long been a sore spot of British diplomacy. Seized from Denmark in 1807, it was formally ceded to England in 1814; now it is a menace to her. While Lord Salisbury was Prime Minister of England, he conceived what he believed to be a shrewd diplomatic move. He offered Bismarck the island of Helgoland in exchange for some East African concessions, and it became a German possession in 1890. Helgoland is now the key and guard of Germany's main artery of commerce, being the key to Hamburg. With the dirigible station of Helgoland to guard her, Hamburg is impregnable, and on England's northern coast they have a way of looking out across the North Sea with troubled eyes!

"Say! Sammy, you've got to quit bringin' me bokays an' things. First thing you know I'll be gettin' talked about"

Let us consider one of these new war monsters, the latest and most powerful, the *X 15*. The latest Zeppelins, charged with the newly discovered dioxygenous gas, giving these sky battleships triple lifting capacity; the perfecting of the Diesel motor, giving enormous horsepower percentage with light fuel consumption (fifty of these Diesel engines, their workings secret to the German Government, are stored under guard at the big navy yards at Wilhelmshafen and Kiel, ready to be installed at the break of war in submarines and dirigibles), have given the German type of aircraft an importance undreamed of and unsuspected by the rest of the world.

Guns on the Zeppelins

THE operating sphere of the new balloons has extended from 100 to 1,400 kilometers. Secret trial trips of a fully equipped Zeppelin like *X 15*, carrying a crew of twenty-four men, six quick-firing guns, seven tons of explosives, have extended from Stettin, over the Baltic, over the Swedish coast, recrossing the Baltic and landing at Swinemünde, with enough gas, fuel, and provisions left to keep aloft another thirty-six hours. The distance all told covered on one of these trips was 1,180 kilometers. This fact speaks for itself. The return distance from Helgoland to London, or any midland towns in England, corresponds to the mileage covered on recent trips. In the event of hostilities between England and Germany, this statement needs no explanation. That is why I mentioned that the latter-day Zeppelins were a powerful factor in bringing about an amiable understanding between those two powerful countries. For neither the historic wooden walls of Nelson's day nor the steel plates of her modern navy could help England or any other nation against the inroads of the monsters of the air.

The Damage They Can Do

THE capacity of seven tons of explosives does not exhaust the resources of this type of weapon. I have it on good authority that the new Zeppelins can carry double that quantity of explosives if necessary. As the size of these vessels increases, so does the ratio of their carrying capacity.

Picture the havoc a dozen such vultures could create attacking a city like London or Paris. Present-day defense against these ships is totally inadequate. In attacking large places, the Zeppelins would rise to a height of from 6,000 to 8,000 feet, at which distance these huge cigar-shaped engines of death, 700 feet long, would appear the size of a football, and no bigger. I know that Zeppelins have successfully sailed aloft at an altitude of 10,000 feet. Picture them at that elevation, everybody aboard in warm, comfortable quarters, ready to drop explosives to the ground. The half informed man—and there appear to be many such in European cabinets, which recalls the proverb about a little knowledge being a dangerous thing—likes to say that a flock of aeroplanes can put a dirigible out of business. Consider now an aeroplane at an elevation of 6,000 feet and remember that the new Zeppelins have gone thousands of feet higher. An aviator at 6,000 feet is so cold that he is practically useless for anything but guiding his machine. How in the world is he or his seat mate going to do harm to a big craft the size of the Zeppelin that is far above him? Any aviator who has ever gone up, say 8,000 feet, will tell you when he comes down what a harrowing experience he has had. What good can an individual be, exposed to the temperature and the elements at such an altitude, in doing harm to the calm, comfortable gentlemen in the heated compartments of the Zeppelin?—*Quelach!* which is a German army term for piffle!

At 8,000 feet the small target a Zeppelin affords would move at a rate of speed of from thirty-five to sixty miles an hour. The possible chances of being hit by terrestrial gunfire are infinitesimally small. This does not take into account the vast opportunities that a dirigible has for night attacks or the possibility of hiding among the clouds. The *X 15*, sailing over London, could drop explosives down and create terrible havoc. They don't have to aim. They simply dump overboard some of the new explosive of the German Government, this new chemical having the property of setting on fire anything that it hits, and they sail on. And remember that wherever the new German explosive strikes conflagration begins.

Aeroplanes, biplanes, monoplanes, and the other innumerable host of small craft so often quoted as a possible counterdefense against the Zeppelin, are overrated, and are in any case theoretical. The German authorities have made vast and exhaustive trials in these matters. The strenuous efforts on the part of this Empire to increase its dirigible fleet are to my way of thinking answer enough.

Idle Thoughts in Busy Times

(Continued from page 20)

Henry might have risen from obscurity but for his life's misfortune which struck him at this point. In office he had taken a firm stand against corporation domination and for reform. During the heat of the battle some one discovered that he had at one time slipped a lead dollar into a church collection plate. The State rose against him with loathing, and he was defeated for reelection by 200,000 votes. To add to his annoyance his fiancée, who had been obtained for him after a costly search by the Eugenics Bureau, broke her neck while dancing the tango, and some one began to sell peanuts, wrapped individually, with full-page magazine advertisements. Ruined and discouraged, Henry lowered himself out of his past life and plunged into the great West, where for some years he led a gray, monotonous existence holding up pedestrians on State Street, Chicago.

"As is always the case, society cannot refrain from kicking a man when he is down. Being accidentally arrested, Henry was treated with great brutality and was kept all night in the Harrison Street jail. This shattered his health and reduced him to a blind fury against all mankind. Back toward the East he moved, leaving ruin and desolation in his wake. He held up trains, shot sheriffs, murdered policemen, and robbed right and left. He also became addicted to liquor and married profusely. Being caught red-handed in New York after a particularly daring exploit, he was tried and sentenced to death. Henry's fortunes were now at low ebb and, as he was still a young man, it looked as if he might some day be hanged. Public sentiment was very bitter against him, and no one could be elected to office without the indorsement of the Widows' Association, a powerful organization formed of those whose husbands had been shot away by Henry.

"We are now nearly through the book. Ten years intervene and there seems to be but little left to do but arrange the details of the execution. Still Henry lingers on, his case wandering from court to court. He is now wealthy again, thanks to the sale of his book, and his cell in the Tombs is furnished in exquisite taste. The public has lost interest in him, and the Widows' Association, which has controlled the city and has gotten enormously rich, is defeated by the reform element. Suddenly a great newspaper publishes the fact that at one time Henry, while robbing a poor boy, returned enough money to him to enable him to buy a sandwich. A wave of praise sweeps over the city. Pity for Henry becomes epidemic. A petition of 4,000,000 names secures his release. He is carried on the shoulders of the mob through the streets and is elected to Congress that fall."

This plot reeks of the present and immediate future, and we hope to read it from the pen of some noted realist before many years.

Bealby

(Continued from page 22)

with the caravan lamp and kettle. Mrs. Geedge would hand it over to her. She broke into song. "A-hunting we will go-ooh," she sang. "A-hunting we will go." . . .

But she could not conquer the churlish underside of the Captain's nature even by such efforts. She threw a glamour of vigor and fun over the adventure, but some cold streak in his composition was insisting all the time that as a boy hunt the attempt failed. Various little delays in her preparations prevented a start before half past seven; he let that weigh with him, and when sometimes she clapped her hands and ran—and she ran like a deer, and sometimes she sang—he said something about going at an even pace.

At a quarter past one Mrs. Geedge observed them returning. They were walking abreast and about six feet apart; they bore themselves grimly after the manner of those who have delivered ultimata, and they conversed no more. . . .

In the afternoon Madeleine kept her own room, exhausted, and Captain Douglas sought opportunities of speaking to her in vain. His face expressed distress and perplexity, with momentary lapses into wrathful resolution, and he evaded Judy and her leading questions and talked about the weather with Geedge. He declined a proposal of the Professor's to go round the links, with especial reference to his neglected putting. "You ought to, you know," said the Professor. About half past three, and without any publication of his intention, Captain Douglas departed upon his motor bicycle. Madeleine did not reappear until dinner time, and then she was clad in lace and gayety that impressed the naturally very good observation of Mrs. Geedge as unreal.

THE Captain, a confusion of motives that was as it were a mind returning to chaos, started upon his motor bicycle. He had seen tears in her eyes. Just for one instant, but certainly they were tears. Tears of vexation. Or sorrow? (Which is the worse thing for a lover to arouse, grief or resentment?) But this boy must be caught, because if he was not caught a perpetually developing story for imbecile practical joking upon eminent and influential persons would eat like a cancer into the Captain's career. And if his career was spoiled, what sort of thing would he be as a lover? Not to mention that he might never get a chance then to try flying for military purposes. . . . So anyhow, anyhow, this boy must be caught. But quickly, for women's hearts are tender, they will not stand exposure to hardship. There is a kind of unreasonableness natural to goddesses. Unhappily this was an expedition needing wariness, deliberation, and one brought to it a feverish hurry to get back. There must be self-control. There must be patience. Such occasions try the soldiering quality of a man. . . . It added nothing to the Captain's self-control that, after he had traveled ten miles, he found he had forgotten his quite indispensable map and had to return for it. Then he was seized again with doubts about his inductions and went over them again, sitting by the roadside. (There must be patience.) . . . He went on at a pace of thirty-five miles an hour to the inn he had marked upon his map as Bealby's limit for the second evening. It was a beastly little inn: it stewed tea for the Captain atrociously and it knew nothing of Bealby. In the adjacent cottages also they had never heard of Bealby. Captain Douglas revised his deductions for the third time and came to the conclusion that he had not made a proper allowance for Wednesday afternoon. Then there was all Thursday, and the longer, lengthening part of Friday. He might have done thirty miles or more already. And he might have crossed this corner — inconspicuously. Suppose he hadn't after all come along this road!

He had a momentary vision of Madeleine with eyes brightly tearful. "You left me for a Wild Goose Chase," he fancied her saying. . . . One must stick to one's job. A soldier more particularly must stick to his job. Consider Balaklava. . . .

He decided to go on along this road and try the incidental cottages that his reasoning led him to suppose were the most likely places at which Bealby would ask for food. It was a business demanding patience and politeness.

SO a number of cottagers—for the greater part they were elderly women past the fiercer rush and hurry of life, grandmothers and ancient dames, or wives at leisure with their children away at the Council schools—had a caller that afternoon. Cottages are such lonely places in the daytime that even district visitors and canvassers are godsends and only tramps ill received. Captain Douglas ranked high in the scale of visitors.

There was something about him, his fairness, a certain handsomeness, his quick color, his active speech, which interested women at all times, and now an indefinable flow of romantic excitement conveyed itself to his interlocutors. There was a kindly disposition to enter into his troubles lengthily and deliberately. They listened attentively to his demands, and before they testified to Bealby's sustained absence from their perception they would for the most part ask numerous questions in return. They wanted to hear the Captain's story, the reason for his research, the relationship between himself and the boy, they wanted to feel something of the sentiment of the thing. After that was the season for negative facts. Perhaps, when everything was stated, they might be able to conjure up what he wanted. He was asked in to

How advertising saved you $40.00 of the purchase price on a camera.

F. C. S. Hamerschlag.

Advertising Manager Collier's Weekly

There can be no argument as to the benefits to the public through our increased output, which increase in output is due in large measure to our continuous, extensive advertising.

Largely increased output means economies in every direction, but especially in the matter of automatic machinery, which makes it possible to turn out uniform goods at greatly reduced costs. It means a reduction in overhead expenses that more than offsets the advertising expense, which is, of course, a part of such overhead.

Decreased retail prices would have been impossible on the old manufacturing and marketing basis. Increased consumption, due in large measure to the fact that we have taught the people the pleasures that are to be derived from photography, has made possible the present low prices of photographic goods. As a matter of fact, the percentage of advertising cost to the total volume of business is much smaller than most people imagine.

Perhaps the best comparison can be made if we take the 4 x 5 size. In 1892 we were selling a No. 4 Folding Kodak, which made a 4 x 5 picture, at $60. This camera had a rapid rectilinear lens, was equipped with a rising and sliding front and had a very good shutter for those days, providing for both time and instantaneous exposures. It was a handsomely finished box but extremely bulky, was made of mahogany and cherry, and covered with a fine grade of leather. Today we make a 4 x 5 Kodak, using a lens of the same type, but much improved. This Kodak also has a rising and sliding front and shutter vastly superior to that used on the original No. 4 Folding Kodak. This camera is made of aluminum, covered with leather, will go in the pocket and loads in daylight, whereas the old one was a dark-room loader. The price is $20, as against $60 for the original camera in this size.

I can go through our whole line and show marked improvements in the goods at equally marked reductions in price to the consumer. And, by the way, in spite of these reductions in retail selling price, the discount to the dealer is larger than it was in the early days.

By L. B. Jones, Adv. Mgr., Eastman Kodak Company.

Business Opportunities

Intelligent Representatives Wanted: Young Or middle aged men and women who can give satisfactory references as to character can make considerable money weekly introducing our Music Courses. Our successes have brought us to the point where we are now employing representatives in every section of the country. Write today for full particulars. Siegel Myers Correspondence School of Music, Dept. A, Chicago, Ill.

Business Men, Salesmen Wanted Every Town to manage Local, Mail Sales and Jobbing agency; finest proposition in America; repeat order product; original sales plan, samples furnished free. Small capital will create steady life income. Manufacturer, 536 Broadway, N. Y.

Stamps, Coins, Post Cards

$1.00 To $1,000.00 Paid For Thousands Of Rare coins to 1909. Many of great value in circulation. Get Posted. Send only 4c and get our Large Illustrated Coin Circular. It may mean much profit to you. Send now. Numismatic Bank, Dept. C, Fort Worth, Texas.

Motion Picture Plays

Write Moving Picture Plays. Big Prices Paid. Constant demand. Devote all or spare time. Experience, literary ability or correspondence course unnecessary. Details free. Atlas Pub. Co., 346 Atlas Bldg., Cincinnati, O.

Window Trimming

Let Us Send You Full Information On Window Trimming, Advertising and Card Writing Courses, Books and Monthly Paper. The oldest and most successful school of its kind. The Koester School, 302 Jackson Blvd., Chicago.

Dull Razor Blades

Dull Blades Are Worthless, Therefore You Risk nothing by sending them to us without money. We'll re-edge them—you pay if pleased, after trial. Or, ask for prices and Free Mailing Case. Parker-Warren Co., 1435 B'way, N.Y.

Literary: Manuscripts

Authors, Send 2c For "How To Get Your Book Published." Write us your needs. We advise, revise, illustrate, copyright, print and market. Refer to banks and authors. Shakespeare Press, 114 E. 28th St., New York.

Special Offers

Will Pay College Tuition Of Ambitious Young men and women. References required with first letter. Write for particulars. Washclean Manufacturing Co., Boonville, Missouri.

Patents

Wanted An Idea! Who Can Think Of Some simple thing to patent? Protect your ideas. Write for Bulletin of Patent Buyers and Needed Inventions. Randolph & Co., Patent Attorneys, Dept. 151, Washington, D. C.

A Fortune To The Inventor Who Reads And heeds it, is the possible worth of the book we send for 6c. postage. Write us at once. E. S. & A. B. Lacey, Dept. C, Washington, D. C. Established 1869.

Real Estate

Profitable Little Farms At Richland Heights In Shenandoah Valley of Virginia, selected location, 5 and 10 acre tracts, $250.00 and up, easy terms—good fruit, vegetable, poultry and live stock country. Large list of other farms. Send for literature now. F. H. La Baume, Agt'l Agt., N. & W. Ry., 245 Arcade Bldg., Roanoke, Va.

Typewriters, Office Supplies

Largest Stock Of Typewriters In America. All makes. Underwoods, Olivers, Remingtons, etc. ½ to ⅓ mfrs. prices. $15 up—rented anywhere—applying rent on price. Free Trial. Installment payments if desired. Write for catalogue 121, Typewriter Emporium, (Estab. 1892), 34-36 W. Lake St., Chicago, Ill.

Collections

"Red Streaks Of Honesty Exist In Everybody," and thereby I collect over $250,000 yearly from honest debts all over the world. Write for my Red Streak Book, free. Francis G. Lake, 77 Com. Nat. Bank Bldg., Great Salt Lake City, Utah, U.S.A. "Some People Don't Like Us."

Aquatic Devices

Auto-Pneumatic Swimming Belt—"Pocket" Life preserver. Special high-class material. Waterproof. Inflates automatically. Weighs 1 pound. Self-instructor in swimming. Guaranteed. Price $4 (send chest measure): 500 Broadway, New York.

From Producer to Consumer

Ow! Wow! That's The Stuff! Bayle's Horse-radish Mustard. The finest condiment in the world; 10c a jar at your grocer's or direct from Geo. A. Bayle, St. Louis, Mo.

Duplicating Devices

You Can Make 50 Duplicate Copies From Every letter you write with pen or typewriter by using our "Modern" Duplicator. $3.50 complete. Booklet Free. W. E. Durkin, Reeves & Co., 339 Fifth Ave., Pittsburgh, Pa.

JOBS

Agents Wanted

A Golden Opportunity Offered Live Men Selling Pure Sour Aluminum Utensils and Specialties. We furnish free Moving Picture Lantern Slides that sell the goods. Our Co-operative Selling Plans will unlock every door in your territory, every hour turned into profit. Write quick and secure choice of territory. American Aluminum Mfg. Co., Division X, Lemont, Ill.

Agents!! Will You Take A Steady Job Paying regular Weekly Income to start if we give you a chance to work up to Big Yearly Profits? No experience required! Great Crew Manager's proposition! We are big Manufacturers. Middlemen's profits saved! Write quick for Exclusive Territory. Need 150 men at once. E. M. Davis, Pres., B 62 Davis Block, Chicago, Illinois.

We Need Live Wire Representatives For Un-occupied territory to handle The Fuller Sanitary Brushes. Our product is nationally advertised and covers every need. Your territory is valuable. Write for particulars. Fuller Brush Co., 57 Hoadley Place, Hartford, Conn. Western Branch: Rock Island, Ill.

Agents To Handle Exclusively Or As Side Line our Accident and Health Policies, for $6 yearly, which pay $2500 Death and $15 weekly for Injury or Sickness. Sells to men and women. Ages 16 to 70. Double amount for $10 Yearly. No Dues or Assessments. Liberal Commissions. Address Underwriters, Newark, N. J.

Young Man, Would You Accept And Wear A fine tailor-made suit just for showing it to your friends? If you live in a town smaller than 30,000, write at once and get beautiful samples, styles and this wonderful offer. Banner Tailoring Company, Dept. 588, Chicago.

Magazine Subscription Solicitors Earn Liberal commissions and extra prize money working for Scribner's. It does not interfere with your present occupation. A postcard will bring full particulars. Address Desk 1, Scribner's Magazine, 597 Fifth Ave., New York.

Live Agents Wanted To Take Orders For Our guaranteed food flavorsin tubes (saving 80%). Exceptionally large profits. Exclusive territory. Permanent business. C. H. Stuart & Co., 27 Union, Newark, N. Y.

What Are You Selling? If We Had Your Ad-dress we'd show you how to sell more, send you free pocket sample and largely increase your profits—not one week but weekly. S. Mfg. Co., 208 Warren St., New York.

At Last—A Compressed Air Washing Machine: cleans tub of clothes in 3 min. Washday now a pleasure. Women grab it at $1.50. Price to agents 50c in quantities. Wendell Washer Co., 357 Elm St., Leipsic, O.

Agents In Every City To Handle Our Triplex Folding Handbag. Big profits, exclusive territory; write for terms and free catalog; other big-sellers. S. B. Diamond & Bro., 45 West 21st Street, New York City.

Agents: Portraits 35c, Frames 15c. Sheet Pic-tures 1c, Stereoscopes 25c, Views 1c. Pillow tops 25c. 30 days' credit. Samples and catalog free. Consolidated Portrait Co., Dept. 1408, 917 W. Adams St., Chicago.

Agents To Take Orders For Visiting And Busi-ness Cards of Distinction. Sell at sight. Large Profits; Complete Outfit Free. The Forman Printery, 95-W Bank Street, Waterbury, Conn.

Wanted—Live Agents To Sell "Eureka Steel Ranges" from wagon or auto or for cash. Wonderful money maker for ambitious men. Send for catalogue. Eureka Steel Range Co., 107 Chilton, Ill.

Territory Manager Wanted For Guaranteed Washcake. We help make, and guarantee the sale of our product. Exclusive contract to a hustler who can produce, and handle agents. Washclean Mfg. Co., Boonville, Mo.

High-Grade Salesmen

Salesmen Wanted. Exceptional Opportunity for side line Specialty Salesmen, calling on wholesale and Retail Drug, Department, Automobile or Hardware Trade. Patented, nationally advertised, guaranteed specialty. Liberal commission and exclusive territory. Give full particulars, present line, territory, experience and references in first letter. Sanitas Co., 2255 S. Wabash Ave., Chicago.

Wanted: Hustlers To Take Orders For Made-to-measure high grade men's tailored suits from $8.00 to $22.00. You can make good money. Elegant large book outfit free. Experience unnecessary. No pocket folder affair. Splendid opportunity to make money. Handy Dandy Line, Dept. A, Sangamon St., Chicago.

Income Of $25 Weekly When Injured Or Sick —low priced policy for men or women, ages 16 to 70—pays $2,000 death by accident—costs $10 annually. Policy paying $2000 for accidental death—$25 a week injury or sickness, costs $5 a year. Write for Agency. Midland Casualty Co., 1345 Insurance Exchange, Chicago.

Sideline Salesmen Making Small Towns. Just the premium proposition you are looking for. Something a little Different than other houses are putting out. We guarantee our goods to sell or take back unsold goods. Write today. May Mfg. Co., 212 West Siegel Street, Chicago, Ill.

Wanted: Calendar Salesman By One Of The leading manufacturers. Large exclusive copyrighted line. Very liberal commission paid on receipt of orders. Experience desirable but not essential. Best references required. Robert Chapman Company, 1013 Grand St., Brooklyn, N.Y.

Salesmen—For High Grade Side Line To Sta-tionery, drug and jewelry trade. Big commissions. Pocket samples. Commission on re-orders. References. State territory. H. W. Haslup, 905 Jefferson Avenue, Toledo, Ohio.

Wanted Side Line Salesman, Auto Specialty, widely advertised. Easy seller, sure repeater, 25% commission. F. H. Phelps, 2921 Stevens Avenue, Minneapolis, Minn.

Agents Wanted

The Fuller Dustless Mop And Furniture Duster are advertised in leading magazines. We need live representatives for unoccupied territory. These articles contain exclusive features. Write for Our Special proposition. Fuller Brush Co., 57 Hoadley Place, Hartford, Conn. Western Branch: Rock Island, Ill.

Sign Men Make Big Money Handling Our Metallic Letters. Best, cheapest. Be independent. No experience required; we show how. Sample, instructions free. Universal Sign & Letter Co., Inc., 351 Fulton St., Brooklyn, N.Y.

Agents: For "Everbrite" Gold Glass Letters for window signs and house numbers. These letters and numbers can be sold in every city in the country. Chicago Glass Novelty Co., Marion, Ind.

Agents Hurry—Something New. Sanitary Tele-phone device. Millions will be sold. Steel Corporation bought 1200. Sells itself. Splendid profit. Write today for territory. Phondate Co., 530 Nasby Bldg., Toledo, O.

have tea twice, for he looked not only pink and dusty but dry, and one old lady said that years ago she had lost just such a boy as Bealby seemed to be—"Ah! not in the way *you* have lost him"—and she wept, poor old dear! and was only comforted after she had told the Captain three touching but extremely lengthy and detailed anecdotes of Bealby's vanished prototype.

(Fellow cannot rush away, you know; still, all this sort of thing, accumulating, means a confounded lot of delay.)

And then there was a deaf old man. . . . A very, very tiresome, deaf old man who said at first he *had* seen Bealby. . . .

After all the old fellow was deaf. . . .

The sunset found the Captain on a breezy common forty miles away from the Redlake Royal Hotel, and by this time he knew that fugitive boys cannot be trusted to follow the lines even of the soundest inductions. This business meant a search.

The Innkeeper's Wife: *"What a beautiful baby! It has your eyes, ma'am!"*

Should he pelt back to Redlake and start again more thoroughly on the morrow?

A moment of temptation. If he did, he knew she wouldn't let him go.

No!

NO!

He must make a sweeping movement through the country to the left, trying up and down the roads that, roughly speaking, radiated from Redlake between the twenty-fifth and thirty-fifth milestone. . . .

It was night and high moonlight when at last the Captain reached Crayminster, that little old town decayed to a village, in the Crays Valley. He was hungry, dispirited, quite unsuccessful, and here he resolved to eat and rest for the night.

He would have a meal, for by this time he was ravenous, and then go and talk in the bar or the tap about Bealby.

Until he had eaten he felt he could not endure the sound of his own voice repeating what had already become a tiresome stereotyped formula: "You haven't, I suppose, seen or heard anything during the last two days of a small boy—little chap of about thirteen—wandering about? He's a sturdy, resolute little fellow with a high color, short, wiry hair, rather dark . . ."

THE White Hart at Crayminster, after some negotiations, produced mutton cutlets and Australian hock. As he sat at his meal in the small, ambiguous, respectable dining room of the inn—adorned with framed and glazed beer advertisements, crinkled paper fringes, and insincere sporting prints—he became aware of a murmurous confabulation going on in the bar parlor. It must certainly, he felt, be the beer parlor. . . .

He could not hear distinctly, and yet it seemed to him that the conversational style of Crayminster was abnormally rich in expletive. And the tone was odd. It had a steadfast quality of commination.

He brushed off a crumb from his jacket, lit a cigarette, and stepped across the passage to put his hopeless questions.

The talk ceased abruptly at his appearance. It was one of those deep-toned bar parlors that are so infinitely more pleasant to the eye than the tawdry decorations of the genteel accommodation. It was brown with a trimming of green paper hops, and it had a mirror, and glass shelves sustaining bottles and tankards. Six or seven individuals were sitting about the room. They had a numerous effect. There was a man in very light floury tweeds, with a floury bloom on his face and hair and an anxious, depressed expression. He was clearly a baker. He sat forward as though he nursed something precious under the table. Next him was a respectable-looking, regular-featured fair man with a large head, and a ruddy-faced butcher-like individual smoked a clay pipe by the side of the fireplace. A further individual with an alert, intrusive look might have been a grocer's assistant associating above himself.

"Evening," said the Captain.

"Evening," said the man with the large head guardedly.

The Captain came to the hearthrug with an affectation of ease.

"I suppose," he began, "that you haven't any of you seen anything of a small boy wandering about. He's a little chap, about thirteen. Sturdy, resolute-looking little fellow with a high color, short, wiry hair, rather dark . . ."

He stopped short, arrested by the excited movements of the butcher's pipe and by the changed expressions of the rest of the company.

"We—we seen 'im," the man with the big head managed to say at last.

"We seen 'im all right," said a voice out of the darkness beyond the range of the lamp.

THE baker with the melancholy expression interjected: "I don't care if I don't ever see 'im again."

"Ah!" said the Captain, astonished to find himself suddenly, beyond hoping, on a fresh scent. "Now all that's very interesting. Where did you see him?"

"Thunderin' vicious little varmint," said the butcher. "Owdacious."

"Mr. Benshaw," said the voice from the shadows, "'e's arter 'im now with a shotgun loaded wi' oats. 'E'll pepper 'im if 'e c[illegible]'im, Bill will, you bet your 'at. And cve 'im jolly well right *ter*."

"I doubt," said the baker—"I doubt if I'll ever get my stummik—not thoroughly proper again. It's a Blaw I've 'ad. 'E gives me a Blaw. Oh! Mr. 'Orrocks, *could* I trouble you for another thimbleful of brandy? Just a thimbleful neat. It eases the ache . . ."

FREE—Your Copy of This "Guide Booklet" to Books

Your copy of an interesting little "guide booklet" to books is wrapped up and waiting your request. It is free to you as a Collier reader. No obligation. Merely clip the coupon.

This little book guide is invaluable to any man or woman who owns books or ever expects to own them. It tells how Dr. Eliot of Harvard, from his sixty years of reading, study and experience—forty years of it at the head of one of the World's greatest Universities—has put aside the few great books that in themselves "give a picture of the progress of the human race" from the dawn of history to modern times.

"How can the average man select a Library that will help him to become really well-read in a short time without wasting a dollar or a minute on useless books?" That is the question which this book guide answers. It tells the story of the 418 great works that Dr. Eliot chose—

The Famous Five-Foot Shelf of Books

"The Few Great Books That Make a Man Think Straight and Talk Well"

Every well-informed man or woman should at least know something about this famous library.

The free booklet tells about it—how Dr. Eliot has put into his Five-Foot Shelf "the essentials of a liberal education," and so arranged it that even "fifteen minutes a day" is enough.

Read Only Worth While Books

And you begin today to be really well read. In only a few pleasant minutes a day, by using the reading course which Dr. Eliot has provided for you, you can get the knowledge of literature and life, the culture, the broad viewpoint that every University strives to give.

The free book guide contains Dr. Eliot's own plan of reading explained by himself. Merely ask for it.

The Aristocracy of "Bull" Durham Hand-made Cigarettes

You find them at every rendezvous of men of wealth and refinement—at the yacht club, the private beach, the gymkhana. Those deliciously mild, fragrant, fresh-rolled "Bull" Durham cigarettes—as intimately suited to the taste and expressive of the personality of the smoker, as the fashionable fit of his attire, the equipage of his yacht.

"Bull" Durham hand-made cigarettes have an irresistible attraction for the experienced smoker, because of their wonderful, unique fragrance, their inimitable savory mildness, found in no other cigarettes and in no other tobacco. When you "roll your own" with world-famous, mellow "Bull" Durham, you experience a distinctive form of tobacco enjoyment, supremely mild and satisfying.

Ask for FREE book of "papers" with each 5c sack.

GENUINE

"BULL" DURHAM

SMOKING TOBACCO

(Enough for forty hand-made cigarettes in each 5c sack)

An illustrated booklet, showing how to "Roll Your Own," and a Book of cigarette papers, will both be mailed, *free*, to any address in U. S. on postal request.

DANGER!

A Remarkable Story of England at War

by

A. CONAN DOYLE

Digitized by Google

"Joy, Temperance and Repose Slam the door on the doctor's nose–"

and if Henry Wadsworth Longfellow were alive today he would include under the head of Joy and Repose the day-by-day use of Tuxedo in a pipe.

Tuxedo assures real repose: the calm, wrinkle-smoothing, mind-easing repose that comes with a wholesome, helpful pipe of satisfactory tobacco.

Tuxedo is the satisfactory tobacco—in a class by itself for mildness, fragrance and non-irritating qualities.

Tuxedo

The Perfect Tobacco for Pipe or Cigarette

Tuxedo tobacco has made thousands of men joyful, temperate and comfortable converts to the pipe, because it has made pipe-smoking not only possible but pleasant to them.

Under the famous "Tuxedo Process" the mild, tender leaves of the highest grade Burley tobacco are so skillfully treated that Tuxedo absolutely cannot bite, parch or irritate the tongue or mouth in any way. Tuxedo burns slowly and coolly, with a delicious aroma.

Many other brands have tried to imitate the original "Tuxedo Process"—but the process is still a secret known only to the makers of Tuxedo. Get the original Tuxedo—avoid imitations—and you will get the best tobacco on earth for your money.

YOU CAN BUY TUXEDO EVERYWHERE

Convenient pouch, *innerlined* with moisture-proof paper . . . 5c

Famous green tin, with gold lettering, curved to fit pocket 10c

In Tin Humidors, 40c and 80c In Glass Humidors, 50c and 90c

GRANTLAND RICE

Famous Sporting Writer and Authority, says:

"Whenever I go hunting or fishing I slip a curved tin of Tuxedo Tobacco in my hip-pocket and I always keep a supply at home. Ample proof that I like Tuxedo."

Grantland Rice

E. YSAYE

The World-famous Violinist, says:

"Tuxedo is a fine, mild, fragrant smoke — the best ever. The more experience one has had, the more convincing is the superiority of Tuxedo. It is the only tobacco free from bite that I have ever found, and it leads all others in fragrance and flavor—a rare combination."

E. Ysaye

PENRHYN STANLAWS

Celebrated Artist, creator of the famous "Stanlaws Girls," says:

"Some artists draw better than others, but no artist draws better than a good pipe filled with Tuxedo."

Penrhyn Stanlaws

D. N. TRAVIS, L. L. B.

President Michigan Board of Pardons. Delegate American Prison Congress. Former Secretary to Ex-Gov. Chase S. Osborn. Lecturer, Lawyer and Dramatist, says:

"The man on the lecture platform need not be lonesome if he smokes Tuxedo. A good pipe and book will convert a hotel bedroom into a home if the tobacco is Tuxedo."

D. N. Travis

ALLAN H. FRAZER

Former prosecutor and leading attorney of Detroit, says:

"In the heat of many a political campaign, in success and in defeat, Tuxedo has been my faithful ally. It teaches me that while all men may be created equal, all tobaccos are not. There is none like Tuxedo."

Allan H. Frazer

GEO. W. GALVIN, M. D.

Founder of Boston Emergency Hospital and its Surgeon-in-Chief for 18 years, says:

"Nothing like Tuxedo as a pal on a hunting or fishing trip. It's a great all-around outdoors smoke; gives a man that old joy-of-living feeling."

Geo. W. Galvin M. D.

We Give You This Fine Leather Tobacco Pouch

Every smoker appreciates a leather tobacco pouch. This handy, serviceable, Tuxedo Draw-Pouch is made of fine, soft, flexible tan leather, with a draw-string and snap that close pouch tight and keep the tobacco from spilling.

Send us 10c and your tobacco dealer's name, and we will mail you prepaid, anywhere in U. S., a 10c tin of TUXEDO and this handsome Leather Draw-Pouch. We gladly make this offer to get you to try TUXEDO. Address

The Finished Six

Here we've fulfilled—after four years of effort—all that we hoped for in Sixes. In big things and little—down to the last detail—it completely meets our conception of the ideal Six

This HUDSON Six-40 was begun four years ago. Howard E. Coffin, the great HUDSON designer, aimed to make it the perfect Six. All the 48 HUDSON engineers have given their best to it.

It came out last year. The first month's output was sold before men saw it. The season's output was 3,000 cars oversold.

We knew then that we had what men wanted. So all last year we worked on final touches. We added 31 refinements. And we trebled our output for this year, to cope with the car's popularity.

Size and Power

This size—123-inch wheelbase—seems exactly right. There are seats and ample room for seven.

The motor shows 47 horsepower. No requirement calls for more than that in a car of this size and weight.

Costly experience is leading motorists away from excesses in these things.

Lightness—Economy

The HUDSON Six-40 weighs 2,890 pounds. Built in old ways, a car like this weighed around 4,000. Better materials and better designing have accomplished all this saving. And the car is stauncher than the old-time heavy cars.

This lightness, plus a new-type motor, have reduced operative cost about 30 per cent. To many, that's the best thing we have done.

Beauty and Comfort

Here also is the modern ideal of a handsome car. Every detail shows the artists' touch. Wide seats, high backs, deep cushions. All the new-day conveniences. All the common equipment and much that's rare or exclusive.

Last year's model seemed to offer every possible attraction, but 31 new ones are added in this 1915 model.

HUDSON
Six-40
$1,550 This Year f.o.b. Detroit

The Hoped-for Price

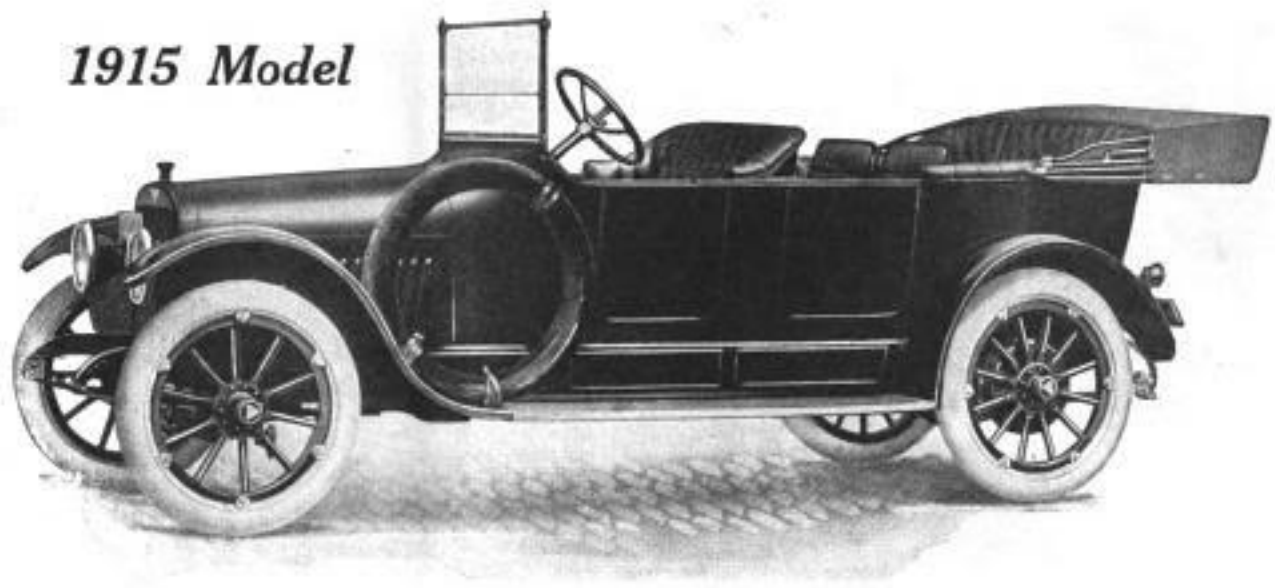
And this year—through trebled output—we've reached the hoped-for price. At $1,550 we are giving the best we know.

Today that price buys the finest type HUDSON ever built. It buys Howard E. Coffin's latest masterpiece. It buys what you will consider as the finest example of the modern type quality car.

Men Will Never Go Back

Note that new-model cars, so far as they can, are adopting these HUDSON standards. Light Sixes are the vogue. The trend is toward modesty in size, toward lower prices and the ending of over-tax.

The HUDSON Six-40 accords with all the time's tendencies. It is not unique. It is simply in advance of others.



And men will never go back to the old-time excesses. This type is the coming car.

Hudson dealers are everywhere. So see this year's new features. Catalog on request.

Attractions

- A perfect streamline body.
- Seats and room for seven.
- Disappearing tonneau seats.
- Invisible hinges.
- Hand-buffed leather upholstery.
- Gasoline tank in dash.
- Tires carried ahead of front door.
- "One-Man" top with quick-adjusting curtains attached.
- Dimming searchlights.
- Simplified starting, lighting and ignition system.
- Wires in metal conduits.
- Locked ignition and lights.
- New-form speedometer drive.
- Automatic spark advance.
- New-method carburetion.
- Horn button in wheel.
- Trunk rack on back.

The Style Book

MEN are as fastidious as women about their clothes. Young men are especially particular and all men have become very inquisitive about style.

To enable them to know what is correct, we publish the Style Book. It contains an epitome of the styles of clothes, hats, shoes; in fact, everything for the season.

Three millions of men are receiving the Style Book twice each year. Some of them rely on it for information whether they buy our clothes or not.

Here are some of the things it shows you:

Fifteen attractive style pictures.
What to wear and when.
How much you ought to pay.
How much you can save in ready clothes.
How you can be fitted.
Where you can buy our clothes.

Send your name now. A copy of the Style Book will be mailed to you shortly after September 1st.

A reproduction of the cover shown at the top of this page is on display in the window of the merchant who sells our clothes in your home town.

Danger!

Being the Log of Captain John Sirius

By Sir A. Conan Doyle—Part I

ILLUSTRATED BY HENRY REUTERDAHL

THIS remarkable story was finished by Sir Arthur Conan Doyle last May just before his visit to America. He wrote it as a last anxious warning to England before she embarked upon another war. And the war has come sooner than even he had feared

IT IS an amazing thing that the English, who have the reputation of being a practical nation, never saw the danger to which they were exposed. For many years they had been spending nearly a hundred millions a year upon their army and their fleet. Squadrons of dreadnoughts costing two millions each had been launched. They had spent enormous sums upon cruisers, and both their torpedo and their submarine squadrons were exceptionally strong. They were also by no means weak in their aerial power, especially in the matter of hydroplanes. Besides all this, their army was very efficient in spite of its limited numbers, and it was the most expensive in Europe. Yet when the day of trial came, all this imposing force was of no use whatever, and might as well have not existed. Their ruin could not have been more complete or more rapid if they had not possessed an ironclad or a regiment. And all this was accomplished by me, Captain John Sirius, belonging to the navy of one of the smallest powers in Europe, and having under my command a flotilla of eight vessels, the collective cost of which was eighteen hundred thousand pounds. No one has a better right to tell the story than I.

I will not trouble you about the dispute concerning the Colonial frontier, embittered, as it was, by the subsequent death of the two missionaries. A naval officer has nothing to do with politics. I only came upon the scene after the ultimatum had been actually received. Admiral Horli had been summoned to the Presence, and he asked that I should be allowed to accompany him, because he happened to know that I had some clear ideas as to the weak points of England and also some schemes as to how to take advantage of them. There were only four of us present at this meeting—the King, the Foreign Secretary, Admiral Horli, and myself. The time allowed by the ultimatum expired in forty-eight hours.

I am not breaking any confidence when I say that both the King and the Minister were in favor of a surrender. They saw no possibility of standing up against the colossal power of Great Britain. The Minister had drawn up an acceptance of the British terms, and the King sat with it before him on the table. I saw the tears of anger and humiliation run down his cheeks as he looked at it.

"I fear that there is no possible alternative, Sire," said the Minister. "Our envoy in London has just sent this report, which shows that the public and the press are more united than he has ever known them. The feeling is intense, especially since the rash act of Malort in desecrating the flag. We must give way."

THE King looked sadly at Admiral Horli.

"What is your effective fleet, Admiral?" he asked.

"Two battleships, four cruisers, twenty torpedo boats, and eight submarines," said the Admiral.

The King shook his head.

"It would be madness to resist," said he.

"And yet, Sire," said the Admiral, "before you come to a decision I should wish you to hear Captain Sirius, who has a very definite plan of campaign against the English."

"Absurd!" said the King, impatiently. "What is the use? Do you imagine that you could defeat their vast armada?"

"Sire," I answered, "I will stake my life that if you will follow my advice you will, within a month or six weeks at the utmost, bring proud England to her knees." There was an assurance in my voice which arrested the attention of the King.

"You seem self-confident, Captain Sirius."

"I have no doubt at all, Sire."

"What then would you advise?"

"I would advise, Sire, that the whole fleet be gathered under the forts of Blankenberg and be protected from attack by booms and piles. There they can stay till the war is over. The eight submarines, however, you will leave in my charge to use as I think fit."

"Ah, you would attack the English battleships with submarines?"

"Sire, I would never go near an English battleship."

"And why not?"

"Because they might injure me, Sire."

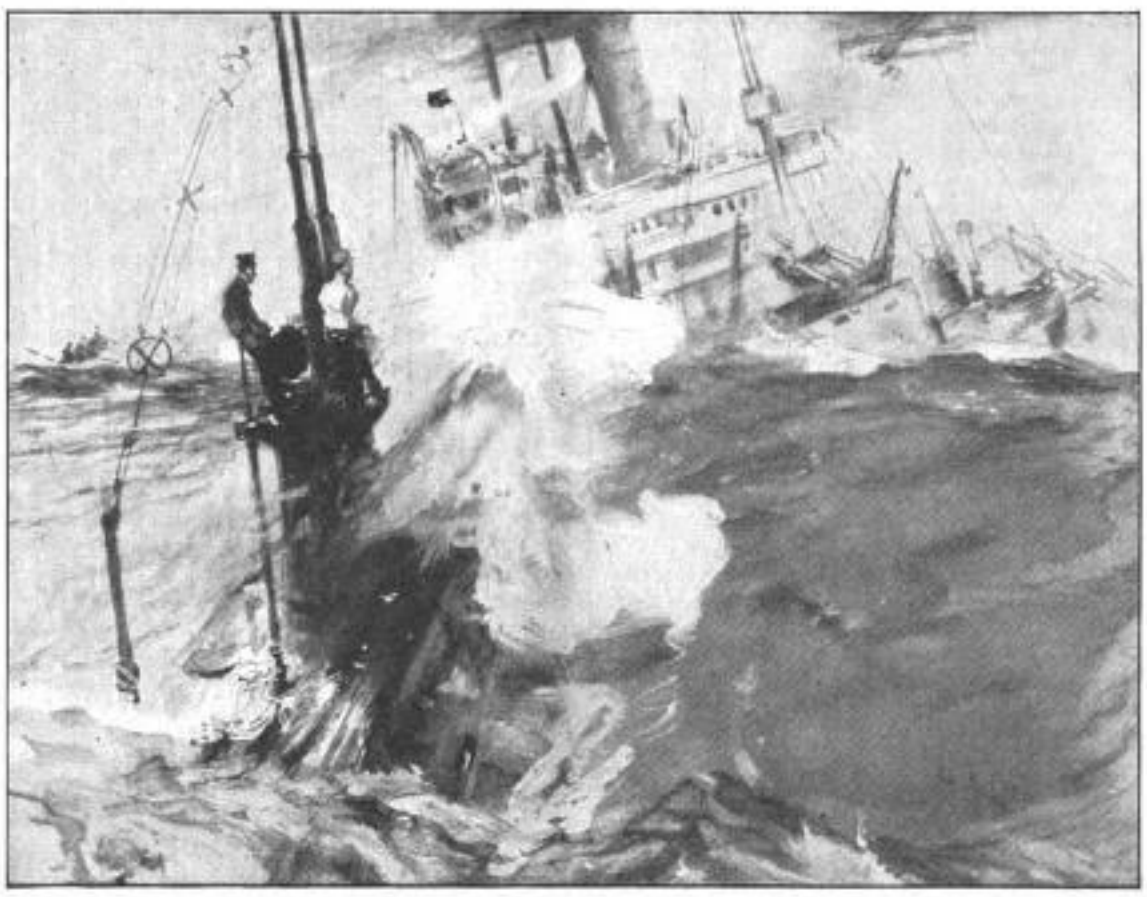
"What, a sailor and afraid?"

"My life belongs to the country, Sire. It is nothing. But these eight ships—everything depends upon them. I could not risk them. Nothing would induce me to fight."

"Then what will you do?"

"I will tell you, Sire."

And I did so. For half an hour I spoke. I was clear and strong and definite, for many an hour on a lonely watch I had spent in thinking out every detail. I held them enthralled. The King never took his eyes from my face. The Minister sat as if turned to stone.



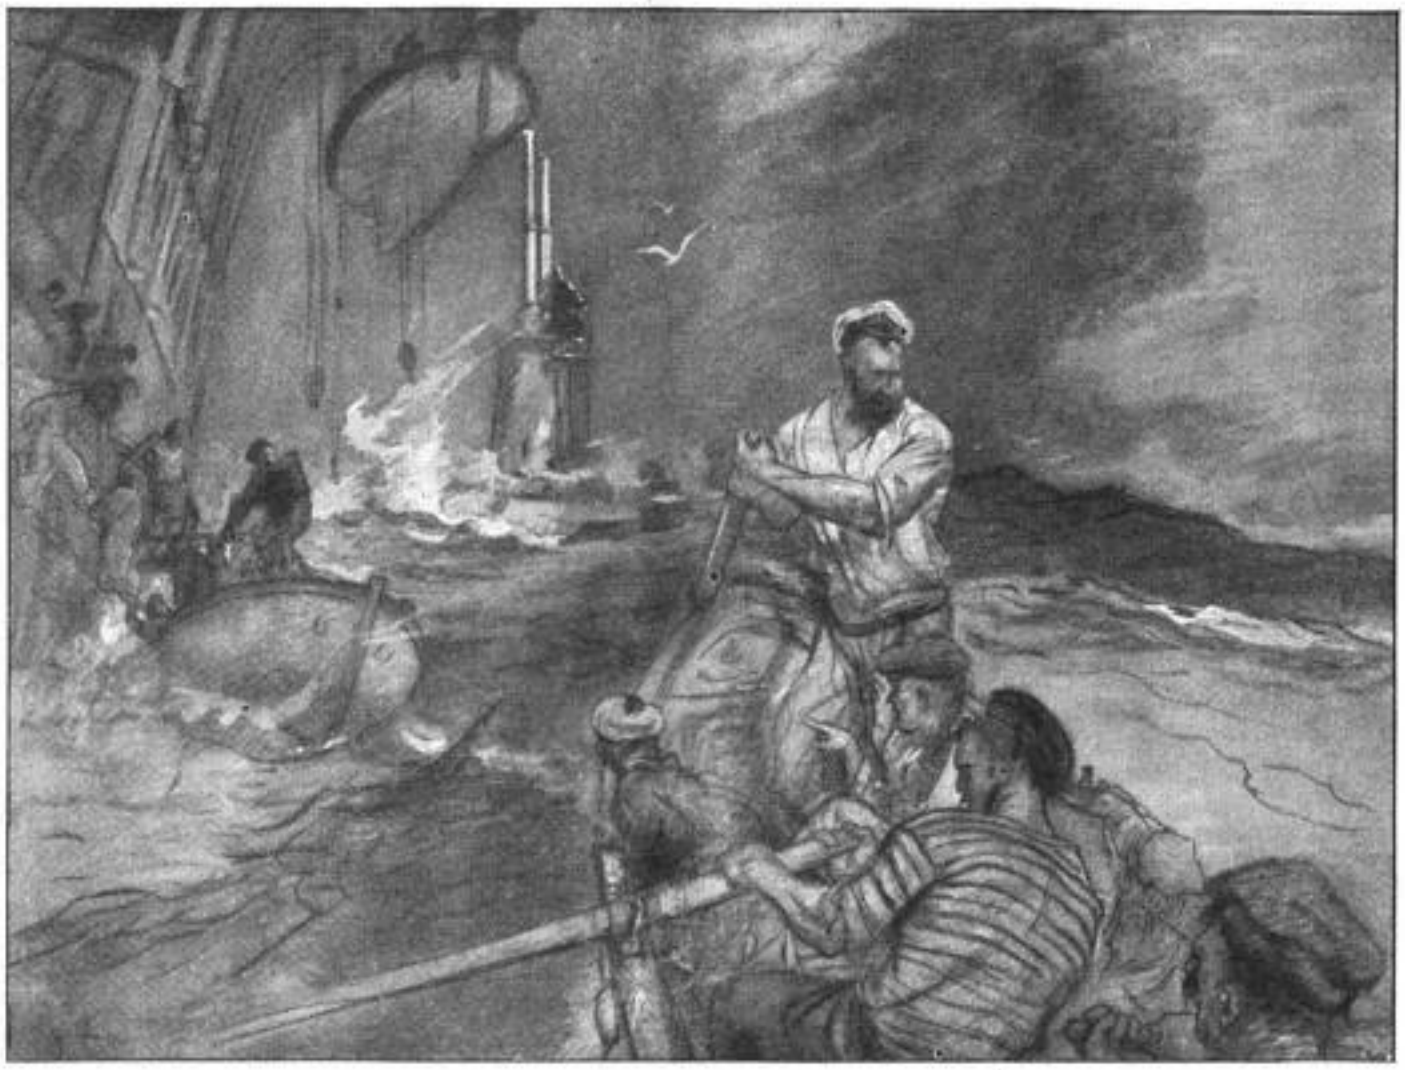
"Are you sure of all this?"

"Perfectly, Sire."

The King rose from the table.

"Send no answer to the ultimatum," said he. "Announce in both Houses that we stand firm in the face of menace. Admiral Horli, you will in all respects carry out that which Captain Sirius may demand in furtherance of his plan. Captain Sirius, the field is clear. Go forth and do as you have said. A grateful King will know how to reward you."

I need not trouble you by telling you the measures which were taken at Blankenberg, since, as you are aware, the fortress and the entire fleet were destroyed by the British within a week of the declaration of war. I will confine myself to my own plans, which had so glorious and final a result.



Heavens, what a smash! The whole stern seemed to go aloft. I drew off and watched her sink. She went down in seven minutes, leaving her masts and funnels over the water and a cluster of her people holding on to them

THE fame of my eight submarines, *Alpha*, *Beta*, *Gamma*, *Theta*, *Delta*, *Epsilon*, *Iota*, and *Kappa*, has spread through the world to such an extent that people

Digitized by Google

have begun to think that there was something peculiar in their form and capabilities. This is not so. Four of them, the *Delta*, *Epsilon*, *Iota*, and *Kappa*, were, it is true, of the very latest model, but had their equals (though not their superiors) in the navies of all the great powers. As to *Alpha*, *Beta*, *Gamma*, and *Theta*, they were by no means modern vessels, and found their prototypes in the old F class of British boats, having a submerged displacement of eight hundred tons, with heavy oil engines of sixteen hundred horsepower, giving them a speed of eighteen knots on the surface and of twelve knots submerged. Their length was one hundred and eighty-six and their breadth twenty-four feet. They had a radius of action of four thousand miles and a submerged endurance of nine hours. These were considered the latest word in 1915, but the four new boats exceeded them in all respects. Without troubling you with precise figures, I may say that they represented roughly a 25 per cent advance upon the older boats, and were fitted with several auxiliary engines which were wanting in the others. At my suggestion instead of carrying eight of the very large Bakdorf torpedoes, which are nineteen feet long, weigh half a ton, and are charged with two hundred pounds of wet gun-cotton, we had tubes designed for eighteen of less than half the size. It was my design to make myself independent of my base.

And yet it was clear that I must have a base, so I made arrangements at once with that object. Blankenberg was the last place I would have chosen. Why should I have a *port* of any kind? Ports would be watched or occupied. Any place would do for me. I finally chose a small villa standing alone nearly five miles from any village and thirty miles from any port. To this I ordered them to convey, secretly by night, oil, spare parts, extra torpedoes, storage batteries, reserve periscopes, and everything that I could need for refitting. The little whitewashed villa of a retired confectioner—that was the base from which I operated against England.

And suddenly, as one of the boats lay off waiting for the others, they caught a glimpse for the first time of my conning tower so close to them. I saw them shouting and pointing

THE boats lay at Blankenberg, and thither I went. They were working frantically at the defenses, and they had only to look seaward to be spurred to fresh exertions. The British fleet was assembling. The ultimatum had not yet expired, but it was evident that a blow would be struck the instant that it did. Four of their aeroplanes, circling at an immense height, were surveying our defenses. From the top of the lighthouse I counted thirty battleships and cruisers in the offing, with a number of the trawlers with which in the British service they break through the mine fields. The approaches were actually sown with two hundred mines, half contact and half observation, but the result showed that they were insufficient to hold off the enemy, since three days later both town and fleet were speedily destroyed.

However, I am not here to tell you the incidents of the war, but to explain my own part in it, which had such a decisive effect upon the result. My first action was to send my four second-class boats away instantly to the point which I had chosen for my base. There they were to wait submerged, lying with negative buoyancy upon the sands in twenty feet of water, and rising only at night. My strict orders were that they were to attempt nothing upon the enemy, however tempting the opportunity. All they had to do was to remain intact and unseen until they received further orders. Having made this clear to Commander Panza, who had charge of this reserve flotilla, I shook him by the hand and bade him farewell, leaving with him a sheet of note paper upon which I had explained the tactics to be used and given him certain general principles which he could apply as circumstances demanded.

My whole attention was now given to my own flotilla, which I divided into two divisions, keeping *Iota* and *Kappa* under my own command, while Captain Miriam had *Delta* and *Epsilon*. He was to operate separately in the British Channel, while my station was the Straits of Dover. I made the whole plan of campaign clear to him. Then I saw that each ship was provided with all it could carry. Each had forty tons of heavy oil for surface propulsion and charging the dynamo which supplied the electric engines under water. Each had also eighteen torpedoes, as explained, and five hundred rounds for the collapsible quick-firing twelve-pounder which we carried on deck, and which, of course, disappeared into a water-tight tank when we were submerged. We carried spare periscopes and a wireless mast, which could be elevated above the conning tower when necessary. There were provisions for sixteen days for the ten men who manned each craft. Such was the equipment of the four boats which were destined to bring to naught all the navies and armies of Britain. At sundown that day—it was April 10—we set forth upon our historic voyage.

Miriam had got away in the afternoon, since he had so much farther to go to reach his station. Stephan of the *Kappa* started with me; but, of course, we realized that we must work independently, and that from that moment when we shut the sliding hatches of our conning towers on the still waters of Blankenberg Harbor it was unlikely that we should ever see each other again, though consorts in the same waters. I waved to Stephan from the side of my conning tower, and he to me. Then I called through the tube to my engineer (our water tanks were already filled and all Kingstons and vents closed) to put her full speed ahead.

Just as we came abreast of the end of the pier and saw the white-capped waves rolling in upon us, I put the horizontal rudder hard down and she slid under water. Through my glass portholes I saw its light green change to a dark blue, while the manometer in front of me indicated twenty feet. I let her go to forty, because I should then be under the warships of the English, though I took the chance of fouling the moorings of our own floating contact mines. Then I brought her on an even keel, and it was music to my ear to hear the gentle, even ticking of my electric engines and to know that I was speeding at twelve miles an hour on my great task.

AT THAT moment, as I stood controlling my levers in my tower, I could have seen, had my cupola been of glass, the vast shadows of the British blockaders hovering above me. I held my course due westward for ninety minutes, and then, by shutting off the electric engine without blowing out the water tanks, I brought her to the surface. There was a rolling sea and the wind was freshening, so I did not think it safe to keep my hatch open long, for so small is the margin of buoyancy that one must run no risks. But from the crests of the rollers I had a look backward at Blankenberg, and saw the black funnels and upper works of the enemy's fleet with the lighthouse and the castle behind them, all flushed with the pink glow of the setting sun. Even as I looked there was the boom of a great gun, and then another. I glanced at my watch. It was six o'clock. The time of the ultimatum had expired. We were at war.

There was no craft near us, and our surface speed is nearly twice that of our submerged, so I blew out the tanks and our whaleback came over the surface. All night we were steering southwest, making an average of eighteen knots. At about five in the morning, as I stood alone upon my tiny bridge, I saw, low down in the west, the scattered lights of the Norfolk coast. "Ah, Johnny, Johnny Bull," I said, as I looked at them, "you are going to have your lesson, and I am to be your master. It is I who have been chosen to teach you that one cannot live under artificial conditions and yet act as if they were natural ones. More foresight, Johnny, and less party politics—that is my lesson to you." And then I had a wave of pity, too, when I thought of those vast droves of helpless people, Yorkshire miners, Lancashire spinners, Birmingham metal workers, the dockers and workers of London, over whose little homes I would bring the shadow of starvation. I seemed to see all those wasted, eager hands held out for food and I, John Sirius, dashing it aside. Ah, well! war is war, and if one is foolish one must pay the price. Just before daybreak I saw the lights of a considerable town, which must have been Yarmouth, bearing about ten miles west-southwest on our starboard bow. I took her farther out, for it is a sandy, dangerous coast, with many shoals. At 5.30 we were abreast of the Lowestoft lightship. A coast guard was sending up flash signals which faded into a pale twinkle as the white dawn crept over the water. There was a good deal of shipping about, mostly fishing boats and small coasting craft, with one large steamer hull down to the west, and a torpedo destroyer between us and the land. It could not harm us, and yet I thought it as well that there should be no word of our presence, so I filled my tanks again and went down to ten feet. I was pleased to find that we got under in one hundred and fifty seconds. The life of one's boat may depend upon this when a swift craft comes suddenly upon you.

We were now within a few hours of our cruising ground, so I determined to snatch a rest, leaving Vornal in charge. When he woke me at ten o'clock we were running on the surface, and had reached the Essex coast off the Maplin Sands. With that charming frankness which is one of their characteristics, our friends of England had informed us by their press that they had put a cordon of torpedo boats across the Straits of Dover to prevent the passage of submarines, which is about as sensible as to lay a wooden plank across a stream to keep the eels from passing. I knew that Stephan, whose station lay at the western end of the Solent, would have no difficulty in reaching it. My own cruising ground was to be the mouth of the Thames, and here I was at the very spot with my tiny *Iota*, my eighteen torpedoes, my quick-firing gun, and, above all, a brain that knew what should be done and how to do it.

WHEN I resumed my place in the conning tower I saw in the periscope (for we had dived) that a lightship was within a few hundred yards of us upon the port bow. Two men were sitting on her bulwarks, but neither of them cast an eye upon the little rod that clove the water so close to them. It was an ideal day for submarine action, with enough ripple upon the surface to make us difficult to detect, and yet smooth enough to give me a clear view. Each of my three periscopes had an angle of sixty degrees, so that between them I commanded a complete semicircle of the horizon. Two British cruisers were steaming north from the Thames within half a mile of me. I could easily have cut them off and attacked them had I allowed myself to be diverted from my great plan. Farther south a destroyer was passing westward to Sheerness. A dozen small steamers were moving about. None of these were worthy of my notice. Great countries are not provisioned by small steamers. I kept the engines running at the lowest pace which would hold our position under water, and, moving slowly across the estuary, I waited for what must assuredly come. I had not long to wait.

Shortly after one o'clock I perceived in the periscope a cloud of smoke to the south. (*Concluded on page 33*)

Cooperation on a Business Basis

By Frank Chase

ILLUSTRATED BY C. B. FALLS

THE proprietor of two hundred grocery stores, Patrick O'Toole, indicated a chair on the opposite side of his flat-topped desk.

"I'm president of a little cooperative society," announced the visitor, sitting. "Just a bunch of us railroad men, you know. We want to reduce the cost of living and we're thinking of opening a store. I thought you might be willing to give us some practical advice. So many cooperative stores have failed, you know, and—er—"

"You would like to know how to make a go of it, is that it?" asked the merchant. His visitor nodded.

"Here is the secret in a nutshell," said Mr. O'Toole. "Scrape up a hundred thousand dollars, hire the ablest manager you can find, and bid him go to it!"

"But we only want a small store!" exclaimed the railroad man. "Just a little place to take care of our own trade. Really, I think two or three thousand dollars ought to—"

"Sure, I know," interrupted Mr. O'Toole, "and you're doomed to fail before you start. First, you don't know the game. Could I run a railroad? I could not. Neither can you run a grocery store, and make it *pay*, mind. Not until you learn the business anyway. And before you learn it, you'll fail. But supposin' you knew the game—and you'd not be chasin' the cooperative rainbow if you did—how far would you get on two or three thousand dollars?"

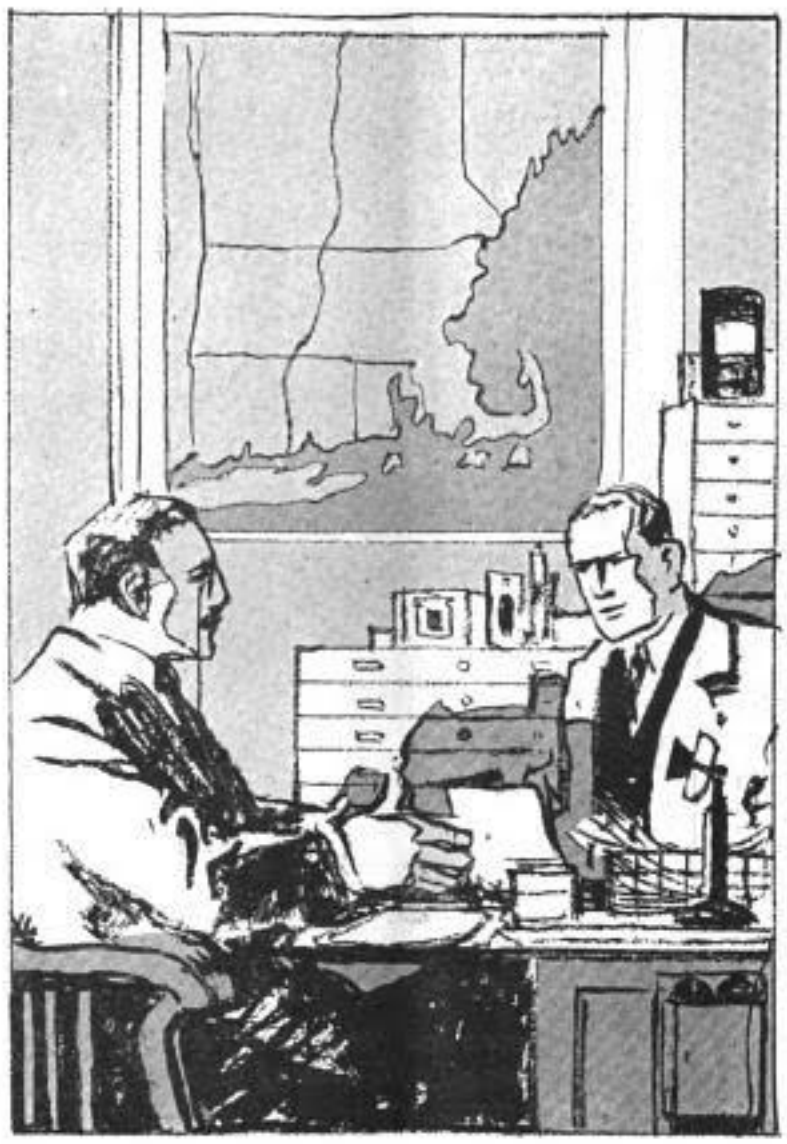
"We only want a *little* store," persisted the younger man.

"You'll find them in every corner basement in the suburbs! If it wasn't for the little basement stores, the wholesale grocers would be out of business long ago. I don't patronize the wholesaler. I buy direct from the packer if it's canned goods, direct from the mill if it's flour, and so on. I buy just as low as the wholesaler can. I am my own wholesaler; put it that way. My two hundred stores sell as many goods as the average wholesale house. Sometimes I put the extra profit in my pocket, and sometimes I cut prices with it to drive out competition. That's what I would do to cooperation if it ever got going on a big scale. But it never will. There's too much pulling and hauling. You have one hundred members and as many bosses.

"When you fellows open up a little store on two or three thousand dollars capital, you don't hurt me at all. I can sell many things cheaper than you can buy them. Your members compare prices, and soon they are back trading with O'Toole."

"But you overlook the fact that our cooperators will pledge themselves to trade at their own store, Mr. O'Toole. That's one of the reasons why I think we can succeed on small capital."

"Touch a man's pocketbook," said Mr. O'Toole, "and he'll mighty soon forget his pledges. That's the rock that splits cooperative storekeeping every time. But I see you're not convinced. Well, go ahead and take a crack at it. You'll soon discover that even a cooperative store must pay rent; it must pay for lights, paper, and clerk hire. That's where even the little basement stores will beat you out—clerk hire; because the small storekeeper usually works himself. If he makes a week's pay, he counts himself lucky. That's his profit. But where will your profit come in with hired labor? Your intentions are good, my boy, but you haven't the equipment to reduce the cost of living. The chain-stores system is the last word in low prices, take my word for it."



The young railroad clerk went back to his desk, convinced that Mr. O'Toole's viewpoint was wrong. Like the majority of men, the railroad clerk had sought expert advice and then rejected it because it did not jibe with his preconceived opinions. He recruited 700 cooperators, who subscribed $5 each to open a grocery store. In due course the store began business. Fourteen months later a receiver closed its doors. Another cooperative store had failed to meet the test of competition.

The Man Who Made Cooperation Pay

THE foregoing is merely one typical case out of several hundred cooperative ventures in the United States. For a good number of years past cooperation has been regarded by the country at large either as a doubtful experiment or a new sort of charity.

The retail grocer has held up cooperative storekeeping as a joke, a huge joke on the consumer because it proved him to be a poor business man.

Albeit, the cooperative crusade has persisted in spite of failures, and now a change is impending. Cooperative storekeeping, in New England at least, has taken on a new lease of life. A system that has proved successful in England and other European countries has been adapted to American conditions. No longer may those who have levied an annual tax of $7,000,000,000 for *distributing* the products of the soil of this country collect their toll without a challenge.

"Our cooperators will pledge themselves, Mr. O'Toole. . . ." "Touch a man's pocketbook," said Mr. O'Toole, "and he'll mighty soon forget his pledges"

A good share of credit for the new order belongs to a young man who was graduated from Bowdoin College, State of Maine, about ten years ago. Mr. Purington offers this modest explanation of how he became identified with the cooperative movement:

"I traveled for a publishing house for a number of years, and wherever I stopped long enough to get acquainted, I observed that people were talking more and more about the high cost of living. Just to keep up with the procession I began to look into the subject. By degrees I became convinced that the high cost of living could be explained in one word: Waste! Low scale of production, ignorance of markets, unnecessary handling, lack of storage facilities for both producer and consumer, delivery of small parcels—these are just a few of the items that go to make up a staggering total waste under our present system.

"Our friends the Socialists have claimed that triumph of their party at the polls would reduce the cost of living along with many other needed reforms. But it was not clear to me how farmers could be compelled by legislation to grow more corn to the acre, for example, or how Mrs. Jones could be prevented from buying her potatoes by the peck, or how Mrs. Smith could be dissuaded from requesting a ten-cent delivery service on two pounds of sugar on which the grocer's mark-up would be about two cents.

"It seemed to me that these wrong conditions could be corrected by cooperation. But although cooperative societies had accomplished wonders abroad, in this country they had failed very much oftener than they had succeeded. Apparently something was wrong with the way the principle of cooperation had been applied to American conditions. To search out the fault and remedy it looked like a task that would require all of a man's time. So I threw up my traveling job and set to work with the idea of establishing cooperation on a business basis. I am still at it."

Mr. Purington has the type of mind that digs to rock bottom once it tackles a subject. He explores all the little bypaths that lead from the main road and neatly charts them for future reference. In computing freight costs on canned goods, for example, he set apart a column for the water in the cans. Result: 40 per cent of freight cost was for solids, balance water!

What does it cost every time your grocery boy delivers an order? The minimum cost of delivery is 5⅛ cents, according to Mr. Purington; it may run up as high as 15 cents in stores that are not well managed. Two deliveries a day at the latter rate means $100 a year as against $36 for the same service from a well-managed store.

A Basis for the New Scheme

TO APPLY some of his theories and at the same time to conduct his search for waste at closer range, Mr. Purington accepted the managership of a little cooperative store that was about ready to give up the ghost. He knew nothing about the practical end of the grocery business, but one could learn. Soon he was confronted by this problem: How could Mr. O'Toole advertise —— Bros. Extra Peas for 19 cents the can when the little cooperative store was paying $2.25 a dozen for the same brand? Mr. Purington went to Mr. O'Toole and asked him. The master of two hundred stores replied with commendable candor that he bought —— Bros. Extra Peas in carload lots for $1.62 a dozen cans! Mr. O'Toole was a little vainglorious. In substance he talked much as he had to the railroad clerk: A small cooperative store could not compete with Patrick O'Toole, who owned two hundred stores and bought in tremendous quantities. Besides, Mr. O'Toole was selling foodstuffs at rock bottom; nobody could sell lower; so what was the use of a cooperative store anyway?

Mr. Purington thanked the merchant and went back to his desk. Unlike the railroad clerk, however, he accepted Mr. O'Toole's advice as sound—so far as it went. Mr. Purington went further: If a chain of stores could earn $1,000,000 a year for Patrick O'Toole, why could not a chain of cooperative stores—granting they were run as efficiently—save $1,000,000 a year for the stores' customers? There would be the problem, no doubt—to run the cooperative stores as *efficiently* as Mr. O'Toole ran his. It could be done, but, first, cooperation must be put on a business basis. Mr. Purington had confirmed his theories, but he had still to build up an organization before he could try out the plan.

Only a true cooperator could have preserved faith and optimism through the discouraging year that followed. It was not hard to find men interested in cooperation, but Mr. Purington presented new ideas. He held firm for them, and new ideas on any subject must undergo varying stages of ridicule before they are accepted.

After fifteen months of effort conditions seemed favorable for launching a chain of cooperative stores. An article published in COLLIER'S had advocated much the same idea; further, the article had brought to the front prominent local men who were interested in cooperation. And prominent men, practical men, moneyed men were necessary, as will be seen.

Getting the Chain Started

THOSE known to be interested were invited to attend a meeting where the chain-of-cooperative-stores plan was explained in detail. A series of conferences followed, some extending from mid-afternoon until early next morning. This is a fair example of the enthusiasm that is backing cooperative storekeeping in New England to-day.

The conferences served to fuse a number of conflicting opinions into one dominating idea: to establish cooperation on a business basis. The subject was fully summed up by Mr. Purington at a dinner—a round-up party—in about the following words:

"Cooperative storekeeping in New England has failed because of inability, through lack of capital, to buy in large quantities and engage expert management. To buy in large quantities requires a large capital and a large volume of business; a small cooperative store has neither. Efficient managers are attracted by the rewards of big business, which means private business run for gain. To succeed in this country, cooperative business requires some such strong central organiza-

Digitized by Google

tion as the English wholesale societies. The plan has been proposed often enough, but it has never got beyond the talking stage, principally for lack of capital.

"Struggling for existence themselves, the small societies which have most needed a central organization have never seen their way to raising the two or three hundred thousand dollars necessary to finance the project. One of the reasons why the English societies have accumulated this fund where we have not is the fact that the English cooperator pays an annual fee for membership, whereas the American cooperator usually pays one fee for a corporate share, and never contributes afterward.

"At $10 each it would require contributions from 20,000 cooperators to supply the capital necessary for a strong central or wholesale society. In the face of past failures it would be next to impossible to round up that number of consumers each willing to contribute $10. Therefore, a cooperative wholesale company must be financed, at the start at least, by contributions from men of means who have the welfare of cooperation at heart and the vision to see what it needs."

Enabling Cooperative Stores to Compete

FOLLOWING the above plea and a resultant discussion, something less than thirty public-spirited citizens of Boston and vicinity subscribed $100,000 for the purpose of placing cooperative business on an equal footing with business run for private gain. These men do not feel that they have endowed a monument to endure after them like a library, or founded a beneficent charity like a hospital, or indulged a patriotic whim like building a cup defender; they are practical business men, and, while wishing to do some good in the world, they look at things from a business point of view. Briefly, this is their position: "Here are fifty cooperative stores in New England. Only three or four of them are financially successful. We will finance a strong cooperative wholesale company which these struggling societies need. We will have one management, the best obtainable, and one buying organization for all cooperative stores who care to join. Then cooperative storekeeping can compete, and when it can compete it will succeed, and when it succeeds we can get our money back—if we want it back."

The New England Cooperative Society was incorporated under Massachusetts laws in 1913. The men who financed it took preferred stock, and—here is proof of their altruism—they have no vote. Control of the central society is vested in the subsidiary societies that have joined, now numbering thirteen, and in a board of nine directors. Each society and each director has one vote; but as the subsidiary societies outnumber the directors the balance of power lies with the beneficiaries of the system rather than with those who administer it. Each subsidiary society has a standard set of by-laws, coordinating with the by-laws of the central society.

The New England Cooperative Society gets in touch with the consumer by three avenues: By taking over cooperative stores already established, by purchasing stores privately owned and converting them into cooperative stores, and by establishing stores in favorable locations. Where a society is already organized it must adopt new by-laws and name a representative to attend meetings of the central organization. Where a privately owned store is purchased or where a new store is established, a cooperative society is recruited from among the store's customers. It is the latter feature which appeals to that large class of Americans who would like the benefits of cooperation, but demand to be *shown* first.

Lessons from Foreign Experience

IN ENGLAND and Continental Europe cooperation is an institution. There also the people have more faith in institutions. Consequently they join a cooperative society and patiently wait for its benefits. On this side of the Atlantic cooperation has been more of an experiment. For reasons already stated, it has failed to meet competition. Therefore your average American buys where prices are lowest and lets the other fellow experiment with cooperation. But exhibit a first-class store that is doing business and meeting competition, and the American proletarian will embrace an opportunity to become a part owner of that store. He will invest in imaginary gold mines, in patent medicines, and even in religion on faith; but when it comes to a cooperative store he wants to see the goods.

It is by making allowances for the American point of view and building an organization to meet it that Mr. Purington has adapted the Rochdale system to New England conditions. Economists may contend that the plan does not make for democratic cooperation, their theory being that a group of consumers ought to associate to buy a chest of tea, we will say, like the pioneers of cooperation; that with the profits of the tea the group of consumers would buy other necessities until at length they owned a small cooperative store; that other groups of consumers in other communities proceed along similar lines; then there would be a number of small cooperatives stores, and when these little stores had each accumulated a surplus they would get together and finance a wholesale society—briefly, that cooperation must start small and grow up as it has done in England.

The foregoing theory is generally held, and it has persisted in spite of the fact that most of the failures in this country have started that same way—and never grown up. In England the cooperative movement grew up with, or ahead of, big private business—the trusts, so called; but in this country private business got started first. To put cooperation on a business basis—which means a competitive basis—it was necessary for some one to bridge the gap.

A Thunderstorm in Town

A Reminiscence

By THOMAS HARDY

SHE wore a new "terra cotta" dress,
And we stayed because of the pelting storm
Within the hansom's dry recess,
Though the horse had stopped; yes, motionless,
We sat on, snug and warm.

Then the downpour ceased, to my lasting pain,
And the glass that had screened our forms before
Flew up, and out she sprang to her door:
I should have kissed her if the rain
Had lasted a minute more.

How One Failing Store Was Rescued

THE first cooperative store to affiliate with the central society was the Devonshire Cooperative Market, owned and largely patronized by Boston bank clerks. This store was the subject of an article published in COLLIER'S of December 6, 1913. The president of the bank clerks' society says:

"We were doing as well as any small cooperative store could be expected to do, which means that we were putting in $100 worth of effort for every $10 drawn out in dividends. Our prices were perhaps lower than prices in the suburbs, but considerably higher than prices of the big city markets. Our attempts to deal directly with the producers of foods had not met with success. For the most part, producers seemed to expect us to pay them as much as we would pay the wholesalers—and express charges besides. We tried this for a time, hoping to effect a compromise; but instead of meeting us halfway the producers, as soon as they discovered that we could not handle their entire output, went back to the commission houses. Apparently they preferred to accept lower prices for the sake of an assured market. Inability to buy in large quantities prevented us from selling goods any lower, and unless we could sell lower there seemed to be slight prospect of building up our membership to the numbers necessary to consume a larger output. Our attempts to unite with other cooperative stores on the buying end had failed also. There were a number of reasons for this: perhaps one store sold one brand of canned goods and each of the other stores some other brand. One manager favored New York rumps, while another would handle nothing but Boston hips. One leaned to package goods; another to buying sugar by the barrel and weighing it out as sold. Worst of all, provided we did establish a buying agency, each manager thought he ought to be made the buyer; and each society wanted just a little more to say about things than any other society.

"Starting out with the best of intentions, we found after a year's hard work that we had merely added one more small retail store to a class already too numerous. Instead of reducing the cost of living, we had really increased the consumers' burden by unprofitable competition. We had about decided to give up labors that were bringing so little in return when the New England Cooperative Society came forward with a practical plan for removing cooperation from the list of charities and establishing it on a firm business basis. The directors voted unanimously to place our little store in charge of the central society, believing that it had the equipment to succeed where we had failed.

"Our expectations have been more than fulfilled. The central society is now buying goods on an average of 10 per cent lower than we could buy the same articles. Part of this saving is immediately applied to the retail prices of our table supplies, and the balance comes to us in the form of semiannual dividends. Affiliation with the central society enables our store to carry a larger and better variety of goods than formerly. Expert management has reduced our store's overhead expense, at the same time bettering its service. All of which, of course, has resulted in better business and a return to the cooperative store of members who were trading elsewhere. The central society boosted our sales 50 per cent during the first month, and they are still climbing."

The first privately owned store to be taken over by the New England Cooperative Society was situated in a crowded section of Boston. It was a large store, long established, and making money. The price paid was $20,000, and this for a cost inventory of goods and a fair appraisal of fixtures. Nothing was paid for good will. This is one of the society's irrevocable rules. Still $20,000 is quite a bit of money—to raise in ten-dollar lots. Here was the first practical test of Mr. Purington's theories; results proved that they were sound. Regular customers of the store knew that it was doing a good business and meeting competition. Here was no experiment to fool away their hard-earned money. It was a going concern. To become a part owner of such a store looked like a good business proposition. Sixty per cent of the store's customers became shareholders. Within sixty days from the time the store was listed for cooperative ownership the $20,000 was returned to the central society's treasury wherewith to buy out or establish other stores, and so on.

Testing Each Link in the Chain

HAD the ablest organizer in the country gone into that section of the city to organize a society with nothing to attract members but the promise of a store when sufficient capital had been raised, it is doubtful if he could have convinced one-tenth of two thousand breadwinners that cooperation was a good thing. That is, he could not have convinced them ten dollars' worth.

It should not be thought that the New England Cooperative Society takes over every grocery store that may be offered, on the theory that cooperation alone will make profitable a store that may be handicapped by a poor location, a clientele who demand credit, excessive rent, or other unfavorable conditions. Establishing a chain of cooperative stores on a business basis requires that each link in the chain shall bear the test of cold business logic. Only experts are qualified to judge such matters. The officers of the society are well qualified.

The president of the society is in middle life and his prime. He has the vision of an idealist combined with the irresistible energy of a man who does things. He has been a success in a business way, and has made enough money (*Concluded on page 34*)

The Colors of Our Battalion

By Donald Francis McGrew

ILLUSTRATED BY SIDNEY H. RIESENBERG

DOWN the march of Time all men who became the men of men have steeled their spines with theories. Upon the things which you cannot hear or see or touch do the destinies of empire hang.

Therefore, upon that perception, the American Powers-That-Be gave prompt and full reward to Captain Brodney Drew when he came through with flying colors at Taliente's Casa. From a captain of constabulary they promoted him to a majorship in the regulars, and sent him down to San Fernal, Samar, to command the Third Battalion of the Ninety-second Infantry.

"Things look bad in San Fernal," observed the General commanding. "The presidente, a Tagalog named Ybarra, is not to be trusted, I am afraid. They are just recovering from too-much-Smith down there; the residentes are all sullen. Captain Allen's constabulary company is trustworthy, but you'd better keep a close eye on affairs, for we don't want another massacre like that of the Ninth."

"Massacre, eh?" sniffed Brodney Drew when he left headquarters. "I guess, from all reports, that if a possible massacre were all I had to worry about I'd have a bed of roses. The Ninety-second Infantry! That blackleg regiment!"

This soulful exclamation indicated the status of the "blackleg regiment," and under ordinary conditions all the officers in the islands might have sent him secret messages of condolence over his assignment. But a constabulary officer who receives promotion over the heads of West Point graduates does not receive condolences from men who have their own opinions on seniority versus selection.

BRODNEY DREW, called Bunga Doo by the little Moro soldiers who could not pronounce his name, was a little man and a chesty man, and a fighting, hearty full bobcat from the tips of his immaculate boots to the scrawny thatch of his partially bald head; and also never in the history of the race had man clung closer to that code which governs Nature's gentlemen. On that account, if for no other in the world, he kept his own opinion of the assignment to himself; but in two hours after he arrived at San Fernal the Ninety-second's Third Battalion knew they had an iron commander.

They found no pleasure in the change, but neither did their commander.

Always, from the beginning, Fate and innocent recruiting sergeants had apparently sworn a solemn oath to send them Nature's worst; two mutinies and one threatening of disbandment lay black against their name; so Bunga had expected very little. But they were even worse than he expected. Just over from the States, they presented a "front," as one old sergeant put it, "made up of the most unsoldierly roughnecks who ever thought to take the wrinkles from their bellies by enlisting with Uncle Sam!"

"Why, curse it!" Bunga thought, watching the companies at their first unwieldy drill; "even the constabulary are laughing at them!" He cast a half-warlike, half-admiring eye at the natty, white-capped native company of veterans which, drilling symmetrically near the whitewashed barracks on the west edge of the plaza, resembled so closely that company of his heart that he had left in Mindanao. "Can't say I blame them much, though," he admitted grudgingly. "But—" here he turned his scarred visage toward the north side of the square, where Señor Ybarra was lounging on his patio—"if you or any of your condemned residentes stand out here and grin at anything American, I'll jerk your bally scalps!"

THE thought was unspoken; but Bunga's face was eloquent. Señor Ybarra retired behind his vines to hide his smiles. White-clad, immaculate, with sinister and sensual mouth hid by a well-trimmed Vandyke, this tall, black-haired Tagalog prided himself on his education and his instinctive judgment of men; he observed in confidence to Father Rial, who held sway in the ivy-grown stone church, that, from the appearance of these troops, the iron was conveniently hot for striking; nevertheless, for his purposes, he admitted he'd much prefer to see some other commandante in the American headquarters.

As the General had said, the town, a typical inland barrio with a surrounding of coco palms, an abundance of nipa huts, and a more than usual number of frame dwellings around the great square plaza, was filled with sullen, chocolate-colored peons, the scum of the Tagalog race; they made their hatred manifest in every word and look, and, till ordered off the plaza by Bunga Doo in person, large groups of them lingered near and laughed disdainfully at the battalion's awkward evolutions. The black looks he could not stop till actions called for bullets; the laughter was a different matter. To the open delight of Captain Allen, the tall, young, brown-eyed Captain of the constabulary, he wheeled about as soon as the taunting crowd was dispersed, marched straight to the president's patio, and told that polished worthy in no uncertain tones that if he did not keep his hoodlums off the plaza during drill he'd clap them all in jail.

THE bitter thing was that the native amusement was justified. Bunga Doo gripped his swagger stick, thrust out his square-cut chin, and started out to whip his men into shape.

From any angle this proved a job for a man with solid jawbones in his skull. His first real order gave the men an inkling of what they might expect from an eccentric theorist who nurses fond ideas about the building of a backbone for an army.

Instead of merely having the companies "fall in at attention" for the usual evening ceremony, he ordered them to "fall in" with their rifles. He also ordered every officer who heretofore had missed retreat with impunity to "stand it" with his company. Then he appeared in person to "take retreat," an act unusual in itself. He stood stiff in the center of the parade, a trig, trim, dapper little fellow of starchy alertness; and, while the blazing tropical sun sank behind the coco palms in the background, the wondering companies facing him watched the battalion color bearer take a stand at his rear. Then, when the crashing echoes of the evening gun ripped out across the plaza and the trumpeters took up "The Colors" in honor of the descending flag, Bunga gripped his saber and barked out that most ringing of commands: "Pre-sent—arms!" Nor was this all. Expecting to be dismissed, the ranks were brought up to a "right shoulder arms"; then they were marched, with their commander at the head, past the colors in columns of fours; and as they passed them they "came down," per the prescribed marching salute, to a snappy "port arms."

"You won't report to your country this time!'"

"Bully!" grinned Captain Allen, watching from his quarters.

THE regular officers did not echo this. "Why, the man is sheer, stark crazy!" said Captain Duncan, commenting on it later at the bachelors' mess. "What does he think he's commanding—a lot of British Life Guards? That's stage stuff, pure and simple!"

"Rights!" declared a cub fresh from the Point. "Wouldn't be surprised, though, if he had us singing the Anthem next. You've heard that story, I suppose, of how he made the constabulary company sing it?"

"Yes, I've heard. But he is not dealing with those quick-stepping little savages now. Entirely different characters. Those sorts of actions will appeal to the men as ridiculously theatrical." And Captain Duncan, a tremendous, bearded man, glared round the board for signs of disapproval.

"Well—er—he *did* show some backbone with these natives," ventured one at last.

"Oh, granted! But did you see those hombres grinning again from the houses to-night? *They* know. If they laugh, what will the *army* say? We'll be the laughing stock of the Philippine Division."

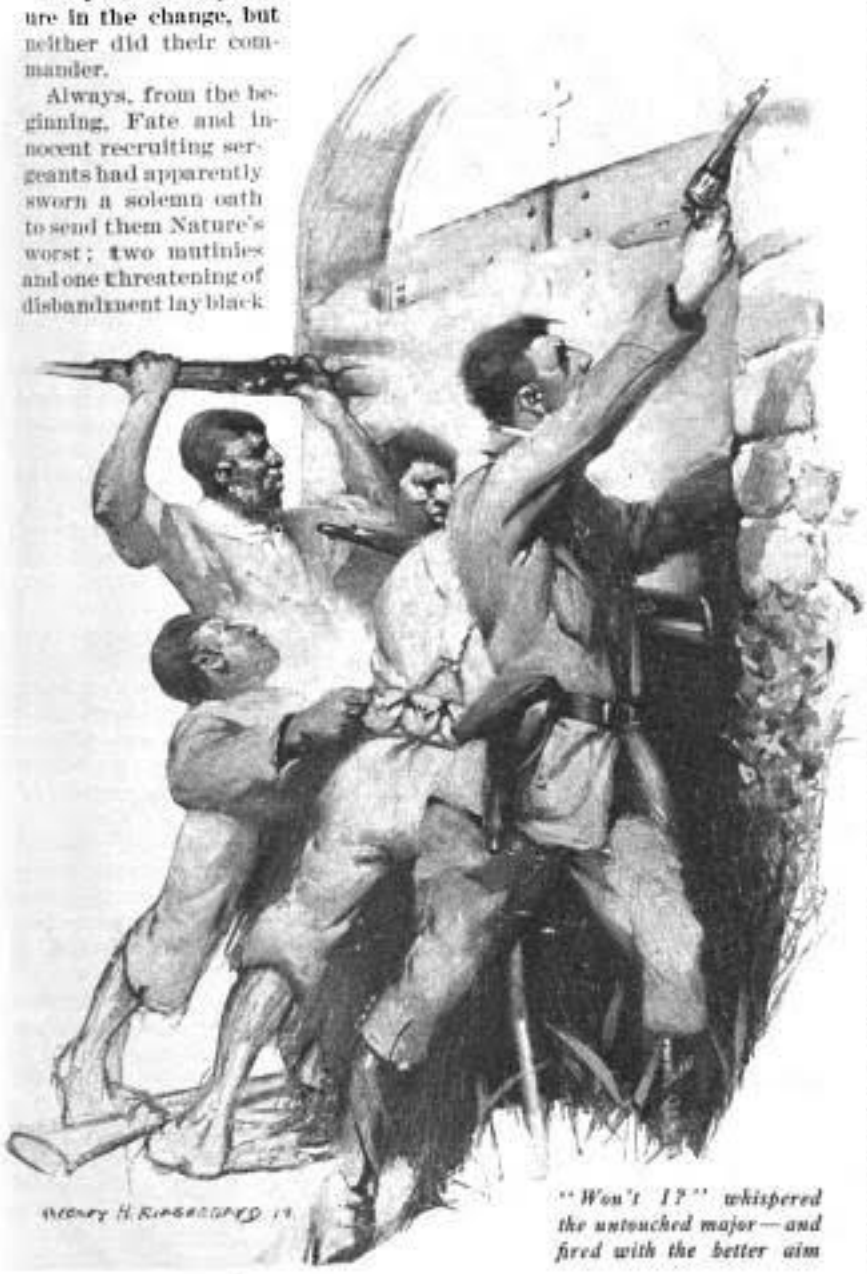
The spirit of these comments may or may not have reached little Bunga Doo; but certain it is Captain Duncan was called upon next evening for a rather unpleasant interview. Just preceding retreat, instead of allowing the company commanders to inspect their companies, Bunga Doo walked down the line himself. What he saw, he saw; when retreat was over, Captain Duncan was ordered to meet the commanding officer at the edge of the plaza.

"Captain," said Bunga, eying the big man impersonally from under his stiff cap brim, "your company was in a most unmilitary condition this evening. Filthy shoes, dirty belts, greasy rifles. They were slovenly, too, in their execution of 'Present—arms.'"

CAPTAIN DUNCAN flushed an angry red to the height of his prominent cheek bones. "I haven't one old soldier in the company, sir," he said in his own defense.

"I know that, Captain, but I want you to lay a great deal of stress on the *spirit* those men put into the movement. By gad, sir, they're saluting the Stars and Stripes and the colors of our battalion; I want to see those guns come up with a *snap!*"

"I'll see that they do in future, sir."



"Very well. I shall always expect you to maintain the strictest sort of discipline in your company. You must appreciate the fact that we have a most unsatisfactory set of recruits to mold over into the form of soldiers; I expect all my officers to help me bring that to pass. If they don't join in with me, then I shall have to take full and complete personal command of our battalion."

"Our battalion?" thought Duncan. "I had an idea the Government owned it." Aloud he said: "Whenever the battalion commander deems that a necessity, it lies within his power, of course."

"Exactly," snapped the little man. "Captain Duncan, I am a man with eyes in my head. I make no apologies whatever for my promotion, though I can see the viewpoint of West Pointers with your service. The fact remains that we are here in the interests of a common work. We are in a decidedly hostile community with a battalion of recruits who have no philosophy, no real theory of soldierdom, no *esprit de corps*. They have no backbone of any description. It's up to us, Captain, to put that backbone into them."

"I fully appreciate that, sir," said Captain Duncan. "Yes, sir. My own theory is, if I might suggest it, that a baptism of fire will do more than all the talk of drill in the world. Lacking that, I—er—don't see how we can effect it by other than the usual methods."

At this juncture soft-footed Señor Ybarra came

"Won't I?" whispered the untouched major—and fired with the better aim

Digitized by Google

walking across the parade. Bunga did not hear him until he was well within earshot of the officers; then he straightened to his full height, this midget with the waist of a girl and the breast of a pouter pigeon, and exclaimed:

"Usual methods? Captain, they will not work fast enough to suit me in this case. By gad, sir, call on this outfit for ordinary work, and they work; call on them for something that appeals to them as obvious madness, and see what happens. They hang back because they are still thinking of themselves alone—and that's what is wrong here. I say that the best we can do is to drill or talk or punish into them the idea that they themselves are too damnably insignificant to be considered men until they wrap themselves round in the colors of our battalion."

"I grasp your idea, sir," returned Captain Duncan when Bunga Doo paused. "Still, in view of the task ahead of us, I wouldn't mind having a small go at the natives to help out."

"Neither would I, Captain. By gad," with suddenly snapping eyes, "I'd *welcome* it. Yes, sir. I'd welcome *more* than a small go. If such a thing were possible, I'd like to see a chance to order them into something that struck them as madness, pure and simple. I'd do it if it cost an otherwise unwarranted percentage of lives."

"Oh, surely, sir—"

"By God, I mean it!" blazed Bunga Doo. "What is a soldier, anyway? A questioner? An ordinary citizen? A judge? No! He's a cog in a machine, and, by all the gods, when he enlists to become a cog in that machine which upholds the flag, he'd better be dead than a living blot on the things that flag stands for!"

THE Captain stood nonplussed, while Bunga breathed balefully through quivering nostrils.

"Yes, sir," he went on. "If death is necessary to teach an outfit a theory, then, damn 'em, let 'em die. No outfit is worth a tinker's whoop until they do grasp it. Why, Captain, I'll wager that constabulary company over there has gone further toward grasping—"

Here Señor Ybarra stepped up, bowing politely. Both officers turned.

"Ah, pardon me," said the native aristocrat in perfect English; "I overheard quite unintentionally. It is a most interesting subject. You know"—he showed his white, incisive teeth in what was meant for a smile—"we Filipinos are quite—er—quite—well, dumfounded by your success. In the beginning we had as good men"—one read from his glance of poorly veiled contempt at the barracks that he meant *better*—"and fine trenches and better rifles—yet you beat us. What would you give as the answer?" The man's manner was pleasantry itself. Yet Bunga restrained himself with an effort. The suave Tagalog emanated something that gritted on every nerve.

"I fancy, sir, that we won because we were sent over here to do it and knew that our country would take no excuse for failure," he said. Then he turned abruptly toward Captain Duncan. "Captain, are you going on to dinner?"

Señor Ybarra grew visibly swarthier; his hands clenched; and as the officers deliberately walked away, he stood there for an instant with nostrils distended and quivering and black eyes boring holes in the hollow backs. And that night, while the moon rose above the distant blue-black mountains and covered the barrio with a seeming peace and calm, Señor Ybarra addressed a meeting in his hacienda. "I tell you the officers themselves realize the men are unprepared!" he exclaimed in part. "Now is the time to rush arrangements for the rifles." But his listeners demurred. Since all arms had been taken away, it was madness to think of trying to cope even with raw recruits unless they had arms and ammunition, but, while guns could be bought with ease from Chinese smugglers and landed on the distant coast, they could not be smuggled in past the outposts without a great deal of danger. Oriental

Initiations at Lockport

By Charles N. Sims—Part II

ILLUSTRATED BY WALTER D. GOLDBECK

THE organization of the Knights of Sahara was to be the biggest event Lockport had ever witnessed. And all through that blazing hot July afternoon nothing else was thought of or talked about.

Children prattled it over the sand pile in the playhouse and at the old swimming hole; women gossiped it in the kitchen and over back fences; men "gassed" it in the truck patch, on the street, and in Abe's store. In short, the village reveled up to its armpits in its first real sensation since the war. A man who was not a candidate for initiation lost caste, but one who had talked openly against the lodge was beyond the pale, and Harry Baum's popularity suffered mightily. Abe suddenly became a lion and his roars kept the excitement at the highest pitch.

Long before night lights blinked from every window in the town hall above Abe's store, and long before that the crowd had gathered on the sidewalk below.

To be sure, no one besides prospective members would witness the ceremonies above, but this did not keep the entire population from turning out in a body to see the arrival of the initiating delegation from the county seat.

THE populace stood a little apart from the candidates for initiation and feasted their eyes upon them. A third group, palpably ostracized, consisting of thirteen young men, headed by the big blacksmith, had taken position just across the street opposite the store. Now and then there was laughter among themselves, but they were studiously frowned upon by all the rest. Abe and the Squire kept the waiting crowd in a perfect agony of suspense by their ambiguous remarks, whispered consultations, sudden excursions in and out of the store and mad dashes up and down the hall stairs.

Abe's last piece of dramatic stage business was exhausted with his jack-in-the-box appearance at an open window in the hall. The Squire groaned with jealous mortification because he had not thought of it himself.

"Good people," Abe began in a stringy, nasal voice. "Good people, I'm about to organize a great lodge—the Knights of Sahary, and I haven't had my shoes off for three days on account of it."

This peep into the speaker's private life brought out a feeble cheer from three or four of the deluded candidates.

"We are all in politics," Abe blundered on in a thundering voice, "we've—"

"Three cheers for Abe Day!" one enthusiast called, and they were given in a half-hearted way that should have discouraged their sponsor, but he instantly asked for three more. Abe held up a hand for silence in time to save the situation.

"That's enough for one time," he said, bowing right and left, "wait 'till you hear this. As I was saying," he took up the broken thread of his discourse with a piece lapping, "we're all in politics—we've got the power—let tyrants beware. Why, good people," he continued with whimsical impressiveness, "we could 'lect a yellow dog to office if we wanted to, though privately I hope it won't be done."

"Three cheers for Squire Buck, our next trustee,"

Harry took a quick step, drew the mask aside, and turned a dimpling face to the bright moonlight. "Why, if it ain't Ruth!" he said

sang out a voice that carried a familiar ring. Nothing happened.

"Who called for them cheers?" Abe asked menacingly. The guilty man wisely refrained from a reply. "Show me the man that interrupted them remarks I was about to make," Abe demanded darkly. No one carried out the command and the enraged speaker grew bolder.

"I do believe that's the shameful hound now, lurking behind that telephone pole," Abe discovered, indignantly pointing out a shrinking figure to the crowd.

"Why, if it ain't Squire Buck himself," Harry Baum cried in a shocked voice. A titter ran through the crowd.

"Go on with your chin music, Abe," the Squire said resentfully, "cheers ain't votes."

"Why, good people," Abe began a rather inopportune recapitulation, "we've got the power to 'lect a yellow dog to office if we want to, though privately I hope it won't be done. We will—"

"There they come now—down at the ford," a voice laden with excitement interrupted shrilly. And necks were craned to catch the first glimpse of the initiating delegation's carriage, as it tolled over the crest of the river bank and trotted briskly up the road toward town in the bright moonlight.

Abe left the window as quickly as he had appeared and careered madly down the steps, lest the Squire get the first greeting from their visitors. Willing hands volunteered to tie the weary team to the railing around the town pump and the two self-appointed members of the local reception committee swept everything before them in a sincere spirit of hospitality.

"Keep back here—you," hissed Abe, elbowing one of his own best patrons.

SEVEN loudly dressed, devilish-looking young fellows, a bit wrinkled by their long drive, climbed stiffly out of the four-seated carriage and seized their grips. The eighth member of the party followed; he was obviously the leader—he looked the oldest, was the noisiest dresser, and, if appearances were worth a cracker, was more devilish than the others.

Jim O'Bear had the face of a naughty Irish Valentine, and his very bearing indicated questionable sympathy for the Dutch. Abe was the first to reach his hand. "So you're Irish," Abe was saying observantly.

"What of it?" Jim replied rudely, sniffing for signs of hidden levity.

"That's nothing," Abe said in a manner calculated to put the unfortunate man at his ease. "I had a great uncle on my father's side who married a full-blooded Irish woman."

"Is that so?" Jim yawned, his inordinate racial vanity lulled for once.

"But then," said Abe, feeling that his remote relative's matrimonial recklessness deserved some extenuation, "they didn't think anything of that in those days."

The reception committee made up in speed for all else they lacked, and the visiting delegation was bustled into the hall without ceremony. Harry Baum managed, however, to buttonhole O'Bear at the foot of the steps and flashed a roll of bills tantalizingly under that gentleman's nose. "Will you do it, Jim—like you promised last night?" he asked.

"Sure," said Jim, reaching for the bribe. "Now that I've seen them," he grimaced, "we won't stop at anything. And, Baum," he added quickly in a low voice, "I want to see you in the hall as soon as you can come here. Don't let anyone see you enter," he warned.

HARRY surrendered the money with a nod and dodged back into the crowd to be congratulated by his companions. He led them down to his shop, where to each one of the twelve conspirators was issued a white garment similar to the pattern he had given Ruth in the morning.

"Now fellows," he began his final instructions, "you've got to keep an eye on the hall. When the initiation is over, make a dash for the ford. I'll be there in time to tell you what to do."

With a last appeal for utmost secrecy, Harry

Digitized by Google

pocketed a tap wrench and stole quietly out at the back door into the alley. At the head of the alley he paused to reconnoiter the delegation's carriage. The coast was clear. He crossed the street boldly and under the pretense of slacking his thirst at the town pump, made a closer inspection of the visitors' vehicle. With the speed of a skilled machinist, he produced his tap wrench and went to work on the wheel taps in a businesslike manner. A moment later he passed stealthily to the rear of Abe's store, mounted the open stairway softly to the back of the hall and disappeared within. The townspeople stood around for a few minutes after the delegation's arrival and then went quietly home, leaving the lodge candidates in undisputed possession of the empty streets.

O'Bear was inclined to be dictatorial, for as soon as Abe and the Squire had surrendered the hall, he ejected them with a parting injunction to stay away until summoned.

These two worthies were too much mystified to be offended. They rejoined their brother candidates on the street without the slightest inkling of what was going on in the hall.

"This is a great night for Lockport," Abe said for the benefit of anyone who would listen; "Jim O'Bear was just saying to me, 'Abe, says he,' I—"

The wailing notes of a softly played flageolet, accompanied by the faint purring of a kettledrum, vibrated through the humid air. The mysterious throbbing music affected the candidates like a January gust, bringing first aid to their melting collars.

PRESENTLY, a whip cracked and a heavy chain rattled, trailed by a heartbreaking moan that was instantly drowned by the swelling music, then stopped as suddenly as it commenced. The candidates looked into each other's eyes with dilating orbs.

"After next Sunday I'm going to let up fishing on the Sabbath," Uriah Westfall said repentantly. "At least so, till the bass is biting on crawdads," he added provisionally. Nelty Driggs produced a full quart of whisky and fortified himself with a deep pull. "When this here is gone," he said earnestly, returning the bottle to his pocket without spilling a drop, "I guess I'll swear off."

He was scarcely done speaking when a window in the hall grated in its frame and Jim O'Bear looked down on them. "All you candidates come upstairs," he said authoritatively. Abe and the Squire pushed briskly to the head of the line. "Not you two," O'Bear said curtly, "stay where you are. Mr. Buck and Mr. Day have been chosen head sheiks, and their initiation will come later," he explained. This artifice had the desired effect and the prospective head sheiks drew aside, greatly mollified, and watched the others climb the rickety steps.

THE clink of coin that went on at the head of the stairs, as the candidates were passed within the sacred portals, testified to the sound business principles of the visiting delegation and aroused misgivings in the Squire's breast.

"At five apiece, that's a whole hundred," he grumbled as the door above clicked shut. "The home camp ort ter had part of it," he regretted.

"We'll soon make it all back—by 'lection time," Abe advanced confidently.

"Sociables, dances, and all such doings, maybe a lecture," he added tentatively, "there's money in that."

"Lectures cost," objected the Squire; "expenses eat up the profits."

"Say Squire," Abe broke out breathlessly as if voicing a freshly conceived idea, "why can't I give them lectures myself?" The Squire only grunted.

"I never suspicioned I could make a speech till tonight," Abe marveled.

"You're too suspicious," criticised the other. "Entirely too suspicious. A man of your suspicions ort ter be a detective."

"That speech come to me like—like a call for help in the woods," Abe declared.

"That's the way it sounded to me," the Squire said spitefully. At this juncture a piercing scream echoed and reechoed through the lonely streets. It was directly smothered in a chorus of moans that were engulfed in turn by hideous, discordant music.

The next thirty minutes seemed an age in which Abe and the Squire lived over much of the past and more of the immediate future. Finally, when O'Bear's seductive voice summoned them to the trial, a white, silent figure, hooded and gowned like one of Dante's hypocrites, met them at the door and relieved them of a five-dollar bill each, in spite of the Squire's plea to reduce his fee to four-seventy-five. Abe and the Squire gawked about the old familiar room. The two prospective head sheiks sniffed delightedly at the atmosphere which was thick with cheap incense, cheap cigarette smoke, and cheaper whisky.

OTHER white gowns stood ranged along the sides of the long room in the brooding quiet. The room was lighted by huge candles that cast a faint, yellow light on the naked walls, and lent death's

His Majesty emitted a nasty laugh. "If you had confessed to three or four living wives," he said grimly, "I wouldn't be the one to press for embarrassing detail"

hue to the candidates' faces. A blood-red light showed dimly through the cracks in the storeroom at the rear of the hall. Above the door in flaming letters frightened eyes read the ominous superscription: "*Those Who Enter Here Leave Hope Behind.*"

"Look, Squire!" whispered Abe making a painful excursion into the old man's short ribs with a bony elbow. The admonition was entirely superfluous, for the Squire's staring eyes were already glued to the red-bunting throne where his Satanic Majesty in all of his fiery Faustlike finery disported himself with languid grace.

"It's him all right," the Squire returned hoarsely, "I'd know him any place."

"Silence there!" rapped his Majesty, flourishing his fork.

"Abraham Day," he continued magisterially, "advance to the presence for examination." A white gown led Abe forward to the foot of the throne, after which he modestly withdrew leaving his charge face to face with the figure in red.

"Mr. Day," began his Satanic Majesty, bending knit brows on the nervous candidate, "prospective Knights are expected to come to us with a clean conscience. It's only fair to you," he went on civilly, "that you should know I have a complete history of your life and I know it like a book. Beware," he adjured, "you are expected to tell the truth, the whole truth and nothing but the truth, or—" and a stern finger elucidated the unspoken threat by pointing out the fearful legend above the storeroom door.

"NOW, Mr. Day, how old are you?" the examiner began in businesslike tones.

"Forty-five years, four months, and seven days," Abe replied glibly.

"Correct," verified the other, "just as I have it here. Where born?" was the next question.

"Salt Lake City, Utah," Abe answered self-conceitedly.

"No doubt of it," his Majesty observed with a hearty laugh. "Your domestic life out there proves it. Are you still a Mormon?" he yawned.

"No," Abe replied quickly, too astonished to say more.

"Look out," cried his Majesty with playful severity.

"I ain't a Mormon," Abe said loudly—"never was. I'm a deep-water Baptist," he added stoutly.

"I don't know as I blame you for denying it," his Majesty pondered leniently. "If I was tempted like you are," he continued, darting a significant glance in the Squire's direction, "I expect I'd lie, too."

"I ain't a Mormon," Abe said desperately, "never was—"

"That will do," his Majesty said with wintry indifference, "nobody here cares what your religion is as long as you don't insist on practicing it."

Abe felt himself growing hot, cold, and numb by turns, and in his wretched plight, he even dared an appealing look at the Squire, in whose brooding countenance he read neither recognition nor compassion.

"Mr. Day," smiled his Majesty—Abe licked his parched lips foreboadingly—"just tell the gentlemen of the jury how many times you have been married?"

"Never were married," gasped Abe. "Never found a woman I'd have."

HIS Majesty emitted a nasty laugh. "If you had confessed to three or four living wives," he said grimly, "I wouldn't be the one to press for embarrassing detail, though I wouldn't care to be in your place when all the rest of them found it out."

"I ain't married," Abe cried miserably, "I can prove it in—in a minute."

"Don't lie to me again, you procrastinating, pusillanimous polygamist," fumed his Majesty, obviously at the end of his good nature.

"Oh, what a pity!" chorused the white gowns.

"Oh, what a pity! Take him to the torture—take him to the torture."

"Mercy! Mercy!" entreated a voice from the chamber of horrors. The soul-withering call for clemency was lost in a rattle of chains and the biting crack of a well-used whip. Abe's hair stood on end as though it had been combed wet and then frozen.

"Don't let them take me in there," he pleaded; "I'm half sick the way it is."

"Oh, what a pity!" sighed the white gowns. "Oh, what a pity!"

"Away with him to the torture!" frothed his Majesty, beside himself with anger. Two white gowns jumped to obey and Abe was borne swiftly toward the storeroom, amid baleful cries of: "Oh, what a pity! Oh, what a pity!"

AT THE dreaded threshold he found a coherent tongue. "I'll confess," he broke down, "I'll confess anything you want me to."

"How many of your wives are living?" his Majesty asked impatiently.

"I—I don't know," Abe faltered truthfully. His Majesty frowned and signed for his orders to be carried out. Abe wriggled like a gagged eel, but without avail, and the torture-room door closed in the nick of time to hide what happened immediately after his suspenders snapped. However, the door of the torture room could not deaden the awful sounds that issued from the place.

Shivering from head to foot, the Squire watched the grotesque contortions of his Majesty with supreme wonder. "It hurts me almost as bad as it will Mr. Day," his Majesty explained groaningly, as he controlled an imminent paroxysm that seemed to be contagious among the white gowns.

"There it comes again. Te, he!" he choked, doubling up in a shaking knot, and it took some minutes for the spasm to pass. "I hope I don't have to send an old man like you there, Squire," he said at last. "If I did," he went on sorrowfully, "and you were to groan every time I saw them wheeling you about in an invalid chair I'd feel unhappy as long as you were in sight."

"Mr. Buck," he added, in quite another manner, "Come before the tribune." The Squire scarcely felt the floor beneath his dragging feet as his escort of white gowns led him forward.

"Your name?" his Majesty began.

"Squire Buck," the self-assured candidate replied at once.

"Age?"

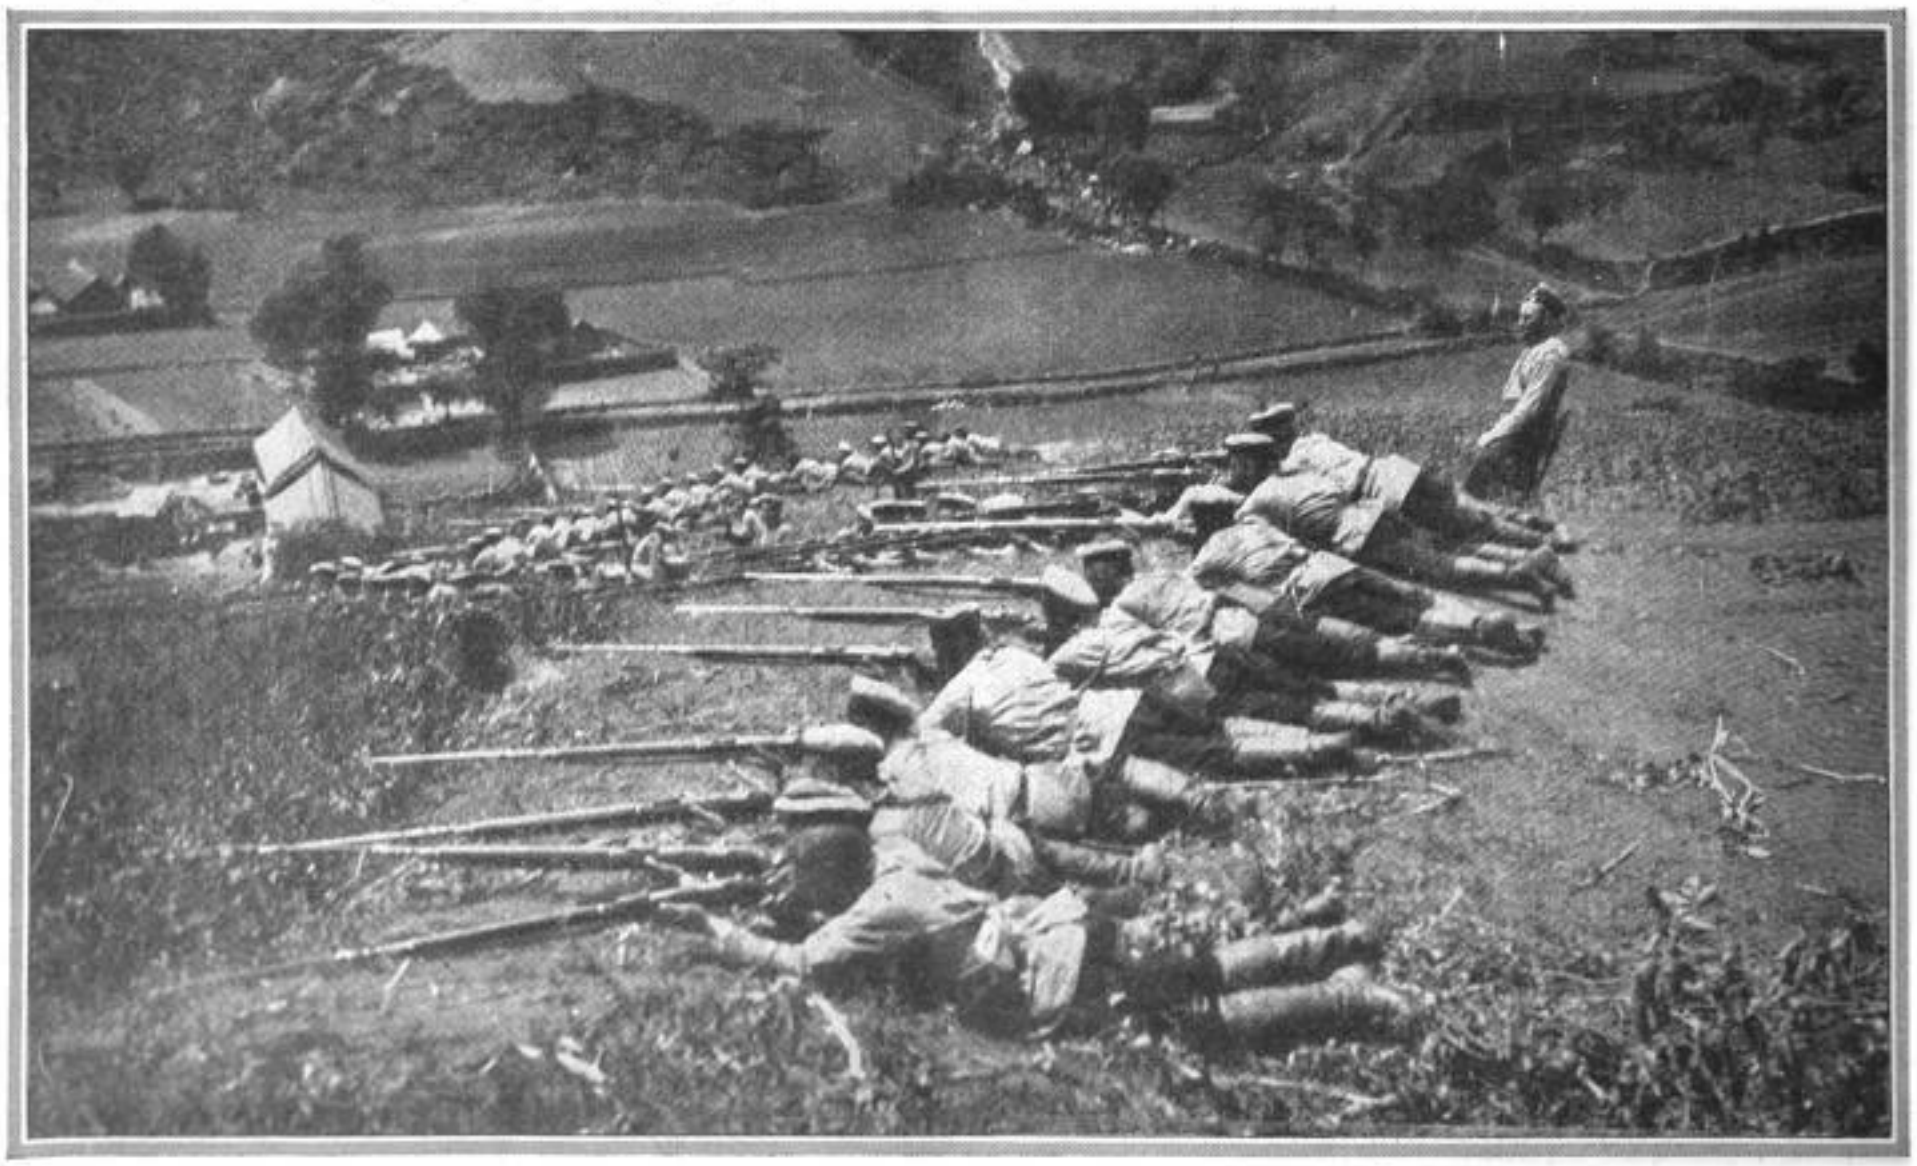
The Armies That Menace the Teuton World

One of the Czar's artillery batteries in the field. The Russian artillery is modeled upon the French. It has been thoroughly reorganized since Russia was beaten in the war with Japan and is now in first-class fighting condition

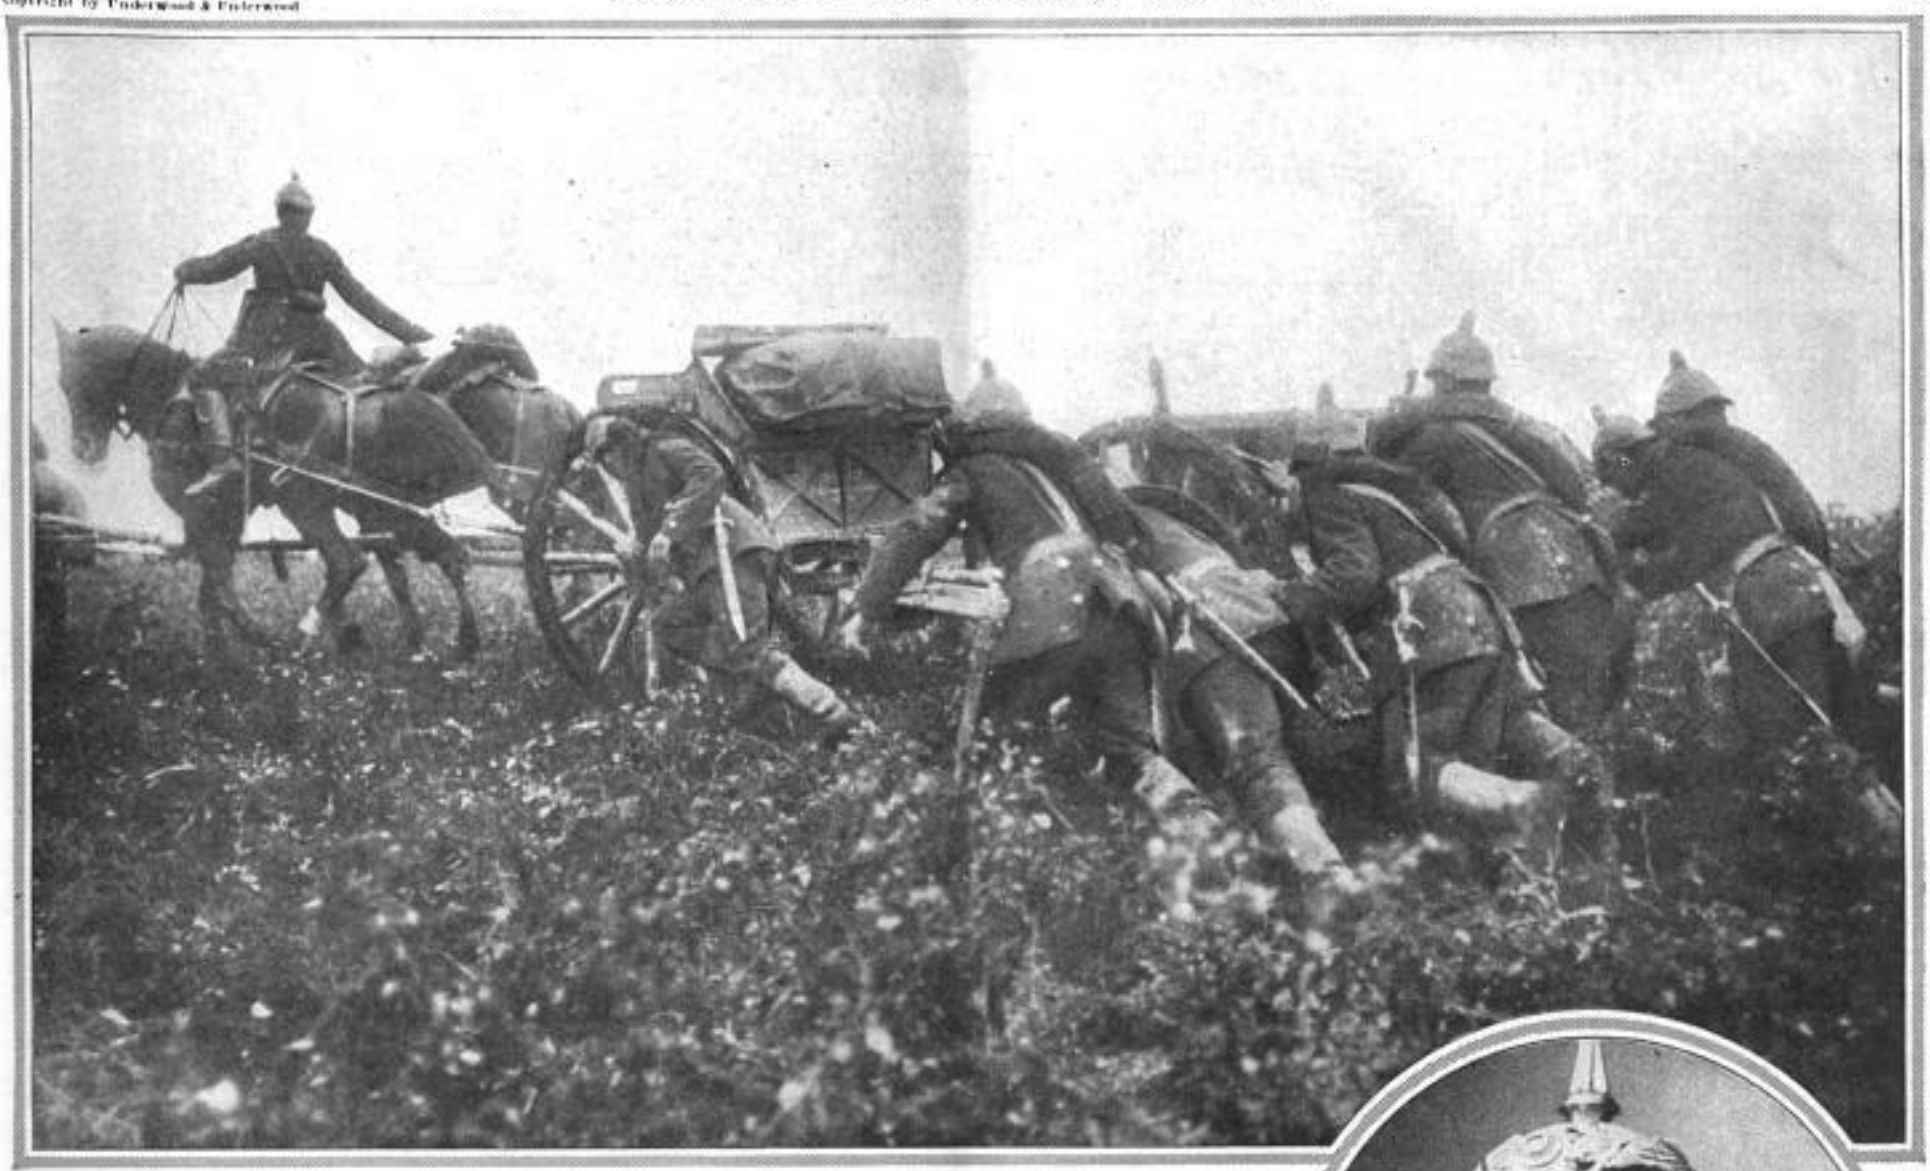
Photograph by J. h. J. Pacter



A battery of English field artillery in full equipment. Army experts predict that the larger part of the deadly work in the present war will be done by artillery. England's army strength for immediate use is 693,000 well-trained men

Copyright by Underwood & Underwood

General Joffre (left), field head of the French, discussing tactics with a subordinate general. The French have 1,300,000 men



BY comparison the trained field forces involved in the present European war make the armies of the past look like scouting parties. England, Russia, and France, the Triple Entente, have a ready force of 3,843,000 men. The soldiery of these three nations is represented in the photographs on this page. Belgium and Servia furnish approximately 250,000 more men, which runs the total up to 4,093,000. That is the present fighting strength of the allied armies opposed to Germany and Austria at the hour we go to press. Germany's ready force of 1,850,000 men and Austria's 820,000 make a total of 2,670,000. The nations involved can put from 17,000,000 to 20,000,000 men in the field in two or three months.

Russian infantry in shallow trenches. The Czar's navy is weak, but his army is equal to Germany's in size. He has 1,850,000 men immediately available

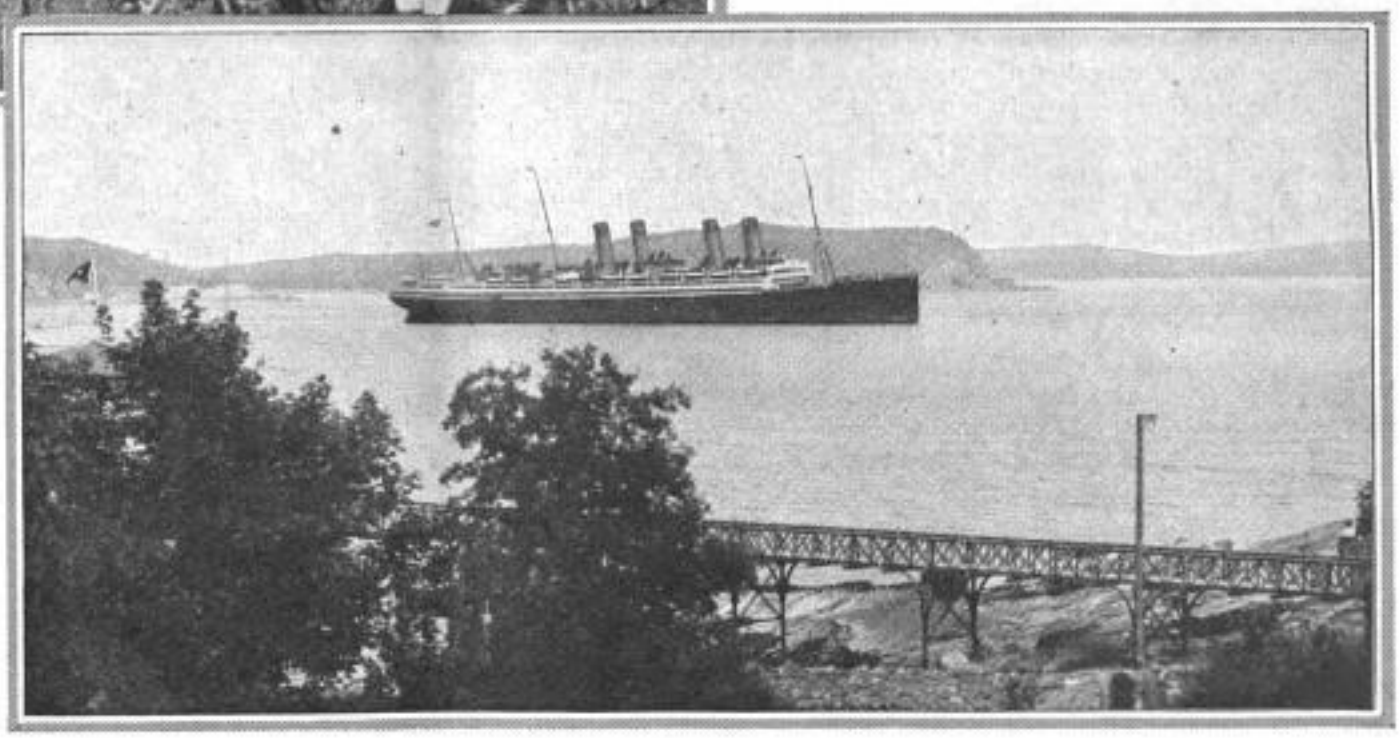
Soldiery of Two Nations That Face Great Odds

THE efficiency of the German artillery, members of which are seen on the move in the photograph above, is traditional. The story begins with the war between Prussia and Austria in 1866, when the Prussian artillery, with the first rifled, breech-loading guns to be used on a large scale, defeated the Austrians. But there is a difference of expert opinion now as to whether Germany or France has the best artillery in the world. In all probability the question of superiority will be settled soon in the struggle between Germany and Austria, constituting the Dual Alliance, and their numerous powerful foes. The men in fancy uniform in the picture below are a company of Tyroler Guards, who form a part of Austria's army of 500,000 in the field as we go to press. The Austrian land forces are in four divisions, two numbering 150,000 each and two 100,000 each. In efficiency the Austrians are supposed to rank next to the Germans and the French.



Moltke, the General Who Never Laughs

GENERAL HELMUTH VON MOLTKE, Chief of the General Staff of the German army, is one of the gloomiest men alive. His acquaintances say he seldom smiles and is never known to laugh. Kaiser Wilhelm frequently calls him "the gloomy Helmuth." It is not because of any event of the present European war that Von Moltke finds it impossible to laugh. Studying the business of war since early youth and having to deal constantly with the Kaiser, who is an exacting master in military affairs, explain the General's lack of cheerfulness. Von Moltke has been personally unpopular with the Kaiser nearly ever since his appointment in 1904. He has been kept in the position because of his extraordinary ability.

A Modern Sea Tale That Shelves Captain Kidd

THE tales of treasure ships that fled from Captain Kidd and his like in the romantic days of the Spanish Main cannot be permanently robbed of any of their charms, but they are shelved for a time to make way for the true-as-Gospel story of how the *Kronprinzessin Cecilie*, carrying $10,700,000 in gold, eluded hostile warships on the high seas. When the good German ship was four days out of New York a radio message told her to turn back. Her funnels were painted to resemble those of a British steamer, her lights were hidden, and she raced back to the American coast at the highest possible speed. She put in at a most unexpected port. Under cover of darkness the *Cecilie*, in our photograph at the right, slipped into Bar Harbor, Me., giving the wealthy vacationists at the resort a big surprise when they awoke next morning.

COLLIER'S

The Meaning of the War

NOW ARMAGEDDON HAS A REAL MEANING—now we have roaring in our ears the thunder of the captains and the shouting of a continent in conflict. If this be not Armageddon, we shall never suffer that final death grip of the nations. "For they are the spirits of devils, working miracles, which go forth unto the kings of the earth and of the whole world, to gather them to the battle of that great day of Gon Almighty."

Civilization itself stands in jeopardy. The nations which are at war are the custodians of enlightenment for the earth, and they are entrapped into treason to their trust. For, after all has been said on the side of the virtues developed by war, we know that these peoples will not be the same peoples after this tornado has swept them. For the destruction of a Galveston, the shaking and burning of a San Francisco, the overwhelming of a Dayton, the wrecking of an Omaha, or the inundating of a Johnstown there is a remedy in mutual help and intensified industry and enterprise. Those calamities come from man's defeat at the hands of Nature; but this infernal thing in Europe is man's defeat of himself. The index number of everything good will stand lower after it is over. The pressure gauge of efficiency will fall when it is over. Indeed, it will never be over. The long climb to the uplands of the soul, toward which mankind struggles, is not gained by sudden leaps; and a long, tragic slip like this must be regained by effort which would otherwise be unnecessary. A thousand years from now the world will be suffering morally and spiritually from the effects of this unthinkable thing which has come upon us. We may have gained heights, but they will be lower than the levels upon which we should have stood if the villain BERCHTOLD had not thought he could bluff the imbecile NICHOLAS.

How will it affect the United States? Morally we shall suffer with the rest of the world. We shall not be so deeply imbrued as we might be if we plunged our own hands in the blood of our fellows as our poor brethren in Europe are doing; but we, too, shall be degraded by the blood lust turned loose upon the world's psychology. No man liveth unto himself alone nor dieth unto himself alone. We are members one of another. More than ever before in the world's history are the nations members one of another. These peoples are our fathers and mothers as well as our brethren. Every drop of blood shed is blood flowing in the veins of Americans. From the breast of every man in arms there run the threads of consanguinity to us. We shall feel thrilling, from man to man and from family to family, the hatreds let loose across the water. This is a part of the spiritual penalty we shall pay as members of the white race for this white man's suicidal war.

The immediate pinch is on us at this writing. At some ports there is an actual embargo against the exportation of our products—an embargo rendered necessary by the lack of ships to carry them. Congress has done what it should have done years ago—opened American registry to all foreign-built ships; but it is too late. Ships will be accounted as under the flags they flew at the opening of hostilities. We cannot take over the ships of the world in a time of war and make them American by allowing them to hoist the American flag. So that avenue of profit from the war is closed to us. And the vessels which would be glad to carry our wheat, cotton, maize, and meats are carrying armies for the invasion of empires, and supplies and material of war. This is the first shock to our commerce and business.

When the war ends, and at some time during the war if it continues many months, this lack will in all probability be supplied. Where the ships will come from we cannot now see, but they will come. When Europe must have food, the transportation will be provided. Already the British Government has to some extent solved the problem by its guaranty of all shipments of grain to British ports. Sooner or later the freight will move.

Then for a while—in fact, as long as the war lasts and for some time after its close—we shall make much money out of it. The grain fields of Russia and the Balkan states, and that garden spot, the Danube Valley, will be ravaged by armies and lie fallow for want of husbandmen. In the meantime railways will be torn up, engines ruined, all sorts of machinery destroyed, motor cars worn out and shot to pieces, mills shut down, production arrested. The factory hands will be in the armies. The demand for manufactured products of many sorts will be enormous—and where else will they come from but the United States? Japan is the only manufacturing nation, save ours, which is not involved—and Japan may be involved before this reaches our readers. The work left undone by these worse-than-idle hands, the replacement of the manufactured articles destroyed, must fall largely to the factories and the workingmen of the United States.

The great grain-producing and meat-producing peoples of Europe are actively engaged in this war. It began in the heart of the food-producing center of Europe, the Danubian provinces and the Balkans. It immediately involved the best fields in the world, those of Germany and France. And when Russia flew to arms the region of the Old World most like our Mississippi Valley was affected. When the reservists of these nations were called to the colors they left the harvests unreaped and the shocks of grain to waste in the rains. The autumn work will go undone save as it can be performed by the old men, the women, and the children. And whole provinces will be wasted with fire and sword. The paralysis of war strikes down agricultural efficiency, and uncertainty deters the husbandman from effort. To the United States, Argentina, and Canada will fall the task of feeding the hundreds of millions who must otherwise be left destitute. No shortage of ships, it would seem, will be long left unsupplied under these conditions—for hunger must be served. The conditions in cereals will exist in meats. The breeding herds of Europe will be sacrificed to supply the sharp needs while transportation is interrupted, and a shortage will be created which will be long in filling up. The United States will be called on for every pound of its surplus meats at high prices.

Horses and mules will be sacrificed in enormous numbers and will increase in value in this country. The temptation to sell them and adopt motor vehicles in their stead will cause a further shifting from draft animals to machines.

Armies wear out enormous quantities of textiles and shoes. It is said that a soldier needs a new pair of shoes every thirty days. We shall have to make the cotton, the woolen goods, and the shoes to supply this enormous and abnormal demand. The cotton clothes and woolen blankets destroyed in retreats, burned in the destruction of supply depots and trains, abandoned in marches, ruined by weather, and worn out in campaigning, we shall be called upon to manufacture in large measure, and we shall not only make the cotton stuffs, but we shall sell the cotton from which they are manufactured.

As the great neutral nation, our securities will no doubt be sought for and our fields for investment favorably passed upon by capitalists. We may not be able with perfect freedom to take over ships, but money has no flag, and with almost every other great nation torn and rent by war, money will come to the United States. Provided at last with a good currency system, we should be able to extend the field for the employment of American capital in foreign trade and to increase the amount of foreign capital enlisted in the stable, prosperous, peace-blessed industries of America. If these things be true, it will be a blessing to the world as well as to us. If we were embroiled in war, too, the world's outlook would be indeed black. The one clear spot in the sky of the world is the United States of America, at peace, ready to do anything in her power to restore peace to others, full of shops, factories, mines, farms, and highways, all of which may be used and will be used to keep the earth from famine.

We must be prepared for friction. Labor will soon be scarce in this country and the cost of living high. Wages will probably rise, and if they do not there will be labor troubles. And after the war is over, and we have made our money out of it, the relapse will come. We shall be a stronger power in the financial, industrial, and agricultural world than ever before. We shall probably be stronger in our influence on the nations. We shall be these things if for no other reason than that our great competitors will be weakened. But after a fever of one or two or three years the reaction will come, and with it troublesome readjustments for us. We cannot have lived through such a storm on a world so small as this without some suffering.

Why They Last

IN THE "OHIO STATE JOURNAL," published at Columbus, there is a column headed: "News Our Fathers Read Thirty-one Years Ago To-day." In a recent issue we find under the heading a familiar passage about books by one FRANCIS BACON: "Some books are to be tasted. . . ." Now that passage wasn't "news" in 1883, when "our fathers" read it in the "Ohio State Journal," and it is not news to-day. Yet it shines out above all the trivial verse and prose that make up the rest of the column, and serves as a reminder that "news" is often our slightest

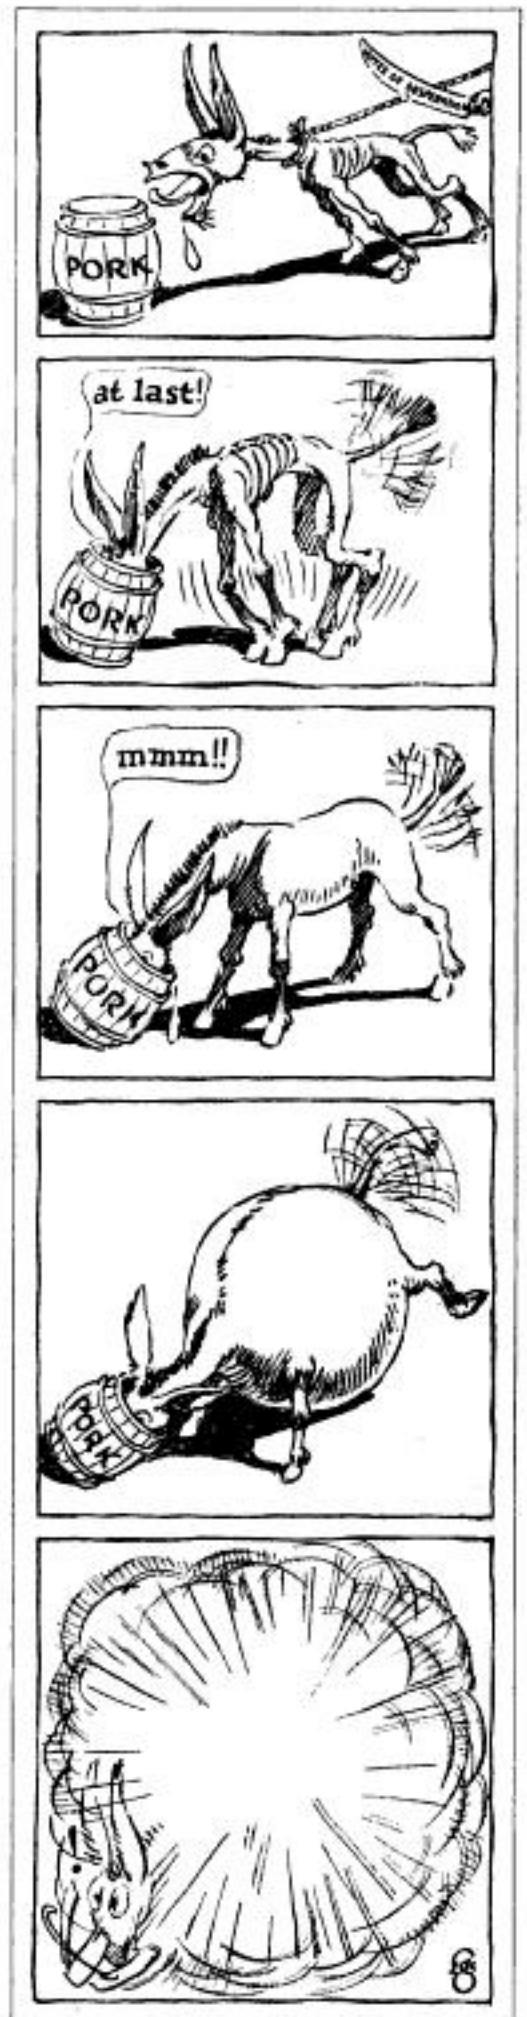
THE NATIONAL WEEKLY

offering, after all. The survival of good books is not due to a conspiracy in their favor on the part of President WILSON and Dr. ELIOT and Colonel ROOSEVELT; they have in them some spark of life that burns as brightly on Friday as on Thursday, and in 1914 as in 1883 or 1597. Form is not all, nor yet mere erudition. Sincerity is one essential. But how can we hope to learn the secret of the life of books while the mystery of human life still baffles us?

Mrs. Woodrow Wilson

THE COUNTRY'S HEART, individually and collectively, is still throbbing with profound sympathy for President WILSON and his family in their bereavement, but it must be a high consolation to them that no death like that of Mrs. WILSON is without a glory for humanity. Hers may well be described as a beautiful death. While her husband was pressed and preoccupied with the cares of his own nation and the tragic misfortune of all Europe, during the very days when he was seeking to urge and establish peace in the present unprecedented cataclysm of war, she, his helpmate and beloved companion of thirty years, lay dying, and smiling lest she should too much distract him from his high duties. Her very condition was brought upon her largely by the service to her neighbors and her people. And that is both the price and the privilege of the exalted places in life—sacrifice and service, unremitting service. A clean and wholesome Washington will doubtless be Mrs. WILSON'S peculiar monument, but not her only monument. In the heart of every American will remain glowing the memory of a beautiful, womanly life.

Schoolhouses and Elections



EMERSON WOULD HAVE APPROVED of ROBERT ADAMSON'S remarks on politics and schoolhouses. MR. ADAMSON is the New York newspaper man whom Mayor GAYNOR made his private secretary; after GAYNOR'S death he ran Mayor MITCHEL'S campaign and became his Fire Commissioner. Says MR. ADAMSON:

> A school would be a more suitable building for a polling place than a basement, some dark room, or a corner store. Such places are conducive to fraud. The use of schools for meetings would tend in the direction of progress. There has been more progress in politics in the last ten years than in the fifty years before. In the era coming there will be less of politicians and more of the men who do the work because they are fitted for it. Experts will have charge of municipal work. And there will be much wider activity of women in city government. Schools should be the center of social activity.

Economy is another advantage. In New York City are more than six hundred schoolhouses, an investment of $135,000,000. Though these are public buildings, they are used only six or seven hours in the day for five days in the week—and this only for nine months. But in towns as far apart as Los Angeles, Cal., and Worcester, Mass., schools are the polling places, and it is only a question of time until other communities follow suit. By the way didn't the Knights of Labor declare at least a generation ago for socializing the schoolhouse?

Common Sense

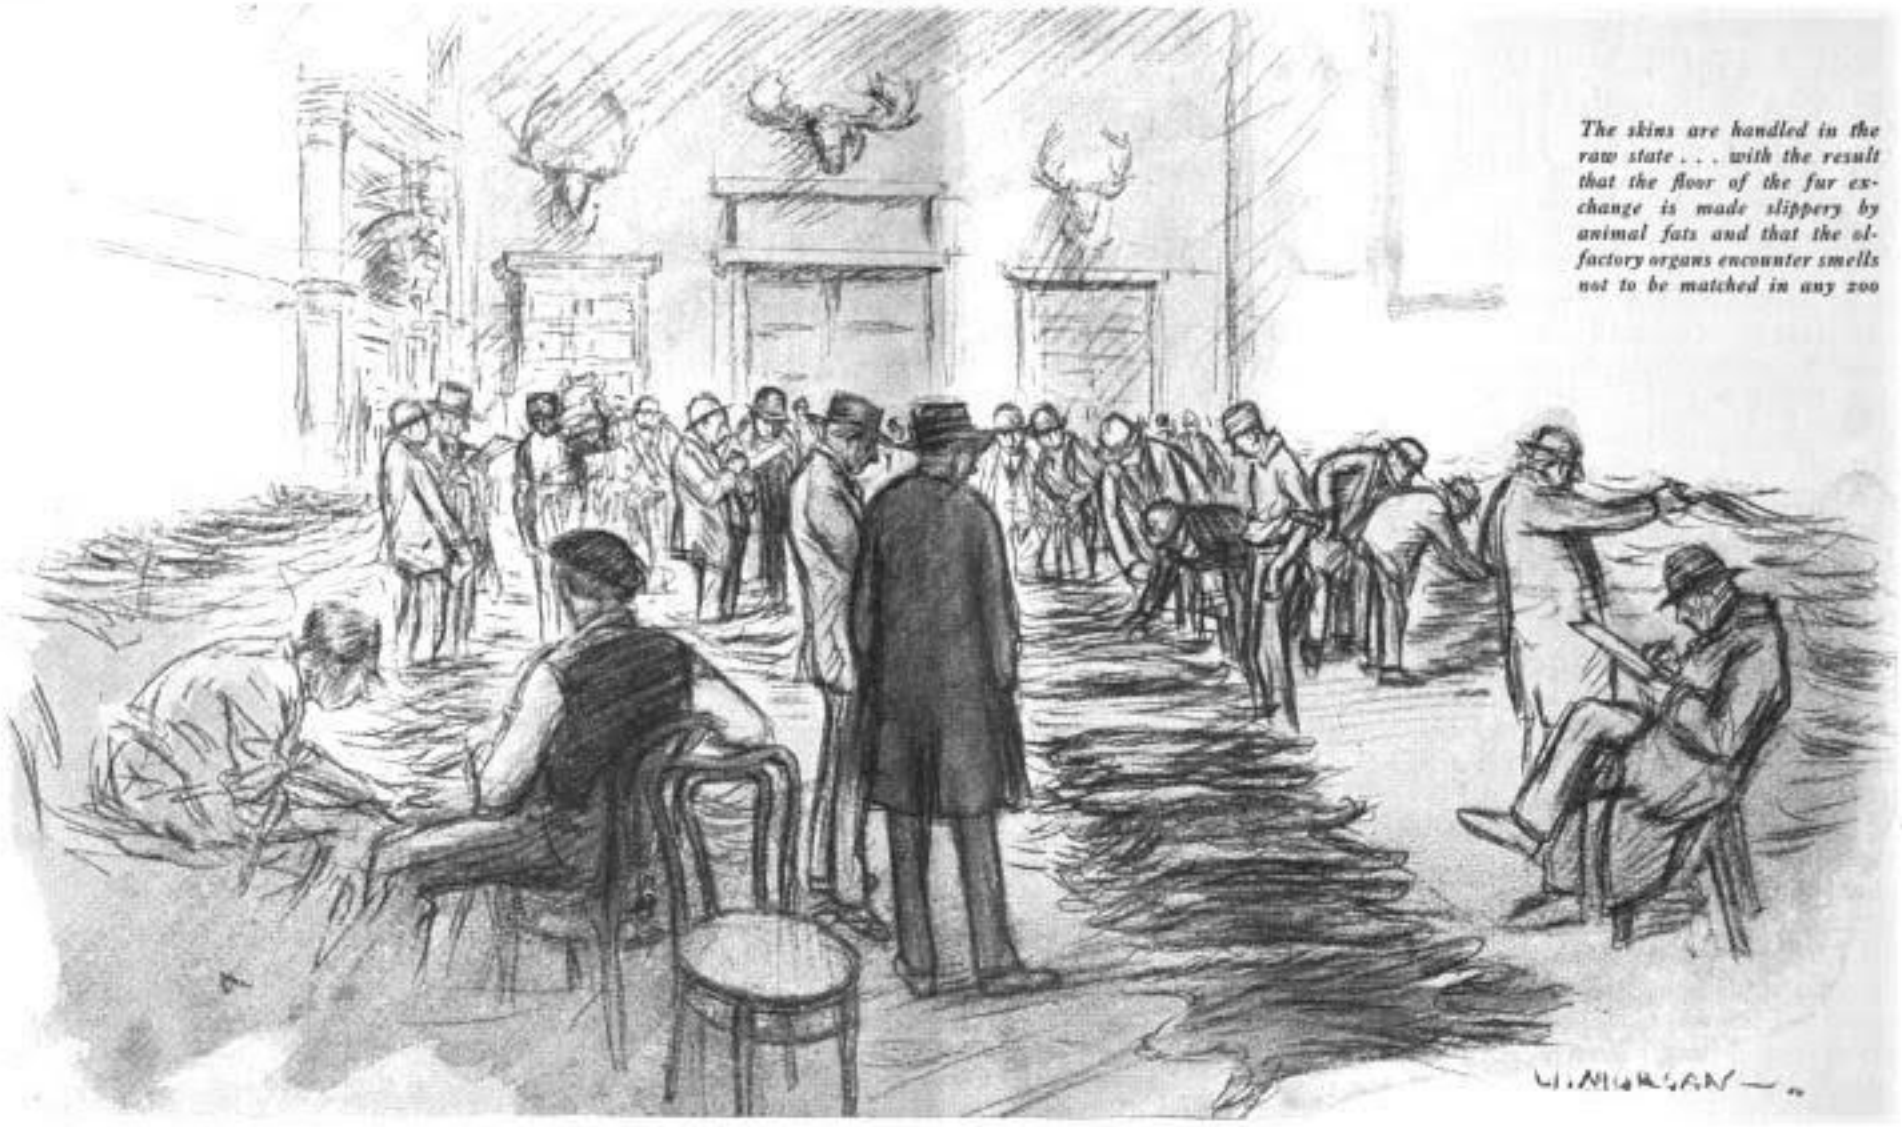
SAFETY FIRST, the saloon second—if at all. THOMAS D. WEST, originally a foundry worker, now manager of the West Steel Foundry Company of Cleveland, Ohio, has started an American Anti-Accident Association. One of the association's proposals is to place a prohibition zone around all industrial plants—such a zone as now surrounds schoolhouses in many towns. The idea is to reduce the number of industrial accidents due to booze by pushing back the saloon. According to the Sick Benefit Society of Leipzig, Germany—the Beer Fatherland—men classed as drinkers had *from 95 to 283 per cent more accidents* than workmen in general. The plan of the American Anti-Accident Association is not a scheme of crazy theorists; the hard-headed "Iron Trade Review" backs the campaign. Unlike some reforms, this strikes us as applied common sense.

The perfectly natural history of a herbivorous animal that thinks itself carnivorous

Cartoon by F. G. Cooper

Spoken Like a Man

WE ENJOY GOOD, honest, whole-souled boasting better than the miching modesty which conceals smug self-content. That is why we have taken pleasure in an editorial burst of civic pride in the Memphis "Commercial Appeal":



> When PAVLOWA, the dancer, came along, our people turned out and filled the theatre to a comfortable degree of repletion. During the same week WILLIAM BUTLER YEATS came, and our people greeted him in numbers just as great as those which watched the Russian get a wriggle on. All of which goes to show that the people of Memphis are strong for anything that is excellent.
>
> Our churches have large congregations. If our prosperity dinner secured an attendance of 500, our morality dinner got us another audience of 500.
>
> When two eminent exponents of the art virile do disport themselves in an arena in the northern part of the city—purely for educational purposes—our leading citizens are there in great numbers.
>
> When a dancer comes our people go and see. When a poet comes we turn out in multitudes, and if this poet rides to the very pinnacle of metrical rhapsody we travel right along with him. . . .
>
> Memphis patronizes good lecturing, good dancing, and good poetry. It is strong for the uplift, no matter whether the uplifter be a tenor-singing poet or an uppercutting boxer. We are for art for art's sake—ars poetica, Terpsichorean, the manly art—all art except the black art. Memphis is cosmopolitan.

Bully for you, Memphis! So many cities are rotten with provincialism, so rare is catholic breadth of taste, that we're only too anxious to take you at your own valuation.

Youth

YOUTH came into the market place half dazed by the dazzling brilliance of the sun, but with strong hands and a ready spirit. Youth found a master, and was happy even when surcharged with labor and meagerly rewarded and denied sunshine. Youth gave largely of service and of loyalty—for of these things Youth was prodigal, being richer in them than in dollars. Years rolled by, and Youth was less quick, and showed the pallor of working indoors for small recompense. Then one day the master reflected and said to himself: "Which of my handmaids has less to give me in the time to come? For I must keep in my house only those whose backs are strong and feet eager and hands subtle." And she whose name had been Youth passed languidly, and the master marked her without speech that she no longer sang softly at her work as once, and he reflected: "A few years and she will be of much less value to me, and I shall be paying her as much as her labor is worth to me—which would be no bargain. Better dismiss her to-day than to-morrow." And he called to her and said: "My plans are altered, Youth, and I no longer need you here. Take two weeks, look about you, and be sure that I shall give you a letter of recommendation saying that I have found you a fairly faithful servant in such matters as you understand." And tears came into Youth's eyes, knowing that she was Youth no longer, but an empty vessel.

Somnolent St. Louis

Chapter VII—Abroad at Home—*American Ramblings, Observations, and Adventures*

By Julian Street

Illustrated by Wallace Morgan

SOME years ago, while riding westward through the Alleghenies in an observation car of the Pennsylvania Limited, a friend of mine fell into conversation with an old gentleman who sat in the next chair.

"Evidently he knew a good deal about that region," said my friend, in telling me of the incident later. "We must have sat there together for a couple of hours. He did most of the talking; I could see that he enjoyed talking, and was glad to have a listener. Before he got off he shook hands with me and said he was glad to have had the little chat. Then, when he was gone, the trainman came and asked me if I knew who he was. I didn't. Come to find out, it was Andrew Carnegie."

I asked my friend how Mr. Carnegie impressed him.

"Oh," he replied, "I was much surprised when I found it had been he. He seemed a nice old fellow enough, kindly and affable, but a little commonplace. I should never have called him an 'inspired millionaire.' I've been reconstructing him in my mind ever since."

Has She Style All the While?

I AM reminded of my friend's experience by my own meeting with the city of St. Louis; for it was not until after I had left St. Louis that I found out "who it is." That is, I failed to focus, while there, upon the fact that it is America's fourth city. And now, in looking back, I feel about St. Louis as my friend felt about the ironmaster: I do not think it looks the part.

St. Louis leads the world in shoes, stoves, and tobacco; it is the world's greatest market for hardware, lumber, and raw furs; it is the principal horse and mule market in America; it builds more street and railroad cars than any other city in the country; it distributes more coffee; it makes more woodenware, more native chemicals, more beer. It leads in all these things. But what it does not do is to *look* as though it led. Physically it is a great, overgrown American town, like Buffalo or St. Paul. Its streets are, for the most part, lacking in distinction. There is no center at which a visitor might stop, knowing by instinct that he was at the city's heart. It is a rambling, incoherent place, in which one has to ask which is the principal retail shopping corner. Fancy having to ask a thing like that!

I do not mean by this that St. Louis is much worse, in appearance, than some other American cities. For American cities, as I have said before, have only recently awakened to the need of broadly planned municipal beauty. All I mean is that St. Louis seems to be behind in taking action to improve herself.

Almost every city presents a paradox, if you will but find it. The St. Louis paradox is that she is a stylish city without style. But that is not, in reality, the paradox, it seems. It only means that being an old, aristocratic city, with a wealthy and cosmopolitan population, and an extraordinarily cultivated social life, St. Louis yet lacks municipal style. It is a dowdy city. It needs to be taken by the hand and led around to some municipal-improvement tailor, some civic haberdasher, who will dress it like the gentleman it really is.

I remember a well-to-do old man who used to be like that. His daughters were obliged to drag him down to get new clothes. Always he insisted that the old frock coat was plenty good enough; that he couldn't spare time and the money for a new one. Nevertheless, he could well afford new clothes, and so can St. Louis. The city debt is relatively small, and the tax rate is lower than in any other American city with over 350,000 population, except two. The exceptions are San Francisco and Cleveland. And either one of them can set a good example to St. Louis in the matter of self-improvement. San Francisco, with a population hardly more than half that of St. Louis, is yet an infinitely more important-looking city; while Minneapolis or Denver might impress a casual visitor, roaming their streets, as being equal to St. Louis in commerce and population. Yet the Missouri metropolis is, in reality, considerably greater than the two combined. However, in considering the foibles of an old city we should be lenient, as in considering those of an old man.

Old men and old cities did not enjoy, in their youth, the advantages which are enjoyed to-day by young men and young cities. Life was harder, and precedent, in many lines, was wanting. Excepting in a few rare instances, as, for example, in Detroit and Savannah, the laying out of cities seems to have been taken care of, in the early days, as much by cows as men. Look at Boston, or lower New York, or St. Paul, or St. Louis. How little did the men who founded those cities dream of the proportions to which they would some day attain! But with cities which have begun to develop within the last fifty or sixty years, it has been different, for there has been precedent to show them what is possible when an American city really starts to grow. To-day all American cities, even down to the smallest towns, have a sneaking suspicion that they may some day become great, too—great, that is, by comparison with what they are. And those which are not altogether lacking in energy are prepared, at least in a small way, to encounter greatness when, at last, it comes.

Her Lineage

BAEDEKER says St. Louis was founded as a fur trading station by the French in 1750. "All About St. Louis," a publication compiled by the St. Louis Advertising Men's League, gives the date 1764. Pierre Laclede was the founder, and it is interesting to note that some of his descendants still reside there.

When Louis XV ceded the territory to the east of the Mississippi to the English, he also ceded the west bank to Spain by secret treaty. Spanish authority was established in St. Louis in 1770, but in 1804 the town became a part of the United States, as a portion of the Louisiana Purchase.

In the old days the city had but three streets: the Rue Royale, one block back from the levee (now Main Street); the Rue de l'Eglise, or Church Street (now Second); and the Rue des Granges, or Barn Street (now Third).

Though a few of the old French houses, in a woeful state of dilapidation, may still be seen in this neighborhood, it is now for the most part given over to commission merchants, warehouses, and slums.

As Charles Dickens Saw Her

CHARLES DICKENS, writing of St. Louis in 1842, describes this quarter:

"In the old French portion of the town the thoroughfares are narrow and crooked, and some of the houses are very quaint and picturesque: being built of wood, with tumble-down galleries before the windows, approachable by stairs or rather ladders from the street. There are queer little barbers' shops and drinking houses, too, in this quarter; and abundance of crazy old tenements with blinking casements, such as may be seen in Flanders. Some of these ancient habitations, with high garret gable windows perking into the roofs, have a kind of French shrug about them; and, being lopsided with age, appear to hold their heads askew, besides, as if they were grimacing in astonishment at the American improvements.

Digitized by Google

"It is hardly necessary to say that these consist of wharves and warehouses and new buildings in all directions; and of a great many vast plans which are still 'progressing.' Already, however, some very good houses, broad streets, and marble-fronted shops have gone so far ahead as to be in a state of completion, and the town bids fair in a few years to improve considerably; though it is not likely ever to vie, in point of elegance or beauty, with Cincinnati. . . . The Roman Catholic religion, introduced here by the early French settlers, prevails extensively. Among the public institutions are a Jesuit college, a convent for 'the Ladies of the Sacred Heart,' and a large chapel attached to the college, which was in course of erection at the time of my visit. . . . The architect of this building is one of the reverend fathers. . . . The organ will be sent from Belgium. . . . In addition to these establishments there is a Roman Catholic cathedral.

"No man ever admits the unhealthiness of the place he dwells in (unless he is going away from it), and I shall therefore, I have no doubt, be at issue with the inhabitants of St. Louis in questioning the perfect salubrity of its climate. . . . It is very hot . . ."

A Sequestered Landmark

THE cathedral of which Dickens wrote remains, perhaps, the most sturdy building in the section which forms the old town. It is a venerable-looking pile of gray granite, built to last forever, and suggesting, with its French inscriptions and its exotic look, a bit of old Quebec. But for the most part the dilapidation of the quarter has continued steadily from Dickens's day to this, and the beauty now to be discovered there is that of decay and ruin—pathetic beauty to charm the etcher, but sadden the lover of improvement, whose battle cry invariably involves the overworked word "civic."

An exception to the general slovenliness of this quarter is to be seen in the old Merchants' Exchange Hall on Main Street. Built nearly sixty years ago, this building, now disused and dilapidated, nevertheless shows the world a façade of a distinction rare in structures of its time. I was surprised to discover that this old hall was not better known in St. Louis, and I cheerfully recommend it to the notice of those who esteem the architecture of the Jefferson Memorial, the bulky new cathedral on Lindell Boulevard, or that residence, suggestive of the hanging gardens of Babylon, at Hortense Place and King's Highway. Take the old Merchants' Exchange Hall away from dirty, cobbled Main Street, set it up, instead, beside the Grand Canal, and watch the tourist from St. Louis stop his gondola to gaze!

Statistics Have Charm

BUT what city has respected its ruins? Rome used her palaces as mines for building material. St. Louis destroyed the wonderful old mound which used to stand at the corner of Mound Street and Broadway, forming one of the most interesting archeological remains in the country and, together with smaller mounds near by, giving St. Louis her title of "Mound City."

With Dickens's statements concerning the St. Louis summer climate, the publication, "All About St. Louis," does not, for one moment, agree. In it I find an article headed: "St. Louis has Better Weather than Other Cities," the preamble to which contains the following solemn truth:

The weather question is purely local and individual. Every person forms his own opinion about the weather by the way it affects him, wherever he happens to be.

Having made that clear, the writer becomes more specific. He informs us that, in St. Louis, "the prevailing winds in summer blow over the Ozark Mountains, insuring cool nights and pleasant days." Also that "during the summer the temperature does not run so high, and warm spells do not last so long as in many cities of the North." The latter statement is supported—as almost every statement in the world, it seems to me, can be supported—by statistics. What wonderful things statistics are! How I should like to have had Charles Dickens see these! How surprised he would be. How surprised I was—for I, too, have visited St. Louis in the middle of the year. Yes, and so has my companion. He went to St. Louis several years ago to attend the Democratic National Convention, but he is all right again now. I showed him the statistics. Clearly he was amazed by them.

"Why!" he cried. "I ought to have been told of this before!"

"What for?" I demanded.

"If I had had this information at the time of the convention," he declared, "I'd have known enough not to have been laid up in bed for six weeks with heat prostration."

A Remediable Oversight

THOUGH the downtown portion of St. Louis is, as I have said, lacking in coherence and distinction, there are, nevertheless, a number of buildings in that section which are, for one reason or another, notable. The old Courthouse, on Chestnut and Market Streets, between Fourth and Fifth, is getting well along toward its centennial, and is interesting, both as a dignified old granite pile and as the scene of the whipping post, and of slave sales which were held upon its steps during the Civil War.

Not far from the old Courthouse stands another building typifying all that is modern—the largest office building in the world, a highly creditable structure, occupying an entire city block, built from designs by St. Louis architects: Mauran, Russell & Crowell. Another building, notable for its beauty, is the Central Public Library, a very simple, well-proportioned building of gray granite, designed by Cass Gilbert.

The St. Louis Union Station is interesting for several reasons. For a long time this station was the largest in the world; for all I know it may still be. At all events, it was important in this country as one of the first great stations of the modern type. It contains, under its roof, five and a half miles of track, and though it has been surpassed, architecturally, by some more recent stations, it is still a spectacular building—or rather it would be, were it not for its setting: among narrow streets, lined with cheap saloons, lunch rooms, and lodging houses. That any city capable of building such a splendid terminal could, at the same time, be capable of leaving it in such environment is a thing baffling to the comprehension. It must, however, be said that efforts have been made to improve this condition. Six or seven years ago the Civic League proposed to buy the property facing the station and turn it into a park. St. Louis somnolence defeated this project. The City Plan Commission now has a more elaborate suggestion which, if accepted by the city, will not only place the station in a proper setting, but also reclaim a large area, in the geographical center of the city, which has suffered a blight, and which is steadily deteriorating, although through it run the chief lines of travel between the business and residence portions of the city.

Like the Champs-Elysées

THIS project, if accepted, will be a fine step toward the creation, in downtown St. Louis, of some outward indication of the real importance of the city. The plan involves the gutting of a strip, one block wide and two miles long; the tearing out of everything between Market and Chestnut Streets, all the way from Twelfth Street, which is the eastern boundary of the City Hall Square, to Grand Avenue on the west. Here it is proposed to construct a Central Traffic Parkway, which will pass directly in front of the station, connecting it with both the business and residence districts, and also pass in front of the Municipal Court Building and the City Hall, located farther downtown. The plan involves an arrangement similar to that of the Champs-Elysées, with a wide central drive, parked on either side, for swift-moving vehicles, and exterior roads for heavy traffic. An expert in such work has said that "city planning has few functions more important than the restoration of impaired property values." American cities are coming to comprehend that investment in intelligently planned improvements, such as this, have to do not only with city dignity and city self-respect, but that they pay for themselves. If St. Louis wants to find that out, she has but to visit her western neighbor, Kansas City, where Paseo Parkway did redeem a blighted district, transforming it into an excellent neighborhood, doubling or trebling the value of adjacent property, and, of course, yielding the city increased revenue from taxes.

The Same Old Civic Indifference

A MATTER more deplorable than the setting of the station is the unparalleled situation which exists with regard to the Free Bridge. Though the echoes of this scandal have been heard, more or less, throughout the country, it is perhaps necessary to give a brief summary of the matter as it stands at present.

The three used bridges which cross the Mississippi River at St. Louis are privately controlled toll bridges. Working people, passing to and fro, are obliged to pay a five-cent toll in excess of car fare. Goods are also taxed. It was with the purpose of defeating this monopoly that the Free Bridge was constructed. But after the body of the bridge was built, factional fights developed as to the placing of approaches, and as a result the approaches have never been built. Thus, the bridge stands to-day, as it has stood for several years, a thing costly, grotesque, and useless, spanning the river, its two ends jutting out, inanely, over the opposing shores. In the meantime the city is paying interest on the bridge bonds at the rate of something over $300 per day. The question of approaches has come before the city at several elections, but the people have so far failed to vote the necessary bonds. The history of the voting on this subject plainly shows indifference. In one election the Twenty-eighth Ward, which is the rich and fashionable ward, cast only 2,325 votes, on the bridge question, out of a possible 6,732. Had the eligible voters of this ward, alone, done their duty, the issue would have been carried at the time, and the bridge would now be in operation.

One becomes accustomed to exhibitions of municipal indifference upon matters involving questions like reform, which, though they are not really abstract, often seem so to the average voter. Reforms are, relatively at least, invisible things. But the Free Bridge is not invisible. Far from it! There it stands above the stream, a grim, gargantuan joke, for every man to see—a tin can tied to a city's tail.

Somewhat Apologetic

IN WRITING of St. Louis I feel, somehow, like a man who has been at a delightful house party where people have been very kind to him, and who, when he goes away, promulgates unpleasant truths about bad plumbing in the house. Yet, of course, St. Louis is a public place, to which I went with the avowed purpose of writing my impressions. The reader may be glad, at this point, to learn that some of my impressions are of a pleasant nature. But before I reach them I must plow on a little further through this substance, which, I am becoming very much afraid, resembles a kind of "muck."

St. Louis is involved in a fight with the United Railways Company, a corporation controlling its street railways. This company, which has been paying dividends on millions of watered stock, was reported by the Public Service Commission (*Continued on page 29*)

The three used bridges which cross the Mississippi River are privately controlled toll bridges. Working people, passing to and fro, are obliged to pay a five-cent toll. This is the Eads Bridge

The cathedral of which Dickens wrote remains, perhaps, the most sturdy building in the section which forms the old town. It is a venerable-looking pile of gray granite, built to last forever

New Stream Line Body—Electric Starter—Electric Lights—Le

This is the car selected by the Rice Leaders of the World Association as prizes for the leading salesmen of the world.

This announces the latest Overland—Model 80.

This is the handsomest Overland ever built. Up-to-date in every respect, artistically designed and finished, this powerful, larger, roomier and smooth running car establishes a new standard.

The price has not been advanced.

This season we shall build 75,000 cars. This increased production again places us in the enviable and supreme position of being able to give still more value for still less money than any other manufacturer.

Model 80 has a brand-new full stream line body. Its full sweeping lines blend and harmonize perfectly with the balance of the symmetrical design. All visible lines are absolutely clean, unbroken and uninterrupted.

The new crowned moulded fenders, new rounded radiator, new hood slightly sloped, and flush U doors with disappearing hinges, contribute the additional touches of exterior grace and modishness which distinguish costly imported cars.

The new tonneau is much larger—both in width and in depth.

The new cushioned upholstery is also considerably deeper and softer. The new long improved underslung springs supply unusual and easy riding qualities. This model is equipped w
est priced electric s
lighting systems. Al
pact switch box, are
on the steering col
driving position, wit

year, being tires can be rims which

are demountable. One extra rim supplied.

Ignition is high tension magneto, independent of starting and lighting system. It requires no dry cells.

Fundamentally the chassis remains as before. The front axle is larger; the wheels are larger; the frame is heavier and stouter; gears are made of 3½% nickel steel; there are integral grease cups in spring bolts; and many other mechanical refinements which are described in detail in our new catalogue. Otherwise we could in no possible way improve the splendid Overland chassis that is giving such satisfactory service to 50,000 nineteen fourteen owners.

There is a powerful, economical and quiet 35 h. p. motor. The wheel base is 114 inches long.

This car comes complete. Electric starter, electric lights, rain vision, ventilating built in, windshield, mohair top and boot, demountable rims with extra rim, jeweled magnetic speedometer, electric horn, robe rail, foot rest and curtain box. This new model is now ready for your inspection in practically every city and town in the country. Dealers are now taking orders. Make arrangements for your demonstration immediately.

Send for Handsome 1915 Catalogue —Gratis

Our 1915 catalogue contains complete and instructive description of the Overland Model 80. It is simply written, with clear, understandable explanations and illustrations. Everyone should have a copy. It posts you on Overland methods, models and policies.

Bealby

Chapter X
Bealby the Tramp

By H. G. Wells

ILLUSTRATED BY HENRY RALEIGH

BEALBY was loath to leave the caravan party, even when by his own gross negligence it had ceased to be a caravan party. He made off regretfully along the crest of the hills through bushes of yew and box until the clamor of the disaster was no longer in his ears. Then he halted for a time and stood sorrowing and listening, and then turned up by a fence along the border of a plantation and so came into a little, overhung road.

His ideas of his immediate future were vague in the extreme. He had a receptive expectation. Since his departure from the gardener's cottage circumstances had handed him on. They had been interesting but unstable circumstances. He supposed they would still hand him on. So far as he had any definite view about his intentions it was that he was running away to sea. And that he was getting hungry. It was also, he presently discovered, getting dark very gently and steadily. And the overhung road, after some tortuosities, expired suddenly upon the bosom of a great, gray, empty common with distant, mysterious hedges.

IT SEEMED high time to Bealby that something happened of a comforting nature. Always hitherto something or some one had come to his help when the world grew dark and cold and given him supper and put him or sent him to bed. Even when he had passed a night in the interstices of Shonts he had known there was a bed at quite a little distance under the stairs. If only that loud voice hadn't shouted curses whenever he moved, he would have gone to it. But as he went across this common in the gloaming it became apparent that this amiable routine was to be broken. For the first time he realized the world could be a homeless world.

And it had become very still. Disagreeably still, and full of ambiguous shadows.

That common was not only an unsheltered place, he felt, but an unfriendly place, and he hurried to a gate at the further end. He kept glancing to the right and to the left. It would be pleasanter when he had got through that gate and shut it after him.

In England there are no gray wolves.

Yet at times one thinks of wolves, gray wolves, the color of twilight, and running noiselessly, almost noiselessly, at the side of their prey for quite a long time before they close in on it.

In England, I say, there are no gray wolves.

Wolves were extinguished in the reign of Edward the Third; it was in the histories, and since then no free wolf has trod the soil of England; only menagerie captives. Of course there may be *escaped* wolves!

Now the gate!—sharp through it and slam it behind you, and a little brisk run and so into this plantation that slopes downhill. This is a sort of path, vague, but it must be a path. Let us hope it is a path.

What was that among the trees?

It stopped, surely it stopped, as Bealby stopped. Pump, pump— Of course! that was one's heart.

NOTHING there! Just fancy. Wolves live in the open; they do not come into woods like this. And besides, there are no wolves. And if one shouts—even if it is but a phantom voice one produces, they go away. They are cowardly things—really. Such as there aren't. And there is the power of the human eye.

Which is why they stalk you and watch you and evade you when you look and creep and creep and creep behind you! Turn sharply. Nothing.

How this stuff rustled under the feet! In woods at twilight, with innumerable things darting from trees and eyes watching you everywhere, it would be pleasanter if one could walk without making quite such a row. Presently surely, Bealby told himself, he would come out on a highroad and meet other people and say "Good night" as they passed. Jolly other people they would be, answering "Good night." He was now going at a moistening trot. It was getting darker and he stumbled against things. When you tumble down wolves leap. Not, of course, that there *are* any wolves.

It was stupid to keep thinking of wolves in this way. Think of something else. Think of things beginning with a B. Beautiful things, boys, beads, butterflies, bears. The mind stuck at bears. *Are there such things as long gray bears?* Ugh! Almost endless, noiseless bears? . . . It grew darker until at last the trees were black. The night was swallowing up the flying Bealby and he had a preposterous persuasion that it had teeth and would begin at the back of his legs. . . .

"Hi!" cried Bealby weakly, hailing the glow of the fire out of the darkness of the woods above. The man by the fire peered at the sound; he had been listening to the stumbling footsteps for some time, and he answered nothing.

IN ANOTHER minute Bealby had struggled through the hedge into the visible world and stood regarding the man by the fire. The phantom wolves had fled beyond Sirius. But Bealby's face was pale still from the terrors of the pursuit and altogether he looked a smallish sort of small boy.

"Lost?" said the man by the fire.

"Couldn't find my way," said Bealby.

"Anyone with you?"

"No." The man reflected. "Tired?"

"Bit."

"Come and sit down by the fire and rest yourself. I won't 'urt you," he added as Bealby hesitated.

So far in his limited experience Bealby had never seen a human countenance lit from behind by a flickering fire flame. The effect he found remarkable rather than pleasing. It gave him the most active and unstable countenance Bealby had ever seen. The nose seemed to be in active oscillation between Pug and Roman, the eyes jumped out of black caves and then went back into them, the more permanent features appeared to be a vast triangle of neck and chin. The tramp would have impressed Bealby as altogether inhuman if it had not been for the smell of cooking he diffused. There were onions in it and turnips and pepper—mouth-watering constituents, testimonials to virtue. He was making a stew in an old can that he had slung on a cross stick over a brisk fire of twigs that he was constantly replenishing.

"I won't 'urt you, darn you," he repeated. "Come and sit down on these leaves here for a bit and tell me all about it."

BEALBY did as he was desired. "I got lost," he said, feeling too exhausted to tell a good story.

The tramp, examined more closely, became less pyrotechnic. He had a large, loose mouth, a confused, massive nose, much long, fair hair, a broad chin with a promising beard and spots—a lot of spots. His eyes looked out of deep sockets and they were sharp little eyes. He was a lean man. His hands were large and long and they kept on with the feeding of the fire as he sat and talked to Bealby. Once or twice he leaned forward and smelt the pot judiciously, but all the time the little eyes watched Bealby very closely. "Lose yer collar?" said the tramp.

Bealby felt for his collar. "I took it orf," he said.

"Come far?"

"Over there," said Bealby.

"Where?"

"Over there."

"What place?"

"I don't know the right name of it."

"Then it ain't your 'ome?"

"No."

"You've run away," said the man.

"P'r'aps I 'ave," said Bealby.

"P'r'aps you 'ave!. Why p'r'aps? You *'ave!* What's the good of telling lies about it? When'd you start?"

"Monday," said Bealby.

THE tramp reflected. "Had about enough of it?"

"Dunno," said Bealby truthfully.

"Like some soup?"

"Yes."

"'Ow much?"

"I could do with a lot," said Bealby.

"Ah, yah! I didn't mean that. I meant, 'ow much for some? 'Ow much will you pay for a nice, nice 'arf can of soup? I ain't a darn charity. See?"

"Tuppence," said Bealby.

The tramp shook his head slowly from side to side and took out the battered iron spoon he was using to stir the stuff and tasted the soup lusciously. It was—jolly good soup and there were potatoes in it.

"Thrippence," said Bealby.

"'Ow much you got?" asked the tramp.

Bealby hesitated perceptibly. "Sixpence," he said weakly.

"It's sixpence," said the tramp. "Pay up."

"'Ow big a can?" asked Bealby.

The tramp felt about in the darkness behind him and produced an empty can with a jagged mouth that had once contained, the label witnessed—I quote, I do not justify—"*Deep Sea Salmon.*" "That," he said, "and this chunk of bread. . . . Right enough?"

"You *will* do it?" said Bealby.

"Do I look a swindle?" cried the tramp, and suddenly a lump of the abundant hair fell over one eye in a singularly threatening manner. Bealby handed over the sixpence without further discussion. "I'll treat you fairly, you see," said the tramp, after he had spat on and pocketed the sixpence, and he did as much. He decided that the soup was ready to be served and he served it with care. Bealby began at once. "There's a nextry onion," said the tramp, throwing one over. "It didn't cost me much and I gives it you for nothin'. That's all right, eh? Here's 'ealth!"

BEALBY consumed his soup and bread meekly with one eye upon his host. He would, he decided, eat all he could and then sit a little while and then get this tramp to tell him the way to—anywhere else. And the tramp wiped soup out of his can with gobbets of bread very earnestly and meditated sagely on Bealby.

"You better pal in with me, matey, for a bit," he said at last. "You can't go nowhere else—not to-night."

"Couldn't I walk perhaps to a town or sumpthing?"

"These woods ain't safe."

"'Ow d'you mean?"

"Ever 'eard tell of a gurrillia?—sort of big black monkey thing."

"Yes," said Bealby faintly.

"There's been one loose abäit 'ere—oh, week or more. Fact. And if you wasn't a grown-up man quite and going along in the dark, well—'e might say something *to* you. . . . Of course 'e wouldn't do nothing where there was a fire or a man—but a little chap like you. I wouldn't like to let you do it, 'strewth I wouldn't. It's risky. 'Course I don't want to *keep* you. There it is. You go if you like. But I'd rather you didn't. 'Onest."

"Where'd he come from?" asked Bealby.

"M'nagery," said the tramp. "'E very near bit through the fist of a chap that tried to stop 'im."

Bealby, after weighing tramp and gorilla carefully in his mind, decided he wouldn't and drew closer to the fire—but not too close—and the conversation deepened.

Digitized by Google

It was a long and rambling conversation, and the tramp displayed himself at times as quite an amiable person. It was a discourse varied by interrogations, and, as a thread of departure and return, it dealt with the life of the road and with life at large and—life, and with matters of "must" and "may."

Sometimes, and more particularly at first, Bealby felt as though a ferocious beast lurked in the tramp and peeped out through the fallen hank of hair and might leap out upon him, and sometimes he felt the tramp was large and fine and gay and amusing, more particularly when he lifted his voice and his bristling chin. And ever and again the talker became a nasty creature and a disgusting creature, and his red-lit face was an ugly, creeping approach that made Bealby recoil. And then again he was strong and wise. So the unstable needle of a boy's moral compass spins.

THE tramp used strange terms. He spoke of the "deputy" and the "doss house," of the "spike" and "padding the hoof," of "screevers" and "tarts" and "copper's narks." To these words Bealby attached such meanings as he could, and so the things of which the tramp talked floated unsurely into his mind, and again and again he had to readjust and revise his interpretations. And through these dim and fluctuating veils a new side of life dawned upon his consciousness—a side that was strange and lawless and dirty—in every way dirty—and dreadful and—attractive. That was the queer thing about it, that attraction. It had humor. For all its squalor and repulsiveness it was lit by defiance and laughter, bitter laughter perhaps, but laughter. It had a gayety that Mr. Mergleson, for example, did not possess: it had a penetration, like the penetrating quality of onions or acids or asafetida, that made the memory of Mr. Darling insipid.

The tramp assumed from the outset that Bealby had "done something" and run away, and some mysterious etiquette prevented his asking directly what was the nature of his offense. But he made a number of insidious soundings. And he assumed that Bealby was taking to the life of the road, and that, until good cause to the contrary appeared, they were to remain together. "It's a tough life," he said, "but it has its points, and you got a toughish look about you."

HE TALKED of roads and the quality of roads and countryside. This was a good countryside; it wasn't overdone and there was no great hostility to wanderers and sleeping out. Some roads—the London to Brighton, for example, if a chap struck a match somebody came running. But here, unless you went pulling the haystacks about too much, they left you alone. And they weren't such dead nuts on their pheasants, and one had a chance of an empty cowshed. "If I've spotted a shed or anything with a roof to it I stay out," said the tramp, "even if it's raining cats and dogs. Otherwise it's the doss 'ouse or the spike. It's the rain is the worst thing—getting wet. You haven't been wet yet, not if you only started Monday. Wet—with a chilly wind to drive it. Gaw! I been blown out of a holly hedge. You *would* think there'd be protection in a holly hedge. . . .

"Spike's the last thing," said the tramp. "I'd rather go bare-gutted to a doss 'ouse anywhen. Gaw!—you've not 'ad your first taste of the spike yet."

But it wasn't heaven in the doss houses. He spoke of several of the landladies in strange but, it would seem, unflattering terms. "And there's always such a blamed lot of washing going on in a doss 'ouse. Always washing they are! One chap's washing 'is socks and another's washing 'is shirt. Making a steam drying it. Disgustin'. Can't see what they want with it all. Bländ to git dirty again . . ."

HE DISCOURSED of spikes—that is to say, of workhouses and of masters. "An' then," he said with revolting yet alluring adjectives, "there's the bath."

"That's the worst side of it," said the tramp. . . . "'Owever, it doesn't always rain, and if it doesn't rain—well, you can keep yourself dry."

He came back to the pleasanter aspects of the nomadic life. He was all for the outdoor style. "Ain't we comfortable 'ere?" he asked. He sketched out the simple larcenies that had contributed and given zest to the evening's meal. But it seemed there were also doss houses that had the agreeable side. "Never been in one!" he said. "But where you been sleeping since Monday?"

BEALBY described the caravan in phrases that seemed suddenly thin and anemic to his ears.

"You hit it lucky," said the tramp. "If a chap's a kid, he strikes all sorts of luck of that sort. Now ef *I* come up against three ladies travelin' in a van—think they'd arst me in? Not it!"

He dwelt with manifest envy on the situation and the possibilities of the situation for some time. "You ain't dangerous," he said; "that's where you get in." . . .

He consoled himself by anecdotes of remarkable good fortunes of a kindred description. Apparently he sometimes traveled in the company of a lady named Izzy Berners—"a fair scorcher, been a regular, slap-up circus actress." And there was also "good old Susan." It was a little difficult for Bealby to see the point of some of these flashes by a tendency on the part of the tramp while his thoughts turned on these matters to adopt a staccato style of speech, punctuated by brief, darkly significant guffaws. There grew in the mind of Bealby a vision of the doss house as a large, crowded place, lit by a great central fire, with much cooking afoot and much jawing and disputing going on, and then "me and Izzy sailed in." . . .

THE fire sank, the darkness of the woods seemed to creep nearer. The moonlight pierced the trees only in long beams that seemed to point steadfastly at unseen things; it made patches of ashen light that looked like watching faces. Under the tramp's direction Bealby skirmished round and got sticks and fed the fire until the darkness and thoughts of a possible gorilla were driven back for some yards and the tramp pronounced the blaze a "fair treat." He had made a kind of bed of leaves which he now invited Bealby to extend and share, and, lying feet to the fire, he continued his discourse. He talked of stealing and cheating by various endearing names: he made these enterprises seem adventurous and facetious; there was, it seemed, a peculiar sort of happy find one came upon called a "flat," that it was not only entertaining but obligatory to swindle. He made fraud seem so smart and bright at times that Bealby found it difficult to keep a firm grasp on the fact that it was—fraud. . . .

Bealby lay upon the leaves close up to the prone body of the tramp and his mind and his standards became confused. The tramp's body was a dark but protecting ridge on one side of him; he could not see the fire beyond his toes, but its flickerings were reflected by the tree stems about them and made perplexing sudden movements that at times caught his attention and made him raise his head to watch them. . . . Against the terrors of the night the tramp had become humanity, the species, the moral basis. His voice was full of consolation; his topics made one forget the watchful, silent circumambient. Bealby's first distrusts faded. He began to think the tramp a fine, brotherly, generous fellow. He was also growing accustomed to a faint something—shall I call it an olfactory bar?—that had hitherto kept them apart. The monologue ceased to devote itself to the elucidation of Bealby; the tramp was lying on his back with his fingers interlaced beneath his head and talking not so much to his companion as to the stars and the universe at large. His theme was no longer the wandering life simply, but the wandering life as he had led it, and the spiritedness with which he had led it and the real and admirable quality of himself. It was that soliloquy of consolation which is the secret preservative of innumerable lives.

Sometimes . . . Bealby felt as though a ferocious beast lurked in the tramp . . . and might leap out upon him, and sometimes he felt the tramp was large and fine and gay and amusing, more particularly when he lifted his voice

HE WANTED to make it perfectly clear that he was a tramp by choice. He also wanted to make it clear that he was a tramp and no better, because of the wicked folly of those he had trusted and the evil devices of enemies. In the world that contained those figures of spirit, Isabel Berners and Susan, there was also, it seemed, a bad and spiritless person, the tramp's wife, who had done him many passive injuries. It was clear she did not appreciate her blessings. She had been much to blame. "Anybody's opinion is better than 'er 'usband's," said the tramp. "Always 'as been." Bealby had a sudden memory of Mr. Darling saying exactly the same thing of his mother. "She's the sort," said the tramp, "what would rather go to a meetin' than a music 'all. She'd rather drop a shilling down a crack than spend it on anything decent. If there was a choice of jobs going she'd ask which 'ad the lowest pay and the longest hours and she'd choose *that*. She'd feel safer. She was born scared. When there wasn't anything else to do she'd stop at 'ome and scrub the floors. Gaw! It made a chap want to put the darn' pail over 'er 'ead, so's she'd get enough of it. . . . .

"I don't hold with all this crawling through life and saying *Please*," said the tramp. "I say it's *my* world just as much as it's *your* world. You may have your 'orses and carriages, your 'ouses and country places and all that and you may think Gawd sent me to run abart and work for you; but *I* don't. See?"

BEALBY saw.

"I seek my satisfactions just as you seek your satisfactions, and if you want to get me to work, you've jolly well got to make me. I don't choose to work. I choose to keep on my own and a bit loose and take my chance where I find it. You got to take your chances in this world. Sometimes they come bad and sometimes they come good. And very often you can't tell which it is when they 'ave come . . ."

Then he fell to questioning Bealby again and then he talked of the immediate future. He was heating for the seaside. "Always something doing," he said. "You got to keep your eye on for cops; those seaside benches, they're 'ot on tramps—give you a month for begging soon as look at you—but there's flats dropping sixpences thick as flies on a sore 'orse. You're wanted there for all sorts of jobs. You're the chap for it, matey. Saw it soon's ever I set eyes on you . . ." He made projects. . . .

Finally he became more personal and very flattering.

"Now you and me," he said, suddenly shifting himself quite close to Bealby, "we're going to be downright pals. I've took a liking to you. Me and you are going to pal together. See?"

He breathed into Bealby's face and laid a hand on his knee and squeezed it, and Bealby, on the whole, felt honored by his protection. . . .

IN THE unsympathetic light of a bright and pushful morning the tramp was shorn of much of his overnight glamour. It became manifest that he was not merely offensively unshaven but extravagantly dirty. It was not ordinary (*Concluded on page 28*)

Pickups of Sport

By Grantland Rice

The Art of Getting Around

CHARLEY HERZOG, the Maryland cantaloupe grower who has been using a grappling hook on the Reds this season in an attempt to lift them out of the rut, recently inaugurated an interesting experiment in baseball offense.

Herzog decided in his own mind that with a runner on first the sacrifice was useless and the hit-and-run was worse. He figured that with a runner possessing any sort of speed, the only system was to steal.

Before establishing the system fully Herzog decided to try the plan out.

The next sixteen times that he managed to reach first base the Red leader launched his wiry body into a steal. He reached second safely fifteen times and was thrown out but once. A general order to steal was then issued and for many weeks Herzog kept his team in the first division when much better individual material was well below him. For a system of attack that with a fair runner can register fifteen out of sixteen times is certainly well beyond any other method now known.

Base running as a portion of the game's offense is as important as batting, and yet only three or four leaders have been wise enough to handle this winning art in any but a perfunctory way.

The Giants have led their league in base running for four years and are now on their way to their fourth consecutive pennant. Which is part of the answer, at any rate.

Bringing It Home

EUROPEAN war maneuvers failed to impress Americans deeply one way or another until it was announced that the war scare was "driving the White Hopes back to United States soil."

At which point the gravity of the situation and its tremendous seriousness struck America with stunning force.

In Another War

IT MAY have been Germany who showed the keenest desire for hostilities, but the names of those who have been doing the greatest amount of flag fighting on this side of the world are McGillicuddy, McGraw, Carrigan, and O'Day. Which would indicate that the Teutonic influence in our martial affairs is not exactly at record mark.

Over the Centuries

I remember—I remember—
As Tom Hood used to say—
When Cæsar led the Roman League
And Pompey used to play;
When Homer's paper sent him down
To cover games at Troy,
And Honus Wagner, bare of foot,
Was but a little boy.

I remember—I remember—
(Well, Hood repeated, too)—
When Virgil had a story,
Saying Romulus was through;
When Alexander swept the world
Until his arm went lame,
And Matty, at his father's side,
Had never won a game.

I remember—I remember—
Achilles up at bat;
And how he swung on Hector's speed
And drove him to the mat;
And when poor Hector turned and watched
The drive sail out of reach,
The knot-hole kid who hollered "Cheese!"
Was little Tommy Leach.

Boosting the Game

IF THERE was any touch of dishonesty to baseball, the New York Americans would have a winning team. A winner in New York is a gold mine, with diamond settings.

So while the struggling Yanks have failed to reach out and gather any flags, they should possess themselves of a buoyant soul in the knowledge that they have contributed additional testimony to the innate honesty of their profession.

The Secret of Golf

GOLF has developed through the experts into such a mystery that only psychic souls may grope therein for the answer.

As a matter of fact, there are but two main essentials to the game—and both are out in the open.

1. To keep one's head still when making the swing.

2. The development of a natural swing, through practice, that comes to its climax of power as the club head strikes the ball.

Take these two—plus natural knack—and the answer is simple—ranging anywhere from a 72 to a 128—depending largely upon the naturalness of the aforesaid knack.

Dipping Into the Future

"THEN I dipped into the future far as human eye could see," wrote the late Mr. Tennyson.

He had little on McGraw. Two years ago McGraw landed a young shortstop named Milton Stock. He watched Stock work out some thirty minutes one day at short and then called him in.

"You're not a shortstop," he said; "you're a natural third baseman. Move over to the bag."

Stock, young and inexperienced, was sent back to the minors, where he was promptly moved back to short. He was only an average shortstop even in minor-league competition. This spring McGraw called him back, shifted him again to third, and within two months young Stock was accounted one of the greatest third-base discoveries of the decade. How did McGraw, who saw him play short for thirty minutes, know his natural sphere of endeavor was at third? You can frisk us. That's one of the reasons the Giant leader gets $30,000 a year—and one of the reasons why he earns it.

Cut Shots

The difference between a hero and a coward—between a star and a dub—is too often the matter of one day's digestion.

This good advice to duffers is posted out at Scarsdale: "Remember you are off your game only when you're playing well. Save your alibis for that occasion."

It may be more heroic to play a poor hand well than to hold a good one. But for all that give us a pat king full and we'll tackle a C. J. Cæsar operating a brace of deuces.

The pity of it is that those "left on bases" are generally the ones who have driven in the runs.

For the Good of the Game

SOME time early this winter representative magnates and ball players should hold a session and establish a just working code that will for all time end the constant wranglings and bickerings that have disgraced baseball for some time past.

One suggestion would be to add to the National Commission three ball players to be selected by the Fraternity, the six to vote upon or to select a seventh member who shall round out the board.

There has been a wide and growing breach between the players and the commission, and for the good of the game this breach should be closed. If the club owners decide that Ban Johnson, John K. Tener, and Garry Herrmann shall represent them, why not let the players add three such people as Christy Mathewson, Jake Daubert, and George McBride.

Whether this move is made or not there should most certainly be some general conference after the campaign is over that will lift the game back to its old place and establish a mutual understanding for seasons on beyond. There has been too much of the other, and if the owners and players fail to act, the public that comprises Rooters' Row soon will.

Among Ourselves

AT EKWANOK, located at Manchester, Vt., the next two weeks will develop the most interesting golf competition in American golf history.

This tournament will find, among other stars, our three leading English invaders battling among themselves. It will be more than usually interesting to see how Messrs. Travers, Evans, and Ouimet fare without the unseemly activities of English and Scotch rivals.

And it will be unusually interesting to see just what effect that English breakdown through staleness will have upon the iron nerves of champion Jerry. Whether, having discovered at last that nerves can slip from one's control, he can still regain his old mastery of a fighting nervous force.

There is no record of any tournament that offers so keen a study of golfing psychology.

The Amateur's Wail

The Amateur tore his hair
And wept aloud in dull despair.

"Alas," he cried, "this year has been
The toughest one in all my ken."

"I've only made expenses and
About four thousand safe in hand."

"Some months I've hardly made a cent
Above my grocery bills and rent."

"I've hardly gathered as much dough
As some professionals I know."

"I guess," he murmured with a sob,
"I'll have to go and get a job."

Four Flags in a Row

THOSE who have watched the Giants at work this summer understand at last just why it is that no club in forty years has won four pennants in a row.

Despite the fact that all opposition this season has been well below past standards, the Giants have been fighting desperately over two months to keep their tanned features out in front of the parade. And it has only been their desperate fighting that has held them in front so long. The drive and smash necessary to win three straight flags have shown all year. Normal .300 hitters are batting around .250. Usually steady athletes in the field have shown tendencies to flutter and break at close intervals. There has been a natural let-down all around in Giant play. For the most part it has been a case of McGraw using the whip hand without rest—and the enduring Mathewson keeping at his best despite all laws of gravity and the game.

Mixing 'Em Up

CHRISTY MATHEWSON is a master artist when it comes to mixing up a bewildering assortment of slow balls, speed, curves, and fadeaways.

But Matty's wisdom goes even beyond that. In place of centering his entire attention upon one game from mid-February to mid-October, a stretch of eight months, the Miracle Man of the Mound finally decided to mix up games as well and so relieve the tension and the staleness.

By taking up golf he was able to shift his mind entirely from baseball twice a week. And by pitching a few games of baseball here and there he was able to escape the wild frenzy of the average golfing debutante.

As a result of which he was able to enter August leading both leagues in the box despite his fourteen years of servitude—and was able to average 85 at golf despite only one year's concentration on the game.

Matty has made wonderful strides at golf through his fourteen-year training at making his muscles obey his brain. He rarely foozles. His timing is generally good despite a form that is not yet wholly orthodox. It is even possible that by deeper concentration on the game after he quits baseball he may even skirt the championship ranks. But in the meanwhile he still has one or two good ball games left in his old right flipper. One or two—plus several more.

The Colors of Our Battalion

(Continued from page 10)

fatalists, they argued that it was best to wait until Chance showed the way.

So they discussed, and so they argued, while Bunga, standing alone on his porch, watched Captain Duncan disappear into the night. He had asked the Captain to dinner; the Captain could not very well refuse; the meal had not been altogether pleasant for either one. Abhorring capitulation, the little man still nursed a secret hope that his officers, among whom Duncan was the leading spirit, would come to accept his view with enthusiasm. But all through the meal Captain Duncan had been put to it to hide his cold dislike. Neither could he agree, as officers usually try to agree with their commanders, when Major Drew again mentioned the constabulary in an effort to exemplify what the Theory will do for an outfit which has it kneaded into their spines.

"Why," he had said, "those little devils over there held Bacolog, they say, when outnumbered eight to one. And not one hope of ever getting out alive. They stuck around their *colors*."

"Ye-e-es," admitted Duncan, choosing his words with care. "They did. Only—I define the word differently. It hardly seems possible to me that those uneducated semisavages have any conception of a theory. It was Allen they stayed with. He was their colors."

"Perhaps so," Bunga had nodded, "at the time. Nevertheless, I maintain that those little fellows have advanced to a point in soldierdom where anyone with the commanding ability of Allen could hold them anywhere. I hate to say it, being an American, but right now any one of those constabulary privates is worth any five of ours in a pinch."

To this Duncan had not replied, making his disapproval manifest by his very silence; hence Bunga's heavy sigh when he watched the big man walk away. Then, with a sudden squaring of his shoulders, Bunga stepped down to the ground and walked over to Captain Allen's quarters.

At their first meeting something mutual had leaped from eye to eye. Watching the tall youth drill his little charges, Bunga sensed at once that here was a man who had labored and sweated and damned his company up and down parade as he himself had done with his own constabulary back in Mindanao, till from the ungodly mass of filthy hill clay there grew a company of reliant, vibrant soldiers. Their first talk verified it; the constabulary captain fully understood and appreciated Bunga Dos's position. "Yes, sir," he said, "we're sitting on a boiling pot. The natives were afraid of the Fifty-second when they were here—the Fifty-second were seasoned men. If anything happens, though, Major, you can count on us."

BUNGA went off with a fresh determination to "buck up" to his work. "I'll drill into them the self-obliterating idea of what that flag embodies or break them, every one!" he gritted. Forthwith, on the next day, when he passed one of the nipa barracks and overheard a group of privates voicing their opinion of the crazy evening parades, he made them march back and forth past the "rag" for four straight steady hours, bringing their right hand up in salute each time they passed.

This incident offset the order he had given the day before. In the United States army each man is allotted so much for food in actual cash. It is credited on the company books and spent according to the company commander's wish. He can "make savings," in army vernacular, or "feed well" at his discretion. Thus one company may be "eating fine," while the one next door is "going on the slim." This Bunga put a stop to. He said he saw no reason why one enlisted man was entitled to more than another of equal merit. Peter must draw as much as Paul.

FOR this the men should have been grateful. But when the undisciplined recruits thought of the fatiguing, six-hour drills in the boiling sun, and the inevitable punishments for having even one button dirty on parade, their hatred killed all gratitude. And the officers resented the order as much as they did the daily battalion drills. It is not well in the eyes of a company commander to reduce him to a cabinet membership where he has been a czar.

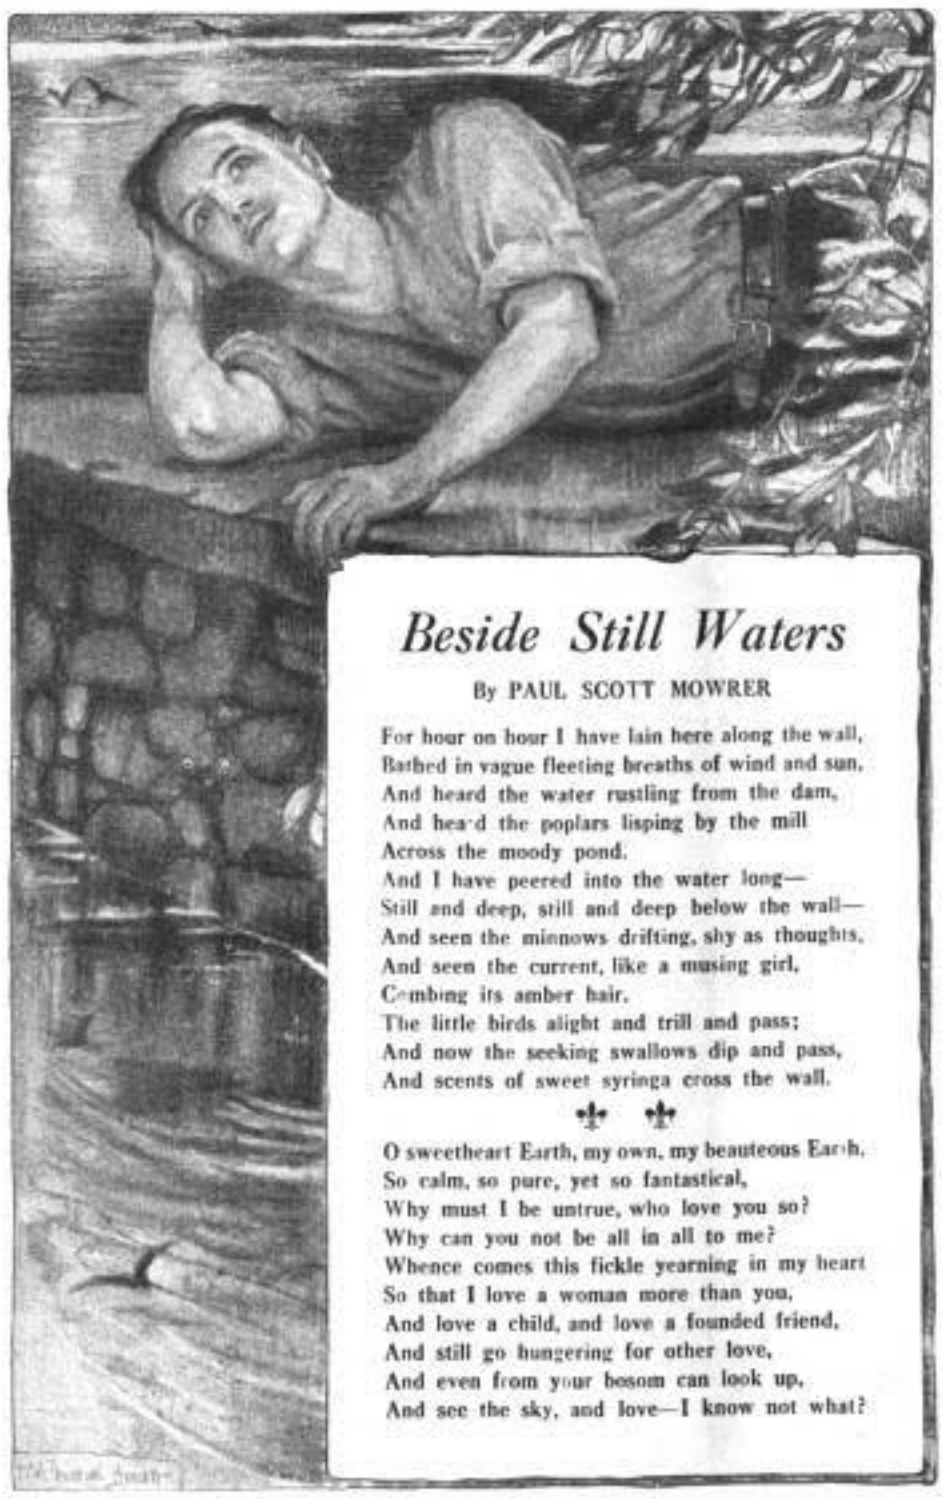
THEN before he had a chance to swing the sullen current into the proper channel the cholera broke out at San Fernal.

It came, as cholera does, without any sort of warning. It came; it was; it killed. Apathetic natives died like sheep. The American doctors did their best, which proved but little; the place became a pesthouse in a night.

"My God!" complained the captain doctor to Punga Dos. "If these natives would make any attempt to protect themselves, I could cope with this. They won't, though. They won't boil their water, they won't stop eating fruit, they won't even tell you when one of the family is dead—"

"By gad, I'll take a hand with them!" said Bunga. Forthwith he ordered the first sergeants to detail emergency squads, and, with the officers taking regular turns, set out to "police" the town.

"First man I want to see is that presidente," he told Captain Duncan. So he ordered the man before him.



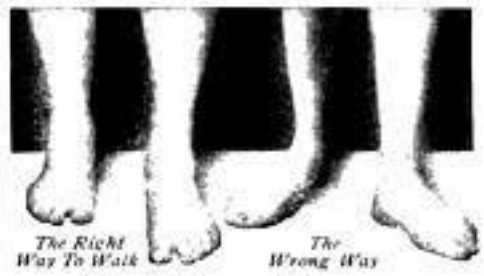
"Señor Ybarra," he said, "I expect you to lend your influence now. We're going to try to save lives whether they want to be saved or not. What is written is not always written. You come with me and act as interpreter."

"But," explained Ybarra, "I find that I must act as a minister giving the last rites. Father Rial left town yesterday."

Bunga scratched his head, then passed a brisk, lean hand over a spot where once an ear had been. "All right," he suddenly decided. "I suppose some one has to say the prayers. You may go back to the church."

Then the parties started on their rounds. They were unsavory rounds, not to be described. In spite of the danger of infection, the natives would not give up their beloved dead till force was used. Bunga was everywhere at once. He ordered that no soldier should touch a mouthful of food or drink a drop of water save that issued out under the doctor's supervision, with a general court-martial as the alternative; the natives were threatened with the water cure. All that night, with Captain Allen and the constabulary assisting, he and his khaki squads patrolled the town, till, at the first streak of approaching dawn, he sought his quarters in utter weariness.

The little Major's eyes were far back in his head. It had been a distressing night. His ears rang with the cries of mourning natives. White-eyed, pain-racked faces trooped past him in ghostly array. He heard again the creak of carabao carts carrying the dead to the churchyard through the darkened lanes. He heard, too, the distant thud of falling dirt as the natives buried the dead in the graveyard, surrounded by the same stone wall that hid the lower part of the cathedral from view. Again the lizards mocked at him, while the soughing of the age-old palms filled him with that indefinable, yet ever-present, sadness of the ancient East; and, suddenly, the lonely little man wished ardently that he, too, could join in at the mess, where all the other officers were washing the night's taste out of their mouths with Scotch and soda. Secretly he regretted having had to speak brusquely to some of them; neither did he recall with pleasure an episode of the night when he sent nine men from C Company to the guard-house for drinking water from a native gourd. "Blankety blank!" he exclaimed, giving his sparse locks a vicious pat with his brushes; "it isn't because I *hate* them. If they could only understand—oh, *hell!*" He moved irresolutely toward a secret drawer, where lay the photograph of his wife who died the year before. Then



Beside Still Waters

By PAUL SCOTT MOWRER

For hour on hour I have lain here along the wall,
Bathed in vague fleeting breaths of wind and sun,
And heard the water rustling from the dam,
And heard the poplars lisping by the mill
Across the moody pond.
And I have peered into the water long—
Still and deep, still and deep below the wall—
And seen the minnows drifting, shy as thoughts,
And seen the current, like a musing girl,
Combing its amber hair.
The little birds alight and trill and pass;
And now the seeking swallows dip and pass,
And scents of sweet syringa cross the wall.

⚜ ⚜

O sweetheart Earth, my own, my beauteous Earth,
So calm, so pure, yet so fantastical,
Why must I be untrue, who love you so?
Why can you not be all in all to me?
Whence comes this fickle yearning in my heart
So that I love a woman more than you,
And love a child, and love a founded friend,
And still go hungering for other love,
And even from your bosom can look up,
And see the sky, and love—I know not what?

Do You Know How to Walk?

WHAT helps to make flat feet? Answer: Walking with *toes pointed out*. You throw all your weight on the arches, until they break and fall.

Point your *toes straight ahead;* throw your weight on the *outside* of your feet! That's the way to walk with a spring and a bounce. That's one recipe for getting rid of flat feet.

The other recipe is to get your feet out of narrow, pointed shoes and into roomy, good-looking Educators, which give nature a chance to put your corns, bunions, ingrowing nails and flat feet to flight. Send for

"Best Bones Make Frantic Feet"

a new book in which two orthopaedic specialists tell you how to walk and how to have healthy, straight-boned feet. Free.

Get your whole family (men, women, children) into Educators to-day. $1.35 to $5.50.

See that EDUCATOR is branded on the sole. It *guarantees* you the *correct* orthopaedic shape. Leading stores everywhere sell Educators. If you have trouble finding them, write us.

BISHOP WELLDON'S CRITICISM OF QUACK MEDICINE ADVERTISERS

"But I object to advertising, and I think it ought to be put down by law, when the advertisements are injurious and untrue. I took the trouble once to study the whole series of quack medicines advertised in a well-known magazine, and it is not too much to say that there is no disease to which humanity is subject but it would be easily curable if those advertisements were true. Yet nobody is entitled for his own personal profit to prey upon the weak and ignorant members of society by fraudulent pretensions of doing what cannot be done at all except by legitimate science, and even by it can be done but imperfectly."

Of course you are going to have a new fall suit—but why pay $20 to $30 for merely ordinary ready made garments when you can get a classy

Made-to-measure, all-wool BLUE SERGE SUIT for $15

the greatest value ever offered in a high-grade blue serge suit, tailored to your individual measure for only $15.

SAXON $395

How much longer will *you* stand on the sidewalk?

You say you want a car but can't afford one? Thousands of other men have said the same thing. And it was true in the past. But not now. Today there is a car on the market that *you can afford.*

A Price Within Your Reach

Several men of big reputation in the costly car field got together and decided to build just such a car as you, and hundreds like you, have been waiting for—a good looking, strongly made, durable car of low first cost and low upkeep expense.

They named it the "SAXON". Today over 5000 men are riding behind its wheel. One of these splendid cars has just finished a coast to coast trip—3389 miles in 30 days.

You'll Be Proud of This Car

Many of the features of the SAXON at $395 you will also find in the costly big cars. The motor is lighter and smaller, it is true but of great sturdiness and power.

The car is of standard design throughout. Note these features: sliding gear transmission, beautiful streamline body, automatic spark control, honeycomb radiator, dry plate clutch and wire wheels.

And there's room a-plenty in the seat for two big people. Of all cars the SAXON costs the least to maintain. *Records prove this.*

You Be the Cross-Examiner

Take the SAXON on a demonstration drive. Get behind the wheel. Send it where you will. Put it to every test. Make its actions tell you the tale of its worth. See nearest SAXON dealer or write us for catalog.

SAXON Motor Company, Detroit

Address Dept. E

You get a whole new novel every month in

MUNSEY'S MAGAZINE

and get it first, get it before it goes into book form.

The Munsey with its complete novel and all other features costs you 15c.

The same novel when it goes into book form will cost you $1.50.

he jerked his head back, took off and carefully folded his khaki blouse, and lay down with a beloved copy of Longfellow to lull his jumping brain to sleep. An ingrained sadness lay deep in the tired eyes, for, away from his martial duties, which were his bread and air, the little man was more than ordinarily lonely.

EVENTUALLY he dozed; and while he lay there the dawn came up from Asia in the vanguard of a red-hot, sizzling day. There was no drill that morning. On the west side of the plaza the brown constabulary soldiers lolled about their veranda, while on the southern side, where the American barracks stood, the tired recruits gathered in the shade of their own verandas, discussing incidents of the gruesome night. Few Filipinos were in sight, save those who passed along the street that skirted the east side of the square. These generally turned aside to enter the great gate of the churchyard on the north. Generally these were mourning parties following a carabao cart in which rested a wooden coffin.

"Ugh!" muttered the sergeant of the guard as another funeral came by. "That makes seven this morning." The guardhouse stood in the southeast corner of the square, facing the east calle. Thus he could see all the processions approaching. "Cheerful doings, eh?"

"Cheerful is right!" grunted a corporal. "Here comes another one."

They looked, and it was true; and in ten minutes a ninth procession turned a distant corner. Then something dawned upon the sergeant.

"By criminy, it seems to me these hombres are getting mighty willing to bury their dead with no patrol to chase them along," he muttered.

"Yes," said the corporal. "And how comes it those mourners ain't coming back out of that church?"

HE turned suddenly suspicious eyes toward the silent stone wall, which now took on a forbidding, sinister aspect.

"There's something queer about it," said the sergeant. "I feel it in my skin. But keep mum. Brown, you slip over and call the officer o' the day."

Thus, in twenty minutes, when the next funeral came along, was the sergeant fully prepared for an investigation. At a word from the officer of the day an armed squad stepped out from the shady interior of the guardroom and strode into the white heat of the road. The black carabao stopped, turning his patient head in bovine curiosity toward the six-foot sentry who grabbed his nose rope. A wail arose from the mourners. One protested; another muttered; suddenly one fled. By that time the officer of the day was in the cart with a rifle in his hand, and the bayonet inserted as a pry under the coffin lid.

"They're closing the churchyard gates!" yelled a private.

Almost simultaneously a wild yell sounded behind the gates, and a shot sang overhead. The coffin lid came off, disclosing a box load of ammunition and rifles; in the next breath the officer fell, shot through the head, while from five hundred unsuspected portholes in the church wall there roared a blaze of rifle fire that filled the air with lead.

CONSTERNATION seized the American troops. Here a man fell, screaming; three of the guard pitched on their faces without a sound; men stumbled over one another in vacating the verandas, where thudding lead was tearing the wood to splinters. When Bunga Doo came tearing into sight, there was not a man left in the verandas save the helpless wounded, while only a fourth of those who had left the riddled barracks had stopped to get their rifles.

The little man saw; and, seeing, gave vent to a sound that was both a sob and a yell of savage joy. For—though his battalion had been caught in a hellish jam—here was the chance.

"Form companies there!" he bawled at the officers who came running up. "Form companies and send those men into the barracks after their rifles!"

This was much easier ordered than executed. The officers formed the men after a fashion, and as often as not with the flat of the sword—for even officers, who don't believe in theories, have reasons for liking better to see a soldier with a rifle than without. The men, however, huddled. To return for rifles into barracks that were filled with flying lead was something the recruiting sergeant had not mentioned in Ohio. Some started, but sullenly and falteringly and with pitiable apprehension; and at this Bunga called out in agonized impatience: "Great God! Suppose those Gin-gus charge us now? Here, Captain Duncan, and you, Mr. Turner, come with me." With that he ran on into the nearest barracks, fully expecting his officers to follow.

Hooking Apples
Sketches from Awayback

The officers did follow; they were West Pointers. And Captain Duncan yelled back to the men: "Come on, some of you! Isn't there a man among you? Come on in here and help get these rifles so we can get out of here!"

Above the roar the big voice carried to Bunga Doo. "We're not going to get out of here!" he snapped as he wrestled with an arm load of guns. "Before God, we're going to charge!"

Captain Duncan gasped incredulously; but just then Lieutenant Turner pitched lengthwise across his feet, and the big man hastened on with his work. This consisted in passing out rifles across window sills creased with ugly furrows and bristling with jagged splinters; the belts and boxes of ammunition were thrown out after them. In a few seconds other officers jumped in to help; then some of the men; for a man, individually, does not have to be a soldier to be a man.

But each link of any chain must bear an equal strain; and an army must contain a big percentage of human beings who were not men's men before they came into the army.

THEREFORE, when Bunga tried to form the battalion behind the barracks for an immediate attack, the small number of *men* could not make up for the majority who were neither men nor soldiers.

"My God!" protested Captain Duncan, you don't mean to order those men straight into the face of *that*, do you? Major, can't you reconsider and wait till night, so we can barricade and then starve them out? We'll lose half the battalion."

"We'll lose half the *mob* or *make* a battalion!" barked the commander. "Form your company and move out on the right flank, Captain Duncan."

Captain Duncan obeyed, but his commands were devoid of thrill. And where officers are deadlike on their feet, what can one expect of the ranks? Bunga ran out into the open square, calling on them to come on; they started to follow in an indescribable mass; then they heard the screams of the wounded rather than any commands, and looked at the ripping turf rather than the gun sights and the targets the Government paid them to look at; in less than a minute they were broken, smashed, defeated, and breaking for the comparative protection of the barracks. Bunga was left alone upon the square.

"Oh, you cowards, you cowards!" he sobbed. He sobbed it much as a man

Digitized by Google

night sob over the failure of a horse he has just begun to love. "Am I to take that place with the *constabulary?*"

CAPTAIN DUNCAN stood wavering in front of the barracks—wavering between his hatred and his reluctant admiration for this mad theorist who "worked out his examples" with bullet-made dust clouds rising around his feet. "I've carried out your order in so far as I was able, sir," he sullenly replied. "The men won't—"

"You won't, either!" shrieked the little man. "By God, I couldn't have expected much else—but I'll show you something now—" He broke off with a sob, then wheeled and made a trumpet of his hands. On the west side of the parade, firing from prone positions on either side of their barracks, lay the constabulary company, with Allen in command; Bunga raised his voice and called: "Captain Allen, move out your company and advance in line of skirmishers."

Instantly there rose from the ground a body of blue-shirted, barefooted little brown men, all standing at command. Then, at a word, they moved forward by platoons. They advanced, and fell, and rose again with the precision of machinery. A great wet sob filled the little Major's breast at the sight. "God!" he choked. "God!"—and, as the platoons half turned to the northeast, he ran to take a place with these "niggers" who knew the theory. "Fire—at will," gasped Allen, spitting a mouthful of blood. "We're—we're with you—sir," he mumbled as he turned his tired brown eyes toward Bunga and sank to the ground. "Take them, sir. They *know*."

This Bunga could not have heard; nevertheless, he understood the import of that painful smile. "Charge!" he roared; and though not one native behind him had listened to his command, they rose and charged. Where gaps appeared, they closed instinctively; where that saber pointed, they followed. Straight over the pock-marked turf it led, to the great ivy-grown oak doors; and, notwithstanding the redoubled fire from the old stone wall, they reached it and fell upon it with their gun butts as a wolf falls on its prey.

WATCHING, the big American men in uniform sickened; their souls were bared.

"Good God!" one yelled, "are we going to let ourselves be shown up by a lot of Gu-gus? I guess we had *better* be dead."

"You're right you had!" choked a bitter officer. "*He's* shown us up as much as the Gu-gus. Come on, you—"

What else the officers said may well be omitted—though the profanity of grown men with tears streaming down their faces may be a sacred thing. Within the next few minutes, while the oaken doors stubbornly resisted the onslaught, the constabulary would have been shot to pieces but for the "outfit of former recruits" who now came pouring out in a manner befitting a Third Battalion. Theirs were the dead-white faces of men who come again; and the natives, looking, knew that on earth is hell.

In a drunken spirit of frenzy, then, Señor Ybarra leaped high on the wall, leaned down, thrust a pistol in Bunga's sweat-streaked face, and yelled: "You won't report to your country this time!"

"Won't I?" whispered the untouched Major—and fired with the better aim. Then, as Señor Ybarra came tumbling down, and the gates went crashing in, powder-drunk bantam Bunga grinned back at the oncoming Third Battalion with the grin of a man who sees, budding, the flower of an ideal.

THERE marched into San Isidro, a year and a month later, a spick-and-span battalion of tanned and quiet chaps who stepped with the spring of a blooded horse and the tread of a Foreign Legion. It was the Third Battalion, changing stations with the Seventy-second's First. One sensed that here was integrity and the all-desirable undercurrent of amalgamation. At their head was a little man, a man whose step was like a tuning fork to a waiting band.

But his seamed, square, bulldog face was not a handsome sight; so, later, the recruits of the Seventy-second voiced their several opinions:

"Some hard-looking K. O. you fellows got, what?"

"He ain't *much* on looks," conceded Devlin of C Company.

"Some rawhider, too, I'll bet."

"Yes," said Devlin, "he's one of the hardest guys to soldier under in the army."

Emboldened by this, one of the Seventy-second's men went on: "I heard about that go at San Fernal. I never did see a grand-stand officer that wouldn't throw his men away to—"

"That'll be all from you," said Devlin "Lemme tell you that while he was grand-standin' there wasn't any bouquets comin' *his* way that *I* could notice When you guys learn how to take commands from an officer that'll do what *he* did to show us how to do our bit, you can call yourself *soldiers*. When it comes right down to it, that little man's the colors of our battalion!"

Initiations at Lockport

(Continued from page 11)

"Sixty," said the Squire.

"Married?"

"Yes, once," the Squire admitted.

"Precisely as I have it," corroborated his Majesty.

"Any children?" continued the questioner.

"One daughter," the other acknowledged.

"Daughters cause a lot of mischief," his Majesty observed sagely. "Abe would be a well man to-morrow if it hadn't been for her."

"She don't want to marry him," the Squire offered hastily, "and I don't blame her," he added vehemently.

"It's too late now, even if she did," the other said dryly. "It isn't customary for a young woman to marry a corpse."

"Abe brought it all on himself," ventured the Squire with easy familiarity. "Serves him right."

SLOWLY, his Majesty turned his baleful blue eyes full on the forward old man. "Who are you," he boomed, "to pass judgment on others?"

"Oh, what a pity!" chorused the spook-like white gowns. "Oh, what a pity!"

"I didn't mean any h-harm, 'pon my soul I did-n't," stammered the Squire.

"Then confine yourself to answering my questions," his Majesty said curtly. "You have wide business interests, Squire?" he went on, adopting his former friendly attitude.

"That's 'bout the size of it," boasted the relieved old man. Here at last was a safe subject.

"And you carry big sums in cash?" intimated the other.

"So I calculate," assented the faltering Squire. "Banks is safer than second mortgages."

"And much harder to tax?" his Majesty suggested slyly.

"A sight," agreed the other with a knowing wink.

"That's just what the new county tax ferret was saying to me this morning," his Majesty mused aloud. The Squire went deathly pale. "Have you any back taxes?" the other asked suddenly.

"No," said the Squire.

"What!" blazed his Majesty.

"Not a cent," whined the other.

"Did you hear him?" said his Majesty appealing blankly to his silent white gowns. "He says," repeated the amazed monarch, "he has no back taxes."

"Oh, what a pity! Take him to the torture," croaked the white gowns, closing in hungrily about their shivering victim. Once more bedlam broke loose in the room of torment. And the wild tumult shook the whole building to its very foundation. His Majesty commanded silence; it seemed the more gravelike by contrast. Out of the depressing stillness came his voice tremulous with passion.

"Squire Buck," he said harshly, "I give you one more chance. "Have you," he hissed through clenched teeth, "any back taxes?"

THE old man's plight was pitiful to behold. He writhed like a perishing worm, but his lips unmistakably formed a fatal denial, and he gave himself up for lost.

"Oh, what a pity! Oh, what a pity! Take him to the torture," dirged the white gowns.

"Off with him to the torture!" screamed his Majesty, a perfect picture of livid fury. Four white gowns leaped bodily on the still vigorous old man.

Clicquot Club

Pronounced Kleek-O

GINGER ALE

The "Horse's Neck," the Most Refreshing Drink in the World

Do you know the "horse's neck"—the perfect beverage? It is made by dropping a whole lemon peel into a tall glass, throwing in a cube of ice and filling with cold ginger ale.

Try a "horse's neck" with Clicquot. Clicquot is a deliciously sparkling, joyous ginger ale made of finest Jamaica ginger root, pure juices of lemon and limes, cane sugar and deep bed-rock spring water, highly carbonated. It is stimulating, mildly laxative, thirst quenching, brain clearing, body revising and taste pleasing.

Sold by Good Grocers and Druggists

If one glass is enough for your thirst we will send—for 4c postage—a patent self-clamping stopper (clever device) that will hold the second glass fresh for 48 hours.

Other Clicquot flavors: Birch Beer, Root Beer, Sarsaparilla, Lemon Sour and Orange Phosphate.

$50 Saved Last Winter in this Chicago Home!

Read This Startling Letter

This past winter I enjoyed, for the first time, ideal heating, and at the same time saved fully $50.

To my mind the Underfeed is so far ahead of the topfeed, that there really is no comparison, and when you come right down to facts, the topfeed is an expense proposition, even as a gift.

I would not think of going back to a topfeed any more than I would think of leaving Electric Light for Candles.

Wishing you success, I am

Yours very truly,
R. E. DICKINSON,
2210 Estes Ave., Chicago

Mr. Dickinson's experience, as given above, is similar to that of over 25,000 other users of Williamson heaters. A saving of *one-half* to *two-thirds* of *your* coal bills is the positive result with the Underfeed.

What Others Say About It

If you want further proof we'll send you the names and addresses of over 2,000 Underfeed users—some right in your vicinity—who *know by experience* that *clean, even, economical* heat is obtainable only with the Underfeed. Here are what just six out of 25,000 users say: "Coal bill $16.22 for seven rooms." "$5.40 to heat four rooms." "Reduced coal bill from $109 to $53." "Heats two flats for $30 per year." "Heats ten-room house for $25." "Saved $122 a season."

Cut-Out View of Furnace

WILLIAMSON NEW-FEED UNDERFEED Furnaces and Boilers

Cut Coal Bills ⅓ to ⅔

With the Underfeed, coal is fed from below. All the fire is on top. Smoke and gases are burned up, making more heat. You can use cheap slack soft coal or pea and buckwheat sizes of hard coal and secure same heat as highest-priced coal with no smoke, smell and dirt. No other furnace or boiler does this. Soon pays for itself. Aids in renting and selling sales of any building. Adapted to warm air, steam and hot water. A saving of ⅓ to ⅔ in coal bills guaranteed with a Williamson *New-Feed* Underfeed when properly installed and operated. If you are going to build or want to cut down your high cost of heating, send the coupon for full information. Write today—NOW. (36)

GOOD LUCK TO HONEST ADVERTISERS

"The value of advertisement has been amply proved by experience. Whether it is in itself a good thing or not, it is indispensable to efficiency in business. For my own part, I cannot but approve it, as it is the only means of bringing useful new inventions or improvements speedily and successfully to the notice of purchasers who might benefit by them all the world over. The wide circulation of good articles is as much a benefit to the persons who buy them, as to the firm which sells them. Nor is it, in my opinion, at all the truth that advertisement increases the price of the article sold; for it is easier to make many articles than few at a cheap rate, and profits, if they are diffused over a wide area, accumulate fast, even though the profit upon each separate article may be less than it was when the sale of the article was small. I wish good luck, therefore, to honest advertisers."

BISHOP WELLDON, Dean of Manchester

The College of Medicine of the University of Illinois

Minimum admission requirements in the Freshman year, 60 term units of work leading to certificate that Rush School and in addition two years in a recognized university or college including at least one year in collegiate physics, chemistry, biology and also college courses in French or German.

"Help!" bellowed the Squire, putting up an obstinate defense against overwhelming odds.

"Blood! Give me blood!" frothed his Majesty, plunging headlong from his throne into the fray.

A TERRIFIC battle ensued in which the Squire's widely scattered false teeth testified to the art of modern dentistry; outnumbered five to one the torture room yawned before him, when the outside door banged open and Harry Baum bore down on his assailants like an avenging angel.

Striking about him with a perfect hailstorm of lefts and rights—which invariably fell short—the hero at last stood panting beside the rescued Squire.

"Nobody can badger the man who expects to make me his son-in-law in a few days," he said sternly, placing an arm affectionately over the Squire's shoulder.

"We didn't know he was a friend of yours," his Majesty said lamely. "If we had—"

"He wasn't," the Squire cut in. "But he is now," he hastily and manfully added. "I've half a mind to turn him loose on you just to see how you'll net," he threatened triumphantly. The struggle had filled the hall with dust. Judging from the way Harry coughed, he must have inhaled a peck.

"Come on, papa," he choked, "let's get out of here."

At the foot of the stairs they stopped. The streets were alive with people, but the Squire did not notice it then.

"Harry," he began thickly, "you're the best friend I've got. You can marry Ruthie to-morrow if you want to and I'll deed you any hundred and sixty acres in the county you'll pick out."

"I expect you'd better put that on paper right now," the younger man said without emotion.

"It's too dark. I can't see," the Squire objected with chilled ardor. "Wait till morning," he put off optimistically. Harry instantly produced paper, a pencil and a box of pocket matches.

"Eighty acres is a fine start for young married folks," reflected the parsimonious old man, making ready to write it in.

"One hundred and sixty," Harry said uncompromisingly and the grumbling Squire was forced to obey. Harry coolly pocketed the written promise and deserted his future father-in-law on the spot.

THE crowd that had gathered about the delegation's carriage was not exactly a cheerful one. Its nucleus was formed of the twenty grumbling candidates, who, after having been relieved of their money and passed through a very tame initiation, found themselves summarily dismissed down the backstairs as Abe and the Squire entered the hall.

From time to time the throng won new recruits until almost the entire population, scenting excitement, were swelling it. Here, the Squire came face to face with his ex-colleague.

"Abe," he said softly, "can I borrow that there muzzle-loading pistol of your'n?"

"What do you want it for?" the other asked suspiciously.

"You'll know to-morrow," the Squire said mysteriously. "That is," he added significantly, "if I can shoot like I use ter could."

"It's broke," said Abe, backing away.

"Oh, let it go then," the old man said carelessly. "I'll get one of Harry Baum. Abe turned away and hid himself in the thickest part of the muttering crowd, while the Squire declaimed loudly against the outrageous treatment he himself had received at the hands of the initiation delegation. After helping himself to copious libations, Nelty Driggs passed the bottle around and the pervading mutter soon became a growl. Harry Baum met the departing delegation at the foot of the hall stairs, where they crowded around him in high glee.

"Good Lord, Baum," O'Bear greeted the newcomer uproariously, "we've had the time of our young lives. I never could have believed there were twenty-two such sets of long ears in the whole State. It's paid, too," he added in a loud voice. O'Bear's remarks brought out a babble of witticisms from his companions at the expense of the local Knights.

"Shut up, for Heaven's sake," Harry implored in a melodramatic whisper.

"What the devil?" asked O'Bear, staring blankly.

"Look! by your carriage," the other breathed hoarsely.

"I can see a bunch of runnuies," O'Bear grunted in relieved disgust.

"A mob," corrected Harry.

"A mob?" faltered O'Bear.

"A blood-thirsty one," Harry said meaningly.

"They're looking for you."

"What shall we do?" implored the others, and the frightened delegation drew closer about their only ally in a hostile country.

"Get out of town quick, it's your only chance," the blacksmith advised hurriedly.

"But how?" queried O'Bear.

"In the carriage," said Harry; "I'll do what I can to keep them off your throats. Come on!" he shouted, starting off at a run.

Kind Lady: *"Why, you poor man! Come around some day and I will give you some of my husband's old clothes"*

O'BEAR grasped the impetuous smith by the coat tails and brought him up sharp. "Why can't you phone the county seat for help?" he pleaded.

"No use," said Harry. "I've just got through trying to wire the Governor and beg him to send up a regiment of militia and a couple of batteries, but they've cut the wires."

"Send a messenger to Sheriff Pupjoy," suggested O'Bear.

Harry shook his head hopelessly. "You know as well as I do, Jim, he'd never come if he knew what was going on," he said ruefully. "And it wouldn't be fair to let a married man come up here without a hint he'd be going to his death."

A few sharp-sighted members of the mob put a sound interpretation on the delegation's delayed departure and accordingly grew bolder.

"Hang them!" shouted Nelty Driggs, staggering under a mighty burden of "squirrel whisky"; others took up the cry, and to the delegation serious trouble seemed unavoidable.

"Follow me," commanded Harry, catching up O'Bear's grip and making a headlong dash for the carriage. The very suddenness of the unexpected move drew the cowering delegation trotting blindly at his heels. The crowd, as yet, had not the slightest intention of violence and it gave way curiously, even politely, before the well-known form of the sturdy smith.

HE had the nervous team untied and the carriage cramped in a trice. The delegation leaped into the vehicle without urging. "Drive slow till you're across the ford, and keep working down stream," Harry said in low tones to O'Bear, as he passed him the reins. "It will be—be safer," he finished lamely.

O'Bear nodded comprehensively and gave the other's hand a grateful squeeze. "I'll not forget all you have done for us to-night if I live to be a hundred," he threw back emotionally, as the team started.

"I don't expect you will," the grati

Digitized by Google

fied hero murmured ambiguously, and modestly fell back into the crowd. The carriage was half a block on its homeward journey, when the thing O'Bear dreaded most happened. "Come on, men, after the scamps—we'll catch them at the ford," yelled a voice that sent a certain white-gowned figure, blending nicely with Squire Buck's whitewashed picket fence into a paroxysm of girlish giggles. All the indignant crowd needed to become a mob was a head. Harry Baum frankly and according to plan supplied that deficiency. The Wabash ford was only four hundred yards from the town pump and the mob followed its new leader enthusiastically. O'Bear discarded Baum's advice and lashed his horses into a run. Seeing their prey about to escape, the most lukewarm and conservative champions of the public cause joined in the chase that soon strung out according to the individual's speed and intention.

THE fleeing carriage gained steadily to the ford, but the steep descent and peculiar nature of the approach required slow, skillful driving that cost them their slight advantage. O'Bear fought for a cool head as he jockeyed his horses carefully into the river.

The racing water whirled under the horses and through the wheels in a dizzy mill stream. O'Bear offered up a silent prayer for moonlight, and shuddered at the approach of many feet.

They were in midstream now and he ventured a backward glance over his shoulder. The foiled mob, like Haley's dogs, had halted at the water's edge. O'Bear reined in his team with a sobbing chuckle of relief. "Hello!" he called. Not a sound came over the surface of the river.

Baum had not been idle. The mob was a mob no longer, for through their leader they now knew something funny was going to happen.

"Hello, you," O'Bear hailed again. An owl hooted weirdly from his perch in an overhanging sycamore, but that was all. O'Bear owned himself puzzled. He could make out people very well, but they were standing so still in the shadows they might have been taken for blackened snags in a burned-over clearing.

"I say, Lockport," he began again in a lazy, drawling, insolent voice, "you are the jayest town, the most pig-headed, asinine set of people ever turned loose in the Wabash Valley to take care of themselves. Delicacy forbids me to say a word against your generous disposition to part with your money. Now there is your new lodge—the Knights of Sahara —" and O'Bear broke off speaking into a loud laugh, to which his companions made a ready chorus.

"Twenty-two candidates at five dollars each," he went on insultingly, "that's one hundred and ten dollars, and another little matter of forty dollars. It was a shame to take the money. But if I should give it all back, you'd just hand it over to the first grafter that hinted he needed funds." Lockport, let the deadly insult pass without comment.

"Good night, dearies," he concluded gallingly. "Put on your nighties and trot to bed like good children before the curfew rings."

EVEN this parting shot brought no reply, but O'Bear didn't mind, his revenge was sweet in his mouth. He called for a bottle. Several appeared from unsuspected places, and the carriage splashed on to the accompaniment of a full-throated song.

"The moonlight's fair to-night along the Wabash—" sobbed the refreshed delegation. "Look where you are driving," angrily warned the bass. O'Bear looked, but he couldn't help what happened. A quick cramping of the upstream wheel over a submerged rock shifted the weight to that side and before anyone could stir a finger, the downstream wheels in response to the current, simultaneously wobbled off their spindles and the crippled carriage dumped its living burden into the water.

THE badly frightened team added to the general confusion by commencing to snort and plunge. The dripping delegation arose sputtering to the surface in time to help O'Bear quiet the team and see their hats and suit cases floating off into deep water. A mournful chant trembled on the midnight air. It drifted out to them from the Lockport side.

"Listen! What's that?" exclaimed O'Bear, his teeth clicking audibly.

"Oh, what a pity!" came the voices—"Oh, what a pity!"

"There," ejaculated one of the late submerged who had a quicker eye than his fellows. Every eye followed his pointing finger to the shore where twelve white gowns stood chanting their requiem of calamity. The crowd entered into the spirit of the thing and the valley quiet was rent by deep-chested shouts of laughter.

The puzzled delegation fished out the lost wheels and put them on in silence. A hasty inspection of the other spindles disclosed the appalling fact that there was not a single tap on the carriage. A long moment of dismay followed the discovery that made their trip home impossible.

"What shall we do?" asked one, speaking for the rest. No one had had the courage or inspiration to offer advice, when a kindly disposed white gown hailed them from ashore. "What's happened, dearies?" said the man.

"The taps came off our rig and threw us out into the water," O'Bear replied in a favor-currying voice.

"Oh, what a pity!" moaned the crowd. "Oh, what a pity!"

"Oh, if that's all," the man went on in a voice that shook, "you'd better come over after you've had your play out and take the rig to the blacksmith shop. You seemed to be having such a whale of a time I didn't like to disturb you."

A SOLEMN consultation was called in the river and O'Bear's violent objections to acting on the man's advice were overruled, seven to one. Accordingly, the team was again headed for Lockport and the chagrined delegation waded ashore.

The jeering crowd fell in behind like a guard of honor, and escorted them back to town, where the bizarre cortège halted before the blacksmith shop.

"Where is the blacksmith?" O'Bear asked curtly now that all danger seemed past.

The one addressed pointed out the figure of a man sitting on the running gear of a wagon near the door.

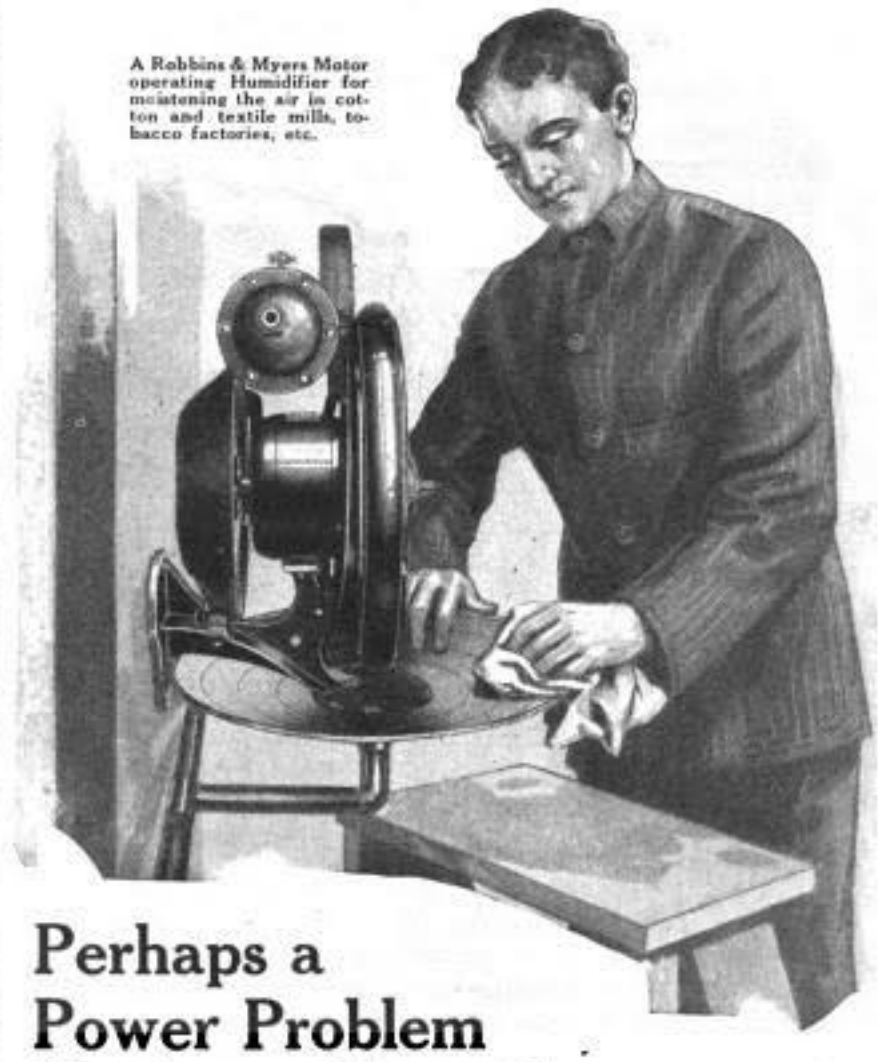
"That's Baum now," replied the man, "lucky fer you he ain't gone to bed."

"Oh," said O'Bear with a world of meaning. Harry knocked the ashes from his pipe and came forward lazily. "What can I do for you, my good man?" he asked complaisantly.

"You can put new taps on all of the spindles of this old hack," O'Bear said shortly. "Some rogue has stolen them," he concluded heatedly.

"I don't believe anybody in Lockport would do a trick like that to be mean," Harry defended loyally. "More than likely its only a joke. Some feller that's been working hard all day wanted to have a little innocent amusement 'fore he went off to bed."

O'BEAR doubled up his fists and glared like a wildcat. "If I could find him," he said sanguinely, "I'd—"



"What would you do?" Harry asked sternly.

"I'd—ask him for the taps," O'Bear finished feebly, to the crowd's delight.

"Why man, you're wet all over," Harry exclaimed at his sudden discovery.

Photographer — *What makes you wear such a sad expression?*
Peck — *My wife's away and she wants me to send my picture*

Perhaps a Power Problem Confronts You, Too

Every day we are supplying Robbins & Myers Motors to serve under conditions of unusual severity. Our engineers are constantly engaged in solving problems of individual peculiarity. Let us tell you of a typical case. It may suggest how we can help you in *your power problems*.

A manufacturer of humidifiers—a device for moistening the atmosphere in textile mills, tobacco factories, etc.—wanted motors suitable for direct connection to the devices which spray the water into the air.

The conditions were drastic. The motors and humidifiers had to be suspended up near the ceiling. In the southern textile mills this means a temperature of about 120 degrees where the motors operate. In addition, the air is filled with the moisture from the machine and is choked with lint and dust.

When the manufacturer of humidifiers put this problem up to us he was doubtful whether we could supply motors which would operate under these extreme conditions of heat, moisture and dust, as reliably as in ordinary service.

After a careful investigation of the conditions, our engineers recommended a special type of Robbins & Myers Motor, which was adopted.

These motors are giving one hundred per cent service—running as smoothly, as reliably, in the operation of these humidifiers in textile mills as the thousands of Robbins & Myers Motors used under normal service conditions. Name sent on request.

Robbins & Myers Motors

Small-Motor Specialists for 18 Years

We make small motors and fans only, in direct and alternating current. And by concentrating our efforts on these small sizes we have so systematized our plant and reduced our manufacturing costs that today it costs nothing extra to get Robbins & Myers *high-quality* motors. Our branches are in all the large cities. Find out what Robbins & Myers Motors can do for *you*.

We Invite Correspondence

We can furnish from our large stock motors in small and medium sizes from $\frac{1}{20}$ to 15 horsepower for all small-power requirements. We also make special motors for manufacturers of all classes of motor-driven machines, and welcome the opportunity of conferring with you on your problems. Write for free literature and information on your particular need.

THE ROBBINS & MYERS CO., Springfield, O.

BRANCHES: New York, Philadelphia, Boston, Chicago, Cincinnati, Cleveland, Rochester, St. Louis. Agencies in all Principal Cities.

"What Shall I Do"?

Some day you must face this question—perhaps tomorrow. An accident happens, a bad cut, a jagged wound, a rusty nail thrust, any one of a thousand things—you know if it is not quickly attended to it will become inflamed and the danger of blood poisoning then becomes a vital, personal one. In every such emergency your first thought should be

Dioxogen

Better to apply it a thousand times when there is no real danger than to go without it once at the critical moment. The best and cheapest *insurance* you can buy is a bottle of Dioxogen.

Why *Dioxogen?*

Because it is the one pure Peroxide of Hydrogen. It purifies by setting free Oxygen—nature's own greatest purifier.

Ask for Dioxogen by name and protect yourself against common, cheap peroxide, containing Acetanilid as a "preservative." Think carefully when you see Acetanilid on a bottle—the Government prohibits its use unless the exact quantity is plainly stated on the label. It is used to make cheap peroxide KEEP—but it also makes it rank and gives it a disagreeable taste and smell.

It is important that you ask for Dioxogen BY NAME

The Oakland Chemical Co., 98 Front St., New York

Dioxogen is always sold in a sealed container for your protection. See that this container is sealed when you buy.

WANTED—JUNIOR SALESMEN

WE want a Junior Salesman in each community—boys between the ages of 9 and 14. Ask for particulars as to how you can represent us in your spare time. Address

Junior Sales Dept.

"Oh, what a pity!" sang the crowd.

"That's my affair," O'Bear retorted sullenly. "What I want to know is, how long it will take you to fit on new taps?"

"Not very long," yawned the other.

"How much will it cost?" O'Bear asked cautiously.

"Oh, only about one hundred and fifty dollars," said the other as if mentioning a mere trifle. The delegation groaned and the crowd laughed. O'Bear was the first to find his tongue. "That's highway robbery," he yelled, "the whole blamed rig isn't worth half that. I'll leave the whole outfit by the road first and hire a team at Bill Harness's livery barn."

"I wouldn't," put in a pithy voice from the rear of the crowd.

"Why?" shot out O'Bear, swinging on his heel.

"Because I'm Harness," said the other. Harness's nearest neighbor ventured a scathing remark on O'Bear's personal appearance and still others felt called upon to reveal their prejudiced opinions.

THINGS began to wear an ugly look when Baum gave O'Bear's arm a jerk that won his instant attention. "Look here, Jim," he said peevishly, "I can't put in the whole night saving your life; I'm sleepy."

Once more O'Bear was forced to listen to the earnest pleadings of his friends and reluctantly turned the required one hundred and fifty dollars over to the blacksmith, who pocketed the money without a word of thanks; neither did he show any visible signs of mechanical activity.

"Good heavens, man!" exploded O'Bear, "get those taps—they're paid for. We want to get out of town before daylight." Harry sauntered leisurely over to the carriage and in plain view of everyone took the taps out of his own pockets and deliberately screwed them into place.

"I'll get even," O'Bear raved, as the ill-fated delegation drove away.

"Oh, what a pity!" jeered Harry. "Oh, what a pity!" echoed the crowd.

HARRY held up his hand for attention. "If the Knights of Sahara y will come around to the shop in the morning, I'll give them their initiation fees back."

"Three cheers for Harry Baum!" demanded two voices at once, voices like Abe Day's and Squire Buck's. And the cheers were given with a hearty good will that would have flattered even a man devoid of vanity.

The tired crowd dispersed at once, leaving the hero of the hour and one of their number alone on the field. Harry lit his pipe and bent for a closer examination of the white-gowned figure hugging the shadow.

"Which one of the boys is it?" he chuckled.

"Don't you know me?"

HARRY took a quick step, drew the mask aside, and turned a dimpling face to the bright moonlight.

"Why, if it ain't Ruth!" he said in pleased astonishment.

"Oh, what a pity!" she sighed demurely. "Oh, what a pity!"

THE END.

Bealby

(*Concluded from page 21*)

rural dirt. During the last few days he must have had dealings of an intimate nature with coal. He was taciturn and irritable, he declared that this sleeping out would be the death of him, and the breakfast was only too manifestly wanting in the comforts of a refined home. He seemed a little less embittered after breakfast, he became even faintly genial, but he remained unpleasing. A distaste for the tramp arose in Bealby's mind, and as he walked on behind his guide and friend he revolved schemes of unobtrusive detachment.

FAR be it from me to accuse Bealby of ingratitude. But it is true that that same disinclination which made him a disloyal assistant to Mr. Mergleson was now affecting his comradeship with the tramp. And he was deceitful. He allowed the tramp to build projects in the confidence of his continued adhesion; he did not warn him of the defection he meditated. But, on the other hand, Bealby had acquired from his mother an effective horror of stealing. And one must admit, since the tramp admitted it, that the man stole.

And another little matter had at the same time estranged Bealby from the tramp and linked the two of them together. The attentive reader will know that Bealby had exactly two shillings and twopence-halfpenny when he came down out of the woods to the fireside. He had Mrs. Bowles's half-crown and the balance of Madeleine Phillips's theatre-shilling, minus sixpence-halfpenny for a collar and sixpence he had given the tramp for the soup overnight. But all this balance was now in the pocket of the tramp. Money talks, and the tramp had heard it. He had not taken it away from Bealby, but he had obtained it in this manner: "We two are pals," he said, "and one of us had better be Treasurer. That's Me. I know the ropes better. So hand over what you got there, matey."

And after he had pointed out that a refusal might lead to Bealby's evisceration the transfer occurred. Bealby was searched, kindly but firmly. . . .

It seemed to the tramp that this trouble had now blown over completely.

Little did he suspect the rebellious and treacherous thoughts that seethed in the head of his companion. Little did he suppose that his personal appearance, his manners, his ethical flavor—nay, even his physical flavor—were being judged in a spirit entirely unamiable. It seemed to him that he had obtained youthful and subservient companionship—companionship that would be equally agreeable and useful; he had adopted a course that he imagined would cement the ties between them; he reckoned not with ingratitude. "If anyone arsts you who I am, call me uncle," he said. He walked along, a little in advance, sticking his toes out right and left in a peculiar wide pace that characterized his walk, and revolving schemes for the happiness and profit of the day. To begin with—great drafts of beer. Then tobacco. Later, perhaps, a little bread and cheese for Bealby. "You can't come in 'ere," he said at the first public house. "You're under age, me boy. It ain't my doing, matey; it's 'Erbert Samuel. You blame 'im. 'E don't objec' to you going to work for any other Mr. Samuel there may 'appen to be abart or anything of that sort, that's good for you, that is; but 'e's most particular you shouldn't go into a public 'ouse. So you just wait about outside 'ere. *I'll* 'ave my eye on you."

"You going to spend my money?" asked Bealby.

"I'm going to ration the party," said the tramp.

"You—you got no right to spend my money," said Bealby.

"I— 'Ang it!—I'll get you some acid drops," said the tramp in tones of remonstrance. "I tell you, blame you—it's 'Erbert Samuel. I can't 'elp it! I can't fight against the lor."

"You 'aven't any right to spend my money," said Bealby.

"*Don't* cut up crusty. 'Ow can I 'elp it?"

"I'll tell a policeman. You gimme back my money and lemme go."

The tramp considered the social atmosphere. It did not contain a policeman. It contained nothing but a peaceful, kindly corner public house, a sleeping dog, and the back of an elderly man digging. The tramp approached Bealby in a confidential manner. "'O's going to believe *you*?" he said. "And besides, 'ow did you come by it?"

Moreover: "*I* ain't going to spend *your* money. I got money of my own. *'Ere!* See?" And suddenly before the dazzled eyes of Bealby he held and instantly withdrew three shillings and two coppers that seemed familiar. He had had a shilling of his own. . . .

Bealby waited outside. . . .

THE tramp emerged in a highly genial mood, with acid drops, and a short clay pipe going strong. "'Ere," he said to Bealby with just the faintest flavor of magnificence over the teeth-held pipe, and handed over not only the acid drops but a virgin short clay. "Fill," he said, proffering the tobacco. "It's yours jus' much as it's mine. Be'r not let 'Erbert Samuel see you, though; that's all. 'E's got a lor abart it."

Bealby held his pipe in his clenched hand. He had already smoked—once. He remembered it quite vividly still, although it had happened six months before. Yet he hated not using that tobacco. "No," he said, "I'll smoke later."

The tramp replaced the screw of red Virginia in his pocket with the air of one who has done the gentlemanly thing. . . .

They went on their way, an ill-assorted couple. [*To be continued next week*]

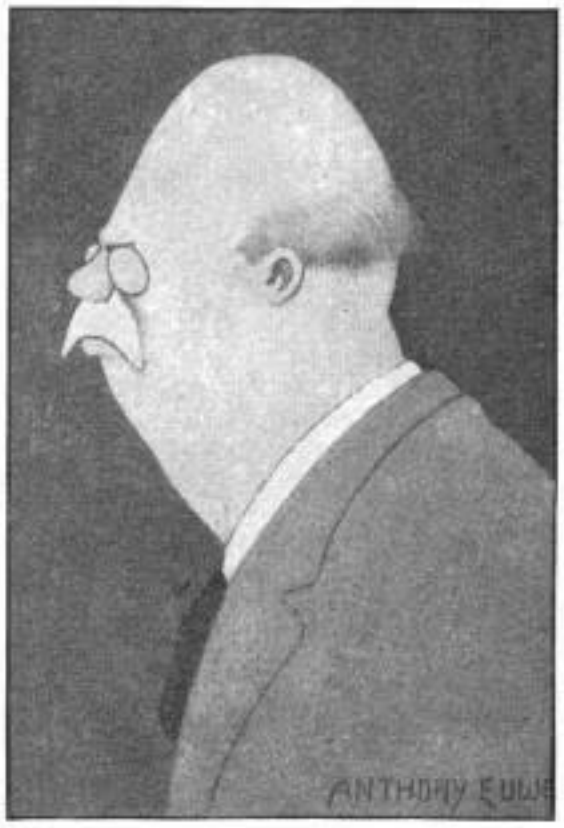
Somnolent St. Louis

Continued from page 17

as earning more than a million a year in excess of a reasonable return on its investment. The service given the city is as bad as I have ever seen. The tracks are rough and the cars are run down and dirty. But most antediluvian of all is the heating system of these cars: a red-hot stove at one end, giving but small comfort to those far removed from it, and fairly cooking those who sit near.

What Is the Matter with St. Louis?

"WHAT is the matter with St. Louis?" I inquired of a wide-awake citizen I met.



"Oh, the Drew question?" he suggested with a smile.

"The Drew question?" I repeated blankly.

"You don't know about that? Well, the question you asked was put to the city, some years ago, by Alderman Drew, so instead of asking it outright any more, we refer to it as 'the Drew question.' Everyone knows what it means."

The man who asks that question in St. Louis will receive a wide variety of answers.

One exceedingly well-informed gentleman told me that St. Louis had the "most aggressive minority" he had ever seen. "Start any movement here," he declared, "and, whatever it may be, you immediately encounter strong objection."

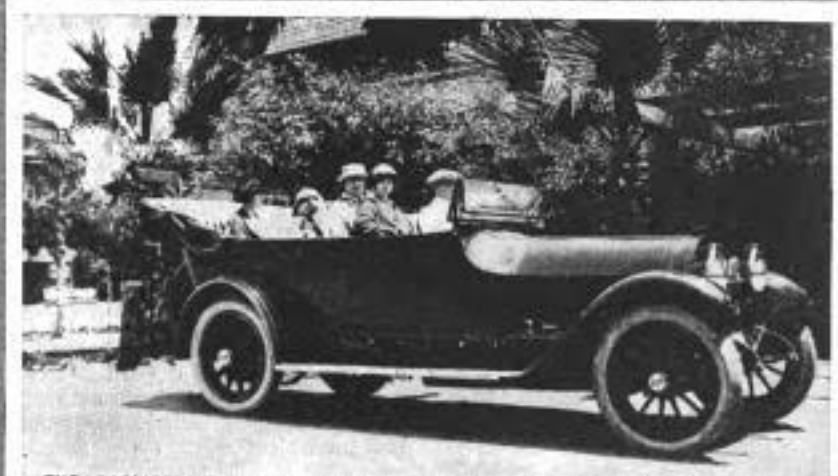
The Chin

The chin it was made to raise trouble,
Either dimples or pimples or stubble;
Then some have the gall
To not grow at all,
While others come triple and double.

In other quarters I learned of something called "The Big Cinch"—an intangible, reactionary sort of dragon, said to be built of big business men. It is charged that this legendary monster has put the quietus upon various enterprises, including the construction of a new and first-class hotel — something which St. Louis needs. In still other quarters I was informed that the city's long-established wealth had placed it in somewhat the position of Detroit before the days of the automobile, and that much of the money and many of the big business enterprises were controlled by elderly men; in short, that what is needed is young blood, or, as one man put it, "a few important funerals."

"It is conservatism," explained another. "The trouble with St. Louis is that nobody here ever goes crazy." And said still another: "About one-third of the population of St. Louis is German. It is German lethargy that holds the city back."

German Flavor



WHATEVER truth may lurk in these several statements, I do not, personally, believe in the last one. If the Germans are sometimes stolid, they are upon the other hand honest, thoughtful, and steady. And when it comes to lethargy—well, Chicago, the most active great city in the country, has a large German population. And, for the matter of that, so has Berlin! Some of the best citizens St. Louis has are Germans, and one of her most public-spirited and nationally distinguished men was born in Prussia—Mr. Frederick W. Lehmann, former Solicitor General of the United States and ex-president of the American Bar Association. Mr. Lehmann (who, as I write, is serving the country as a commissioner in the cause of peace with Mexico at the Niagara Falls conference) drew up a city charter which was recommended by the Board of Freeholders of St. Louis in 1910. This charter was defeated. However, within the last few weeks, another charter, embodying many even more progressive elements than those contained in the charter proposed by Mr. Lehmann, has just been accepted by the city, and there can be little doubt that the earlier proposals paved the way for this one.

German emigration to St. Louis began about 1820 and increased at the time of the rebellion of 1848, so that, like Milwaukee, St. Louis has to-day a very strong German flavor. By the terms of the city charter all ordinances and municipal legal advertising are printed in both English and German, and the "Westliche Post" of St. Louis, a German newspaper founded by the late Emil Pretorius and now conducted by his son, is a powerful organ. The great family beer halls of the city add further Teutonic color, and the Liederkranz is, I believe, the largest club in the city. This organization is not much like a club according to the restricted English idea: it suggests some great, genial public gathering place. The substantial German citizens who arrive here of a Sunday night, when the cook goes out, do not come alone, nor merely with their sons, but bring their entire families for dinner, including the mother, the daughters, and the little children. There is music, of course, and great contentment. The place breathes of substantiality, democracy, and good nature. You feel it even in the manner of the waiters, who, being first of all human beings, second, Germans, and waiters only in the third place, have an air of personal friendliness with those they serve.

Aside from his municipal and national activities, Mr. Lehmann has found time to gather in his home one of the most complete collections of Dickens's first editions and related publications to be found in the whole world. It is, indeed, on this side—the side of cultivation—that St. Louis is most truly charming. She has an old, exclusive, and delightful society, and a widespread and pleasantly unostentatious interest in esthetic things. In fact, I do not know of any American city to which St. Louis may with justice be compared, possessing a larger body of collectors nor collections showing more individual taste. The most important private collections in the city are, I believe, those of Mr. William K. Bixby, who owns a great number of valuable paintings by old masters, and a large collection of rare books and manuscripts. As a book collector, Mr. Bixby is widely known throughout the country, and he has had, if I mistake not, the honor of being president of that Chicago club of bibliolatrists, known as the "Dofobs," or "damned old fools over books."

Art in Missouri

AN exhibition of paintings owned in St. Louis is held annually in the St. Louis Museum of Art, and leaves no doubt as to the genuineness of the

THE LOCOMOBILE IN FRONT OF LAS ROSAS INN, AN HISTORIC CALIFORNIAN LANDMARK

Designed Especially for Cars of Highest Standards

READY made parts and accessories for an automobile are very often a source of waste.

Westinghouse Electric engineering calls for a design amply able to do the work required but *without waste.*

Westinghouse Electric Systems Starting—Lighting—Ignition

Westinghouse Electric generating units for ignition and lighting take the very smallest amount of power from your engine, so small you can hardly find it in your gasoline bill.

Westinghouse Electric starting motors run with the very smallest drain on your storage battery.

Westinghouse Electric ignition applies the spark to the very best advantage.

These features of the Westinghouse Systems have proven themselves in test after test by the best automobile engineers in the business — the engineers responsible for placing the Westinghouse Systems on these well known cars.

Publications of the Department of Agriculture

The Department of Agriculture has a number of very interesting bulletins, written in popular style, available for free distribution. These cover not only the subjects of poultry and cattle raising, the growing of fruits and vegetables, care of bees, construction of farm buildings, the marketing of farm products, and the keeping of accounts, but also cover much that is of interest to those living in cities, such as bulletins on the food values of beans, peas and other legumes, eggs, poultry, cereal breakfast foods, fruit, sugar, corn and corn products, potatoes and other root crops, nuts, milk, cheese, mutton and fish, and bulletins on "Meats, Composition and Cooking," "Principles of Nutrition and Nutritive Value of Food," "Bread and Bread Making," and "Canned Fruits, Preserves and Jellies." **A full list of these bulletins (*not the bulletins themselves*) and information on how to obtain them** will be sent to all those who will write to Collier's Washington Bureau, 901 Munsey Building, Washington, D. C. Our service is entirely without charge.

This beautiful painting "Pandora" by Maxfield Parrish is one of the features of advertising.

Here is a Wonderful Booklet About Your Children's Reading.

It was printed to give away. There is a copy for every Collier reader who has children.

It contains the advice of the greatest teachers in America about your children's reading—priceless counsel for fathers and mothers *who care*.

It tells the fascinating story of

The 847 Junior Classics, "A story at bedtime every night for two years."

Out of all the stories and essays and poems in the world, 847 have been chosen by famous educators.

They are just the 847 that are best adapted to *form character, make school work easier, insure success.*

How these 847 Junior Classics were chosen, what they are, and how you may have them for your boy or girl is all told in this wonderful booklet.

Who Are Your Children's Heroes?

Your children pattern after their heroes and heroines; who are they?

The grotesque figures of the Sunday supplements—the villains of moving picture dramas?

Or are they the great figures, men and women, of literature whose noble lives inspire high ideals?

You can choose your children's heroes and heroines for them; *you* can determine their ideals. This booklet tells the story.

This is the FREE Booklet

For your children's sake, send for it. "It was worth $100 to me" one mother writes.

Yet it is free—given away—and it will be sent to you by mail with no obligation.

P. F. Collier & Son, 416 W. 13th St., New York City

Merely Clip the Coupon

interest of St. Louis citizens in painting. Nor can anyone, considering the groups of canvases loaned to the museum for the annual exhibition, doubt that certain art collectors in St. Louis (Mr. Edward A. Faust, for example) are buying not only names but paintings.

Legacy from the World's Fair

THE Art Museum is less accessible to the general citizen than are museums in some other cities. Having been originally the central hall of the group of buildings devoted to art at the time of the Louisiana Purchase Exhibition, it stands in that part of Forest Park which was formerly the Fair ground. Posed, as it is, upon a hill, in a commanding and conspicuous position, it reveals, somewhat unfortunately, the fact that it is the isolated fragment of a former group. Nevertheless, it must take a high position among the secondary art museums of the United States. For despite the embarrassment caused by the possession of a good deal of mediocre sculpture, a legacy from the World's Fair, which is packed in its central hall; and despite the inheritance from twenty or twenty-five years since of vapid canvases by Bouguereau, Gabriel Max, and other painters of past popularity, whose works are rapidly coming to be known for what they are—despite these handicaps, the museum is now distinctly in step with the march of modern art. The old collection is being weeded out, and good judgment is being shown in the selection of new canvases. Like the Albright Gallery in Buffalo, the St. Louis Museum of Art is rapidly acquiring works by some of the best American painters of to-day, having purchased within the last four or five years canvases by Redfield, Loeb, Symons, Waugh, Dearth, Dougherty, Foster, and others.

Another building saved from the World's Fair is the superb central hall of Washington University, a red granite structure in the English collegiate style, designed by Cope & Stewardson. The dozen or more buildings of this university are very fine in their harmony, and are pronounced by Baedeker "certainly the most successful and appropriate group of collegiate buildings in the New World."

It is curious to note in this connection that there are eight colleges or universities in the United States in which the name of "Washington" appears; among them Washington University at St. Louis; Washington College at Chestertown, Md.; George Washington University at Washington, D. C.; Washington State College at Pullman, Wash., and the University of Washington at Seattle.

Wallop

BEFORE making my transcontinental pilgrimage I used to wonder sometimes just where the line dividing East from West in the United States might be. When I lived in Chicago, and went out to St. Louis, I felt that I was going, not merely in a westerly direction, but that I was actually going out into the "West." I knew, of course, that there was a vast amount of "West" lying to the westward of St. Louis, but I had no real conception—and no one who has not seen it can have—of what a stupendous, endless, different kind of land it is. St. Louis west? It is not west at all. To be sure, it is the frontier, the jumping-off place, but it is no more western in its characteristics than the city of Boulogne is English because it faces England, just across the way. From every point of view except that of geography, Chicago is more western than St. Louis. For Chicago has more "wallop" than St. Louis, and "wallop" is essentially a western thing. "Wallop" St. Louis has not. What she has is civilization and the eastern spirit of laissez-faire. And that of St. Louis which is not of the east is of the south. Her society has a strong southern flavor, many of her leading families having come originally from Kentucky and Virginia. The Southern "colonel" type is to be found there, too—black, broad-brimmed hat, frock coat, goatee, and all—and there is a negro population big enough to give him his customary background.

Much negro labor is employed for the rougher kind of work; colored waiters serve in the hotels, and many families employ colored servants. As is usual in cities where this is true, the accent of the people inclines somewhat to be Southern. Or, perhaps, it is a blending of the accent of the South with the sharper drawl of the West. Then, too, I encountered there men bearing French names (which are pronounced in the French manner, although the city's name has been anglicized, being pronounced "Saint Louiss") who, if they did not speak with a real French accent, had, at least, slight mannerisms of speech which were unmistakably of French origin. I noted down a number of French family names I heard: Chauvenet, Papin, Vallé, Desloge, De Menil, Lucas, Pettus, Guion, Chopin, Janis, Benoist, Cabanné, and Chouteau—the latter family descended, I was told, from Laclede himself. And again, I heard such names as Busch, Lehmann, Faust, and Niedringhaus; and still again such other names as Kilpatrick, Farrell, and O'Fallon—for St. Louis, though a Southern city, and an Eastern city, and a French city, and a German city, by being also Irish, proves herself American.

St. Louis needs to be taken by the hand and led round to some municipal-improvement tailor, some civic haberdasher

Architecture

IT is in all that has to do with family life, I think, that St. Louis comes off best. She has miles upon miles of prosperous-looking, middle-class residence streets, and the system of residence "places" in her more fashionable districts is highly characteristic. These "places" are in reality long, narrow parkways, with double drives, bordered at their outer margin by houses, and parked down the center. The oldest of them is, I am told, Benton Place, on the South Side, but the more attractive ones are to the westward, near Forest Park. Of these the first was Vandeventer Place, which still contains some of the most pleasant and substantial residences of the city, and it may be added that while some of the newer "places" have more recent and elaborate houses than those on Vandeventer Place, the general average of recent domestic architecture in St. Louis is behind that of many other cities. Portland Place seemed, upon the whole, to have the best group of modern houses. Westmoreland and Kingsbury Places also have agreeable homes. But Washington Terrace is not so fortunate; its houses, though they plainly indicate liberal expenditure of money, are often of that "catch-as-catch-can" kind of architecture which one meets with but too frequently in the Middle West. If St. Louis is western in one thing more than another it is the architecture of her houses. Not that they lack solidity but that on the average they are not to be compared, architecturally, with houses of corresponding modernness in such cities as Chicago or Detroit.

Where Detroit Leads

THE more I see of other cities the more, indeed, I appreciate the new domestic architecture of Detroit. And I cannot help feeling that it is curious that St. Louis should be behind Detroit in this particular when she is, as a city, so far superior in her evident understanding and love of art.

Nevertheless, St. Louis has one architect whom she cannot honor too highly—Mr. William B. Ittner, who, as a designer of schools, stands unsurpassed.

One Perfect School Building

IF ever I have seen a building perfect for its purpose, that building is the Frank Louis Soldan High School, designed by this man. It is the last word in schools; a building not only for the city of St. Louis to be proud of, but for the whole country to rejoice in. It has everything a school can have, including that quality rarest of all in schools—sheer beauty. It is a whole story in itself, from its great auditorium, which is like a very simple opera house, seating two thousand persons, to its tiled lunch rooms with their "cafeteria" service. An architect could build one school like that, it seems to me, and then lie down and die content, feeling that his work was done. But Mr. Ittner apparently is not satisfied so easily as I should be, for he goes gayly on building other schools. If there isn't one to be built in St. Louis at the moment (and the city has an extraordinary number of fine school buildings), he goes off to some other city and puts a school up there. And for every one he builds he ought to have a crown of gold.

Mr. John Rush Powell, the principal of the high school, was so good as to take my companion and me over the building. We envied Mr. Powell the privilege of being housed in such a palace, and Mr. Powell, in his turn, tried to talk temperately about the wonders of his school, and was so polite as to let us do the raving.

Like the Old Red Schoolhouse

DO you remember, when you went to school, the long closet, or dressing room where you used to hang your coat and hat? The boys and girls of the Soldan School have steel lockers in a sunlit locker room. Do you remember the old wooden floors? These boys and girls have wooden floors to walk on, too, but the wood is quarter-sawed oak, and it is laid in asphalt over concrete, which makes the finest kind of floor to walk on. Do you remember the ugly old school building? The front of this one looks like Hampden Court Palace, brought up to date. Do you remember the big classroom that served almost every purpose? This school has separate rooms for everything—a greenhouse for the botanists, great studios, with skylights, for those who study art, a music hall, and private offices, beside the classrooms, for instructors. Oh, you ought to see this school yourself, and learn how schools have changed! You ought to see the domestic science kitchen with its twenty-four gas ranges and the model dining room, where the girls learn to cook and give dinner parties for their parents; the sewing room and fitting rooms, and the laundries, with sanitary equipment and electric irons—for every girl who takes the domestic-science course must know how to do fine laundry work, even to the washing of flannels.

A Few More Points of Difference

YOU should see the manual-training shops, and the business college, and the textile work, and the kilns for pottery, and the very creditable drawings and paintings of the art students (who clearly have a competent teacher—again an unusual thing in schools), and the simple beauty of the corridors, so free from decoration, and the library—like that of a club—and the lavatories, as perfect as those in fine hotels, and the pictures on the classroom walls—good prints of good things, like Whistler's portrait of his mother, instead of the old hideosities of Washington and Longfellow and Oliver Wendell Holmes, which used to hang on classroom walls in our school days. Oh, it is good to merely breathe the air of such a school as that—and why shouldn't it be, since the air is washed

Digitized by Google

and screened and warmed and fanned out to the rooms and corridors? Just think of that one thing, and then try to remember how schools used to smell—that rather zoological odor of dirty little boys and dirty little slates. That was one thing which struck me very forcibly about this school: it didn't smell like one. Yet, until I went there, I should have wagered that if I were taken blindfold to a school, led inside, and allowed a single whiff of it, I should immediately detect the place for what it was. Ah, memories of other days! Ah, sacred smells of childhood! Can it be that the school smell has gone forever from the earth—that it has vanished with our youth—that the rising generation may not know it? There is but little sadness in the thought.

St. Louis's Röle in the Fur Trade

HAVING thus dilated upon the old-time smell of schools, I find myself drifting, perhaps through an association of ideas, to another subject—that of furs; raw furs.

The firm of Funsten Brothers & Co. have made St. Louis the largest primary fur market in the world. They operate a fur exchange which, though a private business, is conducted somewhat after the manner of a produce exchange. That is to say, the sales are not open to all buyers, but to about thirty men who are in effect "members," it being required that a member must be a fur dealer with a place of business in St. Louis. These men are jobbers, and they sell in turn to the manufacturers.

Funsten Brothers & Co. work direct with trappers, and are in correspondence, I am informed, with between 700,000 and 800,000 persons, engaged in trapping and shipping furs, in all parts of the world. Their business has been considerably increased of late years by the installation of a trappers' information bureau and supply department for the accommodation of those who send them furs, and also by the marketing of artificial animal baits. In this way, and further by making it a rule to send checks in payment for furs received from trappers, on the same day shipments arrive, this company has built up for itself an enormous good will at the original sources of supply.

An Extraordinary Fur Exchange

THE furs come from every State in the Union, from every Province in Canada, and from Alaska, being shipped in, during the trapping season, at the rate of about 2,000 lots a day, these lots containing anywhere from 5 to 500 pelts each.

The lots are sorted, arranged in batches according to quality, and auctioned off at sales held on three days a week. Even Massachusetts, Rhode Island, Florida, and Texas supply furs, but the furs from the North are in general the most valuable. This is not true, however, of muskrat, the best of which comes from the central and eastern States.

The sales are conducted in the large hall of the exchange, where the lots of furs are displayed in great piles. The skins are handled in the raw state, having been merely removed from the carcass and dried before shipment, with the result that the floor of the exchange is made slippery by animal fats and that the olfactory organs encounter smells not to be matched in any zoo—the blended fragrance of raccoon, mink, opossum, muskrat, ermine, ringtail, house cat, wolf, red fox, gray fox, cross fox, swift fox, silver fox, badger, otter, beaver, lynx, marten, bear, wolverine, fisher—a great orchestra of odors, in which the "air" is carried most competently, most unqualifiedly, by that master virtuoso of mephitic redolence, the skunk.

I was told that about sixty-five per cent of all North American furs pass through this exchange; also I received the rather surprising information that the greatest number of skins furnished by this continent comes from within a radius of 500 miles of St. Louis.

It was in this Fur Exchange that the first auction of government seal and fox skins ever held by the United States on its own territory occurred last year. Before that time it had been the custom of the Government to send Alaskan sealskins to Europe, where they were cured and dyed. Such of these skins as were returned to the United States, after having undergone curing and dyeing, came back under a duty of 20 per cent, or more recently by an increase in the tariff—30 per cent. And all but a very few of the skins did come back. It was by action of Secretary of Commerce Redfield that the seal sale was transferred from London to St. Louis, and a member of the firm of Funsten Brothers & Co. informed me that the ultimate result will be that seal coats now costing, say, $1,200, may be bought for about $400 three years hence, when the seals are no longer protected according to the present law.

Cheaper Sealskins Soon

SOME interesting information with regard to sealing was published in the St. Louis "Republic" at the time of the sale. Quoting Mr. Philip B. Fouke, president of the Funsten Co., the "Republic" says:

"Under the present policy of the Government the United States will get the dyeing, curing, and manufacturing establishments from London, Amsterdam, Nizhni Novgorod, and other great centers. The price of sealskins will be reduced two-thirds to the wearer. Seals have been protected for the past two years, and will be protected for three years more, but during the period of protection it is necessary for the Government hunters to kill some of the 'bachelor seals'—males, without mates, who fight with other male seals for the possession of the females, destroying the young, and causing much trouble. Also a certain amount of seal meat must go to the natives for food.

"Each female produces but one pup a year, and each male demands from twenty to one hundred females. Fights between males for the possession of the females are fearful combats.

"In addition to protecting the seals on the Pribilof Islands, the United States has entered into an agreement with Japan, Russia, and England, that there shall be no sealing in the open seas for fifteen years. This open sea, or pelagic sealing did great harm. Only the females leave the land, where they can be protected, and go down to the open sea. Consequently the poachers got many females, destroying the young seals as well as the mothers, cutting off the source of supply, and leaving a preponderance of 'bachelors,' or useless males."

Why Not a Seal Romance?

WHAT a chance for the writer of sex stories! Why dally with the human race when seals are living such a lurid life? Here is a brand-new field: The heroine a soft-eyed female with a hide like velvet; the hero a dashing, splashing mate. Sweet communions on the rocks at sunset, and long swims side by side. But one night on the cliffs, beneath the moon comes the blond beast of a bachelor, a seal of the lowest animal impulses, absolutely unscrupulous. And then the climax—the Jack London stuff: the fight on the edge of the cliff; the cry, the body hurtling to the rocks below. And, of course, a happy ending—love on a cake of ice.

The First Astor Quits the Trade

OLD John Jacob Astor, founder of the Astor fortune, when engaged in the fur trade, was a partner in the American Fur Company of St. Louis of which Pierre Chouteau was president. A letter written to Chouteau by Astor just before his retirement from the fur business gives us the reason for his withdrawal the following:

> *I very much fear beaver will not sell very well very soon unless very fine. It appears that they make hats of silk in place of beaver.*

Beaver was at that time the most valuable skin, and had been used until then for the making of tall hats; but the French were beginning to make silk hats, and Astor believed that in that fact was presaged the downfall of the beaver trade.

Club Life

CLUB life in St. Louis is very highly developed. There are of course the usual clubs which one expects to find in every large city: The St. Louis Club, a solid old organization; the University Club, and a fine new Country Club, large and well designed. Also there is a Racquet Club, an agreeable and very live institution which now holds the national championship in double racquets, which is vested in the team of Davis and Wear. The Davis of this pair is Dwight F. Davis, an exceedingly active and able young man who, aside from many other interests, is a member of the City Plan Commission, commissioner in charge of the very excellent parks of St. Louis, and giver of the famous Davis Cup, emblematic of the world's team tennis championship.

But the characteristic club note of St. Louis is struck by the very small, exclusive clubs. One is the Florissant Valley Country Club, with a pleasant, simple clubhouse and a very charming membership. But the most famous little club of the city, and one of the most famous in the United States, is the Log Cabin Club. I do not believe that in the entire country there is another like it. The club is on the outskirts of the city, and has its own golf course. It is an utterly unostentatious frame building with a dining room containing one table at which all the members sit together like one large family. The membership limit is twenty-five, and the list has never been completely filled. There were twenty-one members, I was told, at the time we were there, and besides being, perhaps, the most prominent men in the city, these gentlemen are all intimates, so that the club has an air of delightful informality which is hardly equaled in any other club I know. The family spirit is further enhanced by the fact that no checks are signed, the expense of operation being divided equally among the members. Here originated the "Log Cabin game" of poker, which is now known nationally in the most exalted poker circles. I should like to explain this game to you, telling you all the hands, and how to bet on them, but after an evening of practical instruction, I came away quite baffled. Missouri is, you know, a poker State. Ordinary poker, as played in the east, is a game too simple, too childlike for the highly specialized Missouri poker mind. I played poker twice in Missouri—that is, I tried to play—but I might as well have tried to juggle with the lightnings of the gods. No man has the least conception of that game until he goes out to

The dilapidation of the quarter has continued steadily from Dickens's day to this, and the beauty now to be discovered is that of decay and ruin

One of the many beautiful illustrations in the Five-Foot Shelf of Books.

This is Marie Antoinette Riding To Her Death

Have you ever read her tragic story? Have you ever lived through the stirring days of the French Revolution in the pages of Burke's great book—one of the wonderfully fascinating books that have made history?

In all the world there are only a few of these books, speeches, letters, poems, essays, biographies, that have really made history. To read these few great works systematically and intelligently is to be really well read.

What are these few great works? How can a busy man discover them among the millions of worthless books in the world?

The free booklet offered below answers that question? It tells how Dr. Charles W. Eliot, from his sixty years of reading, study and teaching, has selected the books that "picture the progress of civilization" and arranged them as

The Famous Five-Foot Shelf of Books

"418 masterpieces for the ordinary cost of 40"

If you ever expect to add another book to your library, you should have this free booklet, this "guide book to books" to-day.

You should know why 100,000 busy successful men are finding in the Five-Foot Shelf of Books just the daily mental stimulus they need.

You will understand then why it is that some men—who may never have been to college—nevertheless think clearly, talk more convincingly, earn more and enjoy life more than many college men.

is wrapped up, awaiting your request. It was printed especially for *you*—one for each Collier reader—and it was printed to give away.

"It has saved me hours of time and many, many dollars in my choice of books" writes one man.

Merely clip the coupon: it will bring *your* copy by mail *to you*.

Missouri. There it is not merely a casual pastime; it is a rite, a sacrament, a magnificent expression of a people. The Log Cabin game is a thing of "kilters," skip straights, around-the-corner straights, and other complications. Three of a kind is very nearly worthless. Throw it away after the draw if you like, pay a dollar and get a brand-new hand.

But those are some simple little points to be picked up in an evening's play, and a knowledge of the simple little points of such a game is worse than worthless—it's expensive. To really learn the Log Cabin game, you must give up your business, your dancing, and your home life, move out to St. Louis, cultivate Log Cabin members who are the high priests of poker, and play with them until your family fortune has been painlessly extracted. And however great the fortune, it is a small price to pay for such adept instruction. When it is gone you will still fall short of ordinary Missouri poker, and will be as a mere babe in the hands of a Log Cabin member, but you will be absolutely sure of winning, *anywhere outside the State.*

It seems logical that the city, which is beyond doubt the poker center of the universe, should also have attained to eminence in drinks. It was in St. Louis that two great drinks came into being. In the old days of straight whisky, the term for three fingers of red liquor in a whisky glass was a "ball." But there came from Austria a man named Enno Sanders, who established a bottling works in St. Louis, and manufactured seltzer. St. Louis liked the seltzer and presently it became the practice to add a little of the bubbling water to the "ball." This necessitated a taller glass, so men began to call for a "*high* ball."

The weary traveler may be glad to know that the highball has not been discontinued in St. Louis.

Another drink which originated in St. Louis is the gin rickey. Colonel Rickey was born in Hannibal, Mo., of which town I shall write presently. Later he moved to St. Louis and invented the famous rickey, which immortalized his name—preserving it, as it were, in alcohol. The drink was first served in a bar opposite the old Southern Hotel—a hotel which, by the way, I regretted to see standing empty and deserted at the time of my last visit, for, in its prime, it was a hotel among hotels.

Leading to a Climax

I HAVE tried to lead gradually, effectively to a climax. From clubs which are pleasant I progressed to poker, which is pleasanter, and from poker I stepped ahead to highballs and gin rickeys, which are the pleasantest of all.[1] And now I am prepared to reach my highest altitude. I intend to tell the very nicest thing about St. Louis.

I know what it is. It did not take me more than half a day to find it out. And the nicest thing about St. Louis is the nicest thing that there can be about a place.

It discounts a bad street car service, an ill-set railway station, and an unfinished bridge. It sinks the parks, the botanical gardens, the art museum into comparative oblivion. Small wonder that St. Louis seems to ignore her minor weaknesses when she excels in this one thing—as she must know she does.

The Climax Itself

FOR the nicest thing about St. Louis is St. Louis girls.

In the first place, fashionable young women in St. Louis are quite as gratifying to the eye as women anywhere. In the second place, they have unusual poise. This latter quality is very striking, and it springs, I fancy, from the town's conservatism and solidity. The young girls and young men of the St. Louis social group have grown up together, as have their parents and grandparents before them. They give one the feeling that they are somehow rooted to the place, as no New Yorker is rooted to New York. The social fabric of St. Louis changes little. The old families live in the houses they have always lived in, instead of moving from apartment to apartment every year or two. One does not feel the nervous tug of social and financial straining, of that eternal overreaching which one senses always in New York. In St. Louis everything seems settled and assured. One day at luncheon I found myself between two very lovely creatures—neither of them over twenty-two or twenty-three; both of them endowed with the aplomb of older, more experienced, women—who endeared themselves to me by talking critically about the works of Meredith—and Joseph Conrad—and Leonard Merrick. Fancy that! Fancy their being pretty girls yet having worth-while things to say—and about those three men!

Peckham: *"Gee, it musta been great when they could make a woman dry up and stay that way"*

And when the conversation drifted away from books to the topic which my companion and I call "life stuff," and when I found them adept also in this field, my appreciation of St. Louis became boundless.

Is There Unkindness Here?

IT just occurs to me that, in publishing the fact that St. Louis girls have brains I may have unintentionally done them an unkindness.

Once I asked a young English bachelor to my house for a week-end.

"I want you to come this week," I said, "because the prettiest girl I know will be there."

"Delighted," he replied.

"She's a most unusual girl," I went on, "for, besides being a dream of loveliness, she's clever."

"Oh," he said, "if she's clever, let me come some other time. I don't like 'em clever. I like 'em pretty and stupid."

Danger!

(Concluded from page 6)

Half an hour later a large steamer raised her hull, making for the mouth of the Thames. I ordered Vornal to stand by the starboard torpedo tube, having the other also loaded in case of a miss. Then I advanced slowly, for though the steamer was going very swiftly we could easily cut her off. Presently I laid the *Iota* in a position near which she must pass, and would very gladly have lain to, but could not for fear of rising to the surface. I therefore steered out in the direction from which she was coming. She was a very large ship, fifteen thousand tons at the least, painted black above and red below, with two cream-colored funnels. She lay so low in the water that it was clear she had a full cargo. At her bows were a cluster of men, some of them looking, I dare say, for the first time at the mother country. How little could they have guessed the welcome that was waiting them!

ON she came with the great plumes of smoke floating from her funnels, and two white waves foaming from her cutwater. She was within a quarter of a mile. My moment had arrived. I signaled full speed ahead and steered straight for her course. My timing was exact. At a hundred yards I gave the signal, and heard the clank and swish of the discharge. At the same instant I put the helm hard down and flew off at an angle. There was a terrific lurch, which came from the distant explosion. For a moment we were almost upon our side. Then, after staggering and trembling, the *Iota* came on an even keel. I stopped the engines, brought her to the surface, and opened the conning tower, while all my excited crew came crowding to the hatch to know what had happened.

The ship lay within two hundred yards of us, and it was easy to see that she had her deathblow. She was already settling down by the stern. There was a sound of shouting and people running wildly about her decks. Her name was visible, the *Adela* of London, bound, as we afterward learned, from New Zealand with frozen mutton. Strange as it may seem to you, the notion of a submarine had never even now occurred to her people, and all were convinced that they had struck a floating mine. The starboard quarter had been blown in by the explosion, and the ship was sinking rapidly. Their discipline was admirable. We saw boat after boat slip down crowded with people as swiftly and quietly as if it were part of their daily drill. And suddenly, as one of the boats lay off waiting for the others, they caught a glimpse for the first time of my conning tower so close to them. I saw them shouting and pointing, while the men in the other boats got up to have a better look at us. For my part, I cared nothing, for I took it for granted that they already knew that a submarine had destroyed them. One of them clambered back into the sinking ship. I was sure that he was about to send a wireless message as to our presence. It mattered nothing, since, in any case, it must be known; otherwise I could easily have brought him down with a rifle. As it was, I waved my hand to them, and they waved back to me. War is too big a thing to leave room for personal ill feeling, but it must be remorseless all the same.

I WAS still looking at the sinking *Adela* when Vornal, who was beside me, gave a sudden cry of warning and surprise, gripping me by the shoulder and turning my head. There behind us, coming up the fairway, was a huge black vessel with black funnels, flying the well-known house flag of the P. and O. Company. She was not a mile distant, and I calculated in an instant that even if she had seen us she would not have time to turn and get away before we could reach her. We went straight for her, therefore, keeping awash just as we were. They saw the sinking vessel in front of them and that little dark speck moving over the surface, and they suddenly understood their danger. I saw a number of men rush to the bows, and there was a rattle of rifle fire. Two bullets were flattened upon our four-inch armor. You might as well try to stop a charging bull with paper pellets as the *Iota* with rifle fire. I had learned my lesson from the *Adela*, and this time I had the torpedo discharged at a safer distance—two hundred and fifty yards. We caught her amidships and the explosion was tremendous, but we were well outside its area. She sank almost instantaneously.

I am sorry for her people, of whom I hear that more than two hundred, including seventy Lascars and forty passengers, were drowned. Yes, I am sorry for them. But when I think of the huge floating granary that went to the bottom, I rejoice as a man does who has carried out that which he plans.

IT was a bad afternoon that for the P. and O. Company. The second ship which we destroyed was, as we have since learned, the *Moldavia*, of fifteen thousand tons, one of their finest vessels; but about half past three we blew up the *Cuzco*, of eight thousand, of the same line, also from Eastern ports, and laden with corn. Why she came on in face of the wireless messages, which must have warned her of danger, I cannot imagine. The other two steamers which we blew up that day, the *Maid of Athens* (Robson Line) and the *Cormorant*, were neither of them provided with apparatus, and came blindly to their destruction. Both were small boats of from five thousand to seven thousand tons. In the case of the second, I had to rise to the surface and fire six twelve-pound shells under her waterline before she would sink. In each case the crew took to the boats, and so far as I know no casualties occurred.

After that no more steamers came along, nor did I expect them. Warnings must by this time have been flying in all directions. But we had no reason to be dissatisfied with our first day. Between the Maplin Sands and the Nore we had sunk five ships of a total tonnage of about fifty thousand tons. Already the London markets would begin to feel the pinch. And Lloyd's—poor old Lloyd's—what a demented state it would be in! I could imagine the London evening papers and the howling in Fleet Street. We saw the result of our actions, for it was quite laughable to see the torpedo boats buzzing like angry wasps out of Sheerness in the evening. They were darting in every direction across the estuary, and the aeroplanes and hydroplanes were like flights of crows, black dots against the red western sky. They quartered the whole river mouth, until they discovered us at last. Some sharp-sighted fellow with a telescope on board of a destroyer got a sight of our periscope, and came for us full speed. No doubt he would very gladly have rammed us, even if it had meant his own destruction, but that was not part of our program at all. I sank her and ran her east-southeast with an occasional rise. Finally we brought her to, not very far from the Kentish coast, and the searchlights of our pursuers were far on the western sky line. There we lay quietly all night, for a submarine at night is nothing more than a very third-rate surface torpedo boat. Besides, we were all weary and needed rest. Do not forget, you captains of men, when you grease and trim your pumps and compressors and rotators, that the human machine needs some tending also.

I had put up the wireless mast above the conning tower, and had no difficulty in calling up Captain Stephan. He was lying, he said, off Ventnor, and had been unable to reach his station on account of engine trouble, which he had now set right. Next morning he proposed to block the Southampton approach. He had destroyed one large Indian boat on his way down Channel. We exchanged good wishes. Like myself, he needed rest. I was up at four in the morning, however, and called all hands to overhaul the boat. She was somewhat up by the head, owing to the forward torpedoes having been used, so we trimmed her by opening the forward compensating tank, admitting as much water as the torpedoes had weighed. We also overhauled the starboard air compressor and one of the periscope motors which had been jarred by the shock of the first explosion. We had hardly got ourselves shipshape when the morning dawned.

The Effect of the War on American Business

By I. F. MARCOSSON

How often have you been tempted to enter a store whose glaring announcement of cut prices aroused your bargain sense?

Your common sense would have overruled your bargain sense had you been able to look behind the scenes. The purpose and practice of the proprietors of these pirate enterprises is to advertise well known trade-marked articles at cut prices to attract the attention, the attendance and the money of the public.

Let me cite an example of judicial action recently taken wherein the courts have taken a forward step against unfair merchandising and fake sales.

W. G. Hamerschlag.

Advertising Manager Collier's Weekly

***FIRST FAKE BARGAIN ADVERTISER GUILTY**

Ordinance Against Misleading Publicity Stops a False Pretense Sale

HARLEM MERCHANTS ACT

Business Associations in Other Parts of City Plan to Take Similar Action

The first conviction under City Ordinance 229, which is directed "against false and misleading advertising," was obtained yesterday in the Harlem Police Court before Magistrate Levy when Jacob Kantrowitz pleaded guilty and was released under a suspended sentence.

The case was the first in a campaign that has been started by the Harlem Board of Commerce, and now that the precedent of a conviction has been established it is planned to drive out of business all "fake" storekeepers and advertisers who use advertising space for untrue announcements of sales.

The case of Jacob Kantrowitz was first brought to the attention of Police Commissioner Woods by Alderman Chorosh of Harlem, who is a member of the Harlem Board of Commerce. The Commissioner, after considering the facts, referred the matter to Second Deputy Police Commissioner Rubin. Commissioner Rubin assigned Detective Sergeant Francis E. Hawkins of the Thirty-sixth Precinct to obtain evidence.

Kantrowitz said that certain standard goods were being sold at prices far below cost owing to their being sold on the "order of a receiver."

Detective Hawkins investigated and found that no receiver had ordered the sale. He made purchases at the Harlem store, and found that the "standard goods" advertised by the circular were of very inferior grade and unknown manufacture. Certain collars that are usually sold at two for a quarter were advertised to be sold at three for the same money. Hawkins found that he could buy the collars sold on this advertisement at six for a quarter. He bought several and also bought a shirt that was advertised as "standard" at a price far below what such a shirt usually costs. Hawkins asked the salesman, Maurice Kaufmann, what guarantee he had that the goods were as represented. Kaufmann told him that he had the guarantee of The Guarantee Clothing Company and called his attention to the signs in the window, all of which bore the name of that company. Hawkins received a slip with his purchases bearing the name of The Guarantee Clothing Company, and this was in court as evidence.

"To-day I heard my friends discussing the European War—and I sat mute—

"I did not dare to take part in the conversation for fear of exposing my ignorance. Their talk was full of references to the history of Austria and Servia and Russia—

"And I know nothing of history."

The speaker was a business man, unusually successful in his affairs. Perhaps *you*, at some time, have said the same thing. Perhaps you have sat in a company where one man's conversation has held the others spellbound, and have said to yourself "I wish I had his knowledge of history. I wish I could talk as he does."

If you are interested in spending a few minutes a week in mental growth, if you are interested in the success of your boy or girl, we want to send you a copy of the free booklet shown above.

It tells the story of the new kind of history written for busy, ambitious men—the

Lodge History of Nations

"The whole story of each nation in a single volume like the biography of a man."

Your copy of this free booklet, to which you are entitled as a Collier reader—is wrapped up and waiting your direction, merely return the coupon.

It tells how the histories of the nations have at last been written for the busy, modern man who can invest only a few dollars in history buying, and a few minutes a week in history reading.

It tells about the greatest book opportunity of the year—Your chance to own a work that formerly sold for $120, and up, at a tiny fraction of the former price.

To get your copy, clip the coupon

The free booklet contains an essay by Senator Henry Cabot Lodge on the reading of history.

It is the sort of booklet you ought to have for reference whether you intend to add a history to your library now or later.

Your copy, containing Senator Lodge's Essay and a beautiful colored illustration, is ready. Merely ask for it.

Cooperation on a Business Basis

(Concluded from page 8)

so that one may accept without prejudice his statement: "I intend to devote the rest of my life to the cooperative movement." One feels that the cooperative movement is most fortunate; that here is a man with the strength and wisdom to build a new industrial system which shall ease the low places and level the high ones.

The practical man of the society has spent half a lifetime in the grocery business. In that time he has built up one of the finest and best equipped markets in the United States. Should the plans of the central society come true—and they are coming true amazingly fast—this man knows that his own business would be absorbed or driven to the wall by cooperative merchandising. And no one would welcome the day more than he. One who doubts this has merely to follow the man through a day's work to be convinced. Twelve, fifteen, even eighteen hours a day he is on the job, seeing that the cooperative stores in the chain are getting the right goods at the right prices, conferring with store managers, laying out delivery routes with detail maps and pegs, revising store plans, and so on through the long list of things necessary to establish cooperation on a business basis.

Explaining the Investment

THE treasurer is a Harvard man—lawyer, bank director, and economist. He is the type of look-you-in-the-eyes aristocrat that one would select to administer a trust. Also, he owns a large farm—gentleman's estate, it might be called. But the treasurer hopes to make his farm profitable. He thinks all farms ought to be profitable and that cooperation will make them so.

The secretary, Mr. Purington, brings to cooperation the keen analytical mind so sorely needed. To him falls the task of separating the practicable from the impracticable in the history of the cooperative movement. To him belongs a good share of the credit for applying the English system to American conditions. To those who see little similarity between the two systems he makes this explanation:

"Our common shares correspond to the English memberships; each carries the voting power. One of our shares costs $10 for perpetuity; membership in the English societies costs, usually, about $5 a year. Our preferred stock corresponds to the English shares. English cooperators invest in these shares much as our people deposit in savings banks. Our cooperators have not done this, therefore cooperation has lacked capital to finance a wholesale society and keep abreast of competition. A small number of public-spirited men have made good the deficiency up to date. From now on we expect that American cooperators will invest an increasing amount of their savings in their own business where it will earn 7 per cent, rather than in enterprises run for the profit of capitalists, where safe investments seldom yield more than 5 per cent."

Why Single Stores Fail

PERHAPS the most prominent member of the board of nine directors is a Harvard professor, who is a well-known lecturer and author on economic subjects and an international authority on cooperation. His attitude is summed up in the following:

"I have been a cooperator all my life. I have investigated the cooperative movement here and in Europe. I have lectured on the subject for years; but I had got to the point where I hesitated to accept an engagement to lecture on cooperation because I knew that after I had told what cooperation has done abroad some one in the audience would be sure to ask: 'How can we start a successful cooperative store in our town?' Whereupon, knowing the history of cooperation in this country, I would feel obliged to discourage them from making the attempt. One can readily see that my apparent inconsistency was apt to arouse suspicion. I found it increasingly difficult to face the issue before an audience. Now, however, I feel that the New England Cooperative Society has solved the problem, and instead of dreading my lectures I look forward to them with pleasure."

There are approximately fifty independent cooperative associations of consumers in New England—or, rather, there were fifty in 1913. During the past few months these associations have united with the central organization at the rate of one each week. Before very long it became necessary to refuse further applications until an overworked force of store draftsmen, systemizers, and accountants caught up with the procession. Now operating in three different States a chain of thirteen cooperative stores doing an aggregate business of more than $30,000 a week, the New England Cooperative Society has only to continue at its present pace, and by the year's end it will be operating fifty cooperative stores and conducting for thousands of consumers, who will be the owners, the largest cooperative enterprise in the United States.

The cooperative stores in this chain are buying goods at prices 10 per cent lower than they could obtain as separate units. This 10 per cent margin between small buying and big buying explains why a chain of cooperative stores will prosper where the same number of independent cooperative stores may fail. This is the first and perhaps the most important result of cooperation on a business basis. But the New England Cooperative Society does not intend to stop there.

What Combination Does

PRODUCERS of food products in this country receive 35 per cent of retail prices. The railroads get 7 per cent; jobbers, commission men, wholesalers, and retailers divide the remaining 58 per

cent. Granting that it has already eliminated the wholesaler's profit, thereby saving 10 per cent of the 58, the New England Cooperative Society has set out to see what happens to 48 per cent still unaccounted for. By forming a more direct connection between producers and consumers, the society aims to divide a good portion of this 48 per cent between the two classes. A start has already been made. The society buys eggs, poultry, butter, and produce from an association of producers, the Bucksport Cooperative Society, which also operates a cooperative store.

The Bucksport Cooperative Market, which is the best equipped store in eastern Maine, is a collection depot for eggs, poultry, and produce. Cooperation gets the farmers better prices for what they have to sell, and it quotes lower prices for what they have to buy. And this, the central society contends, is as it should be. The farmer has had fully as much cause to complain about the low prices he has been compelled to accept

as the consumer has to complain about the high prices he has been compelled to pay.

Linking consumer and producer is a step forward, but the high cost of living may be reduced still further, according to the society's experts. Waste is still a national characteristic, they affirm. Correction is possible, but it will be a slow process. Those who are to point the way must learn all of the facts first. As a preliminary step the society has prepared two syllabuses, one to be circulated among consumers and the other among producers. Copies of the syllabus for consumers are being circulated by young women who are studying household economics at Simmons College. Copies of the syllabus for producers are going the rounds of rural Maine in the hands of Bowdoin students of political economy.

Undergraduates of both institutions regard the labor, which is unpaid, as a practical application of their studies. They are gathering valuable information which the society expects to tabulate and use in a practical way. The society wants to know if Mrs. Jones, who buys potatoes by the peck, would buy them in two-bushel bags, provided she had a cold cellar where potatoes would keep. The society wants to know if Farmer Jones would pack his apples in paraffin paper wrappers, provided he got a dollar more a barrel for them.

How Profits Are Divided

EACH year our lawmakers turn out statutes intended to adjust differences between capital and labor. Labor's complaint usually is insufficient pay for the work performed. Capital's rejoinder usually is insufficient earnings to pay more. Cooperation seems to adjust compensation very simply. Employees of the New England Cooperative Society have a share in the profits. Each man's portion is based on his wages and the dividend paid on purchases at the store where he is employed.

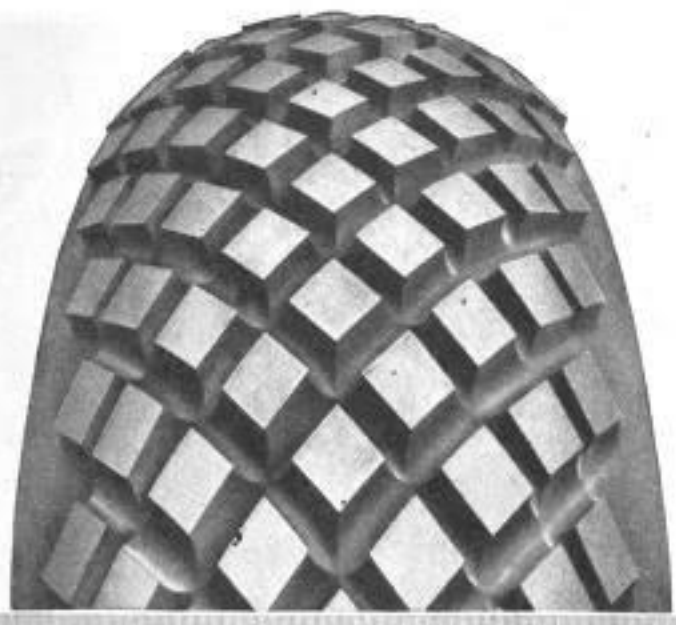
Wages are counted equal to purchases in the apportionment. For example, a store has sold goods amounting to $20,000 and paid $1,000 for clerk hire during a half year. The central society reports that this store's earnings warrant a dividend of 5 per cent. The store's customers, who are the owners as well, would receive dividends amounting to $1,000 and the store's employees would divide $50. If either class, or both, felt dissatisfied, doubtless they would work hard to raise the dividend to 6 per cent for the next half year, the employees by checking small wastes perhaps, and the owners, who are customers, by demanding fewer deliveries possibly, or by interesting new members.

Cooperation Rules Out Cheating

WHEREVER deceit or dishonesty is practiced, even in the least degree, cooperation does not obtain. A man or a store cannot cheat and cooperate at the same time. The New England Cooperative Society is applying this rule to the pure-food question. The laboratory of a leading scientific school has been enlisted in the cause. Students of chemistry must analyze; why not benefit the consumer?

As fast as possible the society is getting analyses of all prepared foods handled in the chain of stores. Injurious preparations or foods that are not what the labels claim are removed from stock. No other course would be consistent. These stores are owned by their customers; a storekeeper does not supply his own table with inferior goods.

The Approaching Conflict



IT may be recalled that Patrick O'Toole threatened to start a price war should cooperation ever grow big enough to menace the profits of his two hundred stores.

There is ample evidence that merchants like Mr. O'Toole see such a menace in the New England Cooperative Society.

One chain-store head, who is less belligerent but more farsighted than Mr. O'Toole, frankly admits that cooperative storekeeping has come to stay. His chain of something over one hundred stores is on the market at a price equaling cost inventory of stock and fixtures. When he becomes willing to throw in the fixtures, the New England Cooperative Society hopes to be in a position to buy.

The conflict between commercialism and cooperation is approaching; it is inevitable. The officers of the New England Cooperative Society say that cooperation will be prepared for the struggle. "Commercialism," says Mr. Purington, "has one big gun—capital. Our financial artillery may be of a little smaller bore, but we have another tool of battle—publicity. The printed word makes people think, and thinkers make good cooperators."

Note This All-Weather Tread

Note how flat and smooth and regular. It runs like a plain tread. Note what deep projections—they last thousands of miles.

Note the sharp edges and angles. They bite into slippery roads in every direction, giving resistless grip.

The tread is double-thick—long-enduring—difficult to puncture. It is toughened by a secret Goodyear process.

The blocks meet at the base, so strains are not centered. They are spread over the fabric, just as with smooth treads.

On every wheel, in every season, safety and trouble-saving call for this All-Weather tread.

We Spend Millions

On 4 Features Exclusive to No-Rim-Cut Tires

This Costs $450,000

The "On-Air" cure—used by us alone—adds to our tire cost $450,000 yearly.

Each tire is final-cured on air-filled tubes, under actual road conditions. This to save the countless blow-outs due to wrinkled fabric.

Each tire has six flat bands of 126 braided piano wires vulcanized into its base. That's our exclusive—our faultless—way to make a tire that can't rim-cut.

In each tire we form, during vulcanization, hundreds of large rubber rivets to combat tread separation. We paid $50,000 to control this patent.

And the All-Weather tread, described above, is an exclusive Goodyear feature.

This Costs $100,000

Our tests and experiments—seeking ways to better tires—cost us $100,000 yearly. Scores of experts are constantly working to add to Goodyear mileage. They build thousands of tires in thousands of ways for comparison.

You don't think—no man can think—that other men have found some way to build a better tire than we. Not while Goodyears, on sheer merit, outsell any other tire.

Why Extra Prices?

Then why pay extra prices?

At least 16 makes now sell above the Goodyear prices. Some are one-third higher.

All lack the four great Goodyear features. They can't give better quality. Do you know one reason for that extra price?

GOODYEAR AKRON
No-Rim-Cut Tires
With All-Weather Treads or Smooth

It Might Buy This

That extra third, if paid for Goodyears, would buy a half-inch wider tire. It would buy a 4-inch tire, for instance, where you use 3½-inch. And the 4-inch would fit your rim.

That extra half-inch adds 14 per cent to the tire size. It brings an extra ply of fabric and a thicker tread. It should add, on the average, 35 per cent to the tire service.

Or the price of three extra-price tires would buy you four of Goodyears. In either way you could spend that extra to buy one-third extra service.

The point is this: Tire worth is measured by low cost per mile, and one big factor is the price per tire.

Goodyear prices—due to mammoth output—start you on the bottom basis. And each exclusive Goodyear feature helps to lower mile-cost.

If you believe that, tell your dealer you must have Goodyear tires.

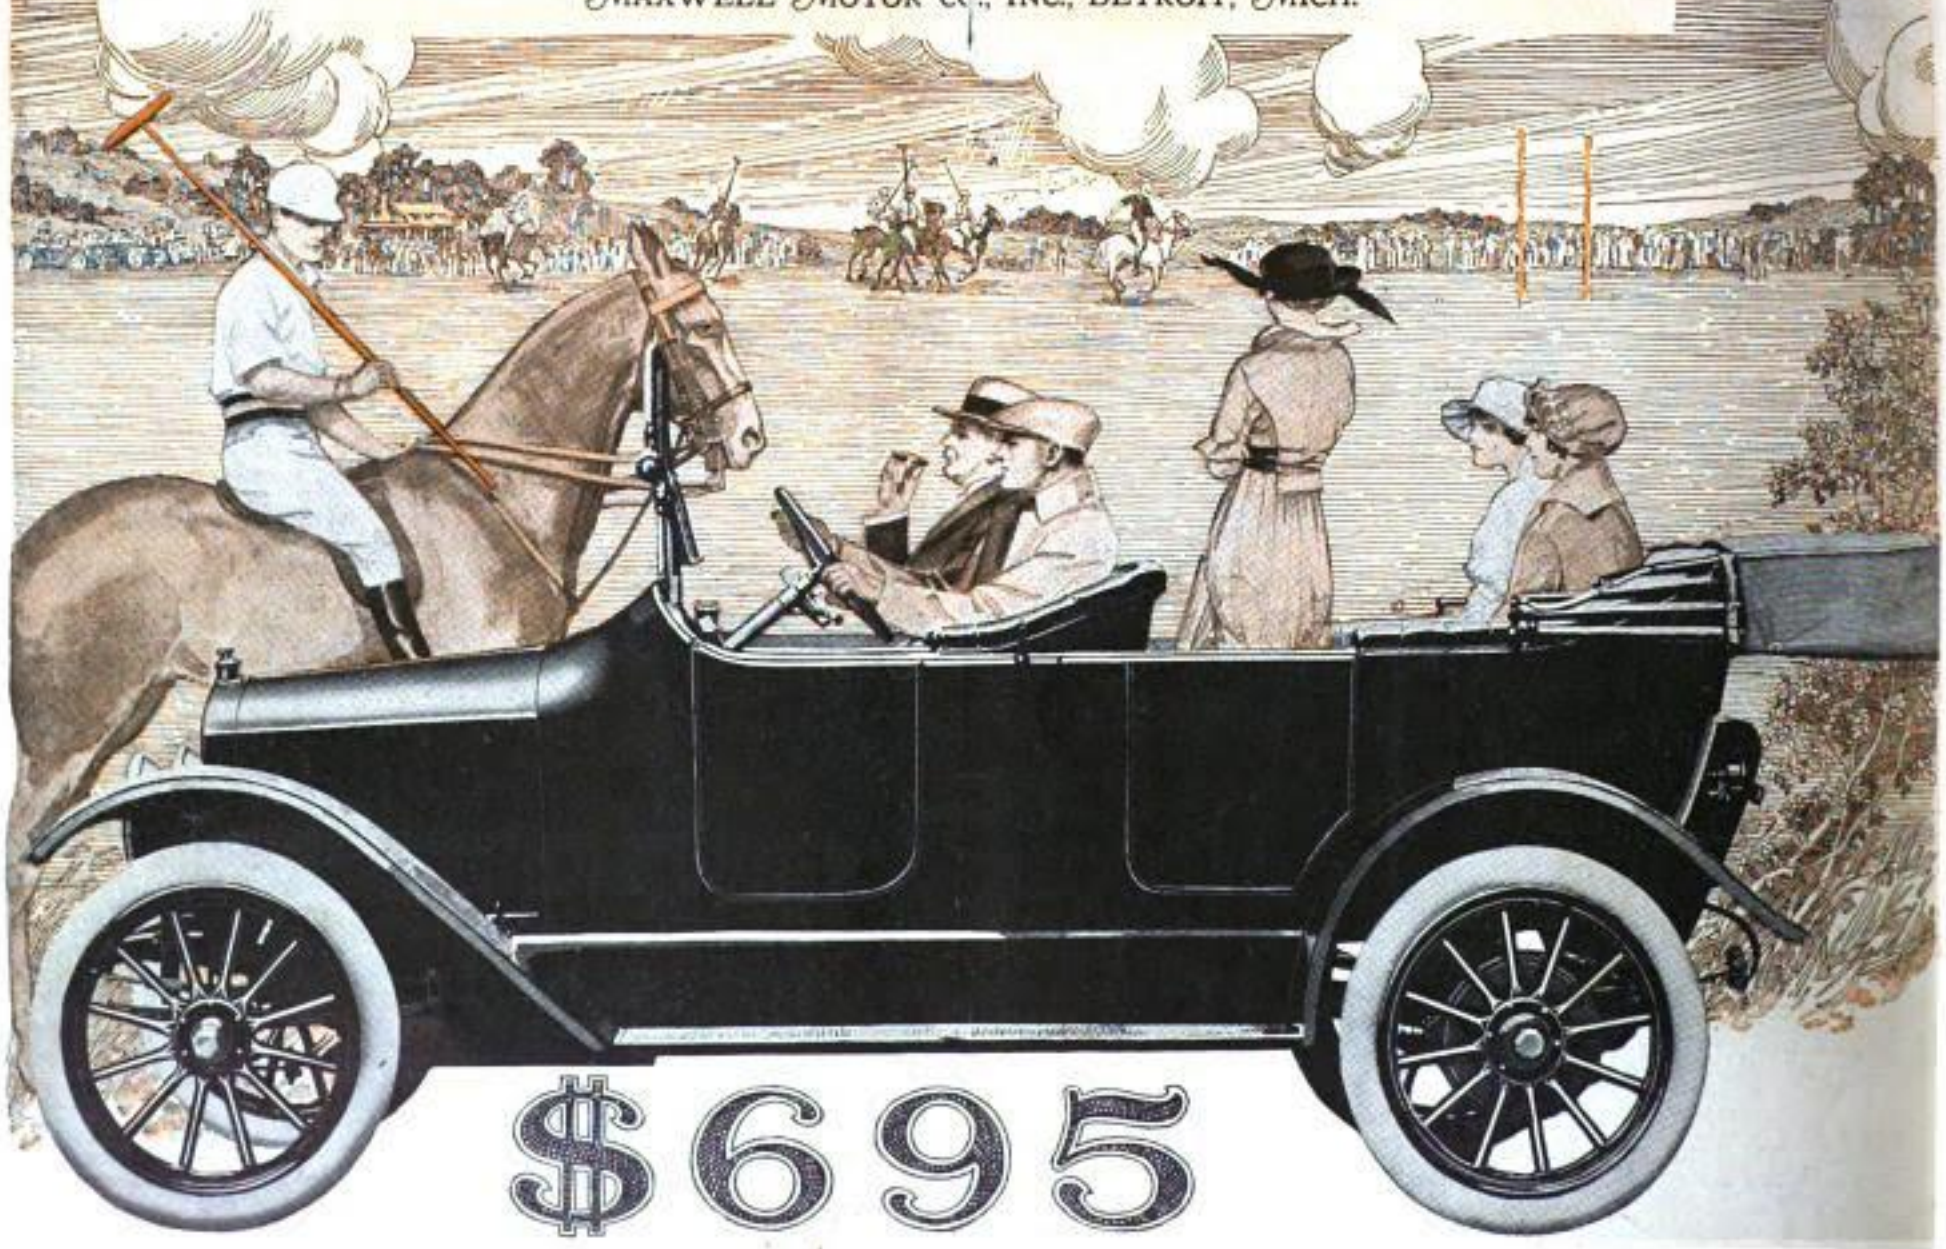
Maxwell "25"

The biggest automobile value ever offered for less than $1,000. Our production of 60,000 cars makes the new price of $695 fully equipped (with 17 new features) possible.

1—Pure-stream line body.
2—Adjustable front seat.
3—Sims high-tension magneto.
4—Three-quarter elliptic rear springs.
5—Tire brackets on rear.
6—Spring tension fan.
7—Kingston carbureter.
8—Clear Vision Wind Shield.
9—Foot-rest for accelerator pedal.
10—Tail lights, with license bracket attached.
11—Gasoline tank located under dash cowl.
12—Crown fenders with all rivets concealed.
13—Head lights braced by rod running between lamps.
14—Famous make of anti-skid tires on rear.
15—Gracefully rounded, double-shell radiator equipped with shock absorbing device.
16—Instrument board, carrying speedometer, carbureter adjustment and gasoline filler.
17—Improved steering gear; spark and throttle control on quadrant under steering wheel; electric horn button mounted on end of quadrant.

Automobile experts have refused to believe that anyone could produce a full grown five passenger really beautiful fully equipped car—a car with real high tension magneto—a car with sliding gear transmission—left hand drive center control, a car with practically every high priced car feature for less than $1,000.



Here it is. Here is a real automobile. Here is the easiest car to drive in the world—here is the greatest all around hill climbing car in the world. Here is an automobile to be really proud of.

With Electric Self-Starter and Electric Lights $55 Extra.

Without penalizing your bank account you can now drive a car of distinctive class

Here is a car that will never be built by the thousands—because it is a special class car for special class men. During the next twelve months we will build and sell 1200 Moline-Knight cars—four cars for each working day—no more, no less—and each car built and finished right.

1200 Moline-Knights for 1200 men of means

This magnificent Moline-Knight sells for $2500—but if you are one of the 1200 men of means to whom we appeal the price will mean nothing, because you know from experience that price does not always determine actual value.

To the man who loves his motor car as a man who loves a good horse—the man who knows there can be spirit in a piece of machinery and friendship in luxurious finish and equipment—if you are such a man, we offer the Moline-Knight as a car of capability and refinement.

The Moline-Knight is guaranteed 50 H. P., 128-inch wheelbase, four speed transmission, spiral gear rear axle, 36 x 4½ inch Goodrich or Firestone Tires, Bosch plugs and ignition, Wagner electric starting, lefthand drive, center control, Power tire pump, and other conveniences.

Quality, durability, luxuriousness—not quantity—are the predominating requisites in building Moline-Knight cars.

MOLINE KNIGHT

For those who demand luxurious comfort

The 60-inch semi-elliptic rear springs with Truffault-Hartford shock absorbers insure comfortable riding.

The seats are wide, deep and comfortable—and the distinctive streamline body marks the Moline-Knight as a car of class.

You will appreciate the instantaneous getaway and the smooth even pull of the powerful Moline-Knight engine. The power actually increases with use.

It is the "no-waste and up-keep-reduced-to-the-minimum car"—no carbon—no valves to clog or grind—less consumption of fuel per horsepower—simpler parts, fewer parts, less to get out of order—economy.

The Moline-Knight gives you a smooth even pull with quick acceleration, without laboring—just a velvety feeling of steady resistless power.

Power—Endurance Economy—Quality

In the Moline-Knight you will get the same motor that ran 337 hours without a stop or adjustment on the testing block of the Automobile Club of America, New York. During this test it made a remarkable record for power, economy and endurance. (Send for Official A. C. A. Report.)

We have compiled illustrated booklets containing specifications and just the information you want in condensed form. Write us that you are interested and we will send you these booklets by return mail.

Dealers We will require a limited number of additional dealers to help us market our 1200 Moline-Knight cars—high grade men who have been selling high priced cars. Write at once for advance information regarding Roadster, Sedan and Limousine to be added to the Moline-Knight line.

Moline Automobile Company

On the Crest of the Wave of Popularity—

Armour's Grape Juice

By reason of its purity, its wholesomeness and its delicious *natural* flavor.

Unfermented, undiluted, *unsweetened*—it is just the rich juice of choice Concord grapes pressed when freshly picked. For hot weather drinks, sherbet, punch, and many other desserts.

If your dealer cannot supply you we will send you a dozen pints for $3.00 or a dozen quarts for $5.50.

The Effect of the War on American Business

By Isaac F. Marcosson

ILLUSTRATED BY WALTER J. ENRIGHT

"WHAT will be the effect of the war on American business?" After the first shock of horror over the conflict that is shaking Europe to its very roots, and aside from the moral and spiritual kinship that we naturally feel as part of the white man's civilization, this is the question uppermost in the mind of the United States to-day. It overshadows legislation, wipes out partisanship, provides the one common basis of concern in which all our people may share. For the warring nations cannot tamper with our territory, jeopardize our human life, blight our progress. Such is the high privilege of freedom from entangling alliances.

Though we may be immune from those diplomatic complications that engender international conflict, yet we are inseparably and intimately a part of the huge world-trade fabric now facing the most serious crisis in all its romantic history.

Countries like England, Germany, France, Austria, and Russia, with whom we do vast business and who, in turn, provide us and many other peoples with needed supplies, have suddenly turned from useful pursuits to ruthless devastation. Their factories are silent, their harvests ungarnered, their commercial ardor abated, their merchant marine inert in friendly ports or already prizes of war. Notwithstanding all this cessation, life pulses on.

Hunger, like gold, knows neither flag nor creed. We alone, of all the great powers, stand at the universal trade counter, ready to do business. We must take up the work of peace that the warrior has laid down.

How, then, shall we fare in this dramatic shifting of the sources and the agencies of supply? What will be our new place in the whole drama of international barter? What will be the ultimate economic advantage—if any—to us?

Many difficulties lie in the way of any attempt to answer these queries. In the first place, this article is written only a week after the actual outbreak of war. No man can tell how long it will last; what havoc will be wrought. On its duration and on the terms of peace will partly depend the extent to which our business will be affected. If the German fleet, for instance, is annihilated or put out of commission at the outset, the high seas will be open to immediate commerce, and this will be a great stimulus to our exports. Everything is uncertain and speculation is the only alternative. A necessarily swift canvass of the situation, however, reveals the predominating opinion that a vast opportunity for trade expansion confronts us.

Behind whatever prospect lies before us in this thrilling emergency is the feeling that we will not willfully seek to capitalize a world tragedy for selfish personal profit as did that wily founder of the English branch of the Rothschilds after the battle of Waterloo. Rather is the opportunity translated into terms of responsibility to the whole world, into a duty to all humanity.

Although this vast region lies at our very feet, it has taken a great and devastating European struggle to give us the adequate commercial opening there that long ago should have been ours

The Paralysis of World Markets

BEFORE we go into any detailed consideration of the questions that face American business men as a result of the war, it is well to consider for a moment the extraordinary and unprecedented conditions that obtain. They have an important bearing on our new commercial destiny.

For the first time in world upheaval, even including that epoch when Napoleon bestrode Europe like a Colossus, all the machinery of exchange was stopped at the beginning of hostilities. As I write these lines every Stock Exchange, including that of London—the heart of finance—is closed. Thus there is no medium for foreign exchange; in fact, no exchange. Without such economic engineery there can be no trading between nations save with an actual interchange of money. Credit is liquid and it cannot flow when the channels are blocked. Drastic as it seems, this shutdown of exchanges was nevertheless a heroic measure of conservation, for it prevented disastrous panic.

In the second place, there is no commanding neutral nation in Europe. For the moment Italy is free from war, but by the time this article appears she may be involved in the Titanic struggle. Japan is the only manufacturing country, save ours, that continues normal; but she, too, will doubtless be drawn into action as an ally of Great Britain.

The net result, therefore, is that the United States presents the amazing spectacle of being the only great power absolutely at peace with all her sisters and able to transact business. If, by the grim circumstance of war, it was necessary for one nation to be so peculiarly isolated, it is indeed fortunate that it happened to be ours. No other land is so rich in resources; none so self-sufficient. We export staples and our imports are mainly luxuries.

This naturally brings us to the situation at home: to our fitness to take up the burdens that war will impose and to meet the losses that a temporary stoppage of revenue from the belligerents automatically brings about.

Despite the depression in our business, due in the main to political activity, and in the face of a long liquidation, we met the shock of the war with a serenity that again proved the fundamental soundness of the country.

America Sustains World Credit

COMBINED with this was a new international financial distinction because the New York Stock Exchange remained open after all its foreign colleagues had yielded to expediency. During that period Yankee shoulders carried the world's financial obligations. To have continued this costly exercise would have courted trouble, because European investors were dumping their securities on the market in a frenzy to realize on them.

The whole country, with characteristic energy, rose to the situation. Coincident with the closing of Stock Exchanges in the East and West came a check on the outflow of gold, the creation of Clearing House certificates, which at once safeguarded the specie supply, the restriction of withdrawals from savings banks, and the issuance by the Government of adequate new emergency currency. Washington and Wall Street, forgetting past grievances and prejudices, worked shoulder to shoulder for the common good.

Instead of depletion and fear, there were credit and confidence. If the war was to mean hardship and loss to us, here were the agencies to resist disaster. If it proved to be an ill wind that blew us good, we were equipped to take advantage. In a word, we were ready for any fate.

Having taken this hurried bird's-eye view of the conspicuous events attending the greatest crisis in the world's affairs, let us now see how American business views the situation and is affected by it.

Of course there are two sides. The immediate effect of the war in those quarters vitally concerned in foreign commerce, especially cotton and wheat—the great international crops—was destructive. The exporter, for example, who saw his consignments piling up on wharves with no means of transporting them, who

Digitized by Google

It is absolutely certain that practically all of Germany's expanding export trade will be throttled

visioned his cargoes afloat in ships that were perhaps the prey of hostile fleets, who remembered his shipments in European warehouses menaced by lead, fire, and hate, and who heard all the while the American farmer, back home, clamoring for his money, had good grounds for pessimism. He agreed readily with General Sherman's celebrated definition of war.

But even in this early hour of his deepest gloom came the reassurance that promised good out of what seemed to be impending evil. The case of cotton will illustrate. As these lines are written comes a pledge of nearly half a billion dollars from New York bankers to support this vast staple; the guarantee of united Government aid in warehousing against the time when an American fleet can haul the huge exports, and the growing feeling of confidence in authoritative quarters best expressed by the president of one of New York's largest commercial banks, who had just returned from a trip through the cotton-growing section and who said:

"The new and increased demand for American textiles will use up the crop more quickly than the most optimistic may now expect. The consumption in American mills, due to the inevitable demand from the Latin-American, African, and Asiatic centers, is bound to increase, and I look for an early resumption of spinning in England.

"The great effect of the European war on the cotton trade, as I see it, is that New York will now become the principal cotton market of the world. Liverpool has lost its premiership, never to be regained."

Time for the Larger Vision

LESS gloomy than the grain factors are those manufacturers dependent upon imports from the warring countries for the production of their output. With commendable resource they are already turning to other regions; or, with true American inventiveness, building up native sources of supply.

For every pessimistic view you get a score of optimistic expressions. The dread existing in those quarters where the effect of the war has been felt immediately is offset by a bigger outlook that comprehends a whole new trade conquest of South America, South Africa, Australia, and the Far East. It sees beyond the troubles of to-day far into the benefits of to-morrow, of next year, of coming decades. It beholds an expanding export map on which the sun of our business enterprise will never set. It is, indeed, the time for the larger vision.

What might be called the keynote sentiment of this whole situation is to be found in the kindling slogan flung from the masthead of the "American Exporter" hot on the heels of war. Here it is:

"Tremendous responsibilities and opportunities face the American manufacturer as a result of the European cataclysm. Germany is isolated, her merchant shipping idle, her manufacturers cut off from all the world. France, England, Austria, are but little less crippled. The world to-day looks to the United States not only for food but for all kinds of goods and machinery necessary to civilization. Vast neutral markets of the world, including Latin America, the Orient, Australia, South Africa, are to-day dependent upon this country for all sorts of goods heretofore supplied by Germany and England.

"Every consideration compels the American manufacturer to face the situation calmly, deliberately, and, above all, with inspired courage to give a good account of himself and his country's industrial resources.

"Temporary disorganization of shipping, finance, and insurance is only to be expected, but that is a matter of days, possibly weeks. The increased demand and opportunity for American goods will be matters of months and years. The American flag will be restored to the high seas as the result of the withdrawal of Germany's. A whole new epoch of American business expansion is about to begin."

This sentiment, I might add, merely echoes the disinterested view of Sir George Paish, editor of the "Statist" of London, who is perhaps the foremost economist of our times. While Europe was still gasping at the Kaiser's first defiance, he went on record as saying:

"The great war in Europe will probably bring economic advantages to the United States. Almost every industry should derive more or less advantage. Should the American people take advantage of the golden opportunity afforded them by the outbreak of war, it will mean not diminished but increased prosperity for the United States."

Facts That Support American Optimism

THAT more than mere optimism attaches to these sentiments is attested in various concrete ways. On the day after Germany declared war against France one of the leading American steel producers received an order by cable for an immense shipment of structural bridge work to Australia, and at very advantageous prices. This contract had originally been made with Germany and was canceled on account of the war. The incident is typical of what is expected to follow on a very large scale.

Germany has been our greatest rival in steel output. For years she has been able to lay down steel work on the Pacific Coast cheaper than we could. The Kaiser's foundries have been selling more than $20,000,000 worth of machinery, electrical goods, sewing machines, and hardware in Great Britain. We have been importing more than $8,000,000 worth of machinery and cutlery from them. It is reasonable to expect that the great bulk of this business will now turn to the United States producer.

As a matter of fact, many farsighted American business men believe that we can, for the time at least, get a part of Germany's total export trade, amounting to $1,123,000,000, with the United Kingdom and all other British possessions. As one exporter expressed it: "It is absolutely certain that practically all of Germany's expanding export trade will be throttled. She will even lack the means of transporting such of her products as limited factory facilities during the war may turn out. The drafting of hundreds of thousands of industrial workers into the army will almost annihilate German industrial productiveness. Her trade intercourse with those countries against whom she is warring is at an end for a considerable time, and when peace does come it seems likely that England and France will patronize the United States —all things being equal—in preference to such a hated foe. Germany has really put a commercial price on her head, and the United States is in a fair way to reap an unsolicited trade harvest which she planted. In a word, the trade-mark 'Made in America' is very likely to overshadow the familiar 'Made in Germany' the world over."

Straws That Indicate the Export Wind

ANOTHER straw that shows which way the export winds are blowing is the fact that one large manufacturing firm in New York received eighteen cables from South America one day during the first week in August ordering plumbing supplies. Another establishment received five cables at the same time, ordering paint. All of these orders had been originally placed with German firms.

On the same day, too, the Lloyd-Brazileiro, which operates steamship lines between New York and South America, placed an order for 36,000 tons of American coal. This coal had originally been procured in Wales. The Cardiff loss will be the American gain. What is happening with coal will happen with scores of other commodities everywhere.

One new source of direct export is not to be overlooked. Germany, England, and France for years have imported American goods and then exported them in turn to other countries. We now have the chance to export direct to those quarters—Egypt, Scandinavia, British South and German East Africa—and to reap the larger profit ourselves.

We alone of all the great powers stand at the universal trade center ready to do business

The Rich Prize of South American Trade

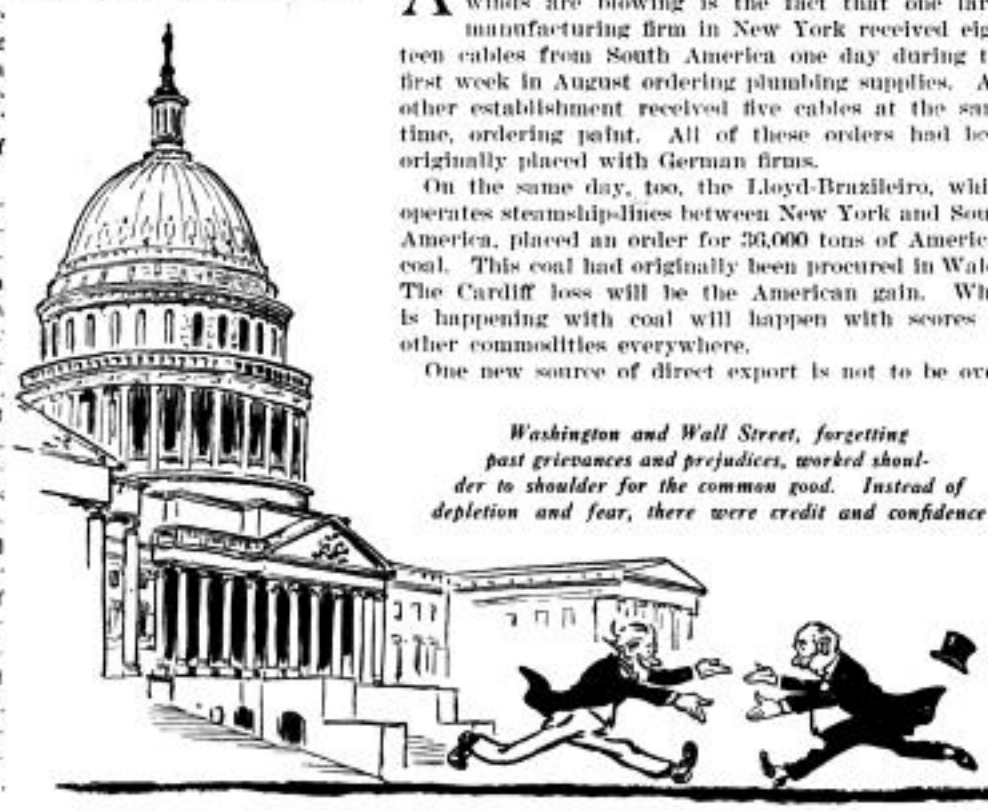
WHATEVER conflict of opinion (there is really not very much) may exist about the war's benefit to our business in other directions, there is no difference concerning what will happen to us in South America. The belief is emphatic and unanimous that here is the richest trade prize of the war. Although this vast region lies at our very feet, and is bound to us by geographical and sentimental ties, by a curious irony it has taken a great and devastating European struggle to give us the adequate commercial opening there that long ago should have been ours.

There is no denying the fact that for years Great Britain and Germany have outclassed us commercially in South America. Great Britain, for example, has averaged an annual export business of $273,000,000 to the ten republics; Germany, $180,000,000, while we have rolled up a total of $153,000,000. France's volume was $83,000,000.

One reason for our lagging has been a lack of transportation facilities; the second, our failure to adapt our products to the Latin-American requirements. Here are two concrete examples: The South American, like the Parisian, prefers long, pointed shoes, which are directly the reverse of the American makes. With a full knowledge of this difference, our shoe manufacturers in the main have insisted upon trying to sell him their standard type. The result is that other countries have profited by our omission.

We Shall Adapt Our Products

IN THE second place, Europe and South America use the metric system; we use the inch and the foot system, and sell our goods by it. It stands to reason that South America prefers to buy goods adapted to its own system of measurements. Although this fact has been brought home repeatedly to our mills, they have refused to change their looms.



In the natural course of events, Great Britain and Germany, and especially the latter through her extraordinarily thorough system of colonial trade education, which, among other things, requires the humblest clerks in banks to know at least three foreign languages, would have greatly increased their South American trade lead on us.

Now comes a war which undoes (it is impossible to say for how long) all this European business crusading and upbuilding. The South American republics not only look to us for supplies; they actually demand them.

As one eminent Pan-American authority puts it: "The United States has a grave duty as well as a great opportunity in its new relation to South America. Europe's share of her trade is now temporarily cut off, placing the principal ports of South America practically in a condition of absolute blockade. As nearly all the European commerce is carried in British and German bottoms, now suddenly withdrawn from the seas, it can be realized how acute the situation is. Something must be done at once to relieve it.

"Quick and comprehensive action by the commercial and financial interests of the

Danger!

Being the Log of Captain John Sirius

By Sir A. Conan Doyle—Part II

ILLUSTRATED BY HENRY REUTERDAHL

IN THIS story, written four months before the outbreak of the present European war, Sir Arthur Conan Doyle suggests that England's strength may be shattered in a month; he tells, moreover, how it could be done. Four submarines, belonging to a minor power, are blowing up grain ships as they near the British Isles. England faces starvation. In the first chapter, printed last week, six ships carrying food for Britain are destroyed. The second day of the war dawns and Captain John Sirius, commander of the enemy's undersea flotilla, has come to the surface to find that commerce has all but fled the Channel

I HAVE no doubt that a good many ships which had taken refuge in the French ports at the first alarm had run across and got safely up the river in the night. Of course I could have attacked them, but I do not care to take risks—and there are always risks for a submarine at night. But one had miscalculated his time, and there she was, just abreast of Warden Point, when the daylight disclosed her to us. In an instant we were after her. It was a near thing, for she was a flyer, and could do two miles to our one; but we just reached her as she went swashing by. She saw us at the last moment, for I attacked her awash, since otherwise we could not have had the pace to reach her. She swung away and the first torpedo missed, but the second took her full under the counter. Heavens, what a smash! The whole stern seemed to go aloft. I drew off and watched her sink. She went down in seven minutes, leaving her masts and funnels over the water and a cluster of her people holding on to them. She was the *Virginia* of the Bibby Line—twelve thousand tons—and laden, like the others, with foodstuffs from the East. The whole surface of the sea was covered with the floating grain. "John Bull will have to take up a hole or two of his belt if this goes on," said Vornal, as we watched the scene.

AND it was at that moment that the very worst danger occurred that could befall us. I tremble now when I think how our glorious voyage might have been nipped in the bud. I had freed the hatch of my tower, and was looking at the boats of the *Virginia* with Vornal beside me, when there was a swish and a terrific splash in the water beside us, which covered us both with spray. We looked up, and you can imagine our feelings when we saw an aeroplane hovering a few hundred feet above us like a hawk. With its silencer, it was perfectly noiseless, and had its bomb not fallen into the sea we should never have known what had destroyed us. She was circling round in the hope of dropping a second one, but we shoved on all speed ahead, crammed down the rudders, and vanished into the side of a roller. I kept the deflection indicator falling until I had put fifty good feet of water between the aeroplane and ourselves, for I knew well how deep they can see under the surface. However, we soon threw her off our track, and when we came to the surface near Margate there was no sign of her, unless she was one of several which we saw hovering over Herne Bay.

THERE was not a ship in the offing save a few small coasters and little thousand-ton steamers, which were beneath my notice. For several hours I lay submerged with a blank periscope. Then I had an inspiration. Orders had been Marconied to every foolship to lie in French waters and dash across after dark. I was as sure of it as if they had been recorded in our own receiver. Well, if they were there, that was where I should be also. I blew out the tanks and rose, for there was no sign of any warship near. They had some good system of signaling from the shore, however, for I had not got to the North Foreland before three destroyers came foaming after me, all converging from different directions. They had about as good a chance of catching me as three spaniels would of overtaking a porpoise. Out of pure bravado—I know it was very wrong—I waited until they were actually within gunshot. Then I sank and we saw each other no more.

It is, as I have said, a shallow, sandy coast, and submarine navigation is very difficult. The worst mishap that can befall a boat is to bury its nose in the side of a sand drift and be held there. Such an accident might have been the end of our boat, though with our Fluess cylinders and electric lamps we should have found no difficulty in getting out at the air lock and in walking ashore across the bed of the ocean. As it was, however, I was able, thanks to our excellent charts, to keep the channel and so to gain the open straits. There we rose about midday, but, observing a hydroplane at no great distance, we sank again for half an hour. When we came up for the second time, all was peaceful around us, and the English coast was lining the whole western horizon. We kept outside the Goodwins and straight down Channel until we saw a line of black dots in front of us, which I knew to be the Dover-Calais torpedo-boat cordon. When two miles distant we dived and came up again seven miles to the southwest, without one of them dreaming that we had been within thirty feet of their keels.

When we rose, a large steamer flying the German flag was within half a mile of us. It was the North German Lloyd *Altona*, from New York to Bremen. I raised our whole hull and dipped our flag to her. It was amusing to see the amazement of her people at what they must have regarded as our unparalleled impudence in those English-swept waters. They cheered us heartily, and the tricolor flag was dipped in greeting as they went roaring past us. Then I stood in to the French coast.

It was exactly as I had expected. There were three great British steamers lying at anchor in Boulogne, outer harbor. They were the *Ceawar*, the *King of the East*, and the *Pathfinder*, none less than ten thousand tons. I suppose they thought they were safe in French waters, but what did I care about three-mile limits and international law? The view of my Government was that England was blockaded, food contraband, and vessels carrying it to be destroyed. The lawyers could argue about it afterward. My business was to starve the enemy any way I could. Within an hour the three ships were under the waves and the *Iota* was steaming down the Picardy coast, looking for fresh victims. The Channel was covered with English torpedo boats buzzing and whirling like a cloud of midges. How they thought they could hurt me I cannot imagine, unless by accident I were to come up underneath one of them. More dangerous were the aeroplanes which circled here and there.

THE water being calm, I had several times to descend as deep as a hundred feet before I was sure that I was out of their sight. After I had blown up the three ships at Boulogne I saw two aeroplanes flying down Channel, and I knew that they would head off any vessels which were coming up. There was one very large white steamer lying off Havre, but she steamed west before I could reach her. I dare say Stephan or one of the others would get her before long. But those infernal aeroplanes spoiled our sport for that day. Not another steamer did I see, save the never-ending torpedo boats. I consoled myself with the reflection, however, that no food was passing me on its way to London. That was what I was there for, after all. If I could do it without spending my torpedoes, all the better. Up to date I had fired ten of them and sunk nine steamers, so I had not wasted my weapons. That night I came back to the Kent coast and lay upon the bottom in shallow water near Dungeness.

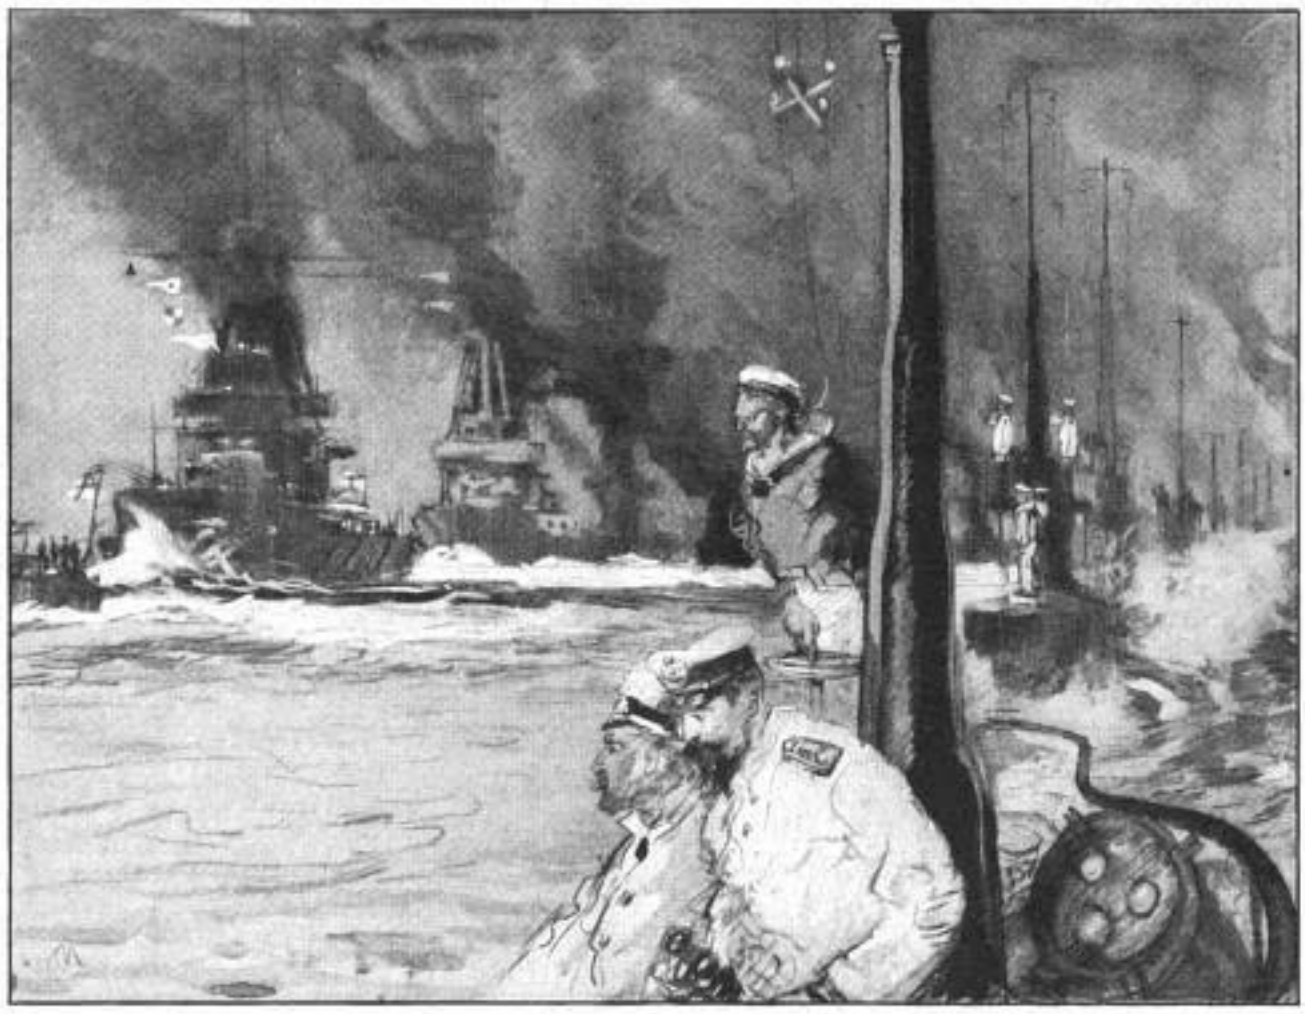
WE WERE all trimmed and ready at the first break of day, for I expected to catch some ships which had tried to make the Thames in the darkness and had miscalculated their time. Sure enough, there was a great steamer coming up Channel and flying the American flag. It was all the same to me what flag she flew so long as she was engaged in conveying contraband of war to the British Isles. There were no torpedo boats about at the moment, so I ran out on the surface and fired a shot across her bows. She seemed inclined to go on, so I put a second one just above her water line on her port bow. She stopped then and a very angry man began to gesticulate from the bridge. I ran the *Iota* almost alongside. "Are you the captain?" I asked.

"What the——" I won't attempt to reproduce his language.

"You have foodstuffs on board?" I said.

"It's an American ship, you blind beetle!" he cried. "Can't you see the flag? It's the *Vermondia* of Boston."

"Sorry, Captain," I answered. "I have really no time for words. Those shots of mine will bring the torpedo boats, and I dare say at this very moment



It was the queenly Olympic of the White Star Line . . . and I knew that she had her deathblow. She dived bow foremost, and there was a terrific explosion, which sent one of the funnels into the air

Digitized by Google

your wireless is making trouble for me. Get your people into the boats."

I had to show him I was not bluffing, so I drew off and began putting shells into him just on the water line. When I had knocked six holes in his ship he was very busy on his boats. I fired twenty shots altogether, and no torpedo was needed, for she was lying over with a terrible list to port, and presently came right on to her side. There she lay for two or three minutes before she foundered. There were eight boats crammed with people lying round her when she went down. I believe everybody was saved, but I could not wait to inquire. From all quarters the poor old panting, useless war vessels were hurrying. I filled my tanks, ran our bows under, and came up fifteen miles to the south. Of course, I knew there would be a big row afterward—as there was—but that did not help the starving crowds round the London bakers, who only saved their skins, poor devils, by explaining to the mob that they had nothing to bake.

We returned to port upon the surface, steaming through the whole British fleet as we passed up the North Sea. The crews clustered thick along the sides of the vessels to watch us

BY THIS time I was becoming rather anxious, as you can imagine, to know what was going on in the world and what England was thinking about it all. I ran alongside a fishing boat, therefore, and ordered them to give up their papers. Unfortunately, they had none, except a rag of an evening paper, which was full of nothing but betting news. In a second attempt I came alongside a small yachting party from Eastbourne, who were frightened to death at our sudden appearance out of the depths. From them we were lucky enough to get the London "Courier" of that very morning.

It was interesting reading—so interesting that I had to announce it all to the crew. Of course, you know the British style of headline, which gives you all the news at a glance. It seemed to me that the whole paper was headlines, it was in such a state of excitement. Hardly a word about me and my flotilla. We were on the second page. The first one began something like this:

CAPTURE OF BLANKENBERG!

DESTRUCTION OF ENEMY'S FLEET

BURNING OF TOWN

TRAWLERS DESTROY MINE FIELD

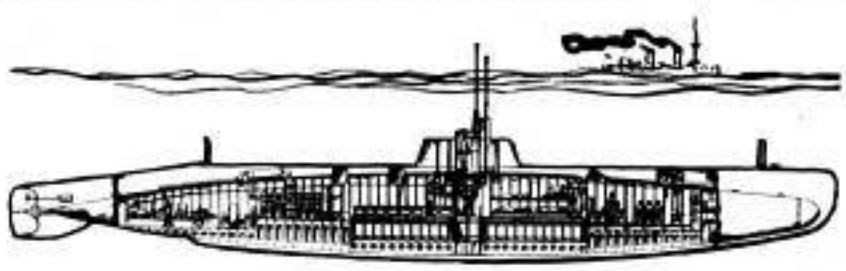
LOSS OF TWO BATTLESHIPS

IS IT THE END?

Of course, what I had foreseen had occurred. The town was actually occupied by the British. And they thought it was the end! We would see about that.

On the round-the-corner page, at the back of the glorious resonant leaders, there was a little column which read like this:

"HOSTILE SUBMARINES



"Several of the enemy's submarines are at sea, and have inflicted some appreciable damage upon our merchant ships. The danger spots upon Monday and the greater part of Tuesday appear to have been the mouth of the Thames and the western entrance to the Solent. On Monday, between the Nore and Margate, there were sunk five large steamers, the *Adela*, *Moldavia*, *Cuso*, *Cormorant*, and *Maid of Athens*, particulars of which will be found below. Near Ventnor on the same day was sunk the *Verulam*, from Bombay. On Tuesday the *Virginia*, *Cæsar*, *King of the East*, and *Pathfinder* were destroyed between the Foreland and Boulogne. The latter three were actually lying in French waters, and the most energetic representations have been made by the Government of the Republic. On the same day *The Queen of Sheba*, *Orontes*, *Diana*, and *Atalanta* were destroyed near the Needles. Wireless messages have stopped all ingoing cargo ships from coming up Channel, but unfortunately there is evidence that at least two of the enemy's submarines are in the west. Four cattle ships from Dublin to Liverpool were sunk yesterday evening, while three Bristol-bound steamers, *The Hilda*, *Mercury*, and *Dacia Tower*, were blown up in the neighborhood of Lundy Island. Commerce has, so far as possible, been diverted into safer channels, but in the meantime, however vexatious these incidents may be, and however grievous the loss both to the owners and to Lloyd's, we may console ourselves by the reflection that since a submarine cannot keep the sea for more than ten days without refitting, and since the base has been captured, there must come a speedy term to these depredations."

So much for the "Courier's" account of our proceedings. Another small paragraph was, however, more eloquent:

"The price of wheat," it said, "which stood at thirty-five shillings a week before the declaration of war, was quoted yesterday on the Baltic at fifty-two. Maize has gone from twenty-one to thirty-seven, barley from nineteen to thirty-five, sugar (foreign granulated) from eleven shillings and threepence to nineteen shillings and sixpence."

"Good, my lads!" said I when I read it to the crew. "I can assure you that those few lines will prove to mean more than the whole page about the fall of Blankenberg. Now let us get down Channel and send those prices up a little higher."

ALL traffic had stopped for London—not so bad for the little *Iota*—and we did not see a steamer that was worth a torpedo between Dungeness and the Isle of Wight. There I called Stephan up by wireless, and by seven o'clock we were actually lying side by side in a smooth, rolling sea—Hengistbury Head bearing N.N.W. and about five miles distant. The two crews clustered on the whalebacks and shouted their joy at seeing friendly faces once more. Stephan had done extraordinarily well. I had, of course, read in the London paper of his four ships on Tuesday, but he had sunk no fewer than seven since, for many of those which should have come to the Thames had tried to make Southampton. Of the seven, one was of twenty thousand tons, a grain ship from America; a second was a grain ship from the Black Sea, and two others were great liners from South Africa. I congratulated Stephan with all my heart upon his splendid achievement. Then, as we had been seen by a destroyer which was approaching at a great pace, we both dived, coming up again off the Needles, where we spent the night in company. We could not visit each other, since we had no boat, but we lay so nearly alongside that we were able, Stephan and I, to talk from hatch to hatch and so make our plans.

He had shot away more than half his torpedoes and so had I, and yet we were very averse from returning to our base so long as our oil held out. I told him of my experience with the Boston steamer, and we mutually agreed to sink the ships by gunfire in future so far as possible. I remember old Horll saying: "What use is a gun aboard a submarine?" We were about to show. I read the English paper to Stephan by the light of my electric torch, and we both agreed that few ships would now come up the Channel. That sentence about diverting commerce to safer routes could only mean that the ships would go round the north of Ireland and unload at Glasgow. Oh, for two more ships to stop that entrance! Heavens, what *would* England have done against a foe with thirty or forty submarines, since we only needed six instead of four to complete her destruction!

AFTER much talk we decided that the best plan would be that I should dispatch a cipher telegram next morning from a French port to tell them to send the four second-rate boats to cruise off the north of Ireland and west of Scotland. Then when I had done this I should move down Channel with Stephan and operate at the mouth, while the other two boats could work in the Irish Sea. Having made these plans, I set off across the Channel in the early morning, reaching the small village of Etretat, in Brittany. There I got off my telegram and then laid my course for Falmouth, passing under the keels of two British cruisers which were making eagerly for Etretat, having heard by wireless that we were there.

Halfway down Channel we had trouble with a short circuit in our electric engines, and were compelled to run on the surface for several hours while we replaced one of the cam shafts and renewed some washers. It was a ticklish time, for had a torpedo boat come upon us we could not have dived. The perfect submarine of the future will surely have some alternative engines for such an emergency. However, by the skill of Engineer Morro we got things going once more. All the time we lay there I saw a hydroplane floating between us and the British coast. I can understand how a mouse feels when it is in a tuft of grass and sees a hawk high up in the heavens. However, all went well; the mouse became a water rat, it wagged its tail in derision at the poor blind old hawk, and it dived down into a nice, safe, green, quiet world where there was nothing to injure it.

It was on Wednesday night that the *Iota* crossed to Etretat. It was Friday afternoon before we had reached our new cruising ground. Only one large steamer did I see upon our way. The terror we had caused had cleared the Channel. This big boat had a clever captain on board. His tactics were excellent and took him in safety to the Thames. He came zigzagging up Channel at twenty-five knots, shooting off from his course at all sorts of unexpected angles. With our slow pace we could not catch him, nor could we calculate his line so as to cut him off. Of course, he had never seen us, but he judged, and judged rightly, that wherever we were those were the tactics by which he had the best chance of getting past. He deserved his success.

BUT, of course, it is only in a wide channel that such things can be done. Had I met him in the mouth of the Thames there would have been a different story to tell. As I approached Falmouth I destroyed a three-thousand-ton boat from Cork, laden with butter and cheese. It was my only success for three days.

That night (Friday, April 16) I called up Stephan, but received no reply. As I was within a few miles of our rendezvous, and as he would not be cruising after dark, I was puzzled to account for his silence. I could only imagine that his wireless was deranged. But, alas! I was soon to find the true reason from a copy of the "Western Morning News," which I obtained from a Brixham trawler. The *Kappa*, with her gallant commander and crew, were at the bottom of the English Channel.

It appeared from this account that after I

Digitized by Google

had parted from him he had met and sunk no fewer than five vessels. I gathered this to be his work, since all of them were by gunfire and all were on the south coast of Dorset or Devon. How he met his fate was stated in a short telegram which was headed "Sinking of a Hostile Submarine." It was marked "Falmouth," and ran thus:

"The P. and O. mail steamer *Macedonia* came into this port last night with five shell holes between wind and water. She reports having been attacked by a hostile submarine ten miles to the southeast of the Lizard. Instead of using her torpedoes, the submarine for some reason approached upon the surface and fired five shots from a semiautomatic twelve-pounder gun. She was evidently under the impression that the *Macedonia* was unarmed. As a matter of fact, being warned of the presence of submarines in the Channel, the *Macedonia* had mounted her armament as an auxiliary cruiser. She opened fire with two quick-firers and blew away the conning tower of the submarine. It is probable that the shells went right through her, as she sank at once with her hatches open. The *Macedonia* was only kept afloat by her pumps."

Such was the end of the *Kappa* and my gallant friend, Commander Stephan. His best epitaph was in a corner of the same paper, and was headed "Mark Lane." It ran:

"Wheat (average) 65, maize 48, barley 70."

WELL, if Stephan was gone there was the more need for me to show energy. My plans were quickly taken, but they were comprehensive. All that day (Saturday) I passed down the Cornish coast and round Land's End, getting two steamers on the way. I had learned from Stephan's fate that it was better to torpedo the large craft, but I was aware that the auxiliary cruisers of the British Government were all over ten thousand tons, so that for all ships under that size it was safe to use my gun. Both these craft, the *Yelland* and the *Playboy*—the latter an American ship—were perfectly harmless, so I came up within a hundred yards of them and speedily sank them, after allowing their people to get into the boats. Some other steamers lay farther out, but I was so eager to make my new arrangements that I did not go out of my course to molest them. Just before sunset, however, so magnificent a prey came within my radius of action that I could not possibly refuse her.

No sailor could fail to recognize that glorious monarch of the sea, with her four cream funnels tipped with black, her huge black sides, her red bilges, and her high white top hamper, roaring up channel at twenty-three knots and carrying her forty-five thousand tons as lightly as if she were a five-ton motor boat. It was the queenly *Olympic* of the White Star Line—once the largest and still the comeliest of liners. What a picture she made, with the blue Cornish sea creaming round her giant forefoot, and the pink western sky with one evening star forming the background to her noble lines!

SHE was about five miles off when we dived to cut her off. My calculation was exact. As we came abreast we loosed our torpedo and struck her fair. We swirled round with the concussion of the water. I saw her in my periscope list over on her side, and I knew that she had her deathblow. She settled down slowly, and there was plenty of time to save her people. The sea was dotted with her boats. When I got about three miles off I rose to the surface, and the whole crew clustered up to see the wonderful sight. She dived bow foremost, and there was a terrific explosion, which sent one of the funnels into the air. I suppose we should have cheered—somehow none of us felt like cheering. We were all keen sailors, and it went to our hearts to see such a ship go down like a broken eggshell. I gave a gruff order, and all were at their posts again while we headed northwest. Once round the Land's End I called up my two consorts, and we met next day at Hartland Point, the south end of Bideford Bay. For the moment the Channel was clear, but the English could not know it, and I reckoned that the loss of the *Olympic* would stop all ships for a day or two at least.

HAVING assembled the *Delta* and *Epsilon*, one on each side of me, I received reports from Miriam and Var, the respective commanders. Each had expended twelve torpedoes, and between them they had sunk twenty-two steamers. One man had been killed by the machinery on board of the *Delta*, and two had been burned by the ignition of some oil on the *Epsilon*. I took these injured men on board, and I gave each of the boats one of my crew. I also divided my spare oil, my provisions, and my torpedoes among them, though we had the greatest possible difficulty in those crank vessels in transferring them from one to the other. However, by ten o'clock it was done, and the two vessels were in condition to keep the sea for another ten days. For my part, with only two torpedoes left, I headed north up the Irish Sea. One of my torpedoes I expended that evening upon a cattle ship making for Milford Haven. Late at night, being abreast of Holyhead, I called upon my four northern boats, but without reply. Their Marconi range is very limited. About three in the afternoon of the next day I had a feeble answer. It was a great relief to me to find that my telegraphic instructions had reached them and that they were on their station. Before evening we all assembled in the lee of Sanda Island, in the Mull of Kintyre. I felt an admiral indeed when I saw my five whalebacks all in a row. Panza's report was excellent. They had come round by the Pentland Firth and reached their cruising ground on the fourth day. Already they had destroyed twenty vessels without any mishap. I ordered the *Beta* to divide her oil and torpedoes among the other three, so that they were in good condition to continue their cruise. Then the *Beta* and I headed for home, reaching our base upon Sunday, April 25. Off Cape Wrath I picked up a paper from a small schooner.

"Wheat, 84; maize, 60; barley, 62." What were battles and bombardments compared to that!

The whole coast of Norland was closely blockaded by cordon within cordon, and every port, even the smallest, held by the British. But why should they suspect my modest confectioner's villa more than any other of the ten thousand houses that face the sea? I was glad when I picked up its homely white front in my periscope. That night I landed and found my stores intact. Before morning the *Beta* reported itself, for we had the windows lit as a guide.

It is not for me to recount the messages which I found waiting for me at my humble headquarters. They shall ever remain as the patents of nobility of my family. Among others was that never-to-be-forgotten salutation from my King. He desired me to present myself at Hauptville, but for once I took it upon myself to disobey his commands. It took me two days—or rather two nights, for we sank ourselves during the daylight hours—to get all our stores on board, but my presence was needful every minute of the time. On the third morning, at four o'clock, the *Beta* and my own little flagship were at sea once more, bound for our original station off the mouth of the Thames.

I HAD no time to read our papers while I was refitting, but I gathered the news after we got under way. The British occupied all our ports, but otherwise we had not suffered at all, since we have excellent railway communications with Europe. Prices had altered little, and our industries continued as before. There was talk of a British invasion, but this I knew to be absolute nonsense, for the British must have learned by this time that it would be sheer murder to send transports full of soldiers to sea in the face of submarines. When they have a tunnel they can use their fine expeditionary force upon the Continent, but until then it might just as well not exist so far as Europe is concerned. My own country, therefore, was in good case and had nothing to fear. Great Britain, however, was already feeling my grip upon her throat. As in normal times four-fifths of her food is imported, prices were rising by leaps and bounds. The supplies in the country were beginning to show signs of depletion, while little was coming in to replace them. The insurance at Lloyd's had risen to a figure which made the price of food prohibitive to the mass of the people by the time it had reached the market. The loaf, which under ordinary circumstances stood at fivepence, was already at one and twopence. Beef was three shillings and fourpence a pound, and mutton two shillings and ninepence. Everything else was in proportion. The Government had acted with energy and offered a big bounty for corn to be planted at once. It could only be reaped five months hence, however, and long before then, as the papers pointed out, half the island would be dead from starvation.

STRONG appeals had been made to the patriotism of the people, and they were assured that the interference with trade was temporary, and that with a little patience all would be well. But already there was a marked rise in the death rate, especially among children, (*Continued on page 23*)

Good Morning, Mr. Mocking Bird

By WITTER BYNNER

Good morning, Mr. Mocking Bird.
"Your own good morning, sir, to you!"
There never was, upon my word,
A single song so true.

Yet I am told you pilfer songs,
Yes, any song you chance to hear,
And never doubt if it belongs
To you, you buccaneer.

"But tell me, sir, if I am deft
And add a song to my own store
And yet if that same song is left
Just as it was before,

"And if I fly about and love
Beauty as any bird has lief,
The song of whip-poor-will and dove
And thrush,—am I a thief?

"Of course, dear sir, you never heard
A song, a single *song, so true."*
Good morning, Mr. Mocking Bird.
"Good morning, sir, to you!"

Love and the Business

By George Davies

ILLUSTRATED BY ERNEST FUHR

IT WAS in the small, stuffy, back end of the "Essex Ten-Cent Store," Rosenhartz Brothers, proprietors on Grand Street, not far from Norfolk; this rear part was railed off to discriminate it as "the restaurant"; at one side there was a rickety balcony; on this balcony was a piano; at the piano during certain hours sat Plexo Makarenka, who most assuredly had the artistic temperament and no small degree of turbulent and fascinating talent.

Just at this particular time, however, the restaurant was receiving small patronage. Plexo Makarenka was across the street giving a lesson to the children of the delicatessen store. The girls behind the counters were only busy chaffing one another, for the customers were few. Rosenhartz Brothers, Nathan and Rudolf, sat at one of the pine tables, making no pretense of eating or drinking. Sam, the third partner, was absent in Peekskill, prospecting the ground with a view to starting a branch up there.

Nathan Rosenhartz was saying: "Sam has gone up that river on a fool job errand. What are we doing with starting up a new venture when we're losing the money on this one every day in the week, eh?"

"Get him back," was Rudolf's laconic answer.

"Get back the rain that washed the streets clean last week, eh? Sure he can't make no bargain for a place without both of us, but it's hard for him to be wasting the dollars going up there."

Rudolf nodded. Then he said slowly: "The other store is crowded. I came by just now, presently, and the women were packed like genuine American sardines in there." He laughed grimly.

NATHAN nodded back. "Yep. I was by there myself just now, too. Jammed like it was Christmas. We're too near to 'em, Rudolf. Ten doors only apart. It's too close."

Rudolf lifted his shoulders. "Competition can't be too close; besides, it was Mo' Shipway & Sons that came after us. We ain't to blame. It was our ground first."

"What are we goin' to do about it, eh?" asked Nathan in an even, lowered tone. "Shut up shop?"

"No."

"All right then; the sheriff'll do it for us. If that Moris, our nephew—"

But Nathan got no further, since his junior broke in with an ironical laugh: "Get out. Moris is in love; he ain't any good. Our brother's son is a dead cipher now. Here we were—we bachelors, all three—thinking to fix him up and make him our partner by and by, and so forth; and a girl jumps in and there you are."

"Ah, hush your talk!" exclaimed Nathan Rosenhartz; "he'll forget her maybe, don't you think?"

Rudolf shook his head. "No young feller's forgetting the girl that won't marry him because his folks don't smile her way."

"I ain't ever seen her even," Nathan remarked carelessly.

"Nor I. Sam seen her."

"Where did he see her?" Nathan raised his heavy eyes to his brother's face in some surprise.

"At the Greenwich Village Theatre."

"She playing there?"

RUDOLF said: "Trying to," then he laughed.

"What did Sam say to her anyhow?"

"'No good.' Sam said she had no first show of an idea of putting it over."

"Ah, no good! No good! These playhouse peoples! Why didn't he take up with that fine girl over there that waits in her papa's delicatessen?"

"Who knows that, brother?" was Rudolf's unbiased rejoinder. "Him going out of us here in a rage and putting all his cash in a pack and starting peddling down on Long Island!" cried Nathan angrily.

"He said he wasn't the first one to start millionairing with a pack, and the boy swore by Moses and Aaron, too, he'd make his pile and win Cecilia Messner all right without any of us or our ten-cent stores either!" Rudolf jingled a tin spoon and plate together as he spoke.

"We won't have no ten-cent store pretty soon at all," ejaculated Nathan Rosenhartz.

"Perhaps Sam'll grip on to a chance in Peekskill after all," Rudolf said testily.

"Perhaps. Them Shipways are the luck! Sometimes I think it's because Shipway married and had them four sons, eh?"

"Bosh!" retorted Rudolf Rosenhartz, throwing down the tin spoon.

"Anyhow, no sheriff'll set foot in here." The older man's lean hand came down hard on the table.

"Say now," the junior responded, "I been going over the books. We can come out clean if we stop *now*."

"Now! Not to-day? You don't mean to-day?"

"No," was the impatient response. "Don't be a fool. I mean next week, Friday night. See?"

"All right." The old man sighed. "It's pretty hard, just when we felt so sure of getting on top; so we would with the young blood in, but with the young blood pouring out on account of a girl—from the West Side, too, and a theatre girl, eh? It's hard." His bearded face sank in his open hands.

"Yes, it's hard. She's so stuck-up, though. If she'd have come over here and acted ladylike and so forth, I'd have gone in for taking her up, see? But not she. Moris said she'd never marry him s'long as he was partnering it with relatives that disapproved of her—so!"

NATHAN Rosenhartz may or may not have heard all this that his younger brother said. Presently he raised his head and looked around the long narrow store, a dull pathos distorting his wrinkled face.

"Well, by and by, Monday, I'll give 'em all notice, eh? The girls and Makarenka. Pshaw! Pshaw!" He got up then and passed his hand across his eyes. "I thought when we hired Makarenka, with those grand eyelashes of his, and that long hair curl, so, on his ear, and his music too, that we had 'em sure."

"Yes," Rudolf allowed. "So did I, brother; but we ain't been much better at putting it over, it seems, than Moris's girl. You might as well give Makarenka his walking ticket to-night, eh?"

"No. That ain't fair. But I guess I'll tell him to-morrow night."

"Yes. That's it. To-morrow night tell him."

"Say, it's tough, now, ain't it, to get broke up by them Shipways and a West Side girl?"

"It's rotten," was Rudolf's reply. "But there's anyways Sam and Peekskill."

"'Peekskill!'" repeated Nathan scornfully. "I'd die out of the hum and scrabble of Grand Street. Ach! don't talk to me no more. Never. I'll shut up here, but, so help me Lord of us all, I'll open again farther down the street, say three blocks or so."

"Come on now, here's some customers. Keep still."

"'Customers!'" echoed Nathan. "They're spies—spies from Shipway's, I know." But he smiled gayly as he walked forward to meet the supposed enemy.

SOME five hours earlier than this conversation between the two Rosenhartz brothers, say at seven o'clock that morning, their nephew, Moris Rosenhartz, stood stretching his neck on the wharf at the foot of Grand Street. The ferryboat *Fulton* was just docking, but although young Rosenhartz, guarding his pack, was posted near the wheel, his eager glances were turned back toward the city streets. Moris was clearly looking for some one—some one who immediately alighted from a cross-town car and walked unhesitatingly straight to him.

This was Cecilia Messner, the girl to whom Moris's uncles objected. She was quite an unnoticeable girl, clad in a brown skirt which clung to her young limbs in reckless outline, yellow waist with a brown bow at the low-cut throat. A sailor hat, set, it is true, at a very deft angle on top of her abundant and remarkable red-brown hair. This last, in loops without straggling ends, was softly blown by the early wind across her brow, eyes, and cheeks. The pale face was unpictorial and provoked no description until she spoke.

Then it was indeed a revelation.

"Ah! you have then come," cried the young peddler, laying one hand upon the girl's slim arm and lifting his heavy pack with the other, guiding her aboard the ferryboat.

"Sure," was her answer. "I promised. Do you want that I should cross over to Williamsburg with you then?"

Moris nodded as he scanned the cabin for a quiet corner, then took her to it, and both sat down.

"There! it's fifteen minutes to the good for us now, dear." His warm, large hand found hers, and held it fast.

CECILIA MESSNER smiled, then she said: "Were the uncles pretty mad when they found out you really meant what you said and were going peddling?" she asked.

"Yes, they were so. Let 'em get over it. I ain't afraid. I'll make good, and if I do, you know, Cecilia, you've promised to have me, no matter for them any more, eh?"

Cecilia inclined her head with a strange, shy blush.

"Say!" exclaimed Moris. "Now look here, I don't want any fooling with that actor fellow while I am away; you hear me good?"

"You mean Leo?" she asked, smiling.

"I mean just him, Leo Benrimo; he's always making love to you in the shows and I'm getting sick of it, I am." Moris's hand hurt Cecilia's then.

"Nonsense," the girl whispered close to his ear. "That's all in the line of business. We're always cast opposite each other: it's most like teamwork with me and Leo." Again she smiled gently.

"Don't care if it's team or tandem. Don't like it. Gee! won't I be happy when I make a little pile and come back and ask you to go out shopping with me to Naumann's and flat hunting, eh, Cecilia?"

Digitized by Google

Cecilia looked way down at her white shoes; of course she wore white shoes.

"What are you thinking about?" Moris inquired suspiciously as the girl said nothing.

"Your uncles," she replied. "Perhaps I'm standing in your light by feeling like I do. If it wasn't for me, you'd stay on at the ten-cent and things would brace up and you'd be the young blood and the heir to all three of 'em, I suppose, eh, wouldn't you, now?" She lifted dark, troubled eyes to his.

"Why, yes, I guess it would be so. But, hold on! Cecilia, I'd rather have you have the spirit you've got than have you like a tame kitten ready to lap from any saucer, I would!"

"Perhaps, I've thought, too" (her fingers snuggled tighter in his as she went on), "if the uncles had seen me act, they might have felt differently—might, you know, acknowledge that my talent was something alongside of the delicatessen girl's bookkeeping and all that?"

MORIS looked across the ferryboat and out one of the windows and over the stretch of dancing waters as he answered slowly: "Uncle Sam's seen you act, dear."

"When?" cried the girl excitedly. "What in?"

"Just before he went up to Peekskill a week ago; it was a Monday evening, I think, and—"

"Week before last's bill was that Fulda comedy, and Monday nights we're never up and steady in our parts." She glanced up at his face in unconscious expectation of quick contradiction and certain praise.

"That's so," Moris allowed.

"I'm no good in comedy anyhow," the girl added in a vexed tone.

"That's what I told him." Moris Rosenhartz exclaimed zealously, with an attempted smile.

"Oh!" Cecilia sighed under her breath; then she spoke sharply and quite aloud: "Well, now, what did your Uncle Sam say about me? Tell me, Moris!"

"Say, honest, I forget." He rose. "Come on out forward now, we're most across."

But Cecilia sat still.

"Come!" he urged, but sitting down again beside her. "In about two minutes more we'll be parting, darling; peddling down on Long Island for mine, and you back to old New York on the boat alone. I wish I could kiss you."

Cecilia said: "Moris, what did your Uncle Sam say?"

The young man answered: "Are you sure you want for me to tell you, Cecilia, my dear?"

"I'm sure," was the girl's response.

MORIS ROSENHARTZ floundered a little; and then he spoke out with unreserved distinctness and considerable rancor toward his Uncle Sam.

"Well, then, dear, he said: 'That girl of Moris's that I went way over on the West Side to see act has got no more notion of putting it over than a fly has of how to get out of a dish of molasses.'" The speaker defiantly took the listener's two hands in both his, and in his gray eyes shone as large an admiration as any woman could wish for.

But while it is true that Cecilia saw this and liked it, it is equally a fact that she took no apparent cognizance of it at all, but with lowered lids she made this reply:

"Did he really say that?"

"Yes."

Then Cecilia looked up, stood up, and her luminous brown eyes flashed with the flash of hinted gold somewhere in their depths.

"Come on," she remarked, taking steps forward, then, turning her head to see him pick up his pack, "unless he said anything more, did he?"

Moris nodded. "Hold on, now, Cecilia, it's too rough. I ain't going to repeat any more to you."

"Yes, you are," she ordered in a quiet voice, again coming to a firm standstill. "Go on."

"Oh, pshaw! you know your power over a fellow and you're bound to use it. All right then; the old fool said: 'What helpmate can a girl like that make you, nephew? What good money can she beckon into the drawer, eh?' The old silly."

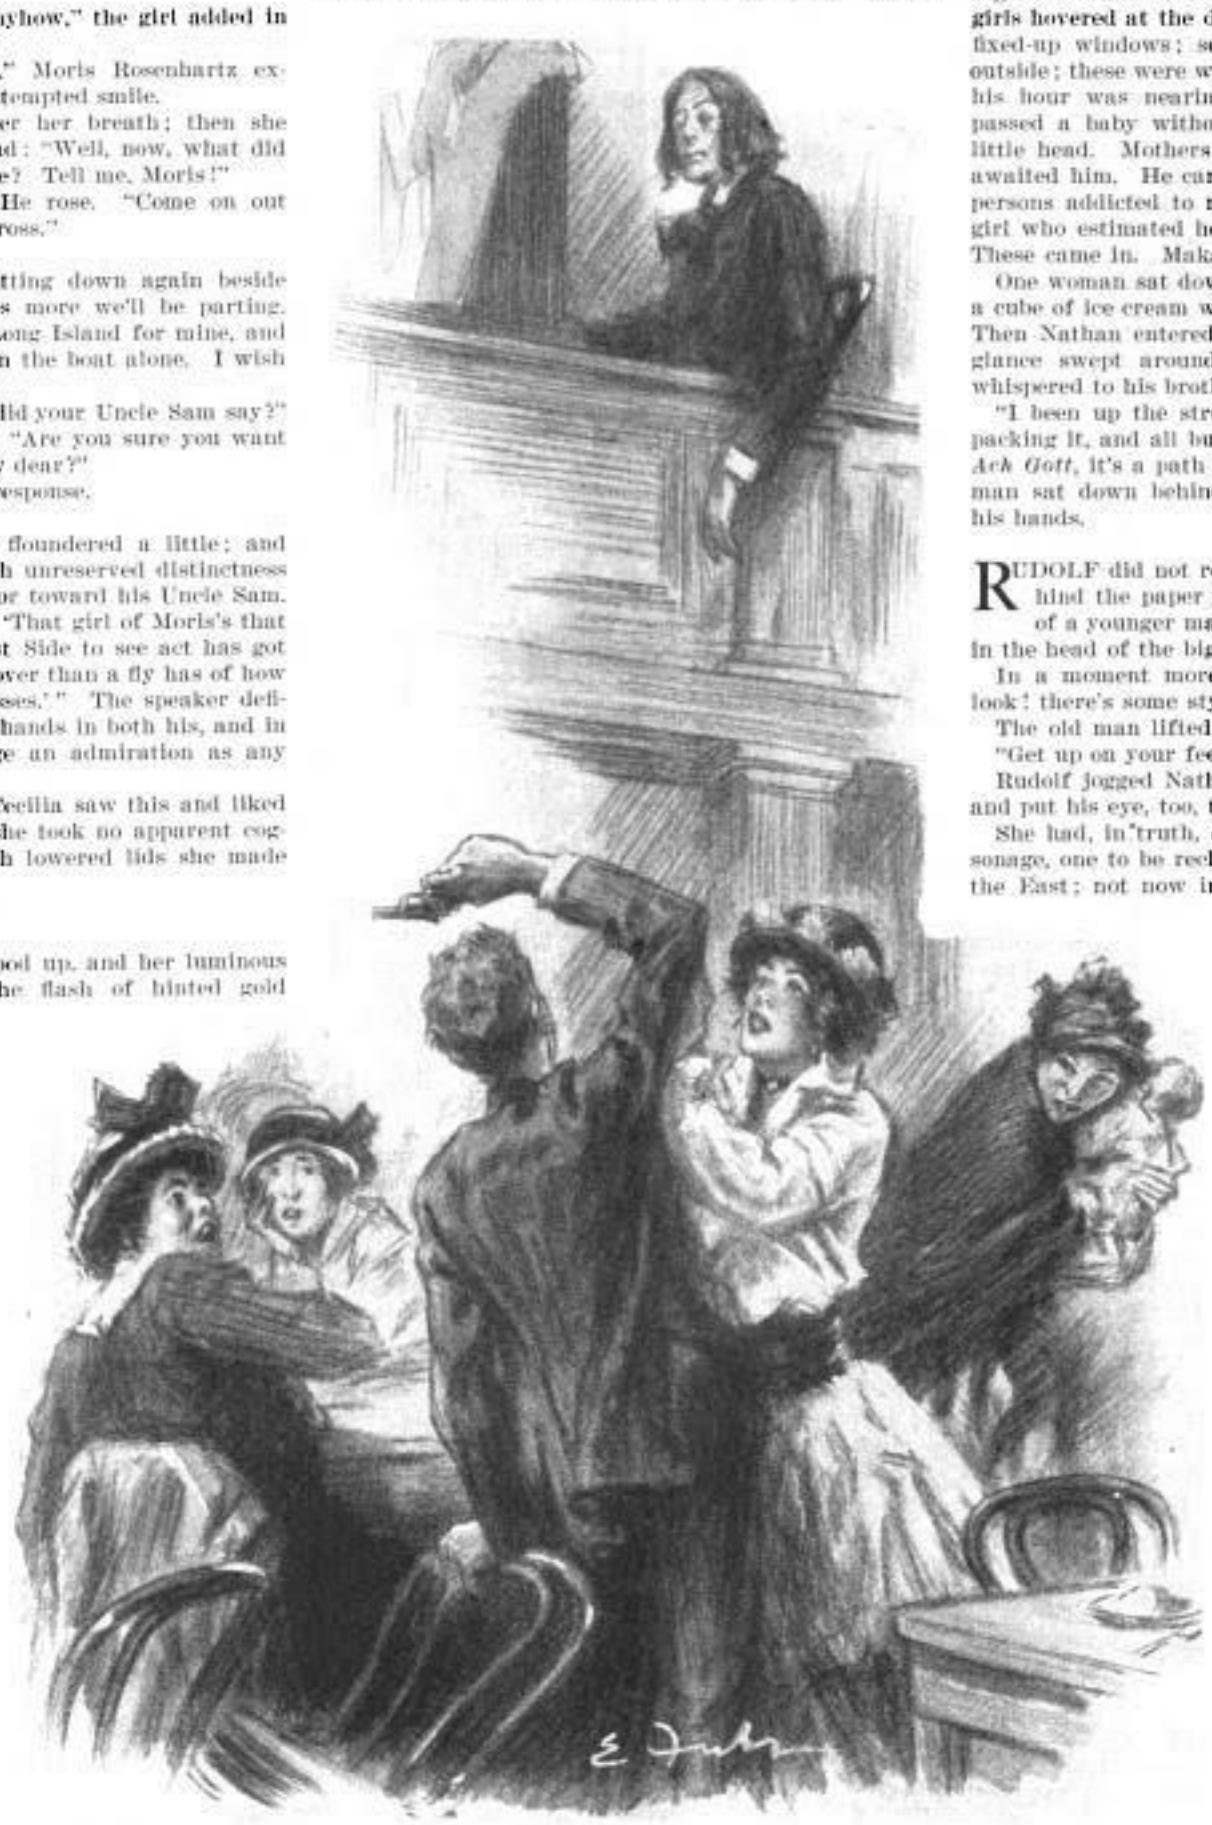
"Did he say that, too?" Cecilia inquired in a leisurely way now.

"Yes, he did. I hope you're satisfied. Oh, say, dear, come along on to the plank end and forget it all, can't you?"

"Send me a picture postal sometimes," she asked aloud at the wheel, her hand on his shoulder.

"Sure—and here." He pressed a ferry ticket and a nickel into her palm. "You got to! It's only for luck!"

She quickly snatched another nickel from her tarnished mesh bag—of course she carried a mesh bag—and put it in her lover's hand.



"For luck," she whispered gayly and watched him stamp manfully up the dockway to the street, swinging his pack for her to see his strength of arm, then turning to get a last glimpse of her waving her hand to him from the deck of the *Fulton*.

CECILIA MESSNER got into a trolley that afternoon and rode over to Grand Street as far as Essex. Then she alighted and, setting her sailor hat well over her eyes and tying her white lace veil (of course she wore a white lace veil) tighter over her face so that its large pattern resembled considerable tattooing on her cheeks she proceeded to the "Essex Ten-Cent Store," Rosenhartz Brothers, proprietors, and sauntered in.

Makarenka was playing on the piano. Rudolf and Nathan were behind the paper screen with the green birds on it, and a hole in the topknot of the largest bird for them to peep through, casting up their accounts. There were three customers in, dallying painfully and with much animated gesticulation over the merits and demerits of certain pans and pots.

No one was in the "restaurant" except the lonesome girl, who stood at attention to dip out whatever should be demanded.

Cecilia looked around. No one paid the slightest attention to her. Even the little Miss who was the store detective did not appear to see her. Cecilia

The escort was on his feet; his weapon was in the air; the lady was up; while, in accents of terror and supplication, she cried out: "Don't, don't kill him!"

bought a five-cent powder puff and a five-cent bottle of perfume. She took a good deal of time to find her dime and more still in rewrapping and retying the parcel to suit her own ideas.

All the while she was making a study of Plexo Makarenka; that's why she was so dilatory and why she was so particular as to paper and string.

Plexo Makarenka had instantly appealed to her artistic sense by his weirdly angelic personality, for his was a face of great purity and sweetness: Romaic, romantic, spiritual, demonized by the one dark curl, say, eight inches in length, which he had carefully cultivated over his left ear; this ringlet hung sometimes on his cheek, sometimes behind the ear on the neck; it actually dominated the rest of his physique; it also now dominated Cecilia Messner. She smiled joyfully to herself as she beheld this strange young musician playing delectably for the patrons of the ten-cent store; playing Rubinstein's Melody in *F*. Giving no heed to anyone there; not even seeing Cecilia, whose rapt eyes absorbed him as a virtuoso absorbs the artistic ideal wherever he finds it.

PRESENTLY, however, she went away; got in the car and was whisked back to the Greenwich Village Theatre in good time for her first cue; it did not come until the second act in that week's play.

By and by, when the matinée was finished, Cecilia did not as usual go home to her tiny room in a neighboring flat in Cottage Place, but rather shut herself in the stage dressing room, then deserted.

Not half an hour later Rudolf Rosenhartz was standing in the almost empty ten-cent store. A few little girls hovered at the door and peered in at the gaudily fixed-up windows; several women with babies stood outside; these were watching for Makarenka to arrive; his hour was nearing, and Plexo Makarenka never passed a baby without patting its bald and curious little head. Mothers liked this habit of his, so they awaited him. He came along, and in his wake a few persons addicted to music; one a young rabbi, one a girl who estimated herself as a Tetrazzini in embryo. These came in. Makarenka began to play.

One woman sat down in the restaurant and ordered a cube of ice cream which she fed to her two children. Then Nathan entered pale and slow-gaited. His sad glance swept around the empty-looking place. He whispered to his brother:

"I been up the street. Shipway's is full. They're packing it, and all buying, buying. No one buys here. *Ach Gott*, it's a path of thorns and thistles." The old man sat down behind the paper screen, his head in his hands.

RUDOLF did not reply. He also was, of course, behind the paper screen, but with the hopefulness of a younger man his eye was applied to the hole in the head of the big bird.

In a moment more he whispered excitedly: "Say, look! there's some style for you now."

The old man lifted his eyes, but not his head.

"Get up on your feet. Believe me, she's coming in!"

Rudolf jogged Nathan's arm so that the senior rose and put his eye, too, to the hole in the big bird's head.

She had, in truth, come in. A vivid, arresting personage, one to be reckoned with either in the West or the East; not now in her native element, one would decidedly say, yet by no means offering the remotest criticism on the present self-sought surroundings. She appeared tall and was clad in a gown of sweeping black woolen whose straight folds did not impede her motions, and in their swathing merely accentuated the lines of a slim and exquisite form. She wore no cloak or coat, simply long sleeves to the knuckles with frills from which shone white hands laden with many flashing rings; and around her head, with its plaits of fine tawny hair, there was arranged a scarf of black tissue stuff worked all over with little stars of gilt thread; from this her ears peeped, hung with dangling jeweled drops. She carried a pair of expensive gloves and a gold (or gilded) mesh bag. She sat down in the restaurant beside the mother and children, to whom, however, she paid no sort of notice. She ordered ten cents' worth of ice cream and a five-cent cake, which was a sumptuous repast in the eyes of the miss who served it; and after all, too, she did not eat it. The cake, by and by, was restored to its glass jar and the ice cream returned to its freezer.

The personage merely played with the tin spoon and the viands, her whole

(Continued on page 25)

"Unto the Least of These"

By Seumas Mac Manus

ILLUSTRATED BY POWER O'MALLEY

With such a pitiful look as hurt the Lord's heart, Conny held up the weeniest, sorriest little wooden goat, tied to the end of a string, and three of its legs gone

OCH! Och! A-nee-O! Och! Och! A-nee-O! But the way is weary and the road is long when all of us come to go the last journey, and 'tis small wonder that the best of us should greet and the worst of us should groan and the lightest heart grow heavy when we set our foot to the lone, lone path.

But *asthore machree*, if any of us—may the good God forbid it!—should have on his soul, as he walks the weary way, all the sins and cruelties of Lord Kildrum, 'tis well he might shiver like the spear grass, and the marra in his bones freeze with fright.

Lord Kildrum in his gran' carriage, which was shinin' so you could see your likeness in it, and its four prancin' black steeds and its silver harness, his driver in livery before and his footmen in livery behind—every one of them lookin' as gran' as the Lord himself—and he lookin' prouder than a prince, rolled out of his gates on one of the beautifulest September mornin's that God ever give the worl', and the great big gates clanged behind him and his gran' equipage rolled down the hill road, with the poor ragged craitures whom he passed upon the way bowin' their necks and bendin' their knees to him—while they cursed him deep in their hearts—and he sittin' as straight and stately and gran' as one of the oaks in his own park. He looked over their heads, never heedin' them nor their curtsies any more than if they were the dirt under his carriage wheels. And sure that's what they were to him, for under his feet he tramped the miserable craitures without a thought whenever it so plazed him—and this pleasure was often. Never a stop nor halt did he, nor notice anything, nor as much as move wan future of his hard, gran' face, till, in the glen, he seen what at first might have been a small bundle of rags, but on nearer comin' showed a chile of ten—no other than little, wee, broken-backed Conny O'Hara perched upon a rock by the riverside, and fishin' the Lord's choicest trout stream. And then Kildrum's countenance darkened with the storm of rage. He snatched the whip from his driver's hand, and rappin' a frightsome oath out of him, jumped from the carriage and torst little crippled Conny. The chile, when he heard the foot near by, looked around, and, seein' the great man in the shinin' goold and silver lacest uniform in which he was goin' to a military meetin', opened his big eyes bigger still, and the smile of wonder and pleasure and admiration that shone out of Conny's big blue eyes put a spell upon Lord Kildrum that instant, that instant. And when little Conny, leanin' over upon the rock, said, "Oh, come here, beautiful man, and let me touch them goold things on your coat," the great Lord, to the dumfoundin' of his footmen and driver, lettin' the whip drop from his hand, drew to the chile, and let the chile run his fingers all over the goold and silver lace that adorned him, while he looked down with a look in his eyes and a feelin' in his heart that had never been there before—down upon the little crippled chile whose crutch, with a few broken toys, lay beside him on the rock.

And the chile, with his big, beautiful blue eyes, smilin' up at Lord Kildrum such a smile as the Lord had before thought was never in all the world, said to him: "Beautiful man, won't you fix me crutch and string me beads and mend me nanny goat for me?" He showed him his crutch with the head loose, and the bull of a burdock leaf of all-colored beads, and, with such a pitiful look in his face as hurt the Lord's heart, held up the weeniest, sorriest little wooden goat, tied to the end of a string, and three of its legs gone.

"Daddy has to go off before break o' day to kill himself earnin' money for the bad Lord in the big house to spend, and doesn't come home till I'm sleepin' at night, so he can't fix me crutch or string me beads or mend me goat for me."

The gran' Lord first strung his beads on a goold and silver thread that he actually raveled from off his beautiful sleeve, an' cut some branches from the thorn tree and wedged the cripple's crutch, and fitted new feet to his nanny goat—tellin' little Conny stories all the time—while the people, creepin' past the road on tippytoes, were as dumfounded as the poker-stiff footmen, and were thrimblin' for little Conny's boldness in sittin' beside Lord Kildrum and lookin' up in his face and smilin' and speakin' to him as if he was no greater than his own daddy!

"Oh, thanky, oh, thanky!" said little Conny, him shinin' with gladness and pride when the Lord had finished stringin' his beads and fixin' his crutch and mendin' his goat, "and now I'm goin' to give you handfuls of blaeberries that I was keepin' for no one but daddy and mammy."

Off the rock the chile dragged himself, and with the beads swingin' from his neck, with his crutch went hirpplesly-hirp! hirpplesly-hirp! boundin' over the ground like a sparrow and disappearin' into the bushes—and comin' out soon again, and hirpplesly-hirp! hirpplesly-hirp! like a sparrow, back to the rock, where he sat down beside Lord Kildrum, his little ragged cap filled with the blaeberries, and, the Lord helpin' him on to the rock again, both of them, one sittin' on each side of the cap, fell to the eatin' of the blaeberries, and campin' to see who'd eat the most, and chattin' and laughin' like they'd been cronies for sixty years, Lord Kildrum tellin' Conny that he thought the blaeberries gran', though they were the first he had ate in his life.

"I'll be searchin' all the dens of the blaeberries from this time out, and I'll always show them to you, and you'll get all you want of them," says Conny.

"Thanky, Conny," says the great Lord, puttin' a shinin' goold piece in his hand and pattin' him on the yellow head and biddin' him good-by.

"Come to see me again soon," Conny said, "and I'll show you all my dens of blaeberries, and I'll show you where all the nice blackthorns that I have marked in the wood are growin', and I'll teach you how to catch the nicest trouts in this pool."

"Don't be afeard, Conny," said the Lord, smilin' and noddin' back to him, "I'll be with you soon again." And the driver had barely the power to say "Gwan!" to his horses. And the great Lord was with Conny again sooner than he thought.

FOR that selfsame evenin', in the awesome stillness of his own gran' chamber, Lord Kildrum lay a corp, and in his father's poor hut, that was filled with heartbroken wailin's, little Conny, the cripple, lay a corp, too: both of them poisoned with the poison berries that Conny mistuk for blaeberries.

And when the word went like wildfire over the country that Lord Kildrum was a dead man, 'twas few and light were the prayers and deep the curses that greeted the news. And the Widow McGruddy fell upon her knees in the middle of the road when she heard the joyful tidings, and thanked the God who spared herself and her seven little children, for Lord Kildrum had promised to turn them out upon the roadside to starve and die next Wednesday.

And when, on the heels of that first word, the next word swept, like moor fire in August, that wee Conny, the cripple, was no more, Och-och-a-nee! you'd think the country far and wide was gone distracted!

Och! Och! A-nee-O! Och! Och! A-nee-O! But the way is weary and the road is long when all of us come to go the last journey, and 'tis small wonder that the best of us should greet and the worst of us should groan and the lightest heart grow heavy when we set our foot to the lone, lone path.

UP THE lone, lone path, where no little bush lifts its head and no blade of grass grows green, among the rocky wild mountains whose heads go through the skies, a big, strong man, bent double with awful burdens, was toilin', toilin', and the sides of the hills were givin' back in echoes the sighs and sobs of him. Up, up he was toilin', toilin'. And deep, deep he was groanin', groanin'. And sore, sore he was sobbin', sobbin'. For his burdens was many and his burdens was great. And when he wanted to lay them down he couldn't drop them, and when he wanted to sit he couldn't sit, and when he wanted for to stand and rest a while he found himself dhowen on.

Och! Och! A-nee-O! Och! Och! A-nee-O! But the way is weary and the road is long when all of us come to go the last journey, and 'tis small wonder that the best of us should greet and the worst of us should groan and the lightest heart grow heavy when we set our foot to the lone, lone path.

Kind gentleman, kind gentleman, won't you wait on me, kind gentleman?" The man on the road heard a voice behind him, and, under his burdens lookin' round, saw hurryin' up the road after him on a bit of a crutch, hirpplesly-hirp! hirpplesly-hirp! Conny, the cripple, his all-colored beads on a goold and silver string swingin' from his neck, a shinin' goold piece in his hand, and drawin' afther him a wee wooden goat upon a string.

"Kind gentleman," says Conny when he come up, "why do you carry all them terrible burdens?"

"Because I can't help it, chile," says the man. "They're the burdens I gave me first life pilin' up. Now I must give me second life to carryin' them forever. Weary's me! Ah! Weary's me!" says he.

"Poor fella, poor fella," says Conny, says he, takin' a gentle hold of his hand with the hand of him that didn't hold the crutch. "Poor fella, me poor, poor fella! What is that big burden that's bendin' low your left shoulder?"

"Weary's me," says the man, "that's the Widow Hanlon's curse and the curse of her three orphan children that I threw upon the road to die seven years ago last Christmas Eve. And the shoulder won't break and the burden won't go. Weary's me!"

"Poor, poor fella," says Conny, "and what is that burden that weighs down the right shoulder of ye?"

"That's the terrible prayer of Bartley Donnellan, whose last cow I seized for the rent when his childer were dyin' of the faiver. And the shoulder won't break and the burden won't go. Weary's me!" (*Continued on page 28*)

Bealby

Chapter XI
Missing!

By H. G. Wells

ILLUSTRATED BY HENRY RALEIGH

ALL day Bealby chafed at the tie and saw the security in the tramp's pocket vanish. They lunched on bread and cheese and then the tramp had a good sustaining drink of beer for both of them and after that they came to a common where it seemed agreeable to repose. And after a due meed of repose in a secluded hollow among the gorse the tramp produced a pack of exceedingly greasy cards and taught Bealby to play euchre. Apparently the tramp had no distinctive pockets in his tail coat; the whole lining was one capacious pocket. Various knobs and bulges indicated his cooking tin, his feeding tin, a turnip, and other unknown properties. At first they played for love and then they played for the balance in the tramp's pocket. And by the time Bealby had learned euchre thoroughly that balance belonged to the tramp. But he was very generous about it and said they would go on sharing just as they had done. And then he became confidential. He scratched about in the bagginess of his garment and drew out a little dark blade of stuff, like a flint implement, regarded it gravely for a moment and held it out to Bealby. "Guess what this is."

Bealby gave it up.

"Smell it."

It smelt very nasty. One familiar smell indeed there was with a paradoxical sanitary quality that he did not quite identify, but that was a mere basis for a complex reek of acquisitions.

"What is it?" said Bealby.

"*Soap!*"

"But what's it for?"

"I thought you'd ask that. . . . What's soap usually for?"

"Washing," said Bealby, guessing wildly.

THE tramp shook his head. "Making a foam," he corrected. "That's what I has my fits with. See? I shoves a bit in my mouth and down I goes and I rolls about. Making a sort of moaning sound. Why, I been given brandy often—neat brandy. . . . It isn't always a cert—nothing's absolutely a cert. I've 'ad some let-downs. . . . Once I was bit by a nasty little dog—that brought me to pretty quick, and once I 'ad an old gentleman go through my pockets. 'Poor chap!' 'e ses, 'very likely 'e's destitoot; let's see if 'e's *got* anything. . . .' I'd got all sorts of things I didn't want 'im prying about. But I didn't come to sharp enough to stop 'im. Got me into trouble, that did. . . .

"It's an old lay," said the tramp, "but it's astonishing 'ow it'll go in a quiet village. Sort of amuses 'em. Or dropping suddenly in front of a bicycle party. Lot of them old tricks are the best tricks, and there ain't many of 'em Billy Bridget don't know. That's where you're lucky to 'ave met me, matey. Billy Bridget's a 'ard man to starve. And I know the ropes. I know what you *can* do and what you *can't* do. And I got a feeling for a policeman—same as some people 'ave for cats. I'd know if one was 'idden in the room. . . ."

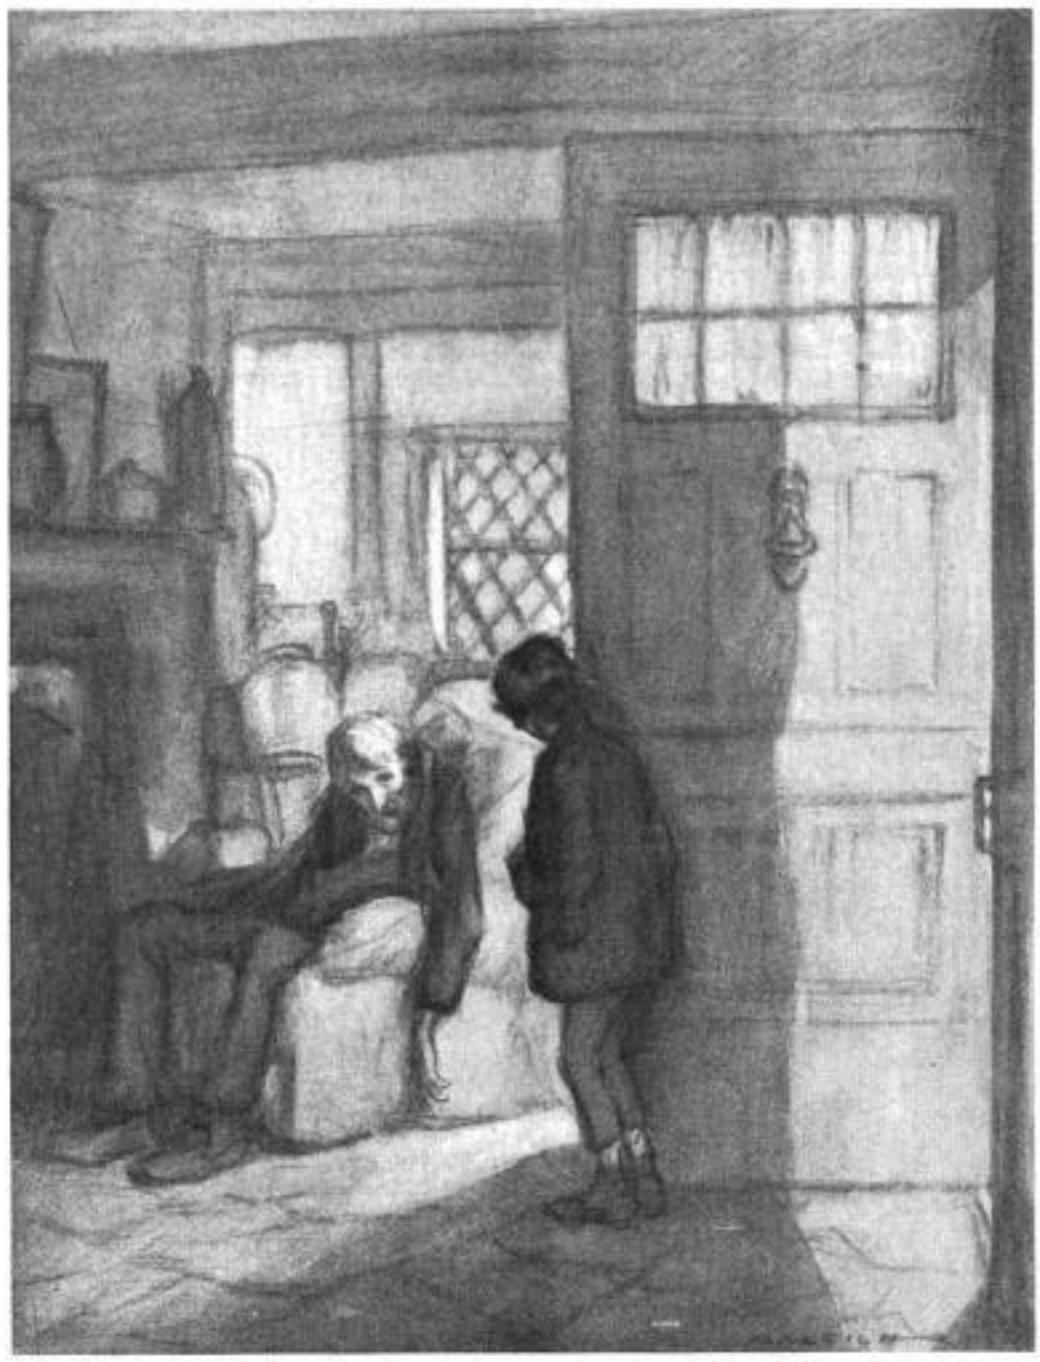
He expanded into anecdotes and the story of various encounters in which he shone. It was amusing and it took Bealby on his weak side. Wasn't he the Champion Dodger of the Chelsome playground?

The tide of talk ebbed. "Well," said the tramp, "time we was up and doing. . . ."

They went along shady lanes and across an open park and they skirted a breezy common from which they could see the sea. And among other things that the tramp said was this: "Time we began to forage a bit."

He turned his large observant nose to the right of him and the left.

THROUGHOUT the afternoon the tramp discoursed upon the rights and wrongs of property, in a way that Bealby found very novel and unsettling. The tramp seemed to have his ideas about owning and stealing arranged quite differently from those of Bealby. Never before had Bealby thought it possible to have them arranged in any other than the way he knew. But the tramp contrived to make most possessions seem unrighteous and honesty a code devised by those who have for those who haven't. "They've just got hold of it," he said. "They want to keep it to themselves. . . . Do I look as though I'd stole much of anybody's? It isn't me got 'old of this land and sticking up my notice boards to keep everybody off. It isn't me spends my days and nights scheming 'ow I can get 'old of more and more of the stuff. . . .



"I don't *carry* it 'em," said the tramp. "Some 'as one taste and some another. But when it comes to making all this fuss because a chap who *isn't* a schemer 'elps 'imself to a mithful—well, it's Rot. . . .

"It's them makes the rules of the game and nobody ever arst me to play it. I don't blame 'em, mind you. Me and you might very well do the same. But brast me if I see where the sense of *my* keeping the rules comes in. This world ought to be a share out. Gawd meant it to be a share out. And me and you—we been done out of our share. That justifies us."

"It isn't right to steal," said Bealby.

"It isn't right to steal—certainly. It isn't right—but it's universal. Here's a chap here over this fence, ask 'im where 'e got 'is land. Stealing! What you call stealing, matey, *I* call restitootion. You ain't probably never even 'eard of socialism."

"I've 'eard of socialists right enough. Don't believe in Gawd and 'aven't no morality."

A very old white man was sitting in a chintz-covered armchair, lost, it would seem, in painful thought. He had a peculiar, gray, shrunken look. . . .

"Don't you believe it. Why!—'arf the socialists are parsons. What I'm saying *is* socialism—practically. *I'm* a socialist. I know all abait socialism. There isn't nothing you can tell me abait socialism. Why!—for three weeks I was one of these here Anti-Socialist speakers. Paid for it. And I tell you there ain't such a thing as property left; it's all a blooming old pinch. Lords, commons, judges, all of them, they're just a crew of brasted old fences and the lawyers getting in the stuff. Then you talk to me of stealing! *Stealing!*"

The tramp's contempt and his long intense way of saying "stealing" were very unsettling to a sensitive mind. They bought some tea and grease in a village shop, and the tramp made tea in his old tin with great dexterity and then they gnawed bread on which two ounces of margarine had been generously distributed. "Live like fighting cocks, we do," said the tramp, wiping out his simple cuisine with the dragged-out end of his shirt sleeve. "And if I'm not very much mistaken we'll sleep to-night on a nice bit of hay. . . ."

But these anticipations were upset by a sudden temptation, and instead of starry summer comfort the two were destined to spend a night of suffering and remorse.

A GREEN lane lured them off the road, and after some windings led them past a field of wire-netted enclosures containing a number of perfect and conceited-looking hens close beside a little cottage, a vegetable garden, and some new elaborate outhouses. It was manifestly a poultry farm, and something about it gave the tramp the conviction that it had been left, that nobody was at home.

These realizations are instinctive, they leap to the mind. He knew it, and an ambition to know further what was in the cottage came with the knowledge. But it seemed to him desirable that the work of exploration should be done by Bealby. He had thought of dogs, and it seemed to him that Bealby might be unembarrassed by that idea. So he put the thing to Bealby. "Let's have a look round 'ere," he said. "You go in and see what's abait. . . ."

There was some difference of opinion. "I don't ask you to take anything," said the tramp. . . . "Nobody won't catch you. . . . I tell you nobody won't catch you. . . . I tell you there ain't nobody here to catch you. . . . Just for the fun of seeing in. I'll go up by them outhouses. And I'll see nobody comes. . . . Ain't afraid to go up a garden path, are you? . . . I tell you, I don't want you to steal. . . . You ain't got much guts to funk a thing like that. . . . I'll be abait too. . . . Thought you'd be the very chap for a bit of scouting. . . . Well, if you ain't afraid you'd do it. . . . Well, why didn't you say you'd do it at the beginning? . . ."

BEALBY went through the hedge and up a grass track between poultry runs, made a cautious inspection of the outhouses, and then approached the cottage. Everything was still. He thought it more plausible to go to the door than peep into the window. He rapped. Then, after an interval of stillness, he lifted the latch, opened the door, and peered into the room. It was a pleasantly furnished room, and before the empty summer fireplace a very old white man was sitting in a chintz-covered armchair, lost, it would seem, in painful thought. He had a peculiar, gray, shrunken look, his eyes were closed, a bony hand with the shiny texture of alabaster gripped the chair arm. . . . There was something about him that held Bealby quite still for a moment.

And this old gentleman behaved very oddly. His body seemed to crumple into his chair, his hands slipped down from the arms, his head nodded forward, and his mouth and eyes seemed to open together. And he made a snoring sound. . . .

For a moment Bealby remained rigidly agape and then a violent desire to rejoin the tramp carried him back through the hen runs. . . .

He tried to describe what he had seen.

"Asleep with his mouth open," said the tramp. "Well, that ain't anything so wonderful. You *got* anything? That's what I want to know. . . . Did anyone ever see such a boy? 'Ere I'll go. . . .

"You keep a look out here," said the tramp.

BUT there was something about the old man in there, something so strange and alien to Bealby, that he could not remain alone in the falling twilight. He followed the cautious advances of the tramp toward the house. From the corner by the outhouses he saw the tramp go and peer in at the open door.

Digitized by Google

He remained for some time peering, his head hidden from Bealby. . . .

Then he went in.

Bealby had an extraordinary desire that somebody else would come. His soul cried out for help against some vaguely apprehended terror. And in the very moment of his wish came its fulfillment. He saw advancing up the garden path a tall woman in a blue serge dress, hatless, and hurrying, and carrying a little package—it was medicine—in her hand. And with her came a big black dog. At the sight of Bealby the dog came forward barking, and Bealby after a moment's hesitation turned and fled.

"What is it?" said Bealby. "Soap!". . . . "That's what I has my fits with. See? I shoves a bit in my mouth and down I goes and I rolls about"

THE dog was quick. But Bealby was quicker. He went up the netting of a hen run and gave the dog no more than an ineffectual snap at his heels. And then dashing from the cottage door came the tramp. Under one arm was a brass-bound workbox and in the other was a candlestick and some smaller articles. He did not instantly grasp the situation of his treed companion, he was too anxious to escape the tall woman, and then with a yelp of dismay he discovered himself between woman and dog. All too late he sought to emulate Bealby. The workbox slipped from under his arm, the rest of his plunder fell from him; for an uneasy moment he was clinging to the side of the swaying hen run and then it had caved in and the dog had got him.

The dog bit, desisted and then finding itself confronted by two men retreated. Bealby and the tramp rolled and scrambled over the other side of the collapsed netting into a parallel track and were halfway to the hedge before the dog—but this time in a less vehement fashion—resumed his attack.

He did not close with them again and at the hedge he halted altogether and remained hacking the gloaming with his rage.

The woman it seemed had gone into the house, leaving the tramp's scattered loot upon the field of battle.

"This means mizzle," said the tramp, leading the way at a trot.

Bealby saw no other course but to follow.

He had a feeling as though the world had turned against him. He did not dare to think what he was thinking of the events of these crowded ten minutes. He felt he had touched something dreadful; that the twilight was full of accusations. . . . He feared and hated the tramp now, but he perceived something had linked them as they had not been linked before. Whatever it was they shared it.

THEY fled through the night; it seemed to Bealby for interminable hours. At last when they were worn out and footsore, they crept through a gate and found an uncomfortable cowering place in the corner of a field.

As they went they talked but little, but the tramp kept up a constant muttering to himself. He was troubled by the thought of hydrophobia. "I know I'll 'ave it," he said, "I know I'll get it."

Bealby after a time ceased to listen to his companion. His mind was preoccupied. He could think of nothing but that very white man in the chair, and the strange manner of his movement. "Was 'e awake when you saw 'im?" he asked at last.

"Awake—who?"

"That old man."

For a moment or so the tramp said nothing. "'E wasn't awake, you young silly," he said at last.

"But—wasn't he?"

"Why!—don't you know! 'E'd croaked—popped off the 'ooks—very moment you saw 'im."

For a moment Bealby's voice failed him.

Then he said quite faintly: "You mean—he'd—Was dead?"

"Didn't you know!" said the tramp. "Gaw! What a kid you are!"

IN THAT manner it was Bealby first saw a dead man. Never before had he seen anyone dead. After that for all the night the old white man pursued him with strange, slowly opening eyes, and a head on one side and his mouth suddenly and absurdly agape. . . .

All night long that white figure presided over seas of dark dismay. It seemed always to be there, and yet Bealby thought of a score of other painful things. For the first time in his life he asked himself: "Where am I going? What am I drifting to?" The world beneath the old man's dominance was a world of prisons.

Bealby believed he was a burglar and behind the darkness imagined the outraged law already seeking him. And the terrors of his associate reinforced his own.

He tried to think what he should do in the morning. He dreaded the dawn profoundly. But he could not collect his thoughts because of the tramp's incessant lapses into grumbling lamentation. Bealby knew he had to get away from the tramp, but now he was too weary and alarmed to think of running away as a possible expedient. And besides there was the matter of his money. And beyond the range of the tramp's voice there were darknesses which to-night at least might hold inconceivable forms of lurking evil. But could he not appeal to the law to save him? Repent? Was there not something called turning King's evidence?

The moon was no comfort that night. Across it there passed with incredible slowness a number of jagged little black clouds, blacker than any clouds Bealby had ever seen before. They were like velvet palls, lined with snowy fur. There was no end to them. And one at last most horribly gaped slowly and opened a mouth. . . .

AT INTERVALS there would be uncomfortable movements and the voice of the tramp came out of the darkness beside Bealby lamenting his approaching fate and discoursing—sometimes with violent expressions—on watchdogs.

"I know I shall 'ave 'idrophobia," said the tramp. "I've always 'ad a disposition to 'idrophobia. Always a dread of water—and now it's got me.

"Think of it!—keeping a beast to set at a 'uman being. Where's the brotherhood of it? Where's the law and the humanity? Getting a animal to set at a brother man. And a poisoned animal, a animal with death in his teeth. And a 'orrible death too. Where's the sense and brotherhood?

"Gaw! when I felt 'is teeth coming through my triisers—!

"Dogs oughtn't to be allowed. They're a noosance in the towns and a danger in the country. They oughtn't to be allowed anywhere—not till every blessed 'uman being 'as got three square meals a day. Then, if you like, keep a dog. And see 'e's a clean dog. . . .

"Gaw! if I'd been a bit quicker up that 'en roost—!

"I ought to 'ave landed 'im a kick.

"It's a man's duty to 'urt a dog. When 'e sees a dog 'e ought to 'urt 'im. It's a natural 'atred. If dogs were what they ought to be, if dogs understood 'ow they're situated, there wouldn't be a dog go for a man ever.

"And if one did they'd shoot 'im. . . .

"After this if ever I get a chance to land a dog a oner with a stone I'll land 'im one. I been too sorft with dogs. . . ."

Toward dawn Bealby slept uneasily, to be awakened by the loud snorting curiosity of three lively young horses. He sat up in a blinding sunshine and saw the tramp looking very filthy and contorted, sleeping with his mouth wide open and an expression of dismay and despair on his face.

BEALBY took his chance to steal away next morning while the tramp was engaged in artificial epilepsy.

"I feel like fits this morning," said the tramp. "I could do it well. I want a bit of human kindness again. After that brasted dog.

"I expect soon I'll 'ave the foam all right without any soap."

They marked down a little cottage before which a benevolent-looking spectacled old gentleman in a large straw hat and a thin alpaca jacket was engaged in budding roses. Then they retired to prepare. The tramp handed over to Bealby various compromising possessions, which might embarrass an afflicted person under the searching hands of charity. There was for example the piece of soap after he had taken sufficient for his immediate needs, there was ninepence in money, there were the pack of cards with which they had played euchre, a key or so and some wires, much assorted string, three tins, a large piece of bread, the end of a composite candle, a box of sulphur matches, list slippers, a pair of gloves, a clasp knife, sundry gray rags. They all seemed to have the distinctive flavor of the tramp. . . .

"If you do a bunk with these," said the tramp. "By Gawd—"

He drew his finger across his throat.

(King's Evidence)

Bealby from a safe distance watched the beginnings of the fit and it impressed him as a thoroughly nasty kind of fit. He saw the elderly gentleman hurry out of the cottage and stand for a moment looking over his little green garden gate, surveying the sufferings of the tramp with an expression of intense yet discreet commiseration. Then suddenly he was struck by an idea, he darted in among his rose bushes and reappeared with a big watering can and an enormous syringe. Still keeping the gate between himself and the sufferer he loaded his syringe very carefully and deliberately. . . .

BEALBY would have liked to have seen more but he felt his moment had come. Another instant and it might be gone again. Very softly he dropped from the gate on which he was sitting and made off like a running partridge along the hedge of the field.

Just for a moment did he halt—at a strange sharp yelp that came from the direction of the little cottage. Then his purpose of flight resumed its control of him.

He would strike across country for two or three miles, then make for the nearest police station and give himself up. (Loud voices. Was that the tramp murdering the benevolent old gentleman in the straw hat or was it the benevolent old gentleman in the straw hat murdering the tramp? No time to question. Onward, Onward!) The tramp's cans rattled in his pocket. He drew one out, hesitated a moment and flung it away and then sent its two companions after it. . . .

He found his police station upon the road between Somesort and Crayminster, a little peaceful rural station, a mere sunny cottage with a blue and white label and a notice board covered with belated bills about the stealing of pheasants' eggs. And another bill—

It was headed MISSING and the next most conspicuous words were £5 *Reward* and the next ARTHUR BEALBY.

He was fascinated. So swift, so terribly swift is the law. Already they knew of his burglary, of his callous participation in the robbing of a dead man. Already the sleuths were upon his trail. So surely did his conscience strike to this conclusion that even the carelessly worded offer of a reward that followed his description conveyed no different intimation to his mind. "To whomsoever will bring him back to Lady Laxton at Shonts near Chelsmore," so it ran.

"And out of pocket expenses."

AND even as Bealby read this terrible document, the door of the police station opened and a very big pink young policeman came out and stood regarding the world in a friendly, self-approving manner. He had innocent, happy, blue eyes; thus far he had had much to do with order and little with crime; and his rosebud mouth would have fallen open, had not discipline already closed it and set upon it the beginnings of a resolute expression that accorded ill with the rest of his open freshness. And when he had surveyed the sky and the distant hills and the little rosebushes that occupied the leisure of the force, his eyes fell upon Bealby. . . .

Indecision has ruined more men than wickedness. And when one has slept rough and eaten nothing and one is conscious of a marred unclean appearance, it is hard to face one's situations. What Bealby had intended to do was to go (Concluded on page 34)

COMMENT ON CONGRESS

CONGRESS, during the latter part of the summer, is not an encouraging spectacle. At a time when every business man and most of the private citizens of the country were hard hit by a foreign war, and when everyone was anxiously readjusting himself to the conditions threatening us—at this very time it was difficult to keep enough Congressmen in Washington to attend to the public business. There were periods when more than half the members were away attending to their own reelection. For example, on Saturday, August 1, 1914, with Congress in session and practically all Europe becoming involved in war, it was not possible to consider emergency legislation because the Lower House could not get a quorum together. Some one not long ago ventured the assertion that not half the members of Congress understand the antitrust measures which they have passed. The proportion may or may not be accurate. But this belief indicates the common feeling of observers about the Lower House of Congress just at this time. Inefficiency in the Lower House shows itself in obvious ways. The boys' bathing beach in Washington had to be closed because the end of the fiscal year arrived before Congress had got around to renewing the appropriations for this year. In any private business such an episode would be a scandal.

The Senate, of course, is another matter. They have stayed in Washington during the hot weather with an earnest intention to attend to the public business. The Senate debates on the antitrust measures have been entirely informing and creditable.

The People Don't Know

THERE is nothing so hopeless to an observer of Congress as the lack of public information about it. There is literally no periodical in the United States which even attempts to give an account of the work of the Government at Washington. In London the "Times" and one or two other daily papers give daily practically a complete stenographic report of the work of Parliament, and this is read each morning by some hundreds of thousands of the people of England. With us Congress does not meet in our largest city. For the New York newspapers to print an equally complete account of the work of Congress would involve prohibitive telegraph tolls. The same is true of every other large city. Washington is a city of only about three hundred thousand, of whom about a half are colored. It has not enough population to justify the daily papers of that city in printing an extended account of the work of Congress for local consumption only. The result is that daily papers throughout the country, quite naturally, expect their Washington correspondents and their expensive telegraph bills to give them primarily that kind of Washington news which is of local interest—the appointment of postmasters, local river improvements, and the like. There is no weekly paper which even attempts to record as much as one one-hundredth of the important activities of Congress and the Government.

The above photograph of Congressman Charles G. Edwards of Savannah, Ga., was printed in his own campaign booklet, which he circulates among his constituents. Another picture of himself has this description:

"CONGRESSMAN EDWARDS'S FIGHTING FACE
This shows Congressman Edwards as he appeared when he made the fight against the Alaskan Railroad Bill"

To anyone who watches Congress closely, this is all very hopeless. The Congressional Record is, of course, a stenographic report of the debates and acts of Congress. If it stopped there, probably it might serve as a basis of information to the public. But it is cumbered with speeches that never were delivered, newspaper clippings, partisan documents. As it stands, probably not a thousand people throughout the country read the official Record with any regularity. It is a book of reference rather than one to be read.

Buncombe

THE curse of Congress is cheapness, inefficiency, buncombe, devotion to private and local interests, indifference to the general public good of the nation. The intellectual average of the Lower House—and of the Senate also—has become low. The quality of the average Congressman is well illustrated by a booklet used as a campaign document by the one whose picture is on this page. He is Congressman Charles Gordon Edwards of Savannah, Ga. He is serving his eighth year in Congress. As Congressmen go, he is not the poorest specimen. The picture that appears on this page, with the flamboyant words which he puts under it, is only one of the four pictures of himself which he puts in the booklet. One is entitled "Edwards, the Man Who Made It Possible"; another, "Congressman Edwards, Pleading for Harmony." Some of the things he says about himself, in order to get himself reelected, are not calculated to make an American proud of Congress. He says: "It is in humble obedience to this duty which I feel I owe to the people of the First Congressional District of Georgia" that he is running for reelection. Bunk! He is running because he wants the office and the pay! There is this promise in the metaphor of pork and pie: "There will be no 'second table' for any county so far as I am concerned." Mark this appeal to sectional prejudice: "Has advocated and favors fair pensions for worthy Confederate veterans and their widows." But on another page: "Opposed Union pensions by his vote and by a speech on the floor of the House." There are pages and pages of his record in getting pie:

Introduced in the past dozens of Southern war-claim bills.

Secured a public building site for Statesboro.
Secured a public site for Waynesboro.

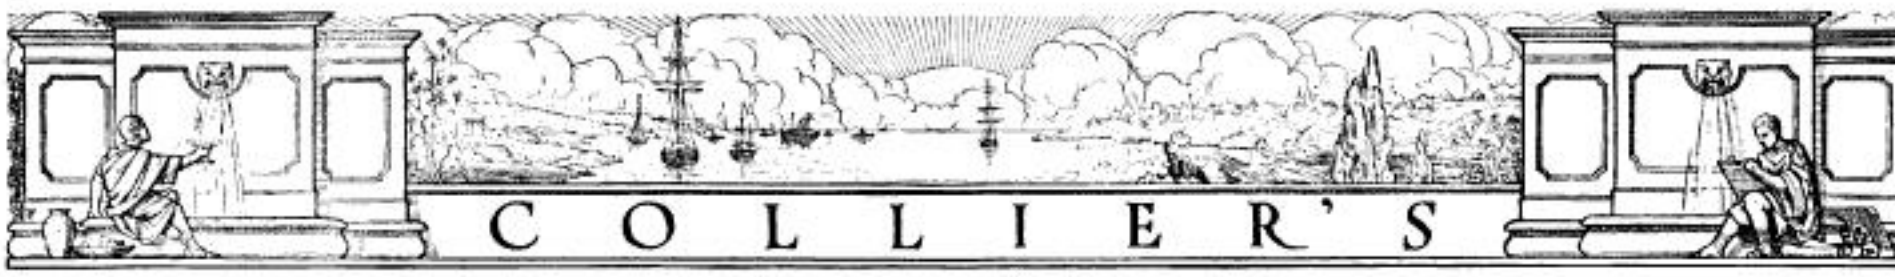
Has helped to distribute latest and most improved cotton and other seed.

Has furnished nearly every rural school of the district with a large United States wall map, in order that the greatest good from these valuable maps would result to the greatest possible number, instead of sending them to the "favored few."

And so on ad infinitum. He calls himself "The PLOWBOY of TATNALL," and says of his opponent: "He can't OUT-COUNTRY the PLOWBOY." Finally, he enumerates as one of the reasons for reelection that:

He delivered a speech urging that the motto, "In God We Trust," be restored to the coins from which it was stricken under the Republican Administration. The motto was restored.

Do the people of Georgia really swallow this sort of thing? Unhappily, it is necessary to admit that this sort of cheap and shallow demagoguery is more common among the Democratic Congressmen from the South than elsewhere.



During the present fall, the entire membership of the HOUSE OF REPRESENTATIVES, and the following SENATORS come up for reelection (some other Senators whose terms expire have already been defeated.)

BRADY *Idaho*	GORE *Oklahoma*	SHIVELY *Indiana*

The Best-Laid Plans

THERE IS A FAINTLY AMUSING IRONY in the situation in which an editor finds himself. Having devoted the summer issues of his periodical more than commonly to entertainment, he looks forward and makes plans for resuming politics and other serious matters at the beginning of September. But just how much interest will Americans take in their own politics this fall? And what direction will that interest take? What is likely to be the trend of the Congressional elections in November? What effect does a war have on neutral thought? Does it tend toward reaction or liberalism? Of course, if it goes far enough, war is likely to result—not here, of course, but in Europe—in a kind of general chaos in which the weak find themselves at the mercy of the strong. That develops a tendency for the weak to seek patrons and leaders, to depend on them and confer power on them. But that is in Europe. If reaction comes there, will it infect America also? Quite apart from the European war, it was already apparent that there were in America the strong beginnings of a swing toward reaction, a fatigue with tumult, a tendency to shut the ears to the din of agitation, a growing distaste for the harsher and noisier leaders of reform, a tolerance, almost a sympathy, for their victims. The sharp defeat of BRISTOW was significant. But the tumult and the shouting have had their effect. Some things are crystallized, never to change. If the people look with almost friendly tolerance on CANNON'S efforts to come back from Danville, it is largely because they know his power for evil is gone. The vote that FORAKER got and that PENROSE will get is founded somewhat on the same spirit—a spirit which would express itself in contemporary American as: "Oh, let 'im up; he's all bloody!"

Bailey

THE PAPERS even say that BAILEY is going to try to come back from Texas. If he does, our interest in his campaign won't be wholly hostile. He is against most of the things in government that we are for, but we know his quality. For such harm as we think he ever did, his teeth are pulled. Standard Oil will never retain him again. All that sort of thing is completely in the past of American politics. Intellectually, BAILEY is needed. In intelligence, in education and experience, in knowledge of the philosophy of government, in personal force, he is incomparably the superior of the man who now holds his seat, or any of the Senators who came in as flotsam on the reform wave. Indeed, when BAILEY was in the Senate he was always among the first five strong men. In any Senate that we can foresee he would probably be among the first ten. The reform of the Senate which came with their direct election, and the agitation of the past few years, resulted, of course, in a higher ideal of the responsiveness of the public servant to the public will, but equally clearly it resulted in a distinct intellectual deterioration. What is needed now in the Senate is intelligence, and devotion to conviction—any sort of conviction—and courage and force. We wish BAILEY well. In reality he is an incorrigible romanticist. He is like an overgrown boy who has been reading Sir WALTER SCOTT and dramatizes himself as IVANHOE, GUY MANNERING, or RICHARD COEUR-DE-LION. We heard a story about BAILEY last winter: Congressman NEELEY of Kansas, discussing a bill on the floor, with an attentive mind upon the rural Kansas ear, spoke of the ex-Senator from Texas as "smeared with the smell of Standard Oil." (The figure of speech is the Congressman's, not ours.) BAILEY heard the quotation and wrote a letter to Congressman NEELEY demanding personal satisfaction, which he sent through the hand of a friendly public man. NEELEY paid no attention to the incident until he received a second visit from the intermediary with a demand for an answer, and was given the idea that Senator BAILEY wanted action and satisfaction of the old-fashioned sort. Thereupon NEELEY, taking the position that custom accorded him the choice of weapons, suggested that each combatant should have a three-foot length of bologna sausage, the combatants to stand twenty feet apart, and heave. We have been told this story under circumstances which urge us to believe it. If by any chance it is not wholly true, we hope the Texas ex-Senator won't call us to account for it. It makes us understand him more clearly and like him better. We think it will have the same effect with the public.

Good Reading

OUR GUESS is that, however much interest there may be in domestic politics this fall, descriptions, well written, of what is going on in Europe will be the form of literature most acceptable in America the coming months. The American writers already there for COLLIER'S include ARTHUR RUHL, WILL IRWIN, GELETT BURGESS, HENRY BEACH NEEDHAM, and STANLEY WASHBURN. Probably the descriptions by these men, written from our home viewpoint, will be the most eagerly read; but in permanent value they will not excel the work of Sir ARTHUR CONAN DOYLE, H. G. WELLS, and the other English writers.

The Great American Fraud

IN THE MIDST OF WAR'S ALARUMS pause to consider the fact that the Oxyfakers have sued COLLIER'S for $250,000 damages. When we reflect upon the aggregate millions of dollars which divers patent-medicine concerns have named as the amounts we have damaged them, we are almost impressed by ourselves.

Looking Away Ahead

THE LYNCHBURG (VA.) "ADVANCE"—owned, incidentally, by a Democratic Congressman, CARTER GLASS, who voted for a high protective tariff on lumber—says that COLLIER'S will be supporting ROOSEVELT for President in 1916. Prophecy, brother, is a pastime more entertaining than seriously valuable. If we are to spend a few minutes in that amusement, our guess is that the next President may be much nearer the standpat type than ROOSEVELT is. But we don't stand very strongly on that guess. We can't remember a time when the future of politics in this country was so difficult to predict. There was a forecast in the Chicago "Tribune" some weeks ago. The "Tribune" is saying, not what it hopes, but what it fears:

> Undoubtedly the once repudiated chiefs of the Republican party have new confidence and are animated by revived hope. They believe that there is to be a reaction against Democratic administration and legislation, and that this reaction will be impatient, unreasoning, and probably violent.
>
> It may be impatient in that the impulse will urge an attack upon all social reform theories, and thus also unreasoning. It may be that public opinion, provoked and exasperated, will not discriminate, but will turn toward the old masters of political affairs as to men who did not disturb business, did not disturb conditions of employment, and who, whatever else they might do, did not interrupt the orderly processes of the nation's affairs.
>
> There is unquestionably a danger that for the time being there will be a loss of ground in a number of highly important political movements which have little or nothing to do with the responsibility of the Democratic administration.
>
> CANNON, PENROSE, MCKINLEY, BARNES, etc., etc., are confident that this revulsion will be to their benefit, and they are astute observers. It therefore becomes more important than ever that there should be renewed opposition to them.
>
> Unless the voters be blinded by their own impatience they will not permit their distrust and disapproval of the Democratic administration to be turned to the advantage of the men who made the establishment of a Democratic administration inevitable by the disregard of the expressed will of the Republican voters.

If our Virginia brother can find any comfort in this, he's welcome.

Of the Same Opinion Still

TO MR. CHARLES W. LAMBORN, lawyer, of Chicago, and some hundreds of others: No, we have not changed our mind about the President's Mexican policy, nor admit that events have proved us wrong. But we can think of a whole lot of things which it is less profitable to keep quiet about just now.

A Woman Who Died Recently

WE CANNOT let the untimely death of Mrs. WOODROW WILSON pass by without reiterating that it is a national misfortune. She was one of those who know this world for what it really is: a camping ground of the human soul, a place of beginnings. Her eyes saw through our shows of rank and property and power to the everlasting brotherhood in which we all stand before GOD. If success came because of duty well done she was glad, but no sudden elevation could disturb with pride the steadfastness of her gentle spirit. Her friends thought of her habitually as one in whose integrity and loyalty their souls might rest. She believed implicitly in the good in others and they were nobler because she did so. To those busied in the noise and strife of our politics at Washington, wherein men's hearts grow hard and their souls dusty, her presence must have been like cool water to one in fever. Such an influence heals and strengthens like the sunlight itself—no one can guess the power it has. It is a blessing to the nation, for men in high office do not live of themselves, they lean on those near and dear to them. It is by love, after all, that we conquer our days, and this was Mrs. WILSON'S *gift*. And is this the end? When such a spirit leaves us, kindly and free, loving sunshine and friendship, making life itself more dear, shall we not say that all is well?

THE NATIONAL WEEKLY

For Efficiency

"TOTAL ABSTINENCE from alcoholic stimulants," runs a cable dispatch from London, "will be strictly observed during Sir ERNEST SHACKLETON'S trip across the South Polar continent. He and his men propose to work long hours, including eight hours' marching every day, but for stimulants they will rely on nothing stronger than tea or cocoa." This is not the freak of an enthusiast, but a common-sense decision, based upon the facts concerning alcohol. For maximum efficiency, the explorer cuts out the booze. The question is: Shall the rest of us be equally efficient in shouldering a share of the world's work?

Is This Best?

ARE WE, after all, doing the right thing with respect to our large units of industry? For ourselves we confess to a feeble-minded indecision. When we talk with LOUIS BRANDEIS or read his books we think he is right. When we read the admirable book of CHARLES R. VAN HISE, president of the University of Wisconsin, we think the encouraging of big units—with regulation—is best. In reading the decision of the court in the International Harvester case we cannot help feeling that no one of the judges had any enthusiasm for what they considered it necessary, under the law as it stands, to do, nor believed in the law they enforced. Judge HOOK stated:

> It may be, as is said, that there is a growing recognition of the need of great concentrated resources for trade and commerce, even though secured by a combination of independent competing concerns. *But that is not the Sherman Act, and a statute must be taken by the courts as a true estimate of the preponderance of public opinion which calls for legislative expression. It is not for the courts to question whether that opinion was rightly weighed or interpreted, whether it is wise or unwise, or whether it has since changed.*

Later on Judge HOOK was still more obvious in letting out the idea that he himself did not believe in what the law compelled him to:

> It is but just, however, to say and make it plain that in the main the business conduct of the company toward its competitors and the public has been honorable, clean, and fair. Some petty dishonesties were tracked in at the start, mostly by subordinates who had been in the service of the old companies, but they were soon gotten rid of. In this connection it should also be said that specific charges of misconduct were made in the Government's petition which found no warrant whatever in the proof. They were of such a character and there was so much of them, apparently without foundation, that the case is exceptional in that particular.

The court said that "in general their treatment of their smaller competitors has been fair and just." Also, it was specifically pointed out that the amount of property turned into the combination was greater than the amount of securities issued, which means that there was no overcapitalization. The statute under which the judges found it necessary to dissolve in this case is even now being made more drastic by Congress. This exactly at a moment when we are under a necessity, universally recognized, for cooperation; to enable us to defend ourselves against the conditions created by foreign war. Does this represent, in Judge HOOK's words, "the preponderance of public opinion"? Is it not a fair question for debate whether this is not a step backward in civilization?

How About This?

THE FOLLOWING WORDS were written by the present writer in COLLIER'S over five years ago:

> *Those who fight consolidation in this era start with a large handicap. Why not accept it and regulate it? In convenience, in economy, in profits, everyone admits the benefits of consolidation. The essential ground for complaint is that too many of these benefits now go to the consolidators.*

These words were printed in COLLIER'S for January 16, 1909. That was some years before the Progressive party was dreamed of. We are free to admit our minds have gone round the compass on this subject several times since then, but the words read well to-day.

The Curse of Small Business

THE ATTENTION of those who believe that big business is necessarily bad and that small units are preferable in the interest of the community is invited to a report recently made to the London (England) County Council on London's electricity supply. Messrs. Merz & McLellan, a famous engineering firm which has built enormous plants at Newcastle and elsewhere, find that England's greatest city is now served by sixty-five companies which operate seventy generating stations using thirty-one different systems of generation, eight different frequencies, twenty-one different distributing voltages, and fifty methods of charging the consumer for what he gets. The waste and vexation caused by this confusion must be incalculable. This planless piecemeal policy has now come to the end of its rope. The engineers propose to arrange for an ultimate supply from one huge generating station and to retire the bric-à-brac as fast as possible. The trouble is that for the next fifteen years the savings thus effected must be spent in retiring the dead capital already invested, so that the consumer will reap no immediate gain. London is far off, but the example is a huge one and easily understood. The difficulty with small-scale business is that it thwarts the future. Business must be regulated, responsive to the public interest and the general conscience, but it must first of all be adequate or it is a failure. Any service fit for our modern communities must be a service of foresight and leadership.

War Costs

THOSE WHO PREDICT A RUINED EUROPE after the war must remember that this depends partly upon whether or not the present struggle settles the armament question. Europe now spends over one thousand million dollars per annum on the war business. If part or all of this can be saved it will go far in the work of restoration. Furthermore, war is a tremendous inspirer of energy, as France proved after 1870 and as we proved after the Civil War. Science and industry will go forward even faster when freed of some of the burden of the military fanatics. Our civilization is not to be overturned.

Much Obliged, Cynthia

IN CINCINNATI the "Post" has a woman star reporter, CYNTHIA GREY. One day recently the managing editor told her to think up a new stunt. She came around to COLLIER'S local office and got a job as agent. From her experiences, as reported in the "Post," we find the first person she called on was ex-Congressman NICHOLAS LONGWORTH. She found Mr. LONGWORTH "all dressed up in a new blue suit—gazing out on the Kentucky hills." (We know what he was thinking about.) NICK subscribed for two years and paid $5 cash. Two years will take us beyond the next National Convention. If the ex-Congressman will read us steadily he may be able to solve the doubt that tears his soul, whether to be Progressive or Republican would best promote his personal political fortunes. WALTER KNIGHT "did not care for the policy of the publication and told me so frankly at once." We don't know WALTER. Has he any distillery connections? Anyhow, if all the persons who don't like the policy of COLLIER'S were assembled on a ten-acre lot, and would then take a look at one another, we think WALTER would quickly get out of the company he would find himself in.

Fatherhood and Motherhood

SOME ONE ought to call the attention of the critics of the modern feminist movement to the fact that our civilization believes in children being born into families. A family consists of a recognized father, a mother, and a child or several children. Every form of legal and social pressure has been exerted for centuries to make this the only accepted mode for carrying on the race. Its success is evident in the fact that the legitimate children are vastly more numerous than the illegitimate—i. e., those born outside the family relation. In spite of all this we are hearing a great deal nowadays about women "shirking motherhood," "refusing motherhood," or "escaping the duty of motherhood," as if a child were a sort of solitary indulgence on the part of the woman concerned. Anyone who knows the facts of modern life knows that there are practically always two people responsible for the childless family—a man and a woman. If any blame is to be assessed, it must be put on both of them. The version which blames the woman only is no more modern than the third chapter of Genesis. If we are to do any clear thinking on this important subject, it is time we began to discuss the phenomenon of men "shirking fatherhood," "refusing fatherhood," and "escaping the duty of fatherhood." This correction is true not only with respect to the institution of marriage, but also with respect to the economic basis of family life. The modern development of means of diversion and indulgence has affected men as well as women. Successful men are quite as apt to be absorbed in business and pleasure as women are in society and pleasure. They avoid and neglect the family with the same selfish facility. Both have made the same tragic mistake of preferring the transient to the durable satisfactions of life. It is doubtful if any women's college has as bad a record from the standpoint of perpetuating the race as has Harvard. Our country will not escape race suicide by talking as if it were sex suicide. The problem is to impress the ideal of family life upon people who have been so educated and trained as to be centered wholly on themselves.

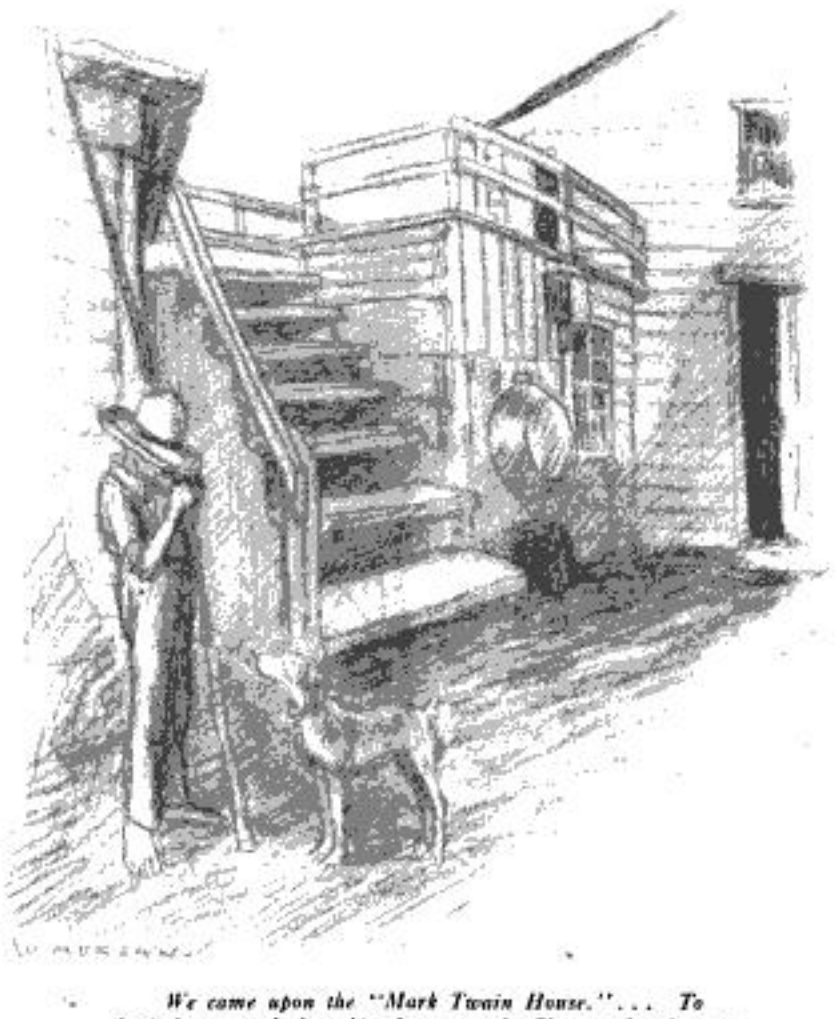
"In Mizzoura"

Three Mississippi River Towns

Chapter VIII—Abroad at Home—*American Ramblings, Observations, and Adventures*

By Julian Street

Illustrated by Wallace Morgan



IF BLACK SLAVES are no longer bought and sold there; if the river trade has dwindled; if the railroad and the factory have come, bringing a larger population with them; if the town now has a hundred-thousand-dollar city hall, a country club, and "fifty-six passenger trains daily," it is, at all events, a pleasure to record the fact that Hannibal, Mo., retains to-day that look of soft and shambling picturesqueness suitable to an old river town, and essential to the "St. Petersburg" of fiction—the perpetual dwelling place of those immortal boys, Tom Sawyer and Huckleberry Finn.

Should this characterization of the town fail to meet with the approval of the Hannibal Commercial Club, I regret it, for I honor the Commercial Club because of its action toward the preservation of a thing so uncommercial as the boyhood home of Mark Twain. But, after all, the club must remember that, in its creditable effort to build up a newer and finer Hannibal, a Hannibal of brick and granite, it is running counter to the sentimental interests of innumerable persons who, though most of them have never seen the old town and never will, yet think of it as given to them by Mark Twain, with a peculiar tenderness, as though it were a Tom Sawyer or Huck Finn among the cities—a ragged, happy boy of a town, which ought never, never to grow up.

There is no more charming way of preserving the memory of an artist than through the preservation of the house in which he lived, and that is especially true where the artist is a literary man and where the house has figured in his writings. What memorial to Thomas Bailey Aldrich, for example, could equal the one in Portsmouth, N. H., where the house in which the "Bad Boy" of the "Diary" used to live is preserved, even to the furniture and the bedroom wall paper mentioned in the book? And what monuments to Washington Irving could touch quite the note that is touched by that old house in Tarrytown, N. Y., or that other old house in Irving Place, in the City of New York, where the Authors' League of America now has its headquarters?

With the exception of Stratford-on-Avon, I do not know of a community so completely dominated by the memory of a great man of letters as is the city of Hannibal by the memory of Mark Twain. There is, indeed, a curious resemblance to be traced between the two towns. I don't mean a physical resemblance, for no places could be less alike than the garden town where Shakespeare lived in England and the pathetic wooden village of the early West in which nine years of Mark Twain's boyhood were spent. The resemblance is only in the majestic shadows cast over them by their great men.

Thus, the hotel in Stratford is called The Shakespeare Hotel, while that in Hannibal is The Mark Twain. Stratford has the house in which Shakespeare was born; Hannibal the house in which Mark Twain lived—the house of Tom Sawyer. Stratford has the cottage of Anne Hathaway; Hannibal that of "Becky Thatcher." And Hannibal has, furthermore, one possession which lovers of the delightful Becky will hope may long be spared to it—it possesses, in the person of Mrs. Laura Hawkins Frazer, who is now matron of the Home for the Friendless, the original of Becky.

We came upon the "Mark Twain House." . . . To think that, wretched as this place was, the Clemens family were forced to leave it for a time because they were too poor to live there!

If They Meet They Smile

IT IS said that a memorial tablet, intended to mark the birthplace of Eugene Field in St. Louis, was placed, not only upon the wrong house, but upon a house in the wrong street. Mark Twain unveiled the tablet; one can fancy the spirits of these two Missouri literary men meeting somewhere and smiling together over that. But if the shade of Mark Twain should undertake to chaff that of the poet upon the fact that mortals had erred as to the location of his birthplace, the shade of Field would not be able to retort in kind, for—thanks partly to the fact that Mark Twain was known for a genius while he was yet alive, and partly to the indefatigable labors of his biographer, Albert Bigelow Paine—a vast fund of accurate information covering the life of the great Missourian, from the time of his birth in the little hamlet of Florida, Mo., to his death in Reading, Conn., has been preserved. No; if the shade of Field should wish to return the jest, it would probably call the humorist's attention to a certain memorial tablet in the Mark Twain house in Hannibal. But of that presently.

What Is Left of Mark Twain in Hannibal

I HAVE said that the Commercial Club honored Mark Twain's memory. That is true. But the Commercial Club would not be a Commercial Club if it did not also wish the visitor to take into consideration certain other matters. In effect it says to him: "Yes, indeed, Mark Twain spent the most important part of his boyhood here. But we wish you to understand that Hannibal is a busy, growing town. We have the cheapest electric power in the Mississippi Valley. We offer free factory sites. We—"

"Yes," you say, "but where is the Mark Twain house?"

"Oh—" says Hannibal, catching its breath. "Go right on up Main to Hill Street; you'll find it just around the corner. Anyone will point it out to you. There's a bronze tablet in the wall. But put this little pamphlet in your pocket. It tells all about our city. You can read it at your leisure."

You take the pamphlet and move along up Main Street. And if there is a sympathetic native with you he will stop you at the corner of Main and Bird—they call it Wildcat Corner—and point out a little wooden shanty adjoining a near-by alley, where, it is said, Mark Twain's father, John Marshall Clemens, had his office when he was Justice of the Peace—the same office in which Samuel Clemens in his boyhood saw the corpse lying on the floor, by moonlight, as recounted in "The Innocents Abroad."

It was at Wildcat Corner, too, that the boys conducted that famous piece of high finance: trading off the green watermelon, which they had stolen, for a ripe one, on the allegation that the former had been purchased.

Also near the corner stands the building in which Joseph Ament had the office of his newspaper, the "Missouri Courrier," where young Sam Clemens first went to work as an apprentice, doing errands and learning to set type; and there are many other old buildings having some bearing on the history of the Clemens family, including one at the corner of Main and Hill Streets, in the upper story of which the family lived for a time, a building somewhat after the Greek pattern so prevalent throughout the South in the early days. Once, when he revisited Hannibal after he had become famous, Mark Twain stopped before that building and told Mr. George A. Mahan that he remembered when it was erected, and that at the time the fluted columns on the front of it constituted his idea of reckless extravagance—that, indeed, the ostentation of them startled the whole town.

Concerning a Certain Memorial Tablet

TURNING into Bird Street and passing the old Pavey Hotel, we came upon the "Mark Twain House," a tiny little box of a cottage, its sagging front so taken up with five windows and a door that there is barely room for the little bronze plaque which marks the place. At one side is an alley running back to the house of Huckleberry Finn, on the next street (Huck, as Paine tells us, was really a boy named Tom Blankenship), and in that alley stood the historic fence which young Sam Clemens cajoled the other boys into whitewashing for him, as related in "Tom Sawyer."

Inside the house there is little to be seen. It is occupied now by a custodian who sells post cards, and has but few Mark Twain souvenirs to show—some photographs and autographs; nothing of importance. But, despite that, I got a real sensation as I stood in the little parlor, hardly larger than a good-sized closet, and realized that in that miserable shanty grew up the wild, barefoot boy who has since been called "the greatest Missourian" and "America's greatest literary man," and that in and about that place he gathered the impressions and had the adventures which at the time he himself never dreamed would be made by him into books—much less books that would be known as classics.

In the front room of the cottage a memorial tablet is to be seen. It is a curious thing. At the top is the following inscription:

THIS BUILDING PRESENTED TO THE
CITY OF HANNIBAL,
MAY 7, 1912,
BY
MR. AND MRS. GEORGE A. MAHAN
AS A MEMORIAL TO
MARK TWAIN

Beneath the legend is a portrait bust of the author in bas relief. At the bottom of the tablet is another inscription. From across the room I saw that it was set off in quotation marks, and assuming, of course, that it was some particularly suitable extract from the works of the most quotable of all Americans, I stepped across and read it. This is what it said:

"MARK TWAIN'S LIFE TEACHES THAT POVERTY IS AN INCENTIVE RATHER THAN A BAR; AND THAT ANY BOY, HOWEVER HUMBLE HIS BIRTH AND SURROUNDINGS, MAY BY HONESTY AND INDUSTRY ACCOMPLISH GREAT THINGS."
—GEORGE A. MAHAN.

That inscription made me think of many things. It made me think of Napoleon's inscription on the

Digitized by Google

statue of Henri IV, and of Judge Thatcher's talk with Tom Sawyer, in the Sunday school, and of Mr. Walters, the Sunday-school superintendent, in the same book, and of certain moral lessons drawn by Andrew Carnegie. And not the least thing of which it made me think was the mischievous, shiftless, troublesome, sandy-haired young rascal who hated school and Sunday school and yet became the more than honest, more than industrious man, commemorated here.

The World That Opened from a Back Yard

IF I did not feel the inspiration of that place while considering the tablet, the back yard gave me real delight. There were the old outhouses, the old back stair, the old back fence, and the little window looking down on them—the window of Tom Sawyer, beneath which, in the gloaming, Huckleberry Finn made catcalls to summon forth his fellow buccaneer. And here, below the window, was the place where Pamela Clemens, Sam's sister, the original of "Cousin Mary" in "Tom Sawyer," had her candy pull on that evening when a boy, in his undershirt, came tumbling from above.

And to think that, wretched as this place was, the Clemens family were forced to leave it for a time because they were too poor to live there! Of a certainty, Mark Twain's early life was as squalid as his later life was rich. However, it was always colorful—he saw to that, straight through from the barefoot days to those of the white suits, the Oxford gown, and the European courts.

Not far back of the house rises the "Cardiff Hill" of the stories; in reality, Holliday's Hill, so called because long ago there lived up at the top old Mrs. Holliday, who burned a lamp in her window every night as a mark for river pilots to run by. It was down that hill that the boys rolled the stones which startled churchgoers, and that final, enormous rock which, by a fortunate freak of chance, hurdled a negro and his wagon instead of striking and destroying them. Ah, how rich in racy memories are those streets! Somewhere among them, in that part of town which has come to be called "Mark Twainville," is the very spot, unmarked and unknown, where young Sam Clemens picked up a scrap of newspaper upon which was printed a portion of the tale of Joan of Arc—a scrap of paper which, Paine says, gave him his first literary stimulus. And somewhere else, not far from the house, is the place where Orion Clemens, Sam's elder brother, ran the ill-starred newspaper on which Sam worked, setting type and doing his first writing. It was, indeed, in Orion's paper that Sam's famous verse, "To Mary in Hannibal," was publisht—the title condensed, because of the narrow column, to read: "To Mary in H—l."

Along the crest of the bluffs, overlooking the river, the city of Hannibal has made for itself a charming park, and at the highest point in this park there is to be unveiled, in a short time, a statue of Samuel Langhorne Clemens, which, from its position, will command a view of many leagues of mile-wide Mississippi. It is peculiarly fitting that the memorial should be stationed in that place. Mark Twain loved the river. Even though it almost "got" him in his boyhood (he had "nine narrow escapes from drowning") he adored it; later, when his youthful ambition to become a river pilot was attained, he still adored it; and finally he wrote his love of it into that masterpiece, "Life on the Mississippi," of which Arnold Bennett has said: "I would sacrifice for it the entire works of Thackeray and George Eliot."

Looking up the river from the spot where the statue will be placed, one may see Turtle Island, where the boys used to go and feast on turtle's eggs—rowing there in that boat which they so "honestly and industriously" stole and painted red, that its former proprietor might not recognize it. Below is Glascox Island, where Nigger Jim hid. Glascox Island is often called Tom Sawyer's Island, or Mark Twain's Island, now. Not far below the island is the "scar on the hillside" which marks the famous cave.

"For Sam Clemens," says Paine in his biography, "the cave had a fascination that never faded. Other localities and diversions might pall, but any mention of the cave found him always eager and ready for the three-mile walk or-pull that brought them to the mystic door."

I suggested to my companion that, for the sake of sentiment, we, too, approach the cave by rowing down the river. And, having suggested this plan, I offered to take upon myself the heaviest responsibility connected with the undertaking—that of piloting the boat in these unfamiliar waters. All I required of him was the mere manual act of working the oars. To my amazement he refused. I fear that he not only lacks sentiment, but that he is becoming lazy.

We drove out to the cave in a Ford car.

Do You Remember This Cave?

DO YOU remember when Tom Sawyer took the boys to the cave at night, in "Huckleberry Finn"?

"We went to a clump of bushes," says Huck, "and Tom made everybody swear to keep the secret, and then showed them a hole in the hill, right in the thickest part of the bushes. Then we lit candles and crawled in on our hands and knees. We went about two hundred yards, and then the cave opened up. Tom poked about among the passages, and pretty soon ducked under a wall where you wouldn't 'a' noticed there was a hole. We went along a narrow place and got into a kind of room, all damp and sweaty and cold, and there we stopped. Tom says: 'Now we'll start this band of robbers and call it Tom Sawyer's Gang. Everybody that wants to join has got to take an oath and write his name in blood.'"

That is the sort of cave it is—a wonderful, mysterious place, black as India ink; a maze of passageways and vaulted rooms, eaten by the waters of long ago through the limestone cliffs; a seemingly endless cavern full of stalactites and stalagmites, looking like great conical masses of candle grease; a damp, oppressive labyrinth of eerie rock formations, to kindle the most bloodcurdling imaginings.

Adventuring in the Dark

AS WE moved in, away from the daylight, illuminating our way, feebly, with such matches as we happened to have with us, and with newspaper torches, the man who had driven us out there told us about the cave.

"They ain't no one ever explored it," he said, "'S too big. Why, they's a lake in here—quite a big lake, with fish in it. And they's an arm of the cave that goes away down underneath the river. They say they's wells, too—holes with no bottoms to 'em. Prob'ly that's where them people went to that's got lost in the cave."

"Have people gotten lost in here?" I asked.

"Oh, yes," he said cheerfully. "They say there's some that's gone in and never come out agin. She's quite a cave."

I began to walk more gingerly into the blackness.

"I suppose," I said to him presently, "there are toads and snakes and such things here?"

He hastened to set my mind at rest on that.

"Oh, Lord bless you, yes!" he declared. "Rats, too."

"And I suppose some of those holes you speak of are full of snakes?"

"Most likely." His voice reverberated in the darkness. "But I can't be sure. Nobody that's ever been in them holes has lived to tell the tale."

By this time we had reached a point at which no glimmer of light from the mouth of the cave was visible. We were feeling our way along, running our hands over the damp rocks and putting our feet before us with the utmost caution. I knew, of course, that it would add a good deal to my story if one of our party fell into a hole and was never again heard from, but the more I thought about it the more advisable it seemed to me that I should not be that one. I had an engagement for dinner that evening, and besides, if I fell in, who would write the story? Certainly the driver of the auto-hack, for all his good will, could hardly do it justice; whereas, if he fell in I could at a pinch drive the little Ford back to the city.

I dropped behind. But when I did that he stopped.

"I just stopped for breath," I said. "You can keep on and I'll follow in a minute."

"No," he said. "I'll wait for you. I'm out of breath, too. Besides, I don't want you to get lost in here."

A Tragedy That Didn't Happen

AT THIS juncture my companion, who had moved a little way off, gave a frightful yell, which echoed horribly through the cavern.

I could not see him. I did not know what was the matter. Never mind! My one thought was of him. Perhaps he had been attackt by a wildcat or a serpent. Well, he (*Continued on page* 31)

Never outside of Brittany and Normandy have I seen roads so full of animals as in Pike County, Missouri. Cows and pigs and chickens and dogs were there to protest, by various antics, against the invasion of the motor car. Dogs hurled themselves as though to suicide; chickens extended themselves in shrieking dives across our course; pigs arose from the luxurious mud

A Parallel of Men and Dogs in the Great European Slaughter

A regiment of Russian infantry on the march to the firing line

AT FIRST glance it may seem that there was a bit of irony in placing these photographs together on a page, but the story the pictures tell is more pathetic than ironical. Above are seen some of France's most highly trained cavalrymen, who represent the flower of the big army fighting side by side with the British and the Belgians along the 200-mile slaughter line from Belfort to Liege. The Russians at the left are some of the million who are in the same great struggle, but who are fighting along another war front at the northeast. Below are some dogs of war, but not in the old sense. These animals are used by ambulance corps when picking up the injured. The dogs are the true noncombatants. Even their masters go armed.

Copyright by Underwood & Underwood

The canine ambulance division of the French army, made up of regulation ambulance corps and specially trained dogs. The dogs carry messages between their masters on the battlefield and drugs to the wounded. They are fleet of foot and can run many errands that would endanger the lives of men

The Mowing Down of the Gallant Uhlans

THE men in the photograph above were a part of the three regiments of German Uhlans who were practically annihilated while making a gallant charge against the Belgians during the early fighting at Liege, when General von Emmich started to cross Belgium in his campaign toward Paris. Whether the German general knew that these regiments were going to be cut to pieces, and merely took the slaughter of the men as a matter of course, is problematical. He is accused by the partisans of Germany's enemies of having underestimated the strength of the Belgians. Von Emmich's success later in pushing his men past the Liege fortifications is not convincing proof that he anticipated strong resistance. The loss of a few thousand men during the battle of Liege is like the plucking of a blade of grass in a large pasture field, when we consider the fact that Germany and Austria have three million men in arms and their enemies—Russia, France, England, Belgium, and Servia—are represented in the field by a much larger number, but the story of the desperate charge of the Uhlans will go down in history as a fine example of German courage.

In Germany the word "Uhlan" is applied to the cavalry in general. It originated in eastern Europe, where it is used to describe light cavalry only.

Austrian Artillerie d'Elite

THE artillerymen in the circle are among the best in Austria's army. They compare favorably with the French and German artillery, and are considered equal to the Russians, their most dangerous foes at the present stage of the great European war. The Austrians missed an opportunity to inspire confidence in their fighting ability when they failed to crush Servia in the first few days of their war with that little kingdom. Austria is seriously hampered by a division of her own forces. The Austrian army proper is quite distinct from the Hungarian army. And there is a confusion of tongues used by Francis Joseph's different regiments. Besides, less than half of the Dual Empire's population is of German origin, and naturally its soldiers cannot be counted on to be as loyal in the field as if they were welded together by strong racial ties.

Canada Comes to the Aid of the Motherland

THE Canadians are a peace-loving people, and they could have kept out of the European war as easily as the United States is keeping out of it, but when Britain, the Motherland, went to war they decided to go with her. No sooner had the news reached them that England was going to fight than the Canadian military authorities began to mobilize an expeditionary force of 22,250 men and to prepare for the enrollment of volunteers from their own citizenry and from the large numbers of Frenchmen, Russians, Belgians, and Servians in Canada and in the United States. And one of the first things the Ottawa Government did was to take precautions to prevent the crippling of their rail and water transportation facilities by Germans or Austrians in the Dominion. Troops were stationed at a large number of places to guard against the dynamiting of railroads, bridges, and canal locks. The men in the photograph at the left are guarding the Welland Canal, which connects Lake Ontario with Lake Erie. The St. Lawrence River, the Bay of Fundy, and the Straits of Juan de Fuca at Victoria are well protected by mines and long-range guns. No attack on either coast is contemplated.

Velvet Joe

The Genial Kentucky Philosopher has a message for the readers of Collier's Weekly

"A HOUN' DAWG'S happiest when he's chasin' a rabbit 'cause then he ain't got time to worry about his fleas.

"A man is happiest when he's chasin' a ideal, an' the business that keeps *its* ideal always on the jump is the business that will grow.

"That's how Liggett & Myers got to be the biggest tobacco manufacturer in the world—by chasin' a ideal like this:

"'Whatever brand appears under our name must be the finest that can be put out for the money.'

"VELVET is one of Liggett & Myers ideals.

"Nature must have started out to make a ideal pipe smoke when she made Kentucky's Burley.

"Whar nature leaves off on Burley, work on VELVET begins—cultivatin', an' pickin' an' choosin', to get the best an' richest leaves.

"Then comes the curin' that lasts mo' than two years an' puts that fine, mellow, aged-in-the-wood smoothness into VELVET, The Smoothest Smoking Tobacco.

"Mild, slow-burnin' VELVET will make yo' pipe all that a pipe ought to be—a friend in need and a friend indeed."

Pickups of Sport

By Grantland Rice

ILLUSTRATED BY F. G. COOPER

The Sisyphusian Cinch

NO one has ever accused the late Mr. Sisyphus of having obtained any sugar-coated assignment. His task, as we remember it, was to roll a bowlder up the hill, and then, just as it reached the top, to stand by and watch it careen to the abyss again.

The drab monotony of this episode must have gotten on his nerves. But in the end we doubt if his assignment was quite as rasping as John J. McGraw's. The Giant leader has been predominating all summer in a battle for his fourth consecutive flag. If he succeeds, it will be a wonderful managerial achievement. But, after all, to what main purpose? Merely to drive his legion once more in October against an attack led by Collins and Baker and a defense led by Bender and Plank. Year by year McGraw pushes his club to the crest of the hill where with greater glory in sight they are met by Mackian bats and the volleyed cunning of two renowned arms, right and left. The Giants this season have fought with admirable courage, but have lacked the steady power of other years. The Mackmen are about the same as ever, or, if anything, a trifle more so. The Giants have in their favor only the uncertainty of the national game. We sometimes wonder if Mr. Sisyphus were around and had the choice between pushing a rock to the top of the hill or pushing a ball club up within reach of Athletic bats, whether he would make the shift? For there is always the outside chance, in his original job, of getting that bowlder over with one more shove.

The Immutables

World maps, they say, will soon be changing,
Where nations rise as others fall;
New dreams and hopes will soon be ranging
Above the warring bugles' call;
But when new drifting hordes are mingled
By vanished thrones from Russ to Rome,
We'll still read: "Eddie Collins singled
And Baker's triple drove him home."

The tumult and the shouting rises,
As Kipling almost said before;
Old systems fade and new surprises
Are furnished in bewildering store;
But when the German dream's untroubled
Or France holds Alsace to her breast,
We'll still read: "Eddie Collins doubled
And Baker's wallop did the rest."

Another Call to Arms

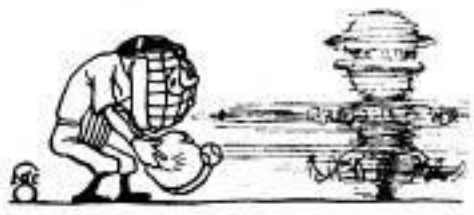
THE European war, in all its mad savagery, had just broken. There was in the air, borne from overseas, the crash of cannon, the roll of drums, and the clamorous echo of conflict.

And then suddenly, above all this, there came another thundering note of strife. Coach Fielding H. Yost of Michigan was summoning his clan to early September mobilization. Europe might be rent with strife, but on a certain late October date in the Harvard Stadium there was another martial program to be faced. And this meant more to the Michigan Mandarin than all the wars that were or will be.

Michigan faces an almost hopeless task, and no one knows it better than Yost. Harvard returns nine-elevenths of a matchless machine—and among these nine are Brickley and Mahan. Yost isn't bothering about the attacking power of his back field with the brilliant Maulbetch added to Hughitt and Galt. But he must find a new protecting wall from tackle to tackle—both as a guard against Harvard's offense and a protection for his own. Hughitt and Galt at quarter and half are proved entries of merit. And Maulbetch gives promise of Hestonian glory. But unless Yost can build in four weeks a line powerful enough to check Harvard's attack and keep Brickley out of constant range he will be up against a day of trouble. Michigan will come with speed and courage—but she is likely to come minus Harvard's additional advantage of power and experience.

The Michigan defense will be assailed from two points—by Brickley through the air and by Mahan on the ground. Fortunately for the Wolverine, there is no waterway to guard against. Yost must be able to develop a line of attack that will call in Harvard's secondary defense before he can introduce his open game. And to do this he must build up a charging line. Which may prove to be a miracle even beyond the genius of Hurry-up Yost, who will turn the trick if said trick is to be turned.

How to Pitch



Shoot all the stuff, both lean and fat,
Your pitching arm may have to yield;
Until Ty Cobb comes up to bat—
Then whirl and throw to center field.

Old Stuff

A FEW days ago we ran across the ghost of old Doc Homer, the well-known (among five or six) sport historian of ancient Greece.

"Say," he said in well-modulated ringwlardner accents, "can you slip me a coupon to this next World Series?"

"Sure," we answered, remembering that the fellow once had some talent, even if we never cared a lot for his stuff.

"Who," asked the ancient bard, "will probably work the opening game?"

"It will probably be Matty against Plank," we replied.

"Then never mind the ticket," he came back with a poorly suppressed yawn. "I saw enough of those two guys in a World Series when I was sporting editor of the "Grecian Bugle" 4,000 years ago. I'll drop around about 1960 when there's some new stuff on the program."

Nailing a Rumor

WE are in a position to deny the rumor that Mr. Fielding H. Yost of Michigan will commit suicide in case Mr. C. E. Brickley of Harvard decides to enlist in the Belgian army. Mr. Yost himself says the rumor is entirely unfounded.

Men or Machines?

AT this stage of the proceedings the Athletics have again salted down the victory in their circuit and have proved that they stand alone.

They are waiting now with loaded guns and bayonets fixed for their fourth World Series. By all the laws of the inelastic dope they should win again. But it might be remembered that as great a machine as the old Cubs were, they were not above defeat in one short series. In their four World Series wars they were beaten by both the White Sox and the Athletics against two victories over the Tigers.

On the other paw, not even the Cubs were as relentless a machine as the Mackian line-up has shown itself to be. The Mackmen, in four post-season games against National League clubs, have won sixteen and lost five. If baseball is as uncertain as they say it is, they are now about due to slip back the other way. But it begins to look as if Mack's club is the certain exception that proves the rule of uncertainty. We have a queer, weird season in sport. A season of many shifts and upsets. But Mr. McGillicuddy has left us one ancient landmark to work with.

Meeting the Game's Break

FOR those in this festive game of Existence who may feel oppressed by the ravages of war we recommend Mr. R. W. Emerson's "Self-Reliance" and "Compensation."

The answer is that Trouble, if faced with the proper courage, can bring more lasting contentment to the soul than any peace or prosperity. Also it proves again that for those content to plug on through the shadows, the sunlight is not only just beyond, but that it is waiting with a radiance undreamed of by those who have known nothing else but the light.

But this can only come to those willing to take the break of the game as it comes without caving in at the first onslaught of old Doc Trouble. It is a great little idea to entertain—that of feeling that after all there may be more fun in a good hard fight than in securing the rewards of an easy battle.

Driving Back War

THE mailed flipper of carnage may have left quite a dent in the jubilee of sport—to mix 'em up a bit—but it failed to suppress any thrill when Maurice McLoughlin met Norman Brookes in the second match for the Davis Cup. The battle to death between two millions faded out for the spectators before the battle for glory between two. Brookes brought with him all the brilliancy and steadiness of his great game, but he found that the red-topped Californian to brilliancy and stamina had added steadiness—and had come from those "among the first three" to stand upon the pinnacle alone.

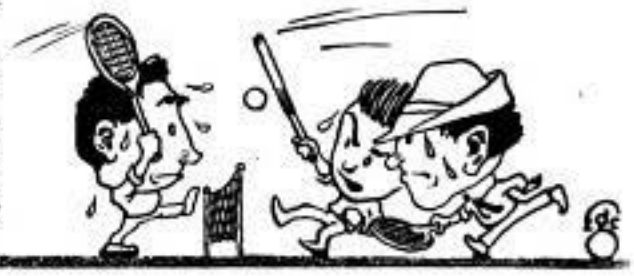
McLoughlin in the past had known two defeats from Brookes, but when one man is standing still and the other is coming forward, it is only a question of time before even the master workman is passed.

Under the Sun

THERE is nothing new, they whisper, under the sun. How, then, would you label the case of the Boston Braves?

Here is a ball club loaded down with the tradition of defeat and disaster. Late in June it was an almost hopeless tailender. It entered August not only in the first division, but making a bold challenge for the top with a fair show of arriving.

If there is a parallel to the Braves' ascent in all baldom we would cherish an immediate reply.



The Lone Survivor

I saw him in the car to-day
Where headlines glimmered, black and large;
And yet he read upon his way
No story of a Uhlan charge.

But skipping swiftly, page by page,
I saw him settle with a sigh
Beyond this battle-bowered age
Where something dearer caught his eye.

One of the old guard, from afar
No cabled bait found him a fish;
It took more than a world-wide war
To drive him from his cherished dish.

Above the battle's vibrant roar,
Beyond mad Europe's gory science,
His eager eye still sought the score,
The dope on Mackmen, Braves, and Giants.

Brickbats & Bouquets

WHO are the most conspicuous newspaper editors before the country today? Watterson of the old school, and Brisbane and Keeley of the new. When we have named them we must stop to think of some more. Presently we think of Harvey and Hapgood, and Lorimer and Sullivan. But they are not newspaper editors. They are weekly and monthly editors. Is there any significance in that? Why do we turn so quickly to periodical journalism to find notable personality? Is the American newspaper no longer hospitable to personality? Why, with so many newspapers, do we produce noteworthy newspaper men in numbers so astonishingly small?
H. M. NIMMO, Detroit *Saturday Night*.
(From an address before the National Editorial Association at Houston, Tex.)

✚

VERNON, TEX.

I have been reading COLLIER'S since Mr. Wilson's inauguration and have found it to be indeed friendly to the present Administration. . . .

I am progressive enough to agree with you on the subjects of Government control of public resources and woman suffrage. J. R. COCKE.

✚

WASHINGTON, D. C.

I am glad that you so heartily use your great influence as a public educator, politically and socially, to make a better country and a happier people.
CHAS. E. OBELL.

✚

SAN FRANCISCO, CAL.

From to-day COLLIER'S is going to be added to my collection.

Why? Because it is *good* and *cheap*.

Now, any child knows that there are mighty few things in this world that are *cheap* and *good*. L. RUNDALL.

✚

YPSILANTI, MICH.

Were I to write you a commendatory letter on each of the editorials you publish which seem to me to be especially fine, you would receive about a dozen letters a week from me. The editorials on booze hit the hardest of anything along that line that comes to my notice. I venture to say they do more toward killing the liquor traffic than anything else published anywhere. This seems a little strong, but I have thought it all over before setting it down here.
F. E. WESTFALL, M. D.

✚

PARKERSBURG, W. VA.

Your cartoon, "The Conjurer," sounds like a joke. . . . The G. O. P. is the only friend the workingman has in this country. A. C. NELSON.

✚

BINGHAMTON, N. Y.

I admire very much the editorials and the serials. Give us more stories which set as high a moral standard for man as for woman. MRS. A. L. WRIGHT.

✚

CHICAGO, ILL.

I certainly commend your stand on liquor—I find business men every day coming over to our way of thinking. The whole liquor game is simply "efficiency poisoned," as one man put it. Your Sullivan letters from Washington are fine, your editorials excellent, your fiction punk. Fitch we all like. E. R. ARMSTRONG.

✚

Mark Sullivan, who stands in the political conning tower of COLLIER'S WEEKLY scanning the far horizon, sees stormy weather ahead for the triumphant Democracy. . . . Mr. Sullivan finds three counts against the Democrats.—Clinton (Ill.) *Public*.

✚

Mark Sullivan of COLLIER'S can hardly be charged with hostility toward the present Administration, yet he has found some points for adverse criticism, notably the Mexican policy and Democratic extravagance.—Salina (Kas.) *Journal*.

✚

LITTLE ROCK, ARK.

Do I understand that your paper has changed colors again? I notice that you are praising Mr. Wilson very highly of late. I thought your paper was a friend of Mr. Roosevelt and also of the Progressive party. Now, honestly, Mr. Editor, do you really see such marked advancement in that Wilsonian outfit at Washington? Men like Wilson and his outfit at Washington are less progressive than Mr. Taft or anybody that was before him.
ISADORE KASSELBERG.

✚

COLLIER'S has been accused of Wilsonphobia without some sort of justification. It has indorsed most of the policies of the President and has always been friendly to him. So that no charge of partisan prejudice can lie against that publication for what it may say with regard to the situation in Mexico.—Tulsa (Okla.) *Daily World*.

✚

COLLIER'S WEEKLY is degenerating.—Johnstown (Pa.) *Democrat*.

✚

COLLIER'S WEEKLY, perhaps the most acute observer of national conditions.—Cincinnati (Ohio) *Spokesman*.

✚

TULSA, OKLA.

It is indeed gratifying to see a publication of the breadth and scope of COLLIER'S demonstrating its Americanism and independence in every issue.
EUGENE LORTON, *Editor*
Tulsa (Okla.) *World*.

✚

Again with dire forebodings of what is to come Mark Sullivan spreads his jeremiads upon the pages of COLLIER'S WEEKLY and tells the American public what a vast and profitless fizzle the Democratic Administration under the direction of President Wilson has made of things. He predicts woe and desolation, pestilence and famine, war and disaster. Nothing appears that is bright, optimistic, or even livable, everything is desolate, bleak, and uncompromising.—Lynchburg (Va.) *Advance*.

✚

PULASKI, TENN.

For my part I do not care if you never say anything else so long as you play on the inside of my heart as you have been doing. D. B. EALY, M. D.

"Ever-ready" ideal heating

When the first cold rain, chill winds, fog or frost stops your vacation-outing and drives you hurriedly back to the city, how your home-coming is cheered by the knowledge that you have only to touch a match to a little kindling in the ever-ready IDEAL Boiler and within ten minutes feel the soft, June-like warmth distributed alike in every room and hall through the AMERICAN Radiators that stand like alert sentinels to guard you from every attack of raw or zero weather.

AMERICAN RADIATORS & IDEAL BOILERS

Why not make yourself care-free by guarding your home against another on-coming season of old-fashioned heating discomforts by putting in at once an outfit of IDEAL Boilers and AMERICAN Radiators.
No matter how fiercely bleak winter rages at the doors or howls at the windows, the faster will be the natural flow of warmth to the AMERICAN Radiators to offset the cold. That's the beauty of our way of heating.
IDEAL Boilers and AMERICAN Radiators *add to the joy of living* because they banish the work and wear by keeping coal-dirt, ashes and soot out of the living rooms, and they *reduce the cost of living* in their great savings in fuel, lessened doctor bills and absence of repairs.
The practical values and every-day economies and conveniences of these heating outfits have been demonstrated in thousands and thousands of homes, stores, schools, churches, hospitals, theaters, notable buildings, etc., in nearly every civilized country, and endorsed by leading health officials, engineers, and architects. That is why IDEAL Boilers and AMERICAN Radiators are so *fully guaranteed*. Yet they cost no more than ordinary types made without scientific tests of construction and capacity. *Accept no substitute.*
If you want to make your home a haven of comfort, don't wait until you build but comfort your present house—on farm or in city—with an outfit of IDEAL Boiler and AMERICAN Radiators. Put outfit in now at present attractive prices and when you can get the services of the most skilled fitters.
Ask for free book: "Ideal Heating," which proves to you why these outfits are an *investment*—not an expense. Write to-day.

A No. 1-22-W IDEAL Boiler and 422 sq. ft. of 38 in. AMERICAN Radiators, costing the owner $180, were used to heat this cottage. At this price the goods can be bought of any reputable, competent Fitter. This did not include costs of labor, pipe, valves, freight, etc., which are extra, and vary according to climatic and other conditions.

$150 Vacuum Cleaner
Ask also for catalog of the ARCO WAND—a genuine, practical sets-in-cellar machine with suction pipe running to each floor.

who suffered from want of milk, the cattle being slaughtered for food. There was serious rioting in the Lanarkshire coal fields and in the Midlands, together with a Socialistic upheaval in the East of London, which had assumed the proportions of a civil war. Already there were responsible papers which declared that England was in an impossible position, and that an immediate peace was necessary to prevent one of the greatest tragedies in history. It was my task now to prove to them that they were right.

IT was May 2 when I found myself back at the Maplin Sands to the north of the estuary of the Thames. The *Beta* was sent on to the Solent to block it and take the place of the lamented *Kappa*. And now I was throttling Britain indeed—London, Southampton, the Bristol Channel, Liverpool, the North Channel, the Glasgow approaches, each was guarded by my boats. Great liners were, as we learned afterward, pouring their supplies into Galway and the west of Ireland, where provisions were cheaper than has ever been known. Tens of thousands were embarking from Britain for Ireland in order to save themselves from starvation. But you cannot transplant a whole dense population. The main body of the people, by the middle of May, were actually starving. At that date wheat was at a hundred, maize and barley at eighty. Even the most obstinate had begun to see that the situation could not possibly continue.

In the great towns starving crowds clamored for bread before the municipal offices, and public officials everywhere were attacked and often murdered by frantic mobs, composed largely of desperate women who had seen their infants perish before their eyes. In the country, roots, bark, and weeds of every sort were used as food. In London the private mansions of Ministers were guarded by strong pickets of soldiers, while a battalion of Guards was camped permanently round the Houses of Parliament. The lives of the Prime Minister and of the Foreign Secretary were continually threatened and occasionally attempted. Yet the Government had entered upon the war with the full assent of every party in the state. The true culprits were those, be they politicians or journalists, who had not the foresight to understand that unless Britain grew her own supplies, or unless by means of a tunnel she had some way of conveying them into the island, all her mighty expenditure upon her army and her fleet was a mere waste of money so long as her antagonist had a few submarines and men who could use them. England has often been stupid, but has got off scot free.

This time she was stupid and had to pay the price. You can't expect luck to be your saviour always.

IT would be a mere repetition of what I have already described if I were to recount all our proceedings during that first ten days after I resumed my station. During my absence the ships had taken heart and had begun to come up again. In the first day I got four. After that I had to go farther afield, and again I picked up several in French waters. Once I had a narrow escape through one of my Kingston valves getting some grit into it and refusing to act when I was below the surface. Our margin of buoyancy just carried us through. By the end of that week the channel was clear again, and both *Beta* and my own boat were down west once more. There we had encouraging messages from our Bristol consort, who in turn had heard from *Delta* at Liverpool. Our task was completely done. We could not prevent all food from passing into the British Islands, but at least we had raised what did get in to a price which put it far beyond the means of the penniless, workless multitudes. In vain Government commandeered it all and doled it out as a general feeds the garrison of a fortress. The task was too great—the responsibility too horrible. Even the proud and stubborn English could not face it any longer.

Danger!

(Continued from page 9)

I REMEMBER well how the news came to me. I was lying at the time off Selsey Bill when I saw a small war vessel coming down channel. It had never been my policy to attack any vessel coming down. My torpedoes and even my shells were too precious for that. I could not help being attracted, however, by the movements of this ship, which came slowly zigzagging in my direction.

"Looking for me," thought I. "What on earth does the foolish thing hope to do if she could find me?"

I was lying awash at the time and got ready to go below in case she should come for me. But at that moment—she was about half a mile away—she turned her quarter, and there, to my

How To Make Your Hair Thrive

First, learn how to wash it, and what to wash it with. PALMOLIVE SHAMPOO is more than a mere cleanser, because it is made from Palm and Olive oils. These are used by scalp specialists everywhere in treating hair that is in bad condition.

Their combination, in PALMOLIVE SHAMPOO, makes a splendid, rich lather that does not leave the hair dry, brittle, faded and unruly, but soft, tractable and glossy.

It cleanses thoroughly, without robbing the scalp of the natural oils necessary to its health. Rinses out easily and perfectly. Price, 50 cents a bottle.

Palmolive
Shampoo

Palmolive Soap

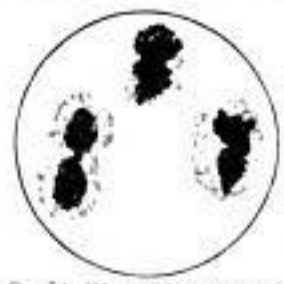
Combines, in most scientific form, palm and olive oils. The great natural beautifiers for over three thousand years.

Cleanses the skin thoroughly, without irritation or roughening.

Lathers freely in any water. Always hard. Never wastes. Price, 15 cents a cake.

Palmolive Cream

Protects the skin from the ravages of wind and dust. Adds to comfort after the use of Palmolive Soap. A necessary addition to every woman's toilet. Price, 50 cents.



THREEFOLD SAMPLE OFFER—Liberal cake of Palmolive, bottle of Shampoo and tube of Cream, packed in neat sample package, all mailed on receipt of five two-cent stamps.

Six consecutive shots at twenty yards

A remarkable score at twenty yards, six *consecutive* shots inside an inch and a quarter circle. *S. & W. accuracy* and *S. & W. mechanical perfection* -- the results of over half a century's experience -- enable even the novice to shoot well with the

Smith & Wesson Automatic

It's doubly safe

Safety first -- For more than fifty years we have made firearms on the *safety first* principle. You can't discharge the S. & W. Automatic *unintentionally*. To release the mechanism requires a *double* motion of the safety device -- made naturally in grasping the stock. And the *non*-automatic safety makes the gun *doubly* safe.

Easiest to cock -- Just press the release catch and you *disconnect* the recoil spring *entirely*. You can cock *this* gun with almost *no effort whatever*.

Easiest to clean -- May be opened up for cleaning *without removing a single part.*

The special caliber protects you from unsuitable ammunition.

No other automatic offers as many *exclusive* and *valuable* features.

Ask your dealer. Write for free booklet describing gun in detail.

SMITH & WESSON, 763 Stockbridge St., Springfield, Mass.

amazement, was the red flag with the blue circle, our own beloved flag, flying from her peak. For a moment I thought that this was some clever dodge of the enemy to tempt me within range. I snatched up my glasses and called on Vornal. Then we both recognized the vessel. It was the *Juno*, the only one left intact of our own cruisers. What could she be doing flying the flag in the enemy's waters? Then I understood it, and, turning to Vornal, we threw ourselves into each other's arms. It could only mean an armistice—or peace!

AND it was peace. We learned the glad news when we had risen alongside the *Juno*, and the ringing cheers which greeted us had at last died away. Our orders were to report ourselves at once at Blankenberg. Then she passed on down channel to collect the others. We returned to port upon the surface, steaming through the whole British fleet as we passed up the North Sea. The crews clustered thick along the sides of the vessels to watch us. I can see now their sullen, angry faces. Many shook their fists and cursed us as we went by. It was not that we had damaged them—I will do them the justice to say that the English, as the old Boer War has proved, bear no resentment against a brave enemy—but that they thought us cowardly to attack merchant ships and avoid the warships. It is like the Arabs, who think that a flank attack is a mean, unmanly device. War is not merely a big game, my English friends. It is a desperate business to gain the upper hand, and one must use one's brain in order to find the weak spot of one's enemy. It is not fair to blame me if I have found yours. It was my duty. Perhaps those officers and sailors who scowled at the little *Iota* that May morning have by this time done me justice when the first bitterness of undeserved defeat was past.

A Remarkable Series of Articles on the Present War by the Ablest of the War Correspondents will begin in Next Week's Issue

Let others describe my entrance into Blankenberg; the mad enthusiasm of the crowds and the magnificent public reception of each successive boat as it arrived. Surely the men deserved the grant made them by the State which has enabled each of them to be independent for life. As a feat of endurance, that long residence in such a state of mental tension in cramped quarters, breathing an unnatural atmosphere, will long remain as a record. The country may well be proud of such sailors.

THE terms of peace were not made onerous, for we were in no condition to make Great Britain our permanent enemy. We knew well that we had won the war by circumstances which would never be allowed to occur again, and that in a few years the island power would be as strong as ever—stronger, perhaps—for the lesson that she had learned. It would be madness to provoke such an antagonist. A mutual salute of flags was arranged, the colonial boundary was adjusted by arbitration, and we claimed no indemnity beyond an undertaking on the part of Britain that she would pay any damages which an international court might award to France or to the United States for injury received through the operations of our submarines. So ended the war.

Of course England will not be caught napping in such a fashion again! Her foolish blindness is partly explained by her delusion that her enemy would not torpedo merchant vessels. Common sense should have told her that her enemy would play the game that suited them best—that they would not inquire what they could do, but they would do it first and talk about it afterward. The opinion of the whole world now is that if a blockade were proclaimed one might do what one could with those who tried to break it, and that it was as reasonable to prevent food from reaching England in war time as it would be for a besieger to prevent the victualing of a beleaguered fortress.

I CANNOT end this account better than by quoting the first few paragraphs of a leader in the "Times," which appeared shortly after the declaration of peace. It may be taken to epitomize the saner public opinion of England upon the meaning and lessons of the episode:

"In all this miserable business," said the writer, "which has cost us the loss of a considerable portion of our merchant fleet, and more than fifty thousand civilian lives, there is just one consolation to be found. It lies in the fact that our temporary conqueror is a power which is not strong enough to reap the fruits of her victory. Had we endured this humiliation at the hands of any of the first-class powers, it would certainly have entailed the loss of all our Crown colonies and tropical possessions, besides the payment of a huge indemnity. We were absolutely at the feet of our conqueror, and had no possible alternative but to submit to her terms, however onerous. Norland has had the good sense to understand that she must not abuse her temporary advantage, and has been generous in her dealings. In the grip of any other power we should have ceased to exist as an empire.

"Even now we are not out of the wood. Some one may maliciously pick a quarrel with us before we get our house in order and use the easy weapon which has been demonstrated. It is to meet such a contingency that the Government has rushed enormous stores of food at the public expense into the country. In a very few months the new harvest will have appeared. On the whole we can face the immediate future without undue depression, though there remain some causes for anxiety. These will no doubt be energetically handled by this new and efficient Government which has taken the place of those discredited politicians who led us into a war without having foreseen how helpless we were against an obvious form of attack.

"Already the lines of our reconstruction are evident. The first and most important is that our party men realize that there is something more vital than their academic disputes about free trade or protection, and that all theory must give way to the fact that a country is in an artificial and dangerous condition if she does not produce within her own borders sufficient food at least to keep life in her population. Whether this should be brought about by a tax upon foreign foodstuffs, or by a bounty upon home products, or by a combination of the two, is now under discussion. But all parties are combined upon the principle, and, though it will undoubtedly entail either a rise in prices or a deterioration in quality in the food of the working classes, they will at least be insured against so terrible a visitation as that which is fresh in our memories. At any rate, we have got past the stage of argument. It *must* be so. The increased prosperity of the farming interest, and, as we will hope, the cessation of agricultural emigration, will be benefits to be counted against the obvious disadvantages.

"THE second lesson is the immediate construction of not one but two double-lined railways under the channel. We stand in a white sheet over the matter, since the project has always been discouraged in these columns, but we are prepared to admit that, had such railway communication been combined with adequate arrangements for forwarding supplies from Marseilles, we should have avoided our recent surrender. We still insist that we cannot trust entirely to a tunnel, since our enemy might have allies in the Mediterranean; but in a single contest with any power of the north of Europe it would certainly be of inestimable benefit. There may be dangers attendant upon the existence of a tunnel, but it must now be admitted that they are trivial compared to those which come from its absence. As to the building of large fleets of merchant submarines for the carriage of food, that is a new departure which will be an additional insurance against the danger which has left so dark a page in the history of our country."

THE END

Love and the Business

(Continued from page 11)

attention being immediately fixed upon the other personage there: Plexo Makarenka, of course. From him she did not remove her gaze, simply shifting it occasionally as the musician shifted his position back and forth from his piano stool and the repose he took between his pieces leaning against the balcony rail.

Makarenka did not see the personage, or, if he did, his vanity was so overweening as to cause him to ignore her. Later on, having performed the services for which he was hired, he took his rolls of music under his arm and quietly left the ten-cent store. As he passed swiftly near the table at which the personage sat her eyes lifted directly to his, but it was not for Makarenka, who had, he said, played before royal highnesses, to observe any such behavior.

THE artist went away; the personage rose, and it is quite true that every woman in the place and all the children cautiously watched her as she rapidly moved toward the doorway, stood there a second ascertaining which direction Makarenka had taken, and then chose that identical path herself.

It's the truth that the few customers in the Rosenhartz ten-cent store, all as by a common impulse, gathered at the entrance to watch what this tall girl might do.

It was impossible to say. Makarenka had disappeared; so had the personage with the diamond rings.

But the following day, the gossip of her visit to the Rosenhartz store having traveled up and down the street and around the corners as well, as many as fifteen women congregated at the door at the hour for Makarenka to play.

Makarenka was late; he did not come. But the lady of the rings came promptly and sat down in the same seat and ordered in the same reckless profusion; also, she did not eat.

Then Makarenka came, and her eyes, as on the day before, fastened upon and never quitted his face; her whole attitude denoting an infatuation that was as unmistakable as it was unreserved.

WHILE the musician was playing the No. 6 "Rhapsodie Hongroise" the woman with the children got softly up, and, leaving them with a spoonful in each little mouth, she went out, only stopping to whisper to a friend who stood at the comb counter: "I go to fetch Rosie Dublatz; she's the girl, my niece, who's writing for the papers; she'd make a story out of that lady and Makarenka. Sure. Business is business, and I'll get 10 per cent of the price from her."

"Go on," cheered the stout woman who listened; "it's something doing, I tell you, with him and her!" She jerked a fat thumb toward the lady and the pianist.

Certainly, Rosie Dublatz came hurriedly, pad and pencil in her bag, shrewd eyes shining with anticipatory thoughts of honest pelf.

The lady of the rings was just then leaning her beautiful chin in her clasped palms; her round white elbows were on the table; her glorious eyes fixed upon Makarenka; the rose she wore at her breast—to be sure, it was false, though heavily perfumed—dropped to the floor.

Rosie Dublatz poked one of her young cousins energetically into restoring the fallen flower. The lady shook her head as she gave the child a penny, and motioned to it to climb up the balcony steps and hand the rose to the musician.

Which, grasping the treasured penny firmly, it did.

Then it was for the others to nod, to smile, to shrug the shoulders, to gaspingly behold what Makarenka would do.

Rosie Dublatz, who was a fair draftsman, to be sure, sketched the pianist with actual skill and accuracy, seizing upon his points with artistic vision as he turned, put his arm around the little one, took the rose, pressed it to his lips, and as he had not relaxed his right hand upon the keys, caused those five fingers of his to glide from the Hungarian rhapsody into a favorite bit of ragtime, familiar then along Grand Street, named "Kiss Me in the Moonlight."

BUT Makarenka, who had, it is to be recalled, performed for royalty, did not turn his head toward the audience at all; he merely tossed his long, weird ringlet over his shoulder, and then with both hands slipped back to the Hungarian rhapsody, while Rosie Dublatz's small cousin tumbled down the rickety stairs and there was a hubbub, indeed.

Makarenka, being an artist, stopped playing at once. He twirled round on the stool, and then his strange, dark eyes did encounter those of the lady of the rings until the noise subsided.

ROSIE DUBLATZ said to herself: "These two have met before; it is a romance behind to-day. It is luck to find it over here. Good! I will follow it up and I will get good money out of it."

When Makarenka's hour was up he went away. So did the lady, leaving her ice cream and cake untasted as on the day previous.

But Rosie Dublatz, also assisted by the little miss who was the store detective, could not follow up the lady of the rings; she seemed to be swallowed in the ditches just then wide open for mending gas pipes, and Rosie had to rest content that day with her imaginings.

But the next day? And the next? And so on for ten days Makarenka played as usual, and the lady of the rings, always beautiful, always gowned in strange and odd fashions, often sparkling with new jewels, never eating, forever with her wonderful gaze fixed upon the musician, came every day at the same time, never failing in rain or sunshine.

Nathan had said softly to Rudolf on that first evening as they stood behind the screen: "I won't give 'em the notice to-night, now, will I?"

And Rudolf had answered: "No! Holy Moses! Maybe she's a mascot for us. Wait until to-morrow. We had thirteen in this afternoon, and seven of 'em was buyers, eh?"

NATHAN gave no notice. The ten-cent store of Rosenhartz Brothers was looking up. Even by the fourth day it was almost crowded. And when Rosie Dublatz's scoop got into print in the paper—patriarchs of old! but it was a jam from everywhere on the East Side of the town. Even from Harlem and the Bronx folks came down in the trolleys to see "The Mystery of Makarenka's Life"—that's what the paper headlined Rosie's story.

"The best of it is," Rosie told her chief, "there's no end to it in sight. The girl's there every day and no one knows or can find out who she is or where she comes from. Take it from me, though, she's some lady and there's some wonder romance back of her and Makarenka. Oh, yes."

On the eleventh day Nathan said to Rudolf: "I have a letter from our brother; he comes back from up the river in a month more."

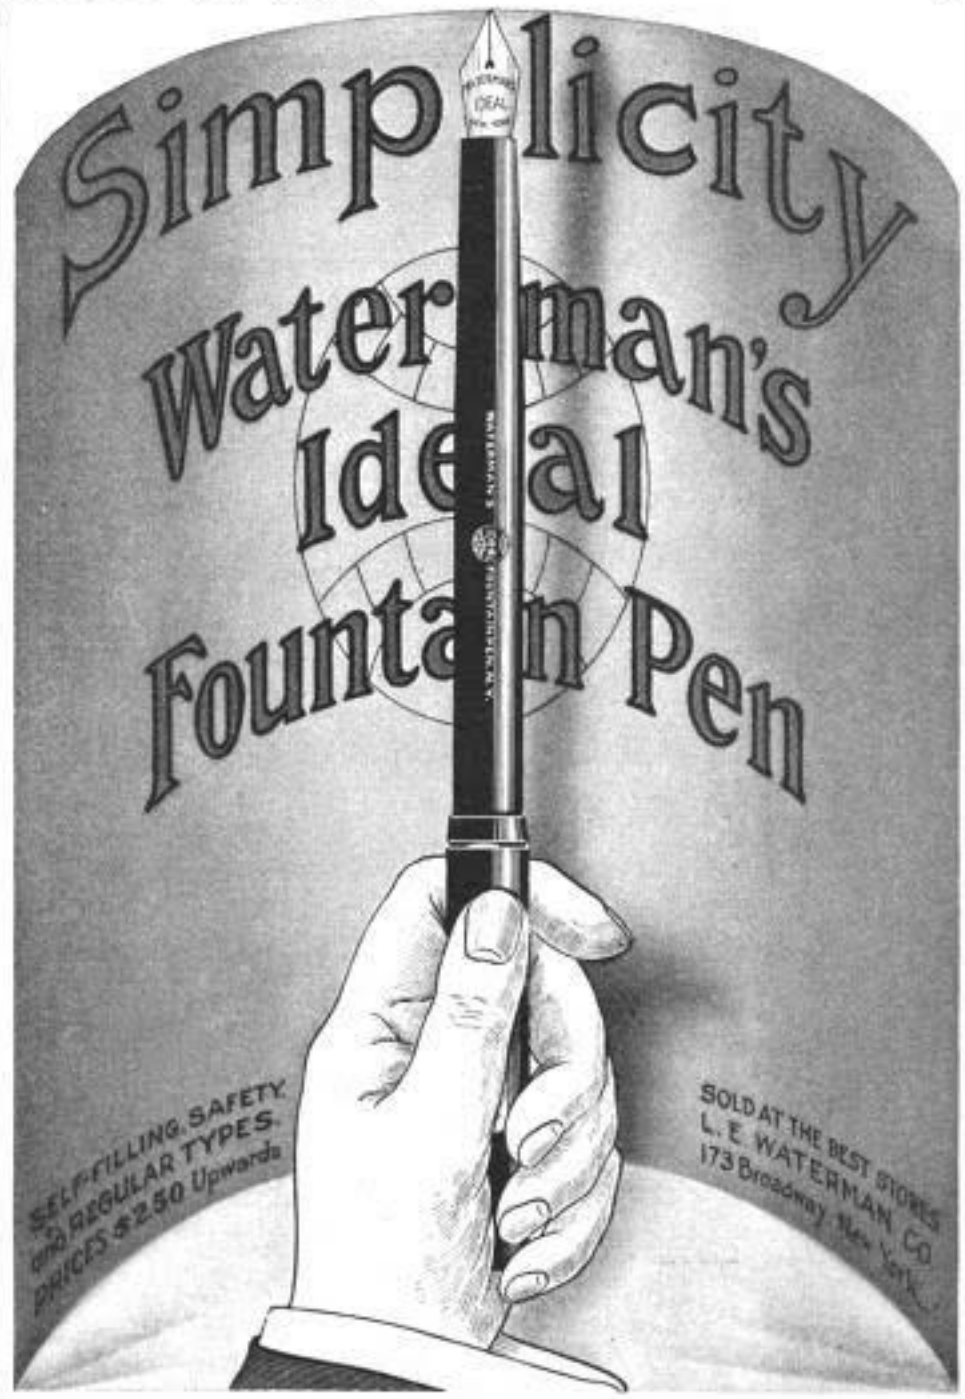
"Is it any good up there?" the junior inquired.

"Yes. He has started a store up fine."

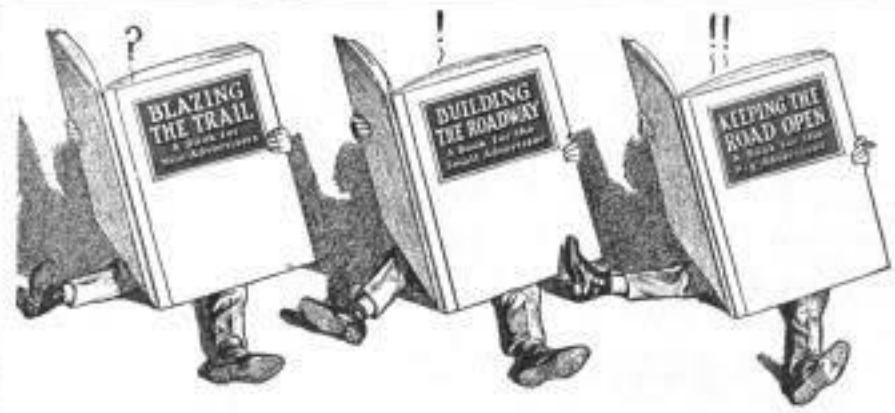
"Say now, that girl of the rings is Makarenka's girl, don't you suppose, eh?" Rudolf asked.

"Who knows! All we know is she's raised us out of the quicksands and made us happy men. Shipway's is lonesome!" He rubbed his thin hands together gleefully. "I was by there just now. Nobody in, nothing doing."

"Suppose the lady don't come by us any more?"



"There she is!" cried Nathan. "Look at her."



RUDOLF peeped out through the hole. There she was, to be sure; and some one was with her.

All the people in the place had halted in their purchases, their gossip, their laughter as the glass door swung open that day and the lady of the rings walked in; close at her side was a man, a young and handsome man, splendidly dressed, with a seal ring on his finger, a diamond in his scarf, a real Panama hat on his head, and a vigilantly possessive and assertive hand on the lady's slim arm.

Ah, but this was a story! Rosie Dublatz was on hand. She had come up behind the screen, too, and stood with the Rosenhartz brothers taking in this wonderful new development in Makarenka's romance. "Hold on, Mr. Rosenhartz!" The newspaper girl gripped Nathan's wrist tensely. "Take it fresh from me, there's going to be some love scenes on before we're all much older. Say, look at that, will you?"

"What?" whispered Nathan and Rudolf both in a trice, each trying to get an eye at the hole in the big bird's head.

Just wait till YOU get behind one of these books

They tell an astonishing story of money that has been wasted!

—of campaigns that have been wrecked!

—of business horse-sense that has been lacking!

They present the whole subject of advertising in a totally new light.

Whether you are now an advertiser or not, you will find information helpful to your business.

These books handle the *head of the business*—perhaps *you*—without gloves.

They point out the safe, sane, easily understandable way to establish advertising on a firm business basis.

In a word, they strip the subject of its "mystery."

Check "A" on coupon if you're a non-advertiser, "B" if you are spending $25,000 or less on advertising, "C" if you are spending more. One book, whichever fits your needs, will be sent free. If you want more than one, send 25c for each additional copy.

MULTIGRAPH

1827 East Forbeth Street, Cleveland, Ohio

The Dealer Holds This Up Because it Upholds Him

He Safely Recommends it because of This Trade Mark

TRADE K-W MARK

Road Smoothers

REG. U.S. PAT. OFF.

Quickly applied to your Ford Car

¶ Even if the dealer did not know that on tens of thousands of Ford cars these Road Smoothers render the best and longest comfort, he would stake his reputation upon it just because it is a K-W. This mark of quality means reliability without a doubt, otherwise it would not be a K-W.

¶ Tell your dealer to put a set on *your* car today, then and only then, will you realize how K-W Road Smoothers smooth out the roughest roads.

¶ What you demand first is comfort. The reasons you get it are—the helical spring that takes up shock; the air chamber that checks rebound; and the anti-side-motion links that prevent side rocking and the chassis from getting out of alignment.

¶ Next, you demand that this comfort be reliable and lasting. The reasons it is permanent are also K-W reasons—high grade heat-treated drop forgings; electric smelted chrome Vanadium steel springs (not ordinary spring steel); extra heavy phosphor bronze bushings, and all thoroughly tested and perfectly built.

¶ Beware of imitations. The K-W is the **only** Road Smoother. K-W Road Smoothers are sold by dealers who know the difference, everywhere, **at one price.**

$25 SET OF FOUR ONE FOR EACH WHEEL

If your dealer cannot supply you send direct on receipt of price. Write for booklet "*Taking Out the Bumps.*"

THE K-W IGNITION CO. 2859 Chester Ave. CLEVELAND, OHIO, U. S. A.

Manufacturers of the 100,000 K-W Master Vibrators

"Why!" cried Rosie in a hushed tone, "the man that's come with her's got a sure-as-your-life gun a-sticking out of his hip pocket. See it? See it? And the looks of him! Just as if he meant to use it."

"Holy prophets!" muttered Nathan Rosenhartz, "then all our business will be ruined again."

"So! So! I'll put 'em out, I will!" Rudolf was on the move, when Rosie laid a stiff, detaining hand upon him.

"No, you don't, Mr. Rosenhartz. Let 'em alone. Don't you stir, don't interfere. Pshaw—don't you see it's all in the line of business for your store? Supposin' there's shooting, won't folks come fast to see to it?"

"Supposing there's a murder," groaned Nathan. "What then, eh? Rudolf, go on and put 'em out." The old man spoke sternly.

"You can't do it." Rosie's voice was low but clarion-noted and hard as rock. "Supposing it comes to manslaughter or even murder, it'll be the making of your business. Everybody runs to a place where there's been a love tragedy."

"Oh, get out," muttered Rudolf, "with your love tragedies! That guy's no good and I ain't going to see Makarenka made a target of."

"Yes, you are, too." Rosie, of the stronger arm, easily held Rudolf where he was. "I haven't been fooling away my time and brains writing up your store to see you jump in and spoil my best scoops. You just let 'em alone, I tell you, or I'll bust up your place myself in the papers, so there. Business is business." Rosie then loosened her hold. Both Nathan and his brother drew back.

THE handsome young stranger did not take out his weapon. He simply sat on guard over the lady of the rings; not eating, but piercing the beautiful lady with as poignant a pair of eyes as anyone there watching had ever beheld.

And everyone in the packed crowd was watching—watching and buying.

Nothing happened. When Makarenka had finished his hour he left. Then the lady and her escort left, too. At the door she wished to go in Makarenka's direction, but the handsome young man pulled her angrily the other way.

For a month these two came together. Always not eating; always with a pistol in evidence; always with jealousy and hatred depicted on the escort's mobile face; always the eyes of the beautiful lady riveted on the face of Makarenka.

AND the business grew and grew. And Shipway & Sons closed up "for a vacation," they said, at which everybody laughed in his sleeves and outside of them, too.

And Rosie, making money—for she was very clever and had known how to convert her scoop into a real serial—rather crowed over Nathan Rosenhartz and laughed at him for having wanted to "put them out."

One afternoon, though, something like real trouble arrived.

Makarenka had a rose, a genuine flower, in his buttonhole, and he played "Kiss Me in the Moonlight" with all the thrill and expression (a good deal, too) of which he was master; upon its last bar the artist placed a new emphasis, for as he finished with his right hand, with his left he took the fresh rose from his coat and deftly threw it straight between the arms of the lady of the rings.

And it was to stare, to crane the neck, to gasp; for a second only. The escort was on his feet; his weapon, with a gold and pearl handle, it was afterward remembered, was in the air; the lady was up, her arms clasped about the handsome young man, while, in accents of terror and supplication, she cried out: "Don't, don't kill him!"

MAKARENKA, the virtuoso, who had, you recollect, played before royalty, sat perfectly still, apparently a willing target in the cause of Romance.

Then Rosie Dublatz, feeling that the vital moment had actually come, shrieked "Police!" and "Murder!" at the top of her lungs.

Her cry was taken up with an unexampled fervor the length and breadth of the street, so that in three minutes there were police reserves forcing their way through the dense throng, two ambulances before the door, every window on Grand Street choked with human heads, the cars stopped, and the trucks running into one another, while Rosie wrote on her yellow pad.

HOWEVER, when the police and the surgeons and the rest finally had beaten their way into the rear part of the store where the affray had started, of course no one was there of the principals save Makarenka—and he began to play over again "Kiss Me in the Moonlight" with such infinite pathos and composure as assured the officers very quickly that he was alive and not even wounded. Nevertheless, they arrested him and took him off to the station house. Rosie strode beside him all the way.

Pressed for Time

"Well, darling, I suppose we'd better start saying good night; I can only stay two hours longer"

Nothing could be learned from Makarenka. He had no story to tell; he had no enemies; he did not know the name of the lady; he didn't know who she was, nor yet the handsome young man who had started to assault him. He had no complaint to enter. So they let him go perforce.

And the succeeding afternoon?

What occurred?

MAYBE there was not a crowd, a throng, a multitude pushing, scrambling, thrusting to get inside of Rosenhartz Brothers' ten-cent store. They had to send Makarenka up through the next-door building and fetch him down to his balcony on the fire escape; and when the people saw him the reception he got was ear-splitting.

Nathan, behind the screen, said to Rudolf: "We're coining the money—real money, eh?"

"Sure. Ever since that lady with the rings put in an appearance. How she must love Makarenka! And, I size up, the other one's her husband, eh?"

"Who knows!" the old man responded ruefully. "Only I hope they won't do any shooting."

"Bosh! Supposin' they do. Rosie says true, it's all in the line of business for us, ain't it now?"

"Yes. If only Moris hadn't gone peddling," the senior exclaimed. Rudolf lifted his shoulders indifferently as he replied:

"I forgot in the row yesterday to tell you I got a card from him."

"Where is it?" Nathan asked eagerly.

"I left it in my other coat, I guess. He said on it he'd heard from post cards of his girl—that one that can't act, you know on the West Side—how business was looking up, and he was glad we were doing better; he was doing well and would be in New York some time soon to buy goods."

Nathan's old eyes were wistful. He was yearning for youth to be about and around him; he had been fond and proud of his dead brother's son.

"Hello, by gee!" Rudolf whispered. "If there she doesn't come for sure."

Nathan looked out of the hole.

He saw the lady of the rings, attended by the handsome young man; near them loitered not only the little miss who was the store detective, but a plain-clothes man sipping lemonade in the interests of law and order.

Rosie Dublatz was not far off. She was panting for the final outcome, and quite prepared to create it out of whole cloth and brains in case it failed to turn up.

EVERY countenance there was turned toward the personages forming the triangle. Not a movement each made that was not construed as the possible prelude to an attack with more or less intent to kill. Maybe Makarenka would draw out a stiletto and spring down upon his adversary? Perhaps the lady would administer poison to herself!

In fact, the handsome young man did this: he took his pistol from his pocket and laid it in a calm, if threatening, way upon the table near the untouched cubes of pink ice cream.

Then the lady raised wild eyes to Makarenka; then Makarenka, still playing with his right hand only in that marvelous fashion he was master of, drew from the folds of his vest somewhere a dagger. Ah, yes!

Rosie's pencil skated over her yellow pad.

The little store detective straightened up. The plain-clothes man stopped drinking lemonade.

THE crush was momentarily being added to by the pushing throngs from the sidewalk. Not one more, it would seem, could get inside the store. But a stalwart young fellow in a gray suit did get in, slip through, make his struggling way up, in and out, until he reached the paper screen.

He did not reckon in the least with either Makarenka, the lady of the rings, or the handsome young man; he could barely see them for the jam. The "romance of love" was not in his mind, perhaps.

But he slipped behind the paper screen and said: "Hello, uncles; how's everybody? Here I am!"

It was Moris Rosenhartz.

The older man kissed his nephew on the cheeks; the younger one shook both his hands.

"We got your card all right," Rudolf said.

"You done well?" Nathan asked. "That's good."

"Yes. My pack's empty," Moris answered, "and"—he jingled the coins in his trousers pockets—"my purse is pretty full. I say," he added, looking out of the hole in the big bird's head, "some business doing in the old store now, isn't there?" He laughed to himself as he sat down between his uncles on the wooden bench in there.

"I guess so. Shipway's shut up!" Nathan explained.

"I SAW the bill 'For Rent' on the window as I came past," Moris replied.

"We got a masoot," Rudolf whispered.

"So I heard," was the nephew's response. "My girl wrote me about her."

"Look at her!" Rudolf pulled Moris over to the hole again. "Ain't she some, eh? For style! Beats Fifth Avenue, eh?"

"I think so," Moris said, scanning the lady where she leaned on her lovely elbows fastening her lovelier eyes still upon Makarenka.

"We're the talk of the town, my son," Nathan whispered in Moris's ear. "Yesterday there was near a riot; the young man out there beside her—oh, they come together every day without fail—he drew

Willys Utility Truck

3/4 TON

Used in Every Line of Business

Chassis price includes driver's seat — Bodies extra — f. o. b. factory

$1350

The Kahn Department Store of Oakland, Cal., who operate a fleet of six Willys Utility Trucks, state that these trucks have reduced delivery costs beyond all expectation.

The cost of operation, the cost per mile and the cost per delivered package, is surprisingly less than even we anticipated. We will submit specific figures on request.

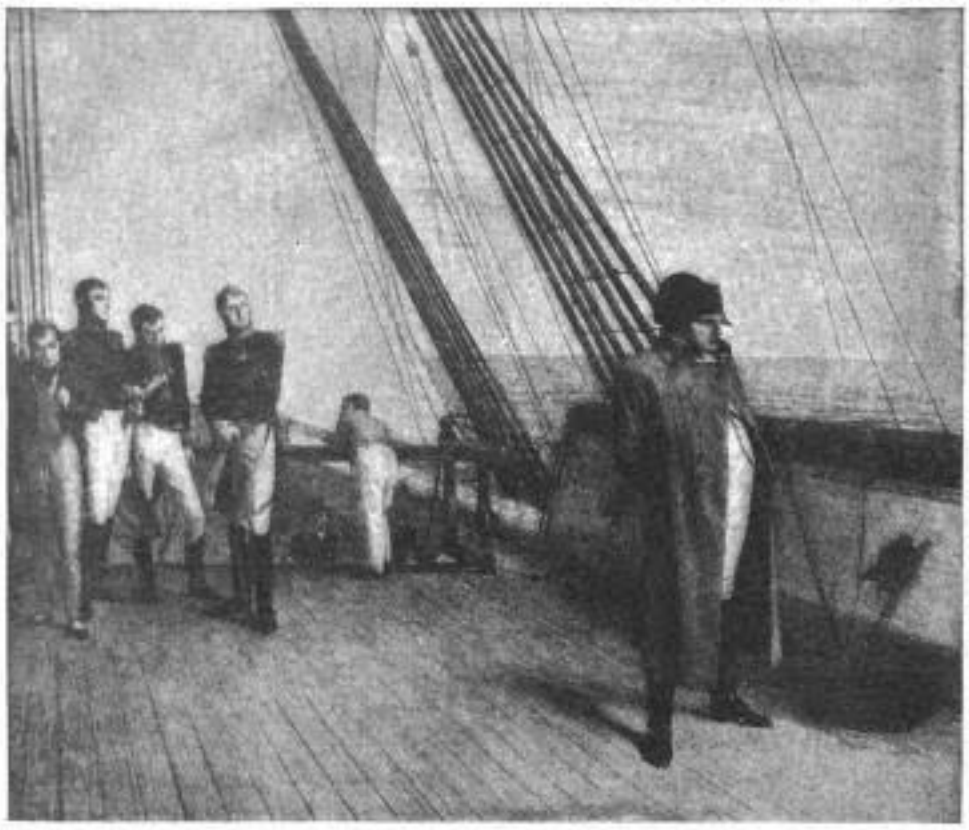
In addition these trucks enabled this concern to handle a much larger volume of business at considerably less expense. Willys Utility Trucks can do the same for you.

HERE we reproduce the names of a few of the many Willys Utility Truck users. These concerns are from every point in the country. They represent all lines of business. Some are among the largest in America—some among the smallest in America.

This variety is given to prove to you that *your* business, no matter how large or small, can be made just that more progressive and prosperous by using these business getting trucks.

While Willys Utility Trucks are more economical than horses that is their smallest value to you. The fact that, right now, Willys Utility Trucks are enabling men to actually double and even treble their business, by their sheer ability to save time and cover more territory, is the big advantage that should vitally interest every business man.

Willys Utility Trucks overcome competition, reduce your operating expenses and develop new trade in every direction.



Their purchase cost is less than that of any other similar truck made.

Can be seen at our dealers in almost every city.

Full information, costs, special body book and chassis literature on request—gratis.

Please address Dept. 153

The Willys-Overland Company, Toledo, Ohio

Just a Century Ago All Europe Was In Arms Against *Him*—

At thirty-six Napoleon had conquered Europe. He had forced his way from a petty officer's rank to the command of a continent. The seeds of the present European war were sown in his meteoric career.

Have you ever read an interesting popular account of "The life of the man of Destiny"?

Do you know why Holland and Belgium were organized as neutral states after the battle of Waterloo?

Do you know how the Grand Duchy of Luxemburg came to be?

These questions and 500,000 others are answered in the new history, written for the modern busy men—

The Lodge History of Nations

"*The story of each nation in a single volume like the biography of a man*"

To-day, while every edition of the newspapers is centering your interest on Europe, you can begin to master—in a few pleasant moments each evening—the whole stirring history of the great European nations.

A year from to-day you will really know those nations—their past struggles, their geography, their resources and strength.

Now, while your interest is stirred, is the time to acquire that knowledge of history which is the surest mark of a really well-read man. Now is the time to cultivate in your children that love of historical study that helps to success.

Your Copy of This Free History Booklet is Waiting

We are holding your copy of this free history booklet awaiting your request. You are entitled to it as a Collier reader. Merely clip the coupon.

It tells how the histories of the nations have at last been written in short popular style, under Senator Lodge's direction, for the busy modern man.

It tells of the index that enables you to locate in an instant any place mentioned in the newspaper dispatches or any historical personage to whom they refer.

8-29

P. F. COLLIER & SON
416 West 13th St.
New York

Please send me my copy of the booklet describing the Lodge History of Nations and full information.

The booklet contains an essay by Senator Lodge on how to read history profitably, and a colored frontispiece illustration, a reproduction of a historical painting.

Ask for your copy now, while it will mean so much to you. It will be sent by mail, free; merely clip the coupon.

a pistol on Makarenka, and the police and—"

"I read it in the papers," Moris said succinctly. "Fine, fine, tiptop; all to the good; and Shipway's gone to the wall, and you got it all your own way now, eh?"

"Sure. We're fixed now." The old man eyed his nephew furtively. "What you going to buy goods for, my son? Stop here with us?" Moris shook his head. "You don't like my girl."

Rudolf was peering out; he turned his head just then to say: "I wonder who the devil that lady is anyhow and the escort with her!"

Moris Rosenhartz looked up at his junior uncle. "Why," he said, "if you really want to know, I can tell you."

"You can! Tell us! Tell us!" both brothers cried in low, eager tones while Makarenka played on "Kiss Me in the Moonlight."

"That's my girl, Cecilia Messner, and the man's the young comedian over at the Greenwich Theatre; his name's Leo Benrimo; him and Cecilia are great pals in their work." Both the men swallowed with shut lips, and their eyes grew big and their thin jaws fell open.

Rudolf spoke first. He asked shrewdly: "What is your girl doing making love to Makarenka, eh?"

But Nathan also joined in before Moris could reply: "Come now, my son, what is your girl doing over here like this, you know, when you was absent from the city and her society, eh?" His veinest fingers rested upon the strong hand of the youth beside him.

"Well," Moris laughed a little, "Uncle Nathan, Cecilia and Plexo Makarenka were students together one time in the Settlement House somewhere—"

"Ach! the prophets! Were they!" interrupted Rudolf jocularly.

"And, Uncle Nathan," Moris Rosenhartz continued, "I guess him and Leo Benrimo has done fine helping my girl putting it over for you and the store. See?"

They saw all right.

"Unto the Least of These"

(Concluded from page 12)

"And what is that awful burden," says Conny, says he, "that's breakin' the bench of ye?"

"That," says he, "is the piles and piles of wrong-got goold that, for my squanderin'. I wrung from the poor and the needy and them who ill could spare it. And the bench won't break and the burden won't go. Weary's me!"

"Poor fella," says Conny, says he, "poor fella! And what," says he, "is that awful lookin' thing that is hangin' from the neck of ye and bowin' ye low, so very low?"

"Och, that," says he, "is the body of one of God's ministers that I paid a man to kill because he dared to check and defy me. And the neck won't break and the burden won't go," says he. "Ah, weary's me!"

"Poor fella," says Conny, "poor fella. And what is that burden that is piled high, high on the broad of your back, squeezin' the groans from your heart and threatenin' to sink ye at every step?"

"Ah," says he, "them is the innocent poor girls whose souls were damned for my pleasure. And ah!" says he, "the back won't break and the burden won't go—never goes. Weary's me, weary's me!"

"Poor fella, poor fella," says Conny, says he, "and what," says he, "is the quare little loaf at your heels that is follin' and follin' all the way after ye?"

The man looked round at a little hard, musty loaf that, sure, enough, was follin' and follin' after him at every step. "I didn't notice that before," says the man. "That must be the loaf that one time, twenty-five years ago, I ordered my butler to give to a poor woman with a chile in her arms who come to me door beggin' somethin' for God's sake. I am afeard I wouldn't have given it, only it was hard and musty, past usin' by any soul in my house. Ah, weary's me!"

"No matter," says Conny, says he, pressin' the man's hand gently, "ye gave it when it was asked for God's sake, and now it comes to witness for ye. And," says he, takin' the man's hand tighter and warmer, "I'm goin' to help you in these awesome ills, poor man."

Och! A-nee-O! Och! A-nee-O! But the way is weary and the road is long on that last lone journey. But the chile's hand claspin' his gave the man new heart, and the chile's soft words put in him new strength. And the chile with his crutch and his goat and his beads and his yellow goold piece cheered the way and shortened the road and helpsel the man on and on.

Till at last they saw the great goolden gates, atween pillars of silver, in high walls of the grandest marble. And they went up, and the child tapped the goolden gates with his crutch, and at the top of the cripple's crutch the gates played the most beautiful music that the ear of man ever heard. And as they swung wide open, St. Peter, appearin', said:

"Conny, Conny, *cushore machree*, come in, come in. Cast away that crutch, that now you will never more need, and come in. You're welcome as the flowers of May, and your throne has long been waitin' ye."

"Come on," says Conny, tuggin' at his companion's hand, who was holdin' back, "Come on in with me."

"He cannot come in, Conny," says St. Peter, shakin' his head.

"For why can't he?" says Conny.

"Because," says St. Peter, "Heaven's gate is neither high enough nor wide enough to let his burdens through. And the burdens can never more leave him in this world." The man groaned an awesome groan and wanted to go away. But Conny tightened the grip on his hand and wouldn't let him.

"See to that loaf," says Conny to St. Peter, "that loaf which has followed him for five and twenty years—a loaf that he gave a poor woman who begged it for God's sake. See to that loaf and let him in."

St. Peter looked at the loaf now for the first time. Then he drew his hand across his forehead and said: "Aye, that's true. He has a musty loaf given for God's sake entered in his favor on the books."

Then St. Peter looked from the wee, wee loaf to the big, big burdens on the man's back, and said: "Conny, Conny, I'd like to, but the loaf is a wee bit too wee, and the burdens are a great bit too big. It's impossible, Conny. He never could get through the gates."

"But," says Conny, says he, "see to the yellow goold piece he put in me hand one day, and see to the beads he strung for me on a goold and silver thread from his own beautiful frock, and he fastened me crutch, and fixed for me my wee, wee nanny goat," says Conny, says he, huggin' the wee nanny goat with one hand to his breast, while with the other hand he still gripped the man's hand, who wanted to be goin' away.

St. Peter, lookin' down into Conny's sweet blue eyes which were piteously pleadin' up to him, saw the tears blindin' them. Then he looked at his goold and his beads and his poor wee wooden nanny goat, and the tears then throoped into Peter's own eyes, blindin' himself likewise. And he put his hand upon Conny's head and said: "Conny, me Conny, the man is saved. Go back to the world ye come from," says he then to the man, "and work off them terrible burdens. Till you've done that and come again, we'll leave a throne waitin' you next Conny's own."

"And, kind gentleman," says wee Conny, "I'll mind it for ye till ye come."

THERE was only one burial, after all, from the two deaths that the poison berries brought. For, to the world's astoundment, Lord Kildrum opened his eyes and sat up just as they were coffinin' him, drivin' the women that were coffinin' him, shriekin', disthracted from the room and from the house. And the great doctors, who believe in nothing, gave it out that the man hadn't been really dead, but only in some kind of trance with a long name.

'Twas a new Lord Kildrum entirely, though, that came back to life. His very first order was that the Widow McGruddy and her childer should be kept in their home all their days, rent free, and that in the meantime plenty to ate and plenty to wear should be given them, and the Widow McGruddy and her childer, when they heard it, dropped upon their knees and cried out to God to send his blessin' upon the good Lord.

And everyone that had been unjustly treated was now given justice. And everyone that was poor was helped, and everyone that was distressed had his heart lifted up by the new Lord Kildrum. And he sold his beautiful carriage with its goold and silver mountin's, and he sold his goold and silver uniforms, and his great black horses, and he dismissed his butlers and his footmen, and he used all his money to help them that needed it, and he lived and went among his people like one of themselves, blessin' them and gettin' their blessin's. And a happy man in due time died and went away from a heartstricken, weepin', wailin' people who nigh begrudged so good a man to God.

Effect of the War on American Business

(Continued from page 6)

United States will earn the lasting gratitude of South America and place them in a position of great permanent advantage with every South American country."

The Markets That Await Us

SOUTH AMERICA'S need, fortunately, is for goods that we can readily supply. Indeed, we can duplicate practically every article exported there by the countries now at war. The case of Brazil will illustrate: Her annual bill of $53,000,000 with Germany includes such items as motor cars, electrical machinery, cutlery, motors and stationary engines, sewing machines, tools, leather goods, paints, paper, photographic apparatus, perfumery, pumps, furniture, and wearing apparel.

Brazil, it is worth while adding, was buying nearly $48,000,000 worth of goods a year from us up to the outbreak of the war. She was also purchasing annually $77,000,000 from the United Kingdom and $27,000,000 from France.

Her neighbor, Argentina, averages $115,000,000 a year from the United Kingdom, $82,000,000 from Germany, $57,000,000 from the United States, and $36,000,000 from France. Now you can get some idea as to the trade possibilities that the two leading South American countries hold out to us.

To offset this bounding prospect, however, there is a far-reaching state of business depression among these South American republics. A huge crop failure has set Argentina back, while the collapse of coffee valorization and the tremendous decline in the price of rubber have hampered Brazil. But in the face of these misfortunes is the more pressing extremity of actually needing many products, and the countries will doubtless find a way to pay for them.

Latin America Needs Our Capital

GREATER even, in one way, than this swelling trade prospect is the opportunity offered by South America to the United States on the financial side. At the outbreak of the war several of the leading republics, notably Brazil, were arranging for large loans. Their need of money will continue. It will be a long time before Europe can resume financial operations abroad; New York, therefore, and the rest of the country will have the chance to consider these South American loan proposals.

This means the creation of financial machinery in South America. By a happy coincidence the National City Bank of New York had already projected branches at Rio de Janeiro and Buenos Aires, and possibly at Valparaiso. In fact, representatives of the bank are now at the first two places, establishing offices.

With the inevitable trade expansion resulting from the war other huge New York financial institutions must do the same thing. Banks belonging to the Federal Reserve system are allowed to maintain foreign branches, and thus the whole country can share in this growth.

The result of this planting of American money in foreign countries cannot fail to give New York and the nation a whole new financial prestige. She will become a vast international clearing house, which may rival the position which London now occupies in the commercial world. With the problem of financing a huge war, and with the European money markets demoralized, the British metropolis will be handicapped indefinitely. Our own condition, on the other hand, is sound, our resources and energy are ample, and we are at peace with the world.

Gains That Flow from Loans

THE profit to be reaped by the United States through financing South American countries will be twofold: First, by the actual gain on the loan; second, by the tendency of at least part of the proceeds of such loans to return to the country that does the lending. If the United States, for example, finances railroads or seaports or municipal construction, it is altogether probable that American engineers and American material will be employed in the operation. We learned this lesson to our cost in China, when the support of American bankers there was withdrawn by the Wilson Administration. A great wave of concessions to European powers and bankers immediately followed. One of the provisions in these loans was that the materials bought with the proceeds should be procured in the lending country.

In this connection it is interesting to reproduce here a telegram just received from the Business Men's League of St. Louis, which has been actively interested in developing our South American trade:

"Manufacturers in the United States should at once send Spanish and Portuguese speaking salesmen of discretion and some knowledge of South American countries through all these countries, keeping them there at least a year and not making fast trips. If these things are done within the coming year, no matter what the outcome of the European war may be, by the time it ends, the United States will be impregnably intrenched in South American trade, and in five years will surpass England, Germany, and France."

American Merchant Marine at Last

THE question now arises, How is the United States meeting this vast opportunity? In the answer lies at least one huge national benefit—an American merchant marine. For, if the war has brought us nothing else, it has emphasized, as no other emergency has emphasized, the crying need of "American bottoms for American cargoes."

If the United States had had a fleet of vessels on the high seas such as the Germans possess, our commerce would have suffered comparatively little interruption. For years we have allowed Europe to do our carrying, and when Europe is engaged in a general war our commerce almost comes to an end.

But, happily, this condition, thanks to the war, is to be remedied. Before this article appears Congress will doubtless have amended the Panama Canal Act, removing many absurd restrictions and bringing the great fleet of American-owned vessels under American registry. Already the ships of the United Fruit Company, the Standard Oil Company, and the United States Steel Corporation—which have flown the British flag—are arranging to come under their natural and proper registry, the Stars and Stripes.

This new merchant marine means moving the congested grain and cotton crops, the prompt relief of the South American and other world markets in their extremities due to the European conflagration, and it is a guarantee for the future of an ever-widening and far-flung prosperity, for we are a great export nation.

Another constructive agency invoked in this emergency is the new Federal Reserve Board, which comes into power at a most opportune moment. Through its operation and through all that it interprets, the country is emancipated from the antiquated inelastic currency system which hampered its progress for years. The board will aid both money and business in facing its fresh world problems. It is very fortunate to include as one of its members the most eminent authority on international finance in the United States, Mr. Paul Warburg.

War Abroad Means Unity at Home

A THIRD and far-reaching benefit growing out of the war is what might be called the aroused and united commercial intelligence of the country—keenly awake to its tremendous opportunities and responsibilities. Already its advance agents are on the way to blaze the path of American goods in new lands. The campaign of this new crusade of peace is: "Open new markets for American goods and keep them open."

Nor can the almost unprecedented cooperation between the Federal Government and Big Business be overlooked. Scarcely a month ago all was hostility between these two great agencies. Business attributed its troubles to Washington's pernicious political activity. Washington, in turn, charged Business with conspiracy to mislead. In a twinkling a terrible crisis in human affairs wiped out etiquette, personal privilege, and grievance.

Significant of this inspiring teamwork is a conference called by Secretary McAdoo at Washington, at which shippers and bankers are to discuss the financial and trade problems growing out of the war, and plan a program for mutual advantage.

Then, too, there will be the increase in our consumption of domestic articles as substitutes for imported goods. This, doubtless, will be especially true of women's wearing apparel. So, too, with

Who Ever Forgot
His First Dish of Puffed Grains?

You have forgotten, no doubt, when first you tasted any other cereal dainty.

But one always remembers the first dish of Puffed Wheat or Puffed Rice.

Look back—you who know them. Note how well you recollect the first sight of them. What other food dainty, in all your lives, ever left such an impression?

Your Time is Coming

Your time is coming—if it hasn't come—when you learn the delights of Puffed Grains.

Month after month we picture them here, and tell you all about them. Some day you will order a package. When you open it, out will roll brown, bubble-like grains, eight times normal size.

You will see crisp, airy, fragile morsels which seem too good to eat.

You will serve them with cream and sugar or mix them with your fruit. Or you will float them like crackers in bowls of milk. And you'll find that these thin-walled, flaky grains have a taste like toasted nuts.

That will be a red-letter morning. You will serve thousands of meals of Puffed Grains after that, but you'll never forget the first one.

Puffed Wheat, 10c
Puffed Rice, 15c
Except in Extreme West

CORN PUFFS 15¢

These, as you know, are Prof. Anderson's foods. By his patent process—by shooting from guns—every granule is steam exploded.

This means easy, complete digestion. Every food element is made available. As never before, the grains are fitted for food.

So these are more than dainties. In them is accomplished what, in all the ages, cooking has never done.

That is the main reason why you should know them. They are scientific foods.

But each is distinct—each has a different taste. Get a package of each—order them now—and see which kind you like best.

food and wine. It means the simple life for us.

We have depended almost entirely upon Germany and Austria for dyes and dyestuffs. Here comes the opportunity to create this industry among ourselves and to be independent of foreign aid.

The Price That War Exacts

IN all this stirring prospect of new business the world over let us not blind ourselves to the fact that there are losses. War means waste, and some one must pay. It, therefore, resolves itself into a question as to whether our gains will offset the tremendous shrinkage which must come in our exports to the warring peoples.

Let us take the instance furnished by Germany, to whom we export $331,000,000 worth of products each year, including $160,000,000 for cotton, $45,000,000 for copper, $18,000,000 for lard, and $10,000,000 for oils. Our task will be to find other absorbers of this wealth or hoard it against the time when it will seek its normal European market. At the present outlook we are likely to lose the German business longer than that of England, France, or Austria.

England is our greatest customer, with an annual purchase of $542,554,127, of which $221,000,000 is paid for cotton, $24,000,000 for wheat, $50,000,000 for ham, bacon, and lard, $20,000,000 for tobacco, $17,000,000 for copper, $20,000,000 for oils, and $6,000,000 for "movie" films.

France only buys $146,000,000 worth of goods from us a year, and $65,000,000 of this is for cotton, $24,000,000 for copper, $5,000,000 for tobacco, and $10,000,000 in oils.

Austria is almost a negligible quantity in our exports, her purchases amounting to only $23,000,000, mainly cotton, copper, and agricultural implements. The same is also true of Russia, who buys $7,000,000 worth of our agricultural implements and $5,000,000 worth of cotton.

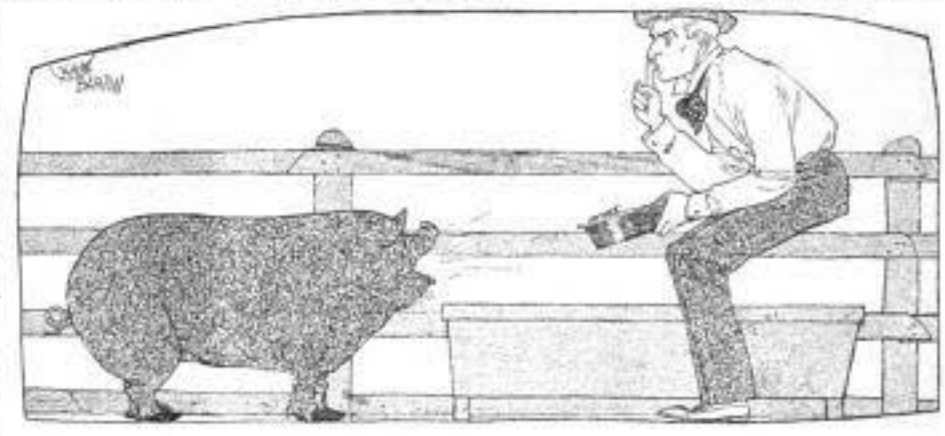
From these statistics it is quite clear which of our resources will suffer the most as a result of the European war.

The Losses We Must Expect

WHEN you come to consider the loss due to a falling off in our imports from the European belligerents, you find that about the hardest blow—should there be a stoppage over a considerable period—would be delivered to Uncle Sam, who faces the prospect of a shrinkage of from $100,000,000 to $200,000,000 in his yearly customs income. Should this misfortune come about, the consumer will have to make up the deficit in a tea and coffee tax. But, war or no war, Europe must have certain of our commodities. The big problem, therefore, will be: "How will Europe pay?" With her treasuries depleted, her industries stifled, and her income almost wiped out, she will be forced to ask long credits or dump her American securities (she has $6,000,000,000 invested in them) on the market. Of these two alternatives the United States prefers the former.

The problem will be to protect and safeguard the security market at the reopening of the exchanges and at the close of the war. It will take much American capital to take care of the immense foreign holdings of our stocks and bonds. But, then again, the income from these very securities will constitute an important revenue to the European investors facing the terrific cost of war. They will hesitate about sacrificing them.

"Goodness in Things Evil"



FROM this not altogether pleasant revelation of the immediate cost of the war—especially in our trade with the fighting countries—let us turn to the big look ahead by representative American business men. It dramatizes to a remarkable degree those lines from "Henry V":

"There is some soul of goodness in things evil,
Would men observingly distill it out."

Take the view of one of the greatest of our international bankers, a man trained in foreign service who is a leader in Wall Street. He said:

"The effects of the war on our business almost baffle the imagination. For the first time in history one great nation stands up as the only source of supply, and that nation is equipped to help the whole world. We not only have an opportunity but a duty to mankind. We may have congestion and apprehension at the start, but the ultimate results will be many-sided and far-reaching benefits.

"The nation-wide response to the need of an American merchant marine (by far the biggest service that the war so far has rendered us) is very significant. For years our farmers have despised the sea and done everything possible to curb our shipping growth. Now they find, in a great world emergency, how valuable the ships are, and they are clamoring for a merchant marine."

Refining the Pig

By HOMER CROY

A HARVARD PROFESSOR *has made the discovery that a pig is naturally a gentleman.*

We are loath to say it, but we must differ with the professor. We have met many pigs in our time, but none of them stands out in our mind as having that indescribable something that marks a gentleman. A pig does not know how to treat callers. We can never spend a few minutes in the society of pigs without their coming up and rubbing their noses on our trousers. Even after a hasty call we are soiled to the knee. A pig has a way of complaining about any delay in the service of its meal that grates on our sensitive ear. When a person appears near its pen with provender, it sets up a loud, uncultured clamor without thinking that there may be company present. All gestures on our part are of no avail. It cares nothing for the family sign. To our humble way of thinking a pig can never be a gentleman as long as it insists on dining with its feet in the trough. To us its table manners are inexcusable. Even when a pig has on its company manners, there is always a wish down deep in our heart that it would strive just a bit harder for culture and refinement. We wish that we could blind our eyes to a pig's shortcomings, and join the professor in recommending the pig as a gentleman, but we must be honest by saying that in many respects a pig falls short of some of our cherished ideals.

A prominent New York merchant sized up the situation in this way:

"The war will make our position financially and commercially stronger than ever before. The temporary loss that we will sustain in Europe will be more than offset by the gain in other directions. We will plant our products in new soil, and it will be up to us to keep them there. I firmly believe we will become the leading commercial nation of the world. Nothing will prevent us from maintaining this prestige if we have statesmen at Washington big enough to see the opportunities and wise enough to frame laws that will conserve them."

The president of one of the largest banks in the United States expressed himself thus:

"Of course the benefits will only be relative. I believe our prosperity and development would have been more consistent if made along normal lines. The profits of peace are more permanent than those of war. But in the end great good will come to the United States. If I owned a cotton mill, for instance, I would keep it going day and night to meet the new demands for goods that will come from everywhere, and especially the Far East."

Another banker, whose view is typical of scores of others, said:

"The war has given us a merchant marine, and, even if we lose money for a year, the ultimate good of a restored American shipping will more than make up for it."

That we face whole new avenues of industrial activity is attested by statements like this:

"Now is the time for American enterprise to assert itself. Austria, for example, has exported most of the bent-wood furniture that we use. We can make it just as easily. So, too, with the toys that have come in floods from Germany. During the war we will not have to compete with the handicap of cheap European labor, either."

I talked with half a dozen international traders, and their opinion, boiled down, is this:

"When the present congestion is relieved there will be a tremendous spurt in world trade and we will be the base of supplies. If conditions were reversed and we were at war, Germany would already have her advance agents of commerce scouring the seven seas, leaving nothing undone to reap the benefits that the situation made possible. We will gain immensely in the end."

The Ultimate Gains and Losses

ONE New York financier made this contribution to the symposium: "The war will wipe out the high cost of living because it will eliminate high living."

These views echo the prevailing sentiment both in New York and throughout the country. When you come to sum up the whole situation you find that the principal benefits to us resulting from the war appear to be:

1. A merchant marine which will undoubtedly restore the supremacy of the American shipping flag to the high seas.

2. A notable increase in export trade, especially with South America and with regions hitherto undeveloped by American business.

3. A new and more commanding place in international finance and commerce.

4. An increase in output and use at home of domestic products as substitutes for foreign-made goods.

5. The ultimate ability to pay our debts to Europe at a discount.

6. Our securities will probably have a stronger position abroad than ever before, because we will be about the only war-proof country.

The main drawbacks may be summarized as these:

1. A decline in exports to Europe of high-class goods.

2. Loss of the service of many skilled workers, especially Germans, who have gone back to fight for their fatherland.

3. Advance in money rates, which will mean increased cost of manufacture and possibly higher cost of living.

4. Heavy shrinkage in national revenue, due to a falling off of imports.

5. A probable fomenting of the labor unrest when the fighters come back to America after a war of savage hate.

Though trade in some quarters may look through a glass darkly at the moment, the prospect of our distilling "goodness out of things evil" is the larger and permanent vision.

To the United States, through the misfortune of war, has come a rare and unique distinction. We seem to stand at the outposts of Universal Need as the Nation of Succor and Rehabilitation. The eyes and the desires of that part of civilization remaining at peace are upon us.

The Metamorphosis of a Nation

IN the light of these new and thrilling world responsibilities we may be justified in paraphrasing John Hay's memorable prophecy of our commercial destiny and make it read:

"The debtor nation has become the chief creditor nation. The financial center of the world, which required thousands of years to journey from the Euphrates to the Thames and the Seine, has passed to the Hudson between daybreak and dark."

"In Mizzoura"

Continued from page 19

was my fellow traveler, and I would stand by him! Even the chauffeur of the hack seemed to feel the same way. Together we turned and ran toward the place whence we thought the voice came—that is to say, toward the mouth of the cave. But when we reached the entrance he wasn't there.

"He must be back in the cave," I said to the driver.

"Yes," he agreed.

"Now, I tell you," I said. "We mustn't both go in after him. One of us ought to stay here and call to the others to guide them out. I'll do that. I have a good strong voice. And you go in and find out what's the matter. You know the cave better than I do."

"Oh, no I don't," said the man.

"Why certainly you do!" I said.

"I never was into the cave before," he said. "Leastways not nowhere near as far as we was this time."

"But you live right here in Hannibal," I insisted. "You *must* know more about it than I do. I live in New York. What could I know about this cave away out here in Missouri?"

"Well, you know just as much as I do, anyhow," he said doggedly.

"Look here!" I said sharply. "I hope you aren't a coward? The idea! A great big fellow like you, too!"

However, at that juncture, our argument was stopped by the appearance of the missing man. He strolled into the light in leisurely fashion.

"What happened?" I cried.

"Happened?" he repeated. "Nothing happened. Why?"

"You yelled, didn't you?"

"Yes," he said, "I wanted to hear the echoes."

Obliging an Amiable Gentleman

BEFORE leaving Hannibal that afternoon, we had the pleasure of meeting an old school friend of Samuel Clemens's, Colonel John L. RoBards—the same of whom it is recorded in Paine's work that "he wore almost continually the medal for amiability, while Samuel Clemens had a mortgage on the medal for spelling."

Colonel RoBards is still amiable. He took us to his office, showed us a scrapbook containing clippings in which he was mentioned in connection with Mark Twain, and told us of old days in the log schoolhouse.

Seeing that I was making notes, the Colonel called my attention politely to the spelling of his name, requesting that I get it right. Then he explained to me the reason for the capital B, beginning the second syllable.

"I may say, sir," he explained in his fine Southern manner, "that I inserted that capital B myself. At least I converted the small B into a capital. I am a Kentuckian, sir, and in Kentucky my family name stands for something. It is a name that I am proud to bear, and I do not like to be called out of it. But up here I was continually annoyed by the errors of careless persons. Frequently they would fail to give the accent on the final syllable, where it should be placed, sir—Ro-*Bards;* that is the way it should be pronounced—but even worse, it happened now and then that some one called me by the plebeian appellation, Roberts. That was most distasteful to me, sir. *Most* distasteful. For that reason I use the capital B for emphasis."

I was glad to assure the Colonel that in these pages, his name would be correctly spelled, and I call him to witness that I spoke the truth. I repeat, the name is RoBards. And it is borne by a most amiable gentleman.

Vision of Sam Clemens, the Boy

MR. F. W. HIXSON of St. Louis has in his possession an autograph book which belonged to his mother when she was a young girl (Ann Virginia Ruffner), residing in Hannibal. In this book, Sam Clemens wrote a verse at a time when he was preparing to leave the town where he had spent his boyhood. I reproduce that boyish bit of doggerel here, solely for the value of one word which it contains:

Good-by, good-by,
I bid you now, my friend;
And though 'tis hard to
say the word,
To destiny I bend.

Never, in his most perfect passages, did Samuel Clemens hit more certainly upon the one right word, than when in this verse he wrote the second word in the last line.

And what a destiny it was!

A Celebrated County

IT was before we left St. Louis that I received a letter inviting us to visit in the town of Louisiana, Mo. I quote a portion of it:

"Louisiana is in Pike County, a county famous for its big red apples, miles of rock roads, fine old estates, Rhine scenery, capons, rare old country hams, and poker. Pike County means more to Missouri than Missouri does to Pike.

"Do you remember 'Jim Bludso of the *Prairie Belle'?*

"'He wern't no saint—them engineers
Is pretty much all alike—
One wife in Natchez-under-the-Hill
And another one here in Pike.'

"We can show you 'the willer-bank on the right,' where Bludso ran the *Prairie Belle* aground and made good with his life his old promise:

"'I'll hold her nozzle agin the bank
Till the last galoot's ashore.'

"We can also show you the home of Champ Clark, and the largest nursery in the world, and a meadow where, twenty-five years ago, a young fellow threw down his hayfork and said to his companion: 'Sam, I'm going to town to study law with Champ Clark. Some day I'm going to be Governor of this State.' He was Elliott W. Major, and he is Governor to-day."

The promise held forth by that letter appealed to me. It is always interesting to see whether a man like Champ Clark lives in a house with ornamental iron fences on the roof and iron urns in the front yard: likewise there is a sort of fascination for a man of my extensive ignorance, not merely in hearing how the Governor of Missouri decided to become Governor, but in finding out his name. Then those hams and capons—how many politicians can compare for interest with a tender capon or a fine old country ham? And perhaps more alluring to me than any of these was the idea of going to visit in a strange State, and a strange town, and a strange house—the house of a total stranger.

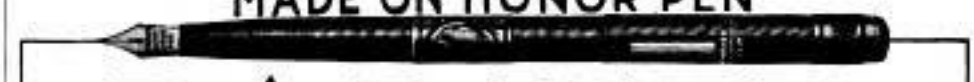
We accepted.

Young Man — *I would like the hand of your daughter, sir.*
Father — *Have you seen her mother?*
Young Man — *Yes, sir; but I still prefer your daughter.*

Here's the best-made .22 Rifle in the world

With
Round Barrel $14.50
Octagon " 16.00

Marlin
.22 Repeater MODEL 1897



THIS is no ordinary .22 rifle: It's the only .22 repeater made with the dependable lever action—like a big game rifle. It has better weight, better balance, greater stability than any other .22. It's guaranteed in accuracy and reliability; handles rapidly, gives 25 shots at one loading. Shoots .22 short, .22 long and .22 long-rifle cartridges without adjustment. For rabbits, squirrels, hawks, geese, foxes, for all small game and target work up to 200 yards, just get this Marlin

It's a take-down rifle, convenient to carry and clean. Has tool steel working parts that cannot wear out. Beautiful case-hardened finish; superb build and balance. Ivory bead and Rocky Mountain sights; the best set furnished on any .22. The solid top and side ejection mean safety and rapid, accurate firing.

Ask your dealer—or send us three stamps postage for new big catalog of all Marlin repeating rifles and shotguns.

WHAT DISTINGUISHES YOUR TOWN?

It's the national advertiser who, in many instances, puts his home town on the map. Grand Rapids has been made famous by the furniture advertisers; Post has made Battle Creek a famous place; the Eastman Kodak Company has made Rochester famous, not only in this country, but all over the world; and even little East Aurora occasionally gets a little notice because it is the home of Elbert Hubbard. You will find that the livest towns in this country are the towns in which the livest advertisers reside

—G. H. E. HAWKINS.

Military Educational Institutions

"My pride in the Old School will never grow less," writes a graduate of

St. John's Military Academy
(Episcopal)
The American Rugby
A sentiment echoed by hundreds of loyal alumni the world over.
Situated on high, well-drained land

This well-known school is famous for the loyalty of its graduates and the "spirit" of the student body. It has an enviable reputation for thoroughness in all departments. It appeals to the wide-awake boy and it satisfies the most exacting parent. It is classed by the government as a "Distinguished Institution." Address ST. JOHN'S MILITARY ACADEMY, Box 13, Delafield, Waukesha County, Wis.

OHIO MILITARY INSTITUTE
Founded in 1833

An academic, military and physical training school. Separate department for young boys. Located at College Hill, unusually beautiful and wholesome suburb of Cincinnati. Buildings well equipped. Gymnasium work and athletics under careful supervision. Military subordinate to academic training. One instructor to every nine cadets. Certificate admits to colleges. No hazing. Moral and social influences of primary consideration. Write for catalog to

A. M. HENSHAW, Superintendent, Box 18, College Hill, Cincinnati, Ohio

Wentworth Military Academy Reaches boys whom the ordinary day school does not interest. Courses prepare for leading Colleges, Universities, National Academies or Business. Government supervision. In "Class A." All Athletics. For Catalog, address The Secretary.
Missouri, Lexington, 1821 Washington Avenue.

New Jersey, Bordentown-on-the-Delaware.

Bordentown Military Institute Thorough preparation for college or business. Efficient faculty, comfortable buildings, healthful location, careful supervision of athletics, military discipline that develops character, and 28 years of experience in training boys. For catalogue write Rev. T. H. LANDON, A. M., D. D., Principal. Col. T. D. LANDON, Commandant.

NORTHWESTERN

MILITARY AND NAVAL ACADEMY
Lake Geneva, Wis., and Highland Park, Illinois
A select school with a high standard of academic work, supplemented by the physical, moral and social benefits of a Military and Naval life. Limited enrollment; references required. For catalogue which will be of interest to thoughtful and discriminating parents, address Col. R. P. DAVIDSON, Supt., Lake Geneva, Wis.

Boys' Educational Institutions

Morgan Park Academy
Known for Character Building
Excels In
Strength of Faculty
High standards
Quality of boys
Care and personal attention
Complete equipment—four modern buildings—with gymnasium and ample athletic field. Morgan Park has a notable record in preparing boys cleanly and thoroughly for College, Technical School, and Business. Home life with military features for development and care of boys. Members of the faculty live and eat with boys. Delightful, healthy location, 14 miles from Chicago. Lower school for small boys. Write for free illustrated catalogue and interesting booklet, "Results with boys."
MORGAN PARK, ILLINOIS Box 11

The Raymond Riordon School
Highland, Ulster Co., New York.
Where the Arts and Sciences, Trades and Culture Are Merged in the Interests of Human Betterment.
Visit the School
A school for normal, healthy boys.
A special and unusual department in mental measurement directed by Elisabeth Ross Shaw. Catalog free.
On Chodikee Lake, eighty miles from New York.

Notre Dame "World Famed"
The University includes the Colleges of Classics, Letters, History, Economics, Journalism, Architecture, Law, Biology, Chemistry, Pharmacy, and Engineering (Civil, Mechanical, Electrical, Mining, and Chemical). Board and Tuition, $400.00 a year.
Preparatory School for boys over thirteen, $400.00
Primary School for boys under thirteen, $250.00
For Catalogue address (specifying department):
DEPARTMENT C., Notre Dame, Indiana

Racine College School
"The School for Manly Boys."
—Chief Justice Winslow.
Character building is our serious work. Modified military system. Location convenient to Chicago. Special provision for younger boys. Supervised athletics. Gymnasium, swimming pool. Diploma accepted by leading institutions. Catalogue. Rev. William Francis Shero, A. M., Ph. D., Warden and Headmaster, Racine, Wis.

St. Paul's School
Healthfully located in beautiful Garden City, Long Island, 18 miles from New York. Buildings completely equipped. Gymnasium, swimming pool, fine athletic fields. Prepares for any college or scientific school, a competent master at the head of each department.
A Lower School for Younger Boys
For information and Catalog address
WALTER R. MARSH, Headmaster, Box 50, Garden City, L. I.

St. Matthew's School EPISCOPAL. Fifteen miles south of San Francisco—dry atmosphere—out-of-door life. Accredited to colleges East and West. Established 1866. Boys taken from eight years of age. Send for catalog.
REV. WM. A. BREWER, RECTOR, Burlingame, California

RANDOLPH-MACON ACADEMY For Boys
A Branch of the Randolph-Macon System. In the Valley of Virginia. Equipment cost $100,000. Large gifts make rates $175 a year. Prepares for College or Scientific Schools. Gymnasium and Athletics. 23d Session opens Sept. 15th. Address
CHAS. L. MELTON, A. M., Prin., Box 460, Front Royal, Va.

BELMONT SCHOOL FOR BOYS
23 miles south of San Francisco. Prepares for College, General and elective courses. Address Secretary, Dept. H, care W. T. Reid, Belmont, California.

Girls' Educational Institutions

THE FINCH SCHOOL
On account of the unsettled condition of Europe, which will prevent many girls from going abroad for study, the Finch School has made arrangements for additional accommodations and offers those girls unusual advantages in Art, Music, Modern Languages, as well as General Courses.
Applicants must make personal visit or be recommended by former pupils or other friends of the School. Fees $1350.
61 East 77th Street, New York City.

Mary Baldwin Seminary For Young Ladies Staunton, Va.
Term begins Sept. 16th, 1914. Located in the Shenandoah Valley of Virginia. Unsurpassed climate. Modern appointments. Students the past session from 35 States. Terms moderate. Pupils enter any time. Send for catalogue.
Miss E. C. WEIMAR, Principal.

Special Educational Institutions

American College of Physical Education
Includes schools for Physical Directors, Playground Workers and Teachers of Esthetics. (Pre-Educational). Full term opens September 16. Faculty of Experts. Unequalled record of successful graduates. Woman's $150,000 building, fully equipped. Address Secretary, Box 183, 6210 Grand Blvd., Chicago, Illinois.

Legs Straight?
If not, our latest invention will make them appear straight and trim; weight, 2 oz. Commended by tailors, by men of fashion, by military, professional and business men everywhere. Sent on approval. Particulars mailed sealed.

A Fortune to the Inventor
who reads and heeds it, is the possible worth of the book we send for 6c. postage. Write us at once.
R. S. & A. B. LACEY, Dept. B, WASHINGTON, D. C.

Our host met us with his touring car and proceeded to make good his promises about the nursery, and the scenery, and the roads, and the estates, and as we bowled along he told us about "Pike." It is indeed a great county. And the fact that it was originally settled by Virginians, Kentuckians, and Carolinians still stamps it strongly with the qualities of the South. Though north of St. Louis on the map, it is south of St. Louis in its spirit. Indeed, Louisiana is the most Southern town in appearance and feeling that we visited upon our travels. The broad black felt hats one sees about the streets, the luxuriant mustaches and goatees—all these things mark the town, and if they are not enough, you should see "Indy" Gordon as she walks along puffing at a bulldog pipe black as her own face.

Never outside of Brittany and Normandy have I seen roads so full of animals as those of Pike County. From the great four-horse teams, drawing produce to and from the beautiful estate called "Falicon," to the mule teams and the saddle horses and the cows and pigs and chickens and dogs, all the quadrupeds and bipeds domesticated by mankind were there upon the roads to meet us and to protest, by various antics, against the invasion of the motor car. Dogs hurled themselves at the car as though to suicide; chickens extended themselves in shrieking dives across our course; pigs arose from the luxurious mud with grunts of frantic disapproval, and cantered heavily into the fields; cows trotted lumberingly before us, their hind legs and their fore legs moving, it seemed, without relation to each other; a goat ran round and round the tree to which he was attached; mules pointed their ears to heaven, and opened their eyes wide in horror and amazement; beautiful saddle horses bearing countrymen, or rosy-cheeked young women from the farms, tried to climb into the boughs of wayside trees for safety, and four-horse teams managed to get themselves involved in a manner only rivaled by a ball of yarn with which a kitten is allowed to work its own sweet will.

Our host took all these matters calmly. When a mule protested at our presence on the road, it would merely serve as a reminder that, "Pike County furnished most of the mules for the Spanish war"; or, when a saddle horse showed signs of homicidal purpose, it would draw the calm observation, "Pike is probably the greatest county in the whole United States for saddle horses. 'Missouri King,' the undefeated champion saddle horse of the world, was raised here."

So we progressed amid the outraged hosts of animals.

Getting Ready for the Party

MY feeling as I alighted at last on the step before our host's front door was one of definite relief. For dinner is the meal that I like best, and man with all his faults is, after all, the animal I most enjoy.

The house was genial like its owner—it was just the sort of house I like: large and open, with wide halls, spacious rooms, comfortable beds and chairs, and ash trays everywhere.

"I've asked some men in for dinner and a little game," our host informed us, as he left us to our dressing.

Presently we heard motors arriving in the drive, beneath our windows. When we descended, the living room was filled with men in dinner suits. (Oh, yes: they wear them in those Mississippi River towns, and they fit as well as yours does!)

When we had been introduced we all moved to the dining room.

Would You Call it a Warning?

AT each place was a printed menu with the heading "At Home Abroad"—a hospitable inversion of the general title of these chapters—and with details as follows:

A COUNTRY DINNER

Old Pike County ham,
Pike County capons
and other Pike County essentials,
with Pike County Colonels.

At the bottom of the card was this—shall I call it warning?

Senator Warner once said to Colonel Roosevelt: "*Pike County babies cut their teeth on poker chips.*"

And Then—Such a Dinner!

I HAVE already said that Pike is a county with a Southern savor, but I had not realized how fully that was true until I dined there. I will not say that I have never tasted such a dinner, for truth I hold even above politeness. All I will say is that if ever before I had met with such a meal the memory of it has departed—and, I may add, my memory for famous meals is considered good to the point of irritation.

Mr. John O. Roberts, president of the Clarksville bank, is a wonder—nothing less. There's a book in him, and I hope that somebody will write it, for I should like to read that book

The Designer of That Dinner

THE dinner (save for the "essentials") was entirely made up of products of the county. More, it was even supervised and cooked by county products, for two particularly sweet young ladies, members of the family, were flying around the kitchen in their pretty evening gowns, helping and directing Molly.

Molly is a pretty mulatto girl. Her skin is like a smooth, light-colored bronze, her eye is dark and gentle, like that of some domesticated animal, her voice drawls in melodious cadences, and she has a sort of shyness which is very fetching.

"Ah cain't cook lak they used to cook in the ole days," she smiled in response to my tribute to the dinner, later. "The Kunnel was askin' jus' th' othah day if ah could make 'im some ash cake, but ah had to tell 'im ah couldn't. Ah've seen ma grun'fahthu make it lots o' times, but folks cain't make it no mo', now-a-days."

Poor benighted Northerner that I am, I had to ask what ash cake was. It is a kind of corn cake, Molly told me, the parent, so to speak, of the corn dodger, and the grandparent of hoecake. It has to be prepared carefully and then cooked in the hot ashes—cooked "jes so," as Molly said.

Having learned about ash cake, I demanded more Pike County culinary lore, whereupon I was told, partly by my host, and partly by Molly, about the old-time wedding cooks.

The Ante-Bellum Wedding Cook

WEDDING cooks were the best cooks in the South, superchefs, with State-wide reputations. When there was a wedding a dinner was given at the home of the bride, for all the wedding guests, and it was in the preparation of this repast that the wedding cook of the bride's family showed what she could do. That dinner was on the day of the wedding. On the next day the entire company repaired to the home of the groom's family, where another dinner was served—a dinner in which the wedding cook belonging to this family tried to outdo that of the day before. This latter feast was known as the "infair." But all these old Southern customs seem to have departed now, along with the wedding cooks themselves. The latter very seldom came to sale, being regarded as the most valuable of all slaves. Once in a while when some leading family was in financial difficulties and was forced to sell its wedding cook she would bring as much as eight or ten times the price of an ordinary female slave.

The Pike County Colonel Crop

AFTER dinner, when we moved out to the living room, we found a large, green table all in place, with the chips arranged in little piles. But let me introduce you to the players.

First, there was Colonel Edgar Stark, our host, genial and warm-hearted over dinner; cold and inscrutable behind his spectacles when poker chips appeared.

Then Colonel Charlie Buffum, heavily built, but with a similar dual personality.

Then Colonel Frank Buffum, State Highway Commissioner; or, as some one called him later in the evening, when the chips began to gather at his place, State "highwayman."

Then Colonel Dick Goodman, banker, raconteur, and connoisseur of edibles and "essentials."

Then Colonel George S. Cake, who, when not a Colonel, is a Commodore; commander of the *Betsy*, flagship of the Louisiana Yacht Club, and the most famous craft to ply the Mississippi since the *Prairie Belle*. (Don't call Colonel Cake when he raises you and at the same time raises his right eyebrow.)

Then Colonel Dick Hawkins, former Collector of the Port of St. Louis, and more recently (since there has been so little in St. Louis to collect), a gentleman farmer. (Colonel Hawkins always wins at poker. The question is not "Will he win?" but "How much?")

Only two men in the game were not, so far as I discovered, Colonels.

One, Major Dave Wald, has been held back in title because of time devoted to the pursuit of literature. Major Wald has written a book. The subject of the book is Poker. As a tactician, he is perhaps unrivaled in Missouri. He will look at a hand and instantly declare the percentage of chance it stands of filling in the draw, according to the law of chance. One hand will be, to Major Wald, a "sixteen-time hand"; another a "thirty-two time hand," and so on—meaning that the player has one chance in sixteen, or in thirty-two, of filling.

A Plain Person Without a Title

THE other player was merely a plain "Mister," like ourselves—Mr. John W. Matson, the corporation lawyer. At first I felt sorry for Mr. Matson. It seemed hard that the rank of Colonel had been denied him. But when I saw him shuffle and deal, I was no longer sorry for him, but for myself. With the possible exception of General Bob Williams (who won't play any more now that he has been appointed postmaster), and Colonel Clarence Buell, who used to play in the big games on the Mississippi boats, Mr. Matson can shuffle and deal more rapidly and more accurately than any man in Missouri.

Colonel Buell was present, as was Colonel Lloyd Stark, but neither played. Colonel Buell had intended to, but on being told that my companion and I were from New York he declined to "take the money." The Colonel—but to say "the Colonel" in Pike County is hardly specific—Colonel Buell, I mean, is the same gentleman who fought the Indians, long ago, with Buffalo Bill, and who later acted as treasurer of the Wild West Show on its first trip to Europe. Some one informed me that the Colonel—Colonel Buell, I mean—was a capitalist, but the information was beside the mark, for I had already seen the diamond ring he wears—a most remarkable piece of landscape gardening.

Digitized by Google

During the evening Colonel Buell, who stood for an hour or two and watched the play, spoke of certain things that he had seen and done which, as I estimated it, could not have been seen or done within the last sixty years. "How old is Colonel Buell?" I asked another Colonel.

"Colonel," asked the Colonel, "how old are you?"

"Colonel," replied the Colonel, "I am exactly in my prime."

"I know that, Colonel," said the Colonel, "but what is your age?"

"Colonel," returned the Colonel suavely, "I have forgotten my exact age. But I know that I am somewhere between eighty and one hundred and forty-two."

The Poker Sense in Pike County

IT was Mr. Matson's deal. He dealt. The cards passed through the air and fell, one on the other, in neat piles. (If you prefer it, Mr. Matson can drop a fan-shaped hand before you, all ready to pick up.) And from the time that the first hand was played I knew that here, as in St. Louis, my companion and I were babes among the lions. I do not know how he played, but I do know that I played along as best I could, only trying not to lose too much money at once.

But why rehearse the pathetic story? I spoke in a former chapter of Missouri poker, and Pike County is a county in Missouri. Bet on a good pat hand and some one always holds a better one. Bluff and they call you. Call and they beat you. There is no way of winning from Missouri. Missouri poker players are mahatmas. They have an occult sense of cards. Babes at their mothers' breasts can tell the difference between a straight and a flush long before they have the power of speech. Once, while in Pike County, I asked a little boy how many brothers and sisters he had. "One brother and three sisters," he replied, and added: "A full house."

The Game Takes Precedence

THE Missouri gentlemen, so gay, so genial, at the dinner table, take on a frigid look when the cards and chips appear. They turn from gentle, kindly human beings into relentless, ravening wolves, each intent upon the thought of devouring the other. And when, over a poker game, some player seems to enter into a pleasant conversation, the other players know that even that is a bluff—a blind to cover up some diabolic plot.

Once during the game, for instance, Colonel Hawkins started in to tell me something of his history. And I, bland simpleton, believed we were conversing *sans* ulterior motive.

"I used to be in politics," he said. "Then I was in the banking business. But I've gone back to farming now, because it is the only honest business in the world. In fact—"

But at that juncture the steely voices of half the other players at the table interrupted.

"Ante!" they cried. "Ante, farmer!"

Whereupon Colonel Hawkins, who by that time had to crane his neck to see the table over his pile of chips—a pile of chips like the battlements of some feudal lord—anted suavely.

Advice Gratis

BY midnight Colonel Buell, who had stood behind me for a time and watched my play, showed signs of fatigue and anguish. And a little later, after having seen me try to "put it over" with three sixes, he sighed heavily and went home—a fine, slender, courtly figure, straight as a gun barrel, walking sadly out into the night. Next Major Wald ceased to play for himself, but began to take an interest in my hand. Under his supervision during the last fifteen minutes of the game I made a tiny dent in Colonel Hawkins's stacks of chips. But it is only just to Colonel Hawkins to say that, by that time, the Missourians were so sorry for us that they were making the most desperate efforts not to win from us any more than they could help.

When the game broke up, Major Wald and Colonel Hawkins showed concern about our future.

"How far are you young men going, did you say?" asked Colonel Hawkins.

"To the Pacific Coast," I said.

At that the two veteran poker players looked at each other solemnly, in silence, and shook their heads.

"All the way to the coast, eh?" demanded Major Wald. Then: "Do you expect to play cards much as you go along?"

I wished to uphold the honor of New York as best I could, so I tried to reply gamely.

"Oh, yes," I said. "Whenever anybody wants a game they'll find us ready."

Again I saw them exchange glances.

"You tell him, Major," said Colonel Hawkins, walking away.

"Young man," said Major Wald, placing his hand kindly on my shoulder, "I played poker before you were born. I know a good deal about it. You wouldn't take offense if I gave you a pointer about your game?"

"On the contrary," I said, thinking I was about to hear the inner secrets of Missouri poker, "I shall be most grateful."

"If I advise you," he pursued, "will you agree to follow my advice?"

"Certainly."

"Well," said the Major, "don't you play poker any more while you're in the West. Wait till you get back to New York."

Apples That Melt on the Tongue

SEEING the houses of the players next day as I drove about the county, I suspected that even these had been built around the game of poker, for each house has ample accommodations for the "gang" in case the game lasts until too late to go home. In the winter the games occur at the houses of the different Colonels, and there is always a dinner first. But it is in summer that the greatest games occur, for then it is the immemorial custom for the Colonels (and Major Wald and Mr. Matson, too, of course) to charter a steamer and go out on the river. These excursions sometimes last for the better part of a week. Sometimes they cruise. Sometimes they go ashore upon an island and camp. "We take a tribe of cooks and a few cases of 'essentials,'" one of the Colonels explained to me, "and the game never stops at all."

At one side is an alley running back to the house of Huckleberry Finn, where stood the historic fence which young Sam Clemens cajoled the other boys into whitewashing for him

My companion and I were tired. The mental strain had told upon us. Soon after the Colonels, the Major, and Mr. Matson went, we retired. It seemed to me that I had hardly closed my eyes when I heard a faint rap at my bedroom door. But I must have slept, for there was sunlight streaming through the window.

"What is it?" I called.

The voice of our host replied.

"Breakfast will be ready any time you want it," he declared. "Will you have your toddy now?"

Ah! Pike is a great county! And what do you suppose we had for breakfast?

At the center of the table was a pile of the most beautiful and enormous red apples—fragrant apples, giving a sweet, appetizing scent which filled the room. I had thought before that I knew something about apples, but when I tasted these I became aware that no merely good apple, no merely fine apple, would ever satisfy my taste again. These apples, which are known as the "Delicious," are to all other apples that I know as Missouri poker is to all other poker. They are in a class absolutely alone, and, in case you get some on a lucky day, I want to tell you how to eat them with your breakfast. Don't eat them as you eat an ordinary apple, but either fry them, with a slice of bacon, or cut them up and take them as you do peaches—that is, with cream and sugar. Did you ever see an apple with flesh white and firm, yet tender as a pear at the exact point of perfect ripeness? Did you ever taste an apple that seemed actually to melt upon your tongue? That is the sort of apple which we had for breakfast.

A Town That Forgot to Grow Up

LATER in the day we motored to the town of Clarksville, some miles down the river. Clarksville huddles along the river bank, as St. Louis must have in her early days. Being a small, straggling town which has not, if one may judge from appearances, progressed or even changed in fifty years, Clarksville out-Hannibals Hannibal. Or, perhaps, it is to-day the kind of town that Hannibal was when Mark Twain was a boy. In its decay it is theatrically perfect.

Our motor stopped before the bank, and we were introduced to the editor of the local paper, which is called "The Piker."

The bank is, in appearance, contemporary with the town. The fittings are of the period of the Civil War—walnut, as I recall them. And there are red glass signs over the little window grilles bearing the legends "Cashier" and "President."

In the back room we met the president, Mr. John O. Roberts, a gentleman over eighty years of age, who can sit back, with his feet upon his desk, smoke cigars, and, from a cloud of smoke, exude the most delightful stories of old days on the Mississippi. For Mr. Roberts was clerk on river boats more than sixty years ago, in the golden days of the great stream. There, too, we had the good fortune to meet Professor M. S. Goodman, who was born in Missouri in 1837, and founded the Clarksville High School in 1865. The professor has written the history of Pike County—but that is a story all by itself.

Old Days on the River

IN the old days Pike County embraced many of the other present counties, and, running all the way from the Mississippi to the Missouri River, was as large as a good-sized State. Pike has colonized more Western country than any other county in Missouri; or, as Professor Goodman put it, "The West used to be full of Pike County men who had pushed out there with their guns and bottles."

"Yes," added Mr. Roberts in his dry, crackling tone, "and wherever they went they always wanted office."

I asked Mr. Roberts about the famous poker games on the river boats.

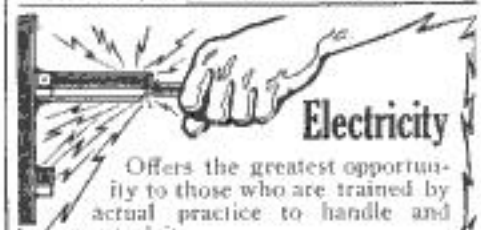
"I antedate poker," he said. "The old river card game was called 'Brag.' It was out of brag that the game of poker developed. A steward on one of the boats once told me that he and the other boys had picked up more than a hundred dollars from the floor of a room in which Henry Clay and some friends had been playing brag."

Golden days indeed!—and for everyone. The steamboat companies made fabulous returns on their investments.

"In '54 and '55," said Mr. Roberts,

Special Educational Institutions

Prospective Freshmen should make reservations immediately in these New Dormitories at



Northwestern University

These buildings—eleven in all—are on the Bluffs of the upper campus overlooking Lake Michigan.

Professional Schools situated in heart of Chicago. Medical School in hospital center. 1,500 beds. Recent benefaction of $1,000,000 gives Medical School unusual clinical advantages. Two years' college credit required. Law School near courts. Elbert H. Gary Library of Law, 40,000 volumes. Campus of Liberal Arts on shores of Lake Michigan. Large gymnasium, new dormitories.

Write for Requirements for Medical School. Typical Lessons in Pharmacy. Engineering as a Vocation. Views of Campus. Earning One's Way. Also books of courses in Schools of Law, Dentistry, Music, Oratory, Commerce, Summer School and Evanston Academy.

JOHN C. BURG, 654 Northwestern University Bldg., Chicago

Electricity

Offers the greatest opportunity to those who are trained by actual practice to handle and control it.

A visit to either of our Schools will convince you that we are teaching a live wire course wherein you Learn By Doing.

Schools open all the year. Free Prospectus on request.

See America now; you can't go abroad while the war is on.

Read Julian Street's "Abroad at Home" and find out something about the "home lot." The European conflict emphasizes the value of the See America First idea, not only as applied to travel, but to the business aspect of the "home lot."

Enforced concentration on home consumption will show the possibilities of "America first" as a market. American table waters, ginger ales, food products, clothing, drugs and toilet preparations, toys and novelties, candies and confections, all of these and many other products will now find greater consumption by our fellow citizens.

The European workman's abandonment of the machine for the rifle offers Uncle Sam the opportunity to establish an international trade-mark—"Made In America". The American Manufacturer will take this opportunity, and every other which presents itself, not to willfully take advantage of a world tragedy, but to heed a demand which must be supplied.

A. C. Hammesfahr.

Advertising Manager Collier's Weekly

"I worked for the St. Louis & Keokuk Packet Company, a line owning three boats, which weren't worth over $75,000. That company cleaned up as much as $150,000 clear profit in one season. And, of course, a season wasn't an entire year either. It would open about March 1 and end in December, or, in a mild winter, January.

"But I tell you we used to drive those boats. We'd shoot up to the docks and land our passengers and mail and freight without so much as tying up or even stopping. We'd just scrape along the dock and then be off again.

"The highest fare ever charged between St. Louis and Keokuk was $4 for the 200 miles. That included a berth, wine, and the finest old Southern cooking a man ever tasted. The best cooks I've ever seen in my life were those old steamboat cooks. And we gave 'em good stuff to cook, too. We bought the best of everything. You ought to see the steaks we had for breakfast! The officers used to sit at the ladies' end of the table and serve out of big chafing dishes. I tell you those were *meals!*

"There was lots going on all the time on the river. I remember one trip I made in '52 in the old *Di Vernon*—all the boats in the line were named for characters in Scott's novels. We were coming from New Orleans with 350 German immigrants on deck and 100 Californians in the cabin. The Californians were sports and they had a big game going all the time. We had two gamblers on board, too—John McKenzie and his partner, a man named Wilburn. They used to come on to the boats at different places, and make out to be farmers, and not acquainted with each other, and there was always something doing when they got into the game.

"Well, this time cholera broke out among the immigrants on the deck. They began dying on us. But we had a deckload of lumber, so we were well fixed to handle 'em. We took the lumber and built coffins for 'em, and when they'd die we'd put 'em in the coffins and save 'em until we got enough to make it worth stopping to bury 'em. Then we'd tie up by some woodyard and be loading up with wood for the furnaces while the burying was going on. Some twenty-five or thirty of 'em died on that trip, and we planted 'em at various points along the way. And all the while, up there in the cabin, the big game was going on—each fellow trying to cheat the other.

"After we got to St. Louis there was a report that we'd buried a man with $3,500 sewed into his clothes. Of course we didn't know which was which or where we'd buried this man. Well, sir, that started the greatest bunch of mining operations along the river bank between New Orleans and St. Louis that anybody ever saw! Everyone was digging for that German. Far as I heard, though, they never found a dollar on him."

Some one in Clarksville (in my notes I neglected to set down the origin of this particular item) told me that the term "stateroom" originated on the Mississippi boats, where the various rooms were named after the States of the Union, a legend which, if true, is worth preserving.

Another interesting item relates to the origin of the slang term "piker," which, whatever it may have meant originally, is used to-day to designate a timid, close-fisted gambler, a "tightwad" or "short sport."

When one inquires as to the origin of this term, Pike County, Missouri, begins to remember that there is another Pike County—Pike County, Illinois, just across the river, which is incidentally, I think, the "Pike" referred to in John Hay's poem.

A gentleman in Clarksville explained the origin of the term "piker" to me thus:

"In the early days men from Pike County, Missouri, and Pike County, Illinois, went all through the West. They were all good men. In fact, they were such a fine lot that when any crooks would want to represent themselves as honest men they would say they were from Pike. As a result of this all the bad men in the West claimed to be from our section, and in that way Pike got a bad name. So when the Westerners suspected a man of being crooked, they'd say: 'Look out for him; he's a Piker.'"

In St. Louis I was given another version. There I was told that long ago men would come down from Pike to gamble. They loved cards, but oftentimes hadn't enough money to play a big game. So, it was said, the term "Piker" came to indicate more or less the type it indicates to-day.

No bit of character and color which we met upon our travels remains in my mind more pleasantly than the talk we had with those fine old men around the stove in the back room of the bank of Mr. John O. Roberts, there at Clarksville. Mr. Roberts is a wonder—nothing less. There's a book in him, and I hope that somebody will write it, for I should like to read that book.

The next article by Mr. Street will be entitled "Kansas City"

Bealby

(Concluded from page 14)

right up to a policeman and say to him, simply and frankly: "I want to turn King's Evidence, please. I was in that burglary where there was a dead old man and a workbox and a woman and a dog. I was led astray by a bad character and I did not mean to do it. And really it was him that did it and not me."

BUT now his tongue clove to the roof of his mouth, he felt he could not speak, could not go through with it. His heart had gone down into his feet. Perhaps he had caught the tramp's constitutional aversion to the police. He affected not to see the observant figure in the doorway. He assumed a slack careless bearing like one who reads by chance idly. He lifted his eyebrows to express unconcern. He pursed his mouth to whistle, but no whistle came. He stuck his hands into his pockets, pulled up his feet as one pulls up plants by the roots and strolled away.

He quickened his stroll as he supposed by imperceptible degrees. He glanced back and saw that the young policeman had come out of the station and was reading the notice. And as the young policeman read he looked ever and again at Bealby like one who checks off items.

Bealby quickened his pace and then, doing his best to suggest by the movements of his back a more boyish levity quite unconnected with the law, he broke into a trot.

Then presently he dropped back into a walking pace, pretended to see something in the hedge, stopped and took a sidelong look at the young policeman.

He was coming along with earnest strides, every movement of his suggested a stealthy hurry!

Bealby trotted and then, becoming almost frank about it, ran. He took to his heels. From the first it was not really an urgent chase; it was a stalking rather than a hunt, because the young policeman was too young and shy and lacking in confidence really to run after a boy without any definite warrant for doing so. When anyone came along he would drop into a smart walk and pretend not to be looking at Bealby but just going somewhere briskly. And after two miles of it he desisted, and stood for a time watching a heap of mangel-wurzel directly and the disappearance of Bealby obliquely, and then when Bealby was quite out of sight he turned back thoughtfully toward his proper place.

ON the whole, he considered he was well out of it. He might have made a fool of himself. . . .

And yet—five pounds reward!

(To be continued next week)

DELCO

ELECTRIC CRANKING LIGHTING IGNITION

Simplicity is the Keynote of the Delco System

Study the wiring diagram illustrated above. It shows all the wires there are in a Delco equipped automobile.

Note the simplicity of it—the apparent strength and character indicated.

You will find slight deviations from this diagram to meet the engineering and manufacturing requirements of the various motor car companies. But, in all essential details the diagram is standard.

The Delco system is a complete electric cranking, lighting and ignition system.

It includes also—

A reserve ignition—

A connection for horn and extra lights when desired—

A dimming feature for headlights—

A protective circuit breaker to prevent possible damage from short circuits—

A locking device for both ignition and lights.

The automatically controlled generator provides a high charging rate at low car speed and lower charging rate at high speed thus insuring a well charged battery under ordinary operating conditions, and preventing over-charging at the hands of a fast driver.

The automatically controlled ignition insures a properly timed spark at all engine speeds.

And with all these features the Delco System is remarkably free from complications.

It has less wiring, in fact, than was once used for ignition alone.

This combination of efficiency and simplicity is made possible by the single unit, single wired, grounded system.

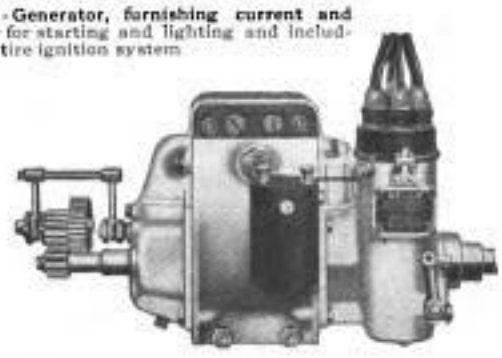
The Delco System was the pioneer in the electric cranking field.

Three years ago the first electrically cranked car appeared.

It was Delco equipped—and it revolutionized the automobile industry.

Today 154,000 owners are driving Delco equipped cars

The Dayton Engineering Laboratories Company, Dayton, Ohio



1—Delco-Exide battery made to withstand rough usage and give constant, efficient service

2—Combination Switch—controls entire electrical system. Strong, simple and very compact.

3—Motor-Generator, furnishing current and power for starting and lighting and including entire ignition system

These three units comprise the entire Delco System—cranking, lighting and ignition

Here's Heap Big Smoke Joy

Here *is* the big smoke joy with the real flavor and get-up-and-get in every whiff. Makes no difference, men, *how* you smoke it—jam it into a jimmy pipe, or roll it into a cigarette after breakfast—and you'll get the top-o-the-morning feeling into your system for all day. Yes, sir, P. A. is the one real biteless and stingless tobacco bet and it *keeps* men smoking it once they start.

PRINCE ALBERT

the national joy smoke

has the bite taken out by an exclusive, patented process. It never nipped anyone. It *can't* bite. You can smoke P. A. all day and until bedtime, without your tongue being any the wiser. P. A. won't parch your throat. It *is* the heap big smoke joy, for sure. You go and swap the change for a helping and know real tobacco. The cost is only 10c for the tidy red tin or 5c for the toppy red bag—also in pound and half-pound humidors.

Sold everywhere, so buy aplenty where stores are far apart.

HUDSON Six-40 1915 Model $1550 This Year F.O.B. Detroit

Our Level-Best Six

This new HUDSON Six-40, despite its price, marks our level best. Our 48 engineers, headed by Howard E. Coffin, have devoted four years to the car. In reply to all conflicting claims—defending higher prices—that's the most that we can say.

This car is the climax of HUDSON ambitions. We may do better sometime, but we can't today.

There is hardly a part or detail which we find a wish to better. In fine engineering, in beauty and comfort, in lightness and economy, this car comes near the apex, we believe.

We say this after thousands have been tested on the road. After 12 months' experience with our last year's Six-40. After noting all the new-year models which our rivals have brought out. And we believe that most men will agree with us.

Its 48 Designers

There are 48 men—there have been for years—on the HUDSON corps of engineers. And Howard E. Coffin heads them.

It has never been claimed, so far as we know, that there is an abler corps in the country. And certainly there isn't.

In HUDSON models—constantly progressing—these men have fought over-tax. They have warred with all excesses—in weight and price, in upkeep and operative cost.

And this HUDSON Six-40 for 1915 marks the final result of their efforts.

Do Opinions Differ?

There are arguments, of course, which combat ours. Each maker defends his own. But we doubt if well-informed men seriously differ about this car.

HUDSON advances have always been combated. But the records show that the general trend has followed where we led.

Sixes are almost universal now in the upper grade of cars. Lightness is now demanded. Economy has been studied. Prices have come down. And HUDSON innovations in beauty and equipment are being fast adopted.

The HUDSON Six-40 this year differs from its leading rivals merely in degree of progress. It simply leads the common trend.

Where Hudson Leads

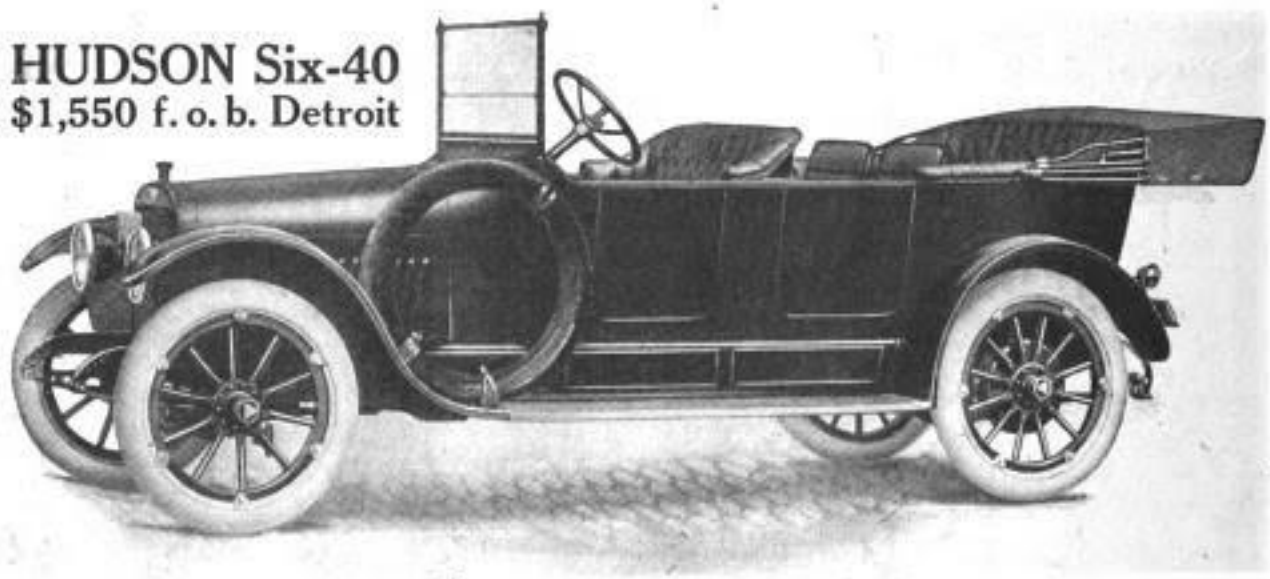
The HUDSON Six-40 leads in lightness among cars of this capacity. It reduces old-time averages about 1,000 pounds.

This lightness, plus a new-type motor, gives it class-lead in low operative cost.

It leads in beauty. In numerous ways it leads all in new styles of equipment.

In the quality field it holds the low-priced record, for cars that compare in size, class and capacity. Since last year, our trebled output has reduced the price $200.

And, in designing, skill—not luck—has given this car amazingly perfect balance.



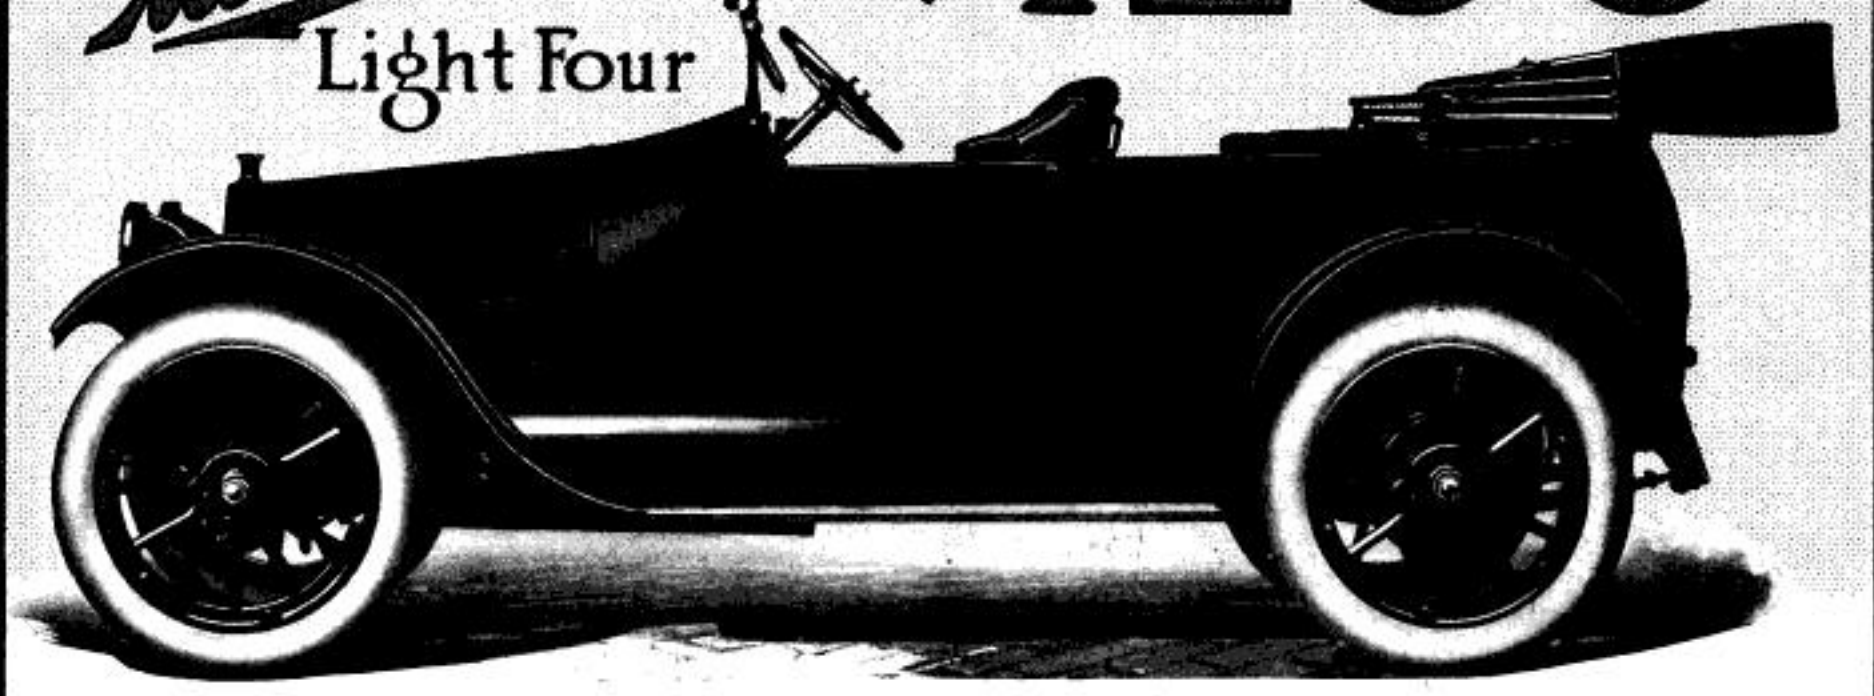
You'll Approve It

The more exacting you are, the better you'll approve this car. It will meet your conceptions in the things you want. In big ways and little ways it will show you today's best standards. We spent all last year on details and refinements.

Go see it, and bear this in mind: We build a larger car for the men who want it. But we could not, with our present knowledge, build a better car.

Hudson dealers are everywhere.
New catalog on request.

HUDSON Six-40
$1,550 f. o. b. Detroit



A perfect streamline body.
Seats and room for seven.
Disappearing tonneau seats.
Invisible hinges.
Hand-buffed leather upholstery.
Wide, high seats.
Gasoline tank in dash. Tires carried ahead of front door.
"One-Man" top with quick-adjusting curtains attached.
Dimming searchlights.
Locked ignition and lights.
Simplified starting, lighting and ignition system.
Wires in metal conduits.
New-form speedometer drive.
New-method carburetion.
Automatic spark advance.
Horn button in wheel.
Trunk rack on back.
Phaeton seats up to seven.
Also an ideal Roadster.
Also a beautiful Coupe.
Also a Limousine.

HUDSON MOTOR CAR COMPANY, 8185 Jefferson Avenue, Detroit, Mich.

1915 Mitchell Light Four $1250

A Revelation in 1915 Automobile Values

Never before have such unprecedented values been offered as in the 1915 Mitchell Light Four. Here is a car that is literally crammed with value. It represents, in our opinion, the best "Buy" in Motordom today.

Look where you will—but if you once see this wonderful car you will be compelled to admit that it is the greatest on the market today.

The Mitchell 1915 Light Four is a John W. Bate masterpiece. John W. Bate is the greatest authority in the automobile world—he is responsible for more radical changes—he has achieved more than any other man living. He has built a car that has solved every motor problem—one that is motor simplicity and efficiency *in the highest degree*—

Read These Remarkable Features:

- Light Weight
- Accessibility
- Economy
- Chrome Vanadium Steel Construction
- Long Stroke, High-Speed L-Head Motors
- Three-point Motor Suspension
- Full Floating Rear Axle
- Two-unit—Three-point Construction
- Silent Electric Starter
- Electric Lights
- Silent Chain Drive Shaft to Generator and Distributor
- Positive Helical Gear Drive to Cam Shaft
- Water Pump on Fan Shaft
- Dimming Search Lights—Non-Glare System
- Electric Horn
- Speedometer
- Gasoline Gauge
- Mitchell Power Tire Pump
- One-Man Top
- Integral Rain Vision Two-Piece Windshield
- Quick-Action Side Curtains
- Crowned Fenders
- Portable Exploring Lamp
- Demountable Rims
- Extra Tire Carrier in Rear
- Stream Line Body
- License Brackets

Light Weight But Safety First

Safety and Durability have not been sacrificed in the 1915 Mitchell Light Four.

It's a light weight car—yet one that will ride rough country roads as well as smooth city boulevards and not acquire the expensive "garage habit" either.

Rough every day going is anticipated in the "*Bate two-unit three-point suspension construction*"—twists and jars will not throw essential parts out of order—accidents are also prevented—

An Economical Car

Because the cost of keeping it *on the* road is small—its repair bills are infrequent and gasoline cost moderate—

Fewer parts than used in most cars to get out of order—more drop forgings—more *hand work*—all these help keep the car running and make the Mitchell an economical car.

Saves Gasoline

Because gasoline energy is turned into mileage with less loss than in ordinary cars—

Friction is reduced to a minimum—the offset crank shaft—*prevents friction* and secures *all* the gasoline energy for turning the wheels.

The *perfect* cooling of the motor insures *complete combustion*—no gas is wasted—

The beautiful simplicity of the car insures the maximum of smooth running with a minimum of resistance.

Accessible

Of course all cars are accessible—their makers say so—

But lift the hood of the Mitchell 1915 Light Four and see what accessibility and simplicity really mean—

You can see for yourself even if you're not an expert—compare what you see there with what you see under the hood of other cars.

The *real accessibility* of Mitchell cars enables the adjustment of a part *before* a repair *becomes necessary*—when a repair is required a Mitchell car does not have to be *entirely dismantled*—the 75% of repair time employed in dismantling a car is thus saved. But of prime importance is the longer life of the car this accessibility assures.

Smooth Riding

Like riding on velvet—because the weight is evenly distributed and carried low—and the springs are extra long—extra strong and resilient. The upholstering is *luxuriously comfortable*. Ask your dealer for a demonstration that will tell the real story—

Saves Tires

Because *each wheel* carries its full share of the load—no set of wheels more than another—wheels are properly and perfectly aligned—no side motion to rub the tread off.

Finally

In appearance the 1915 Mitchell Light Four is as snappy a car as you ever saw—long, low, rakish—with all the up-to-the-minute accessories. Finished in rich dark Imperial-French blue—nickel trimmed.

There are 35,000 Mitchells in use today.

Maybe a Mitchell owner lives near you. Write us and we'll tell you—Mitchell owners can tell you more about the Mitchell reliability than we can.

Get the Personal Touch

Ask for a demonstration. If there isn't a Mitchell dealer in your town write us—we'll arrange a demonstration for you without obligation on your part

But, if you're going to buy a car be sure and *see the Mitchell*—ride in one—drive it yourself—Get the Personal Touch. Never before was so much real motor value crammed in any car.

We have a complete set of booklets—literature—interesting and illuminating.

Please write for them.

American and Foreign weaves in soft-finished Worsteds, Cheviots and Flannel effects in the New Tartan Checks and Glen Urquhart Plaids.

The Beaufort Sack Suit

(By the House of Kuppenheimer)

ADVANCE Fall and Winter Model for Young Men. A good example of an entirely new standard in men's clothing—a quality that is attracting the attention of the whole country to the productions of this house.

The BEAUFORT is a three-button sack, with full soft roll, form fitting, with the correct narrow shoulders and sleeves. It has style, every detail correct, authentic, the general effect graceful and pleasing.

The difference is right here—much of the tailoring you see today is a straining after the fashion rather than an achievement of it.

We venture to say you will not find anything approaching our BEAUFORT or BRITISH models for Young Men under any other than the House of Kuppenheimer label. You may in a way find similar detail, but the effect is not convincing.

Men everywhere should realize that this is a time of *better values* in clothing. Yesterday is not today. Old methods are passing. There are new *demands* and new *possibilities*.

If you have the opportunity to see these Kuppenheimer Suits, slip them on; stand on a rug in front of a mirror and say whether we are wrong or *right*.

We want you to know us better and we want to know you.

Kuppenheimer Clothes are sold by a representative store in nearly every Metropolitan center of the United States and Canada. If you care to give us your name on a post card we will be glad to send you our Book of Fashions.

France Marches Singing

By Gelett Burgess

THE fourteenth of July I arrived in Paris. It was a national holiday. Singing, dancing on the streets. Little boys with fiddles, girls with skirts slit higher than ever, the crowd on the boulevards jesting, jostling, laughing—and gambling at roulette and rouge-et-noir upon the sidewalks. And not for one night only, either; this year the ever-blithe Parisian gala had lasted for three hilarious days. Never had I seen Paris so gay. Electric lights everywhere, arches, bands, and flags, rollicking soldiers, students, tourists, girls, and beggars! Other cities have their carnival moods, but in Paris gayety is an art. Nowhere in the world are there such enthusiastic demonstrations of youth and song, of love and kisses. That night, along the Seine, laughter exploded with the fire works until the dawn came up. But to-day—there is no dancing on the streets of Paris. Oh, there are still kisses; but they are different now—they are drowned in tears! Yes, there is still youth, but it is ebbing, ebbing away, draining Paris down to the women and old men. Songs? There is but one song left—"La Marseillaise." *C'est la guerre!* It is war—war! War on every corner. "*A Berlin! Hou! Hou! A Berlin! Hou! Hou!*" In the café everyone jumps to his feet. Instantly the place is emptied. From queerly bearded students, from girls standing on chairs, from aproned waiters—yes, even from the fat throat of madame, the patronne, at her desk, the yell goes up: "*Vive la France!*" And the blue, white, and red banner, with a thousand boys in its wake, marches, shouting, down the Boulevard San Michel: "*A Berlin! Hou! Hou! A Berlin! Hou! Hou!*"—leaving a seething wake of patriotism behind. For fifteen days clouds hung over the city, drizzling a little every day, alternate sunshine and rain, threatening all the time. For fifteen days also the mental tension tightened, tightened, tightened, as if some one were screwing up a spring. "What will Servia answer?" the chasseur of my hotel asked me, as he brought in my paper. Three days later a friendly policeman was asking: "Do you think Russia will stand by the Slavs?" Another week and it was my calm, intelligent laundress: "That German Kaiser, he is truly mad!" Next came the question: "Will France mobilize? Will Germany declare war?" And lastly: "Ah, if England will only keep faith!" There grew less hope for peace. Blacker and blacker grew the chance of escape. At every café the conversation became more and more serious. At every doorway the concierge gossiped, while the cordonnier and the facteur dejectedly shook their heads. Groups formed and grew larger, here, there, everywhere; behind that tree, in front of the bakery, inside the charcuterie, chattering excitedly over the news. Two words jumped out like rifle shots from every discussion; one heard them again and again: "L'Allemagne!" and "La guerre!" Down the streets, racing from the Grands Boulevards, the camelots came running every afternoon, shouting "La Patrie!" and "La Presse!" The papers were snatched and fought for on every corner; the first editions barely lasted to the Pantheon.

It is the men who are weeping now, as well as the women. That's where I caught the sharp, acrid scent of war's first tragedy

"We'll Finish It Up This Time!"

AT THE newspaper kiosks men and women struggled for the sheets, tore them to pieces in their haste, and, devouring the news, bumped into bystanders right and left, as, head down, absorbed, they stalked off.

So the days passed until that fateful Saturday—that black Saturday—the first of August, 1914.

I was sitting with Webster on the terrasse of the Brasserie opposite the corner of the Luxemburg Gardens that noon, watching the passers-by. "Isn't that bare-headed girl with the red waist there the one we saw the other night smoking a cigarette at the D'Harcourt with that same chap?" Webster languidly pointed with his cane. "Darned if she isn't kissing him again, right on the sidewalk, in broad daylight, too, and no one is paying any attention at all. Wait a bit, though—say! Why, the girl's crying for all she's worth! Look at her; now he's kissing *her*!" Webster turned to his beer. "Isn't Paris the limit?"

But I was watching another group, fascinated.

"Why, everybody's kissing!" I said. "Yes, and crying, too! What the devil's the matter? Let's get up and have a look around!"

We left his beer and my coffee cakes and strolled up the street. The little groups we had seen for days had knotted tighter now, but the talk was low and earnest. Over by the post office we saw a noisier set. Could there be an official notice posted? We thought not, and so went on.

But what *was* the matter? Why this appalling gloom that seemed to have settled over the city? There was nothing new in the papers. We were sure of that. We had read them all; we knew all the scareheads: "The European Crisis!" "Europe Drifting to Disaster!" "Before the Cannon!" "The Specter of War!" and all the changes that could be rung on the Austro-Hungarian situation. What new thing had happened? Surely there was still some hope for peace! What was more important to my friend, at any rate, was to have a new pair of boots made to order. So we went into a shoe shop. A tall, fine-looking woman came forward to meet us, erect, but with eyes like glass, without a glance at us. She moved as if hypnotized. "Boots?" She shrugged her shoulders. "Impossible now! My husband has gone!"—"Gone? Where?"—"To the war."—Webster and I stared at each other. Mobilization! *That's* what it was. We found now that the first eight classes of the reserves had been called out by mail that morning—every man under twenty-eight must go. Back to the post office we hurried. Bareheaded, in shirt sleeves and aprons, one man, I remember, with a hunk of bread in his hand, still gnawing, and a woman with her knitting, and a nursing mother with her baby—chauffeurs and coachmen—all hurrying up to gaze at the wall. In silence, mostly, with tense, gray faces, they turned away. "That takes my Pierre!" I heard an old woman say, wiping her eyes. "We'll finish it up this time!" and "Well, we're in for it now!" as I crowded in to see the bulletin. One look at the notice pasted to the wall told us the whole dreadful story. A *general* mobilization! For the first time since 1870 every able-bodied man under forty-five was summoned. At five o'clock the affiche was posted. By six everyone in Paris was buzzing with the news. It was war!

Can you imagine what that means? War had marched down every street, had stopped at every single house, and cried: "Come!" Paris was struck down as if by plague. Fathers, brothers, sons, and lovers were named in every household. Death—mangled bodies—poverty—starvation—and "Who'll pay the rent?" A million arrows transfixed a million hearts that night. We walked back to the hotel in gloom.

My chambermaid brought up my hot water after I had rung four times. "Where are the clean towels?" I demanded. "And there is no drinking glass here, either!" I was irritated. "Why the devil haven't you taken away that tray?"

"Oh, my God!" Clementine broke down.

I looked at her again. Her pretty brown eyes were full. I jumped up, understanding, and fished for a five-franc piece.

"My husband starts to-night!" she moaned. "And my baby—he's in Germany! Think of it, monsieur, nursed by a German!" She turned away. "Oh, my head! My head! Pardon me, monsieur, I don't know what I'm doing. Yes, I'll bring up the towels right away!"

The Nightmare That Is War

BY EIGHT O'CLOCK that evening at every doorway, laundry, milk depot, and pastry shop stood women, staring out blankly into the street, or weeping silently, or whispering, two and two. Leaning against a lamppost I saw a young girl, painted and powdered like a clown, with dyed hair, earrings, and flesh-colored stockings, a creature dressed for musical comedy, crying bitterly, crying and mopping her face till her handkerchief was red and black with melted cosmetics. There was no attempt at privacy anywhere; it was the abandonment of sorrow. Women with month-old babies passed, sobbing; old ladies and school-girls gazed, weeping, out of window after window. It was a nightmare. Paris,

Digitized by Google

gay Paris, in tears? It was incongruous, grotesque, impossible. It was like the atmosphere one feels before an earthquake or a tornado. One's flesh fairly crawled, as if one were treading on corpses.

What was the matter with the streets? They began to grow queerly silent. To be sure, occasional nervous, determined yellow taxicabs still flew up and down, barking with a new importance—but the autobuses—where were they? In a single hour everyone in the city had disappeared! Every station was deserted.

Clackety-clack, *clackety-clack!* up the forsaken wooden pavement came a cavalry lieutenant in cuirass and helmet and horsehair plume, galloping with orders. Shop shutters began to go up. And still the weeping women stood haggard in the doorways. Far away came the sound of cadenced shouting on the boulevard, louder and louder: "*A Berlin! Hou! Hou! A Berlin! Hou! Hou! A Berlin! Hou! Hou!*" The reaction had already set in.

"He's a German!"

THAT was a night on the Grands Boulevards! In every café one heard, over and over, "La Marseillaise!" Flags appeared like pansies in a night; the tricolor of France first, last, and all the time—then, more and more frequently, the yellow banner of Russia and the British Union Jack. You were not laughed at now if you spoke English in the cafés. "God Save the King!" became the popular song. Chorus after chorus came—came the Russian national hymn; stand up, there; take off your hat! A girl jumped on a table and led the song, waving a cotton flag—the orchestra could not be heard for the tumult.

Suddenly a scream. "He's a German!" cried the girl. In an instant war had exploded in that café, with shrieks and blows and curses, and before the police could get through the door a mass of ragged clothing and a pompadoured blond head rolled out, kicked by a dozen pointed toes.

One thought that excitement could rise no higher in that café, but this was but the froth of the turmoil, that false patriotism that seeks expression in barbarous vengeance. There was a sneer on Webster's intellectual face as the tumult subsided. Suddenly he grabbed my arm. "Look!" he exclaimed. "Now we'll get the real thing!"

The Lost Province

I TURNED to the commotion at the door; I caught a glimpse of red and white—a gold cross flashed on the red as a flag was carried in. Then there was a roar. There was no doubt about the deep genuineness of the emotion this time—every face reflected a stirred soul. "What flag is that?"

"Alsace-Lorraine!" cried Webster. "You see? The lost province. It isn't for nothing they have decorated the statue of Strasbourg with mourning wreaths for forty years. Well, they'll get their chance now!"

"When do you go?" asked one of another. "The second day." "I on the third day of mobilization."

How can we get to the station? No more autobuses—their seats have been taken out, and, loaded with provisions, they are already on their way to the front. At Soissons the peasants are watching a Clichy-Odéon bus, piled with hams, toiling up a muddy hill. Miles away on the road to Nancy by now the Madeleine-Courbevoie bus has sacks of beans piled up to the tops of its windows, all riding first-class, cheered by soldiers. All of them today are "*Complet.*" What will they bring home? Trophies of war or coffins?

But the trams are still running on half time and quarter time when they can, short-handed, with most of their men mobilizing. The Metro still runs, and you can ride, if you can get on—that is, if you are a prize fighter or a football champion—or a woman. Talk about a New York subway crush at the rush hour! The Brooklyn Bridge Station at five-thirty? That's comparative comfort. This is war in large red letters. Why, in the New York Subway the sliding doors are manned by guards who ram you in, and the train waits till they are locked. On the Metro to-day, bound for the Gare de l'Est, there are no guards at the doors. The passengers themselves shut them—if they can—and the train starts at the whistle with half of them open. Never shall I forget that desperate girl, dragged by one hand till she fell rolling

The Gare de l'Est is surrounded by a high iron fence. At the gates no one but the mobilized may enter. Paris is under martial law

on the platform. Women with children, women with infants even, coming back from seeing father off to the war—men with broken ribs and baskets—why, I saw the clothes stripped almost entirely off one baby, and it was passed from hand to hand over the heads of the crowd to a place of safety. Yelling ladies were carried one station, two stations, three, past their destinations, unable to get out through the jam. Women near the doors left the train miles this side of their homes rather than endure the grip of that human vise.

Flying up and down the streets go the taxicabs, every one loaded down with trunks, hurrying the timid and the exigent off to the stations. And then was when we got our first laugh. Did I say trunks? Boxes, bags, chests, grips, baby carriages, tubs, and bicycles, and, lost somewhere in the midst of the conglomeration, a little lady, frightened, anxious, hurried to distraction, clutching three large hats and a yowling white collie. Multiply this situation by thousands, and you have Paris that first night.

"Vive la France!" *And the blue, white, and red banner, with a thousand boys in its wake, marches shouting down the boulevard San Michel:* "A Berlin! Hou! Hou! A Berlin! Hou! Hou!"

At the stations the floors are covered with miscellaneous strewn luggage. People coming in from the country, and nowhere and no way to go. No baggage is registered to-night; you must watch it yourself—watch it or drop it, walk over it or leave it to itself while you go in the vain search for a carriage. Boxes split open, pa's best silk hat trodden under foot, milady's Duchesse lace handkerchief black with mud, overturned baskets of fruit and soiled linen, broken glassware and split talcum powder, pasteboard cartons mortally wounded, bleeding crushed cracker crumbs. Desperately on guard, sitting on tin trunks and holdalls, English women with umbrellas and golf clubs stare all night. Everyone is his own expressman. Why, at some hotels near the stations they were sleeping all over the court and corridors—priests and American girls and red-trousered soldiers!

England's Allegiance

ALONG the sidewalks, workmen tramping, tramping home, too excited to miss the autobuses. The cafés are full, but don't ask for Munich beer to-day! The Grands Boulevards are hectic. Charging through the crowd comes something—what are the people cheering at? Here they are, an auto full of buxom Red Cross nurses in white linen, with long, floating headdresses. There was the first thrill of definite, serious endeavor. In the Boulevard Poissonière one can scarcely get past at all. The street is jammed with the crowds opposite the bulletin boards of "Le Matin." On the sidewalks I found a crowd of a hundred singing from penny leaflets "The Vision of War" as earnestly as a Sunday school chanting "Onward, Christian Soldiers!"

It is all deadly earnest now for all the froth of marching youths who are "on to Berlin." There is no wild enthusiasm, no manifest abandon of patriotism. The thing is too big; one's imagination cannot handle it. The news, as it comes in, is almost too good to be true. Men are not excited by it, they are staggered. The English fleet is with us! Give a man a dollar and he may wax enthusiastic. But give him a million and he is struck dumb. That's how Paris felt when England declared war.

Woe to the Extortionist!

THE smaller streets are still full of people walking. Not a taxicab is at liberty. The moment it unloads its fare it is taken by assault. The fiacres crawl along, their horses almost asleep, head down, staggering, until at last the driver cries out to all "Je rentre!" and creeps back toward the stable. But poor old Dobbin is not safe yet. A soldier has hailed the cab and will not be denied. In vain the driver disclaims that he has driven a hundred kilometers that day without a drink. His horse is dying. No use, the soldier insists—he must get to his caserne for the mobilization! A few spectators stop; more come; in five minutes a mob has collected. Patriotically they threaten the coachman. At last the soldier drives off to his station, lolling on the cushions, yelling "*à Berlin!*" and puffing a cigarette. Tired taxicab drivers may protest that their motors are broken down, but it is the nags that suffer.

And the prices? No, they are not yet raised, even with all this hasty demand. Woe to the chauffeur who attempts extortion! His fare has only to appeal to the crowd, and the driver is threatened with fists, canes, vile language, and the police. But since there are not motor cabs enough for all, most of the mobilized men must perforce trudge it wearily in their old clothes, with two days' provisions in a bag, clear to the station, there to be packed into trains—first class, second class, third class, there is no distinction now—by freight vans even—for their journey to headquarters.

The Gare de l'Est is a long, low, dingy granite building, surrounded by a high iron fence, a defense that is very necessary to-day. It is guarded by a cordon of police, hobbling back the crowd, pointing to the placards which

Barney Has a Hunch

By Harvey J. O'Higgins

ILLUSTRATED BY W. OBERHARDT

THIS was a warm afternoon in June. It was humid after a morning's rain. And City Hall Square was at once hot and moist and noisy and crowded, so that the very air seemed to be stifled and perspiring, as if it were panting with uproar and exhausted by the persecutions of haste. Barney was standing in the oppressive shade of the World Building, with some limp newspapers under his arm—disguised in an old suit of clothes that he had outgrown and a cap that he had once discarded—perfunctorily making a show of seeking customers and vacantly watching the faces that passed. He was supposed to be on the lookout for a suspect who had escaped the surveillance of the Babbing Bureau, in Brooklyn; and he had been waiting so for several days at the bridge entrance, for the purpose of picking up the man's trail again if he should happen by. But the continuous stream of traffic had put him into the daydream of an idler who lolls on a bridge to watch running water; and whenever he became sensible of his surroundings it was merely to envy the crowd in front of the "World's" score board who could follow the baseball game—as he could not.

A passer-by aroused him by offering him a nickel for a newspaper, and glanced at the front page with a hand still held out for change. Barney yawned as he counted the four cents into the open palm. The fingers closed on the money, but the hand did not move. Barney, surprised, looked up from the hand to the owner of it. The man was reading headlines so intently that he was unconscious of all else, and he was blinking at what he read, with his lips pressed together in some sort of instinctive effort to conceal any betrayal of the excitement that showed in his eyes.

IT DID not take him more than two or three "baits" of the eyelid—as Barney would have said—to gather the meaning of the headlines. Then he hastily folded up the paper, thrust his change into his pocket, and hurried away with the air of having picked up something that he wished to examine in secret. And Barney, after one blank moment of staring hesitation, followed him hypnotically.

Those headlines announced, as Barney knew, that the father of Elizabeth Baxter had offered a reward of five thousand dollars to anyone who could discover what had become of her. And Barney had suddenly found himself with what detectives call "a hunch." He could not have explained it. He could not have defended it. But into his empty brain, on the instant that he had seen the man's expression, there had come a conviction that this respectable-looking stranger had a guilty knowledge of the Baxter case. Of the dozen innocent explanations of the man's manner he could not have combated one. And he did not know enough about the case to judge what possible connection this fellow might have with it. He was not even sufficiently conscious of his mental operations to ask himself whether he ought to leave his post at the bridge to follow such a vague scent. He followed it as unreasoningly as an animal that is carried away by an instinct.

And once having abandoned himself to it, he was possessed by it to the exclusion of everything else. "Here, kid," he said hastily aside to the first newsboy that he met, "take my stock. I'll see you later," and he gave up his papers to the gaping newsie as recklessly as he had given up his post. He went along Nassau Street, looking anywhere except at the Panama hat and blue-serge shoulders that he followed; but he did not see anything except these; the rest was in his eyes, but not in his mind; and he had the large, idle, disinterested stare of an operative who is tailing.

HE TURNED down Broadway in this manner, expecting to see his man enter an office building, and ready to close up on him, so that he might not lose him at an elevator. At Liberty Street he followed across Broadway and saw his quarry making toward the water front. And then he realized that it was after five o'clock and the man was a suburbanite going home. He felt in his pocket to assure himself that he had his twenty-five dollars of expense money given him to use, if he should need it, in following the Brooklyn suspect. He found it and kept his hand on it. With that nothing could stop him. The man had no bag; he could not be going far. Once traced to his home, Babbing could be reached by telephone and the bureau could do the rest.

And even this thought of Babbing did not halt him. It rather drove him on. Instead of stopping to reconsider what he was doing—in the aspect that it would wear if it ended badly—he was so obsessed by the assurance of its ending well that he hastened to meet the conclusion that should vindicate him. And, as if the thought of Babbing were Babbing himself pursuing him, he only glanced behind at it and then hurried the more, to reach the safe end of the adventure before he could be overtaken. He had been too long bored by the routine of subordinate work that had no thrill in it. Here was a bit of scouting on his own responsibility—with the chance of a little distinction if he succeeded. The pursuing doubt of what would happen if he failed only added the excitement of truancy.

The fingers closed on the money, but the hand did not move. Barney, surprised, looked up from the hand to the owner of it. The man was reading headlines

HE CAME to the ferryhouse of the Jersey Central Railroad, so close on the heels of his "subject" that he had to pass him, when he stopped to buy more newspapers at the entrance. But inside the doors Barney dawdled until he was behind again, and only closed up to see the suburbanite show a commutation ticket at the gates.

Barney was ignorant enough to suppose that the ticket was a pass, because the gateman did not punch it; but he was not too ignorant to know that he could get through the gates by paying his fare on the ferry—three cents—which he took from his newspaper pennies in his coat pocket. He was puzzled to know how to discover for what destination he should buy a ticket, for if the man was traveling on a pass he could get off or on the train wherever he pleased, with no questions asked.

A ferryboat was waiting at its slip, and the man entered the woman's cabin, while Barney went in among the smokers. He had had enough experience in tailing to know that he ought not to be visible to his subject when he could cover him from ambush; and he walked confidently to the forward end of the boat, to wait there until his man should come out to disembark. He was worried about his railroad ticket. He foresaw that without one he would not be able to pass the gates in the railroad station, and he might not have time to run back to buy a ticket after he had seen what train he ought to take.

While the ferryboat was threading its way across the traffic of the river he was busy devising strategems to outwit the gatekeeper. He would pretend that his mother was on the train with his ticket. Or he would come running, as an office boy, with a verbal message to his employer, who was a passenger. Or he would say that he had missed a man in a Panama hat and a blue serge suit, who had his ticket; and had such a man passed the gates?

Considering his clothes, he decided that he had better say he was traveling with his mother, who was a cook, newly hired to work in some country place of which he did not know the name. He was to have met her on the station platform. He had missed her. She had his ticket. He wanted to go and look for her.

THAT ought to be convincing. He decided to try it. The ferryboat was nosing and bumping its way into its dock at Jersey City when the Panama hat came out with a crowd of passengers, and Barney maneuvered to get a good look at the wearer of it. The sum of his observation was that the man appeared inoffensive. He was well dressed, but his clothes showed both the wear that they had had and the care that had been taken of them. He carried gloves—though it was so warm—but they were soiled leather gloves that had evidently weathered the winter. He was an oldish young man, an office worker probably, well featured, of the lean type. Barney had often delivered telegrams to his kind, in downtown offices, behind spindle railing, at secretarial desks. The only thing unusual about him was the set look of distant expectancy with which he kept his eyes fixed on nothing ahead of him, uneasily, excitedly, but with no guilty suspicion of anyone around him.

He pushed his way through the stream of passengers that went ashore with him, and Barney had to race to keep up. In the train shed he went directly to his train with the assurance of custom, knowing exactly where to find it. And to Barney's relief there were no gates and no gatekeepers. A board at the track end gave a list of the stations at which the train stopped. The last of these was "Somerville." Barney said to himself: "Me for Somerville"—and followed down the platform.

He was last to the smoking car, which was hardly more than half a car, because the forward part of it had been cut off to make a baggage room. He took the seat nearest the rear door and watched some of the suburbanites getting squares of heavy cardboard from the baggage man to use as card tables on their knees; they sat down in fours, here and there, to play. The Panama hat was invited to join some acquaintance at euchre and declined; he was engaged with his newspapers and brier pipe. A man directly in front of Barney was hailed to make the fourth in the game, and threw aside his paper to accept. Barney leaned over the back of the seat and took the paper. At that moment the train started, and his young imagination—that had been reined in restively while he watched—was set galloping with the forward motion, so that when he opened his paper, to study out the Baxter case, he could no more control his attention than if he were in school with a textbook on a spring day beside an open window that overlooked a baseball game.

He frowned diligently at a portrait of Elizabeth Baxter, smiling, on the front page—a dark girl of twenty, naïvely handsome and self-assured. He gathered from her picture nothing more than a feeling that her smile was incongruous. He did not understand that the photograph had been originally published with the announcement of her engagement to marry a conspicuously wealthy old bachelor named Huntley—an occasion for which a smile was fitting. He stared at the Panama hat. He looked out the window absent-mindedly. He smiled to himself. He came back to his newspaper with a guilty start.

THIS is what he should have been reading: Miss Elizabeth Baxter was the only daughter of D. B. Baxter, who was vaguely described as a "well-known Wall Street man." She had left her father's apartment in the Astoria one morning to go to her dressmaker's, and she had telephoned to her maid, two hours later, that she would not be home for luncheon. She had not returned for dinner either. Nor for the

Digitized by Google

night. Next morning private detectives, secretly employed by her father and her fiancé, had started on her trail, and by the end of two weeks they had found that she had been to her dressmaker's at ten o'clock in the morning; that she had bought a novel in a Fifth Avenue bookshop at half past eleven; that she had telephoned at a quarter to twelve from a candy store where she had bought a box of chocolates; that when she left the candy store she disappeared "as completely as if the earth had opened and swallowed her."

No trace of her hand been found. No word had come from her. At the end of two weeks her frightened parent appealed to the police, and the police counseled secrecy, because it would be easier to discover the criminal if no alarm were raised.

THEY discovered nothing. There was no reason why she should have run away. She had no enemies, no love affairs—except the legitimate one with her fiancé—no trouble either of body or mind, no secrets that the police detectives could so much as raise a suspicion of.

Then her father offered a reward and gave his story to the newspapers. Another "mysterious disappearance"! Lists were printed of the names of girls who had been reported "missing" to the New York police in the year past, and they made an alarming array of victims for "a plague of crime" that threatened "every home." If the "rich and beautiful" Elizabeth Baxter were not safe, whose daughter could be considered beyond danger? She had been destroyed by the white-slave trade and the "poison needle." She had been snatched away from crowded Fifth Avenue, at midday, in broad sunlight, and barred up in some noisome den of abductors. She would be murdered now—to escape detection—if she had not been murdered already.

Her case had been discussed that morning in the operatives' room of the Babbing Bureau, but Barney had heard only one authoritative remark upon it, and that had been repeated as Babbing's diagnosis: "When a girl buys a book and a box of chocolates, she's going on a railroad journey. This poison-needle talk is all bunk! Did you ever try to give a hypodermic injection? Next thing, these newspaper boys will be running stories of girls being followed on Fifth Avenue and tattooed down the back without knowing it!"

BARNEY said "Somerville" to the conductor and gave him five dollars, and did not even count the change. "When a girl buys a book and a box of chocolates, she's going on a railroad journey." He was in a state to find a confirmation of his "hunch" in the fact that he was on a railroad journey himself, and he gazed out the window at Newark Bay as if he expected to discover there some trace of her passage. *She* must have looked out at that water as she went by.

The man in the Panama hat did not disengage himself from his newspapers until the car had almost emptied itself at Plainfield. Then he began to make preparations for his arrival at the next station—which the conductor had announced as "Findellen"—and Barney, watching him, took his own paper up again, to shield himself behind it in case the man should glance at him in passing.

"*Fin-dell'n! Fin-dell'n!*"

Barney spread his sheet and hunched his shoulders. The train had stopped before he dared look around, and when he reached the car platform his man had already disappeared in the station.

"This isn't Somerville," the conductor said.

Barney nodded. "'S all right. Keep the change."

He felt cocky. Not only because he thought he had traced the Baxter mystery to its lair in Findellen, but because Findellen was so small a village to his superior metropolitan eye. It had one "front" street of shops about as imposing as a row of booths on Coney Island, and its old frame station house was little better than a Harlem shack to Barney. He entered the waiting room and found it empty, except for a row of benches around the walls, some country cuspidors, and an old base-burner, cold and rusty, that was still standing where the winter had left it. He screened himself behind the stove to spy through the open doorway, and he saw his man cranking a little touring car in which a woman sat at the steering wheel. An automobile!

An automobile presented such an unexpected difficulty to tailing that he stood gazing at the car as if it were an impassable obstacle that had suddenly blocked his way. It moved from the square of the door frame. He hurried to the door. The machine was already disappearing up the street that led straight from the station into the hills behind Findellen. He pulled down the peak of his cap and started after it desperately.

Crossing the road, he crossed the car's trail in the paste of red Jersey mud that remained from the morning's rain; three of the wheels had left smooth tracks where the car had turned, and the fourth had imprinted the indented pattern of a corrugated shoe designed to prevent skidding. Barney slowed his pace to study it. He glanced at the sky, that showed sunset colors. He drew a dollar watch from his trouser pocket and found it five minutes after six. He put his cap back from his forehead thoughtfully and turned along the main street—away from the trail of the automobile—to find a hardware store. He could not follow a track in the mud after dark. He had to have a lantern.

AT SEVEN O'CLOCK, with a little electric lamp in his pocket, he was climbing the hill road behind Findellen, munching crackers and cheese that he had bought from a grocery store, and keeping an occasional eye on the corrugations of the automobile track, to make sure that it was still with him. The road slanted obliquely up the side of a ridge that was too steep to be cleared for farming, and Barney could see nothing but bushes, trees, and undergrowth. He could hear nothing but the twilight song of a wood bird. He neither looked nor listened. In animate or inanimate nature he had, at his most leisurely moments, only sufficient interest to throw a stone at it. Just now he was not in a holiday mood to try his aim on anything. He had natural human instincts even if he did not belong to a gun club.

At the top of the hill the road paused at the turn to show him a panorama of the flats in which Findellen and the railroad lay, under an evening mist. He did not admire the view, although it was admirable. He thought the street lights made a poor showing after New York—as if the place were living by candlelight in a bare world that was too large for it. He turned his back on it and came over the crest of the hill to see the valley to which the road was leading.

IT WAS a charming valley, with the last light softening its pleasant alternations of field and orchard, smooth meadows, and clustered woods. To Barney it was merely "goose pastures," as Hudson Street calls the green suburbs. It was empty of show windows, billboards, moving-picture fronts, newspaper bulletins, hurdy-gurdys, passers-by, street traffic, peddlers, or any of the noise and movement of affairs that make life in the open air interesting. And it was inhabited by poor country boobs who lived in loneliness, with their eyes on the city, growing cabbages to sell in town.

There could be no doubt that the man in the Panama hat was a crook, concealing himself from the police. That was the only reason why he should live in such a place. Well, it was probably "one better than being in jail."

The road descended a more gradual slope than it had climbed, and Barney trudged along doggedly, with his mind on his destination. He expected to be walking all night, because, of course, the man would not have an auto if he lived within easy walking distance of the station.

And Barney intended, when he had located the house, to wait until daylight to reconnoiter before deciding how to make his approach.

He crossed a bridge, that was little larger than a culvert, over a stream that was no more than a liquid note among pebbles. There was a clearing on his left, with a house in it and a barn; the automobile track did not pass it more indifferently than Barney did. The road dipped and rose again, turned through woods, came out on open fields, dropped through a grove of spruce, crossed another little hollow, rose to a sharp hillock, and started down a stony incline toward the broad valley that Barney had seen from the top of the ridge. The auto track did not show on the stones, but on every rise and fall of the road there were water bars that held little pockets of mud, and through these the trail was clear. Barney heeded nothing else—neither the lights of the farmhouses, nor the barking of farm dogs, nor the cool accompaniment of an evening breeze that came ruffling and rustling through the grass and the foliage.

IT WAS growing dark, and he was planning to use his electric lamp, when a dog rushed barking to the roadside from a little bungalow that looked out over the valley from the edge of the final descent. It was an aristocratic collie dog, and Barney growled at it, class consciously. It worked itself into a nervous frenzy of vociferous disapproval of him. He hissed and spat at it like a cat with the purpose of enticing it down the road to a place where some lilac bushes would hide him from the house. There he intended to "give it one in the ribs with a rock"; but as soon as the collie saw him stooping for the stone, it fled growling. He threw his stone at a convenient oak tree—whose air of dignified indifference provoked the insult—and went on.

He was near the bottom of the hill when he crossed the muddy pocket of another water bar and saw no auto trail in it. And his expression of idle mischief changed at once to a look of intent and crafty determination. He glanced behind him, to make sure that he was concealed from the cottage. Then he crawled through an old wire fence, into the woods on the opposite side of the road from the cottage, and disappeared, crouching, in the underbrush.

THE dog, after some distantly defiant barks, fell silent. In a few moments the whole hillside, relieved of Barney's disturbing presence, settled down into dim meditativeness peacefully. The cottage was a simple, shingled bungalow, with a chimney of field stones that sent up a quiet curl of smoke; and it sat there, weather-browned and unpretentious, looking out over the valley, like an old woodsman in a wilderness serenely smoking his pipe. A hermit thrush began to sing its devotional roulades in the distance, and its song gave an interpretative voice to the grave and limpid beauty of the evening; and the scene held that song in its setting as harmoniously as the pale-green sky above the sunset held the sparkle of the first star. Nothing could have looked less like the hiding place of a criminal mystery.

Darkness had settled down on peace, and the moon was rising on it, when Barney issued unexpectedly from the bushes and began to scuffle noisily up the road again to attract the collie. He had his coat over his arm, and when the dog came barking at him he swung the coat at it, and retreated trailing it, and flicked it into the dog's mouth when (*Continued on page 32*)

He was in a little cellar of hanging shelves and larder cupboards. He saw an open door that led into another part of the basement. He had them. It was a man and two women. And the very first words that he heard gave him the solution of the Baxter mystery

Mandy's Methods

By Nelson Burnham

ILLUSTRATED BY CLIFFORD CARLETON

"SCURIOUS thing!" fumed Mandy, pressing hard to drive a rusty pin through her buttonless basque. "Whenever I'm in right smart of a hurry ever'thing comes up a-missin'. First it was one o' the younguns strayed off 'fore anyone was awake, then it was ever' las' dud I wanted to wear a-travelin' to-day, then it was the pig; and now it's that there coffeepot!" Looking over the kitchen's bewildering disorder, she sighed heavily. "Nothin' I seeanywhereslookin'evenlikeacoffeepot. Where'sthem there younguns?—betcher they could tell where 'tis."

She impatiently jerked from a shelf an old rusty can, and, preparatory to using it for coffee making, was shaking out its contents of nails, fishing tackle, nutmeg, and dust, when she heard a commotion that proclaimed the whirlwind of the coming of her "Happy six."

John-Harkless and Hannah-Melissie came tearing down the dusty road as runaway mules, the coffeepot on a long rope bumping and bouncing between them with continuous tinny rattle. Menorie-Ann, Marg'et-Selener, and Patience-Amandy followed closely in a cloud of yellow dust screaming, "whoa, there, whoa!" Lagging far behind toddled the youngest of the lot, Emmie-Violie, aged two and a half years, stumbling through the hot, suffocating dust, crying, "Ait fo' me? Boo-hoo. Ait—neow—a—ait." And behind Emmie-Violie trotted a lean, brown pig.

THE "mules" were stopped in their mad career as they plunged around the little path leading to the kitchen. John-Harkless was heroically brought to a standstill by a master hand that protruded suddenly from nowhere, while the other master hand overpowered Hannah-Melissie. Some of the mule spirit fled.

"John-Harkless, how many times a day do I git to use this here coffeepot 'thout havin' to ransack the whole town over fer ut?—sa-ay. Hain't I told ju? Say!" John-H found himself sitting on the patch of "pussly" near the lean, brown pig, which was standing prop-legged and scared, uncertain which way to run. Hannah-Melissie was juggled urgently into the kitchen and a splint-bottomed chair.

"Now, my young lady, you just set there till the cow comes home." Marg'et-Selener with the group at the doorway moved to obey, when a rasping voice from within commanded—"Fetch it in here to me." "It" meant what remained of the coffeepot.

"Patience-Amandy!"

Patience-Amandy with the others on the outside peered, guiltily interested, at the proceedings within.

"Patience-Amandy!"

P.-A. stooped to dig her mosquito-bitten leg, threw a telepathic glance over her shoulder at the rest and giggled. She usually did giggle when the rest saw fit to cry. Patience-Amandy was nine years old, a twin to John-Harkless, and by reputation an imp.

"*Patience-Amandy!*"

The mother's head framed itself at the window. "It's about time you was a-answerin', miss. Git along out some'ers and fin' me a stone 'bout half's big as my fist. Hurry now. One fer to go inside, an' another to pound with!"

MANDY held the coffeepot to the light, discovering only one new hole.

"If them pesky younguns don't quit a gettin' my coffeepot to play horse with, tho' won't be no room in it fer the dents to hold any coffee. Oh, my, if all their paws was only alive!"

The children were divided into three sets, Mandy having been wedded three times. Now she was on the alert to scare up a fourth husband. Absently turning over the dilapidated coffeepot, she repeated pathetically with another prolonged sigh, "Law, yes, if their paws only could-a lived!"

The parents referred to were Lige Smith, father of John-Harkless and Patience-Amanda, twins, aged nine years. Jake Smith, father of Hannah-Melissie and Margaret Selene, aged, respectively, seven and six years. And Ezra Smith, father of Menora Ann, and Emma Viola, aged, respectively, four and two and a half years.

JONATHAN CREEK was a settlement of Smiths, but none of Mandy's husbands had borne any relationship to each other.

"Well," concluded Mandy, giving the coffeepot one more rough bang on the table, "betcher the next one'll live, or else git 'im one o' them there life assurances. Next widder I git to be will be soin'p'in worth hein' left without no man fer! Guess'll give 'em pancakes an' 'lasses fer breakfas', John Ha-rk-le-ess, fetch me in some o' them there chips." Breakfast over, Mandy proceeded to pack her "grip."

John-Harkless and Hannah-Melissie came tearing down the dusty road as runaway mules and were stopped in their mad career as they plunged down the little path

"Now what'll I do?" her troubles shifted to the packing. "how in the name o' sense will I stretch this here meal sack to squeeze my good bunnet in ut? Don't that beat all, it won't go in! Oh, well," she impatiently gathered up bonnet, meal sack, and shoes, "more'n one way to kill a cat! I'll jus' wrap the sack round, an' carry my shoes in my han's. Guess'm ready. Say, John-Harkless, don't ye ferget to hunt up the bucket fer Abe Smith to milk in to-night. And lock the house up good'n tight," she cautioned; "and you go over to Mis' Wooley's and git the slop fer the pig to-day. If it rains, shut down the winders 'at has any glass in 'em; and see to ut that you're all abed, and asleep," she emphasized, "by sundown. Goo'by. Now don't ever las' one of ye come a whoopin' and a hollerin' an' a follerin'; goo'by."

IT WAS not the first time Mandy had started to the city afoot, although it was a distance of twenty miles. She "figured on gettin' a lift now an' then" as far as some farmer happened to be driving her way. Sometimes—she made the trip three or four times a year—it chanced to be all the way, for she was not particular whether she perched upon a load of hay, pumpkins, or hoop poles.

"This goin' cross lots beats trackin' 'way 'round by the schoolhouse" and Mandy slowly climbed and sat upon the top of a rail fence, sniffing the delicious perfume from a field of sweet clover on the other side through which she intended following a narrow trail leading to the "big road." Hearing a slight disturbance from behind she looked back quickly. There came Hannah-Melissie. Mandy dismounted the "stake and rider" to advance upon the panting child. She met Mandy's glowering look with one of innocent affection; she wanted to run into her mother's arms, but they were not extended to her. "It's a pity if I can't git away from you tormented younguns in peace! If you come another inch, you'll git the worst lickin' ye ever did git. Why don't ye mind?"

Mandy took another threatening step forward, but stopped short, struck with the overwhelming disappointment and pain that had transformed the little face. "What 'id ye come fer?" the tone and manner mollified.

Hannah-Melissie couldn't tell what she had come for; her lip quivered, and a bare sunburned arm went up over tear-brimmed eyes to shield her hurt feelings.

"Come 'ere, Hannah-Melissie," and with a tremendous sob, Hannah-Melissie stood close to her mother.

"If ye tell me, in the name o' common reason a-why you younguns never want to mind fer, I'll be obligationed," which was Greek to Hannah-Melissie; she only continued to cry softly.

"What is it ut ye want?" Mandy shook her impatiently but not roughly. The little face again sought the mother's with a childish, pathetic yearning.

"Well, I washed my face all—good," she explained, "and I thought meby you'd—kiss me—agin," and Hannah-Melissie sobbed afresh.

"Well, of all things! You alwuz was the funniest critter," and Mandy lifted the famished, unmothered little thing onto the rail fence, took the brown arms from over teary eyes and placed them about her own neck.

"There, don't cry no more, and maybe I'll kiss ye again when I git back."

"Good-by, maw," said the child simply, happily clambering down. Once as she skipped light-heartedly toward home she turned and waved. Mandy waved back and there were tears in her eyes.

"Maybe I don't know how to be no mother—I never was give to pettin' up anything, and like as not they'd be a heap better fer it. But no use, 'cause 'tain't my way."

Coming out of the field of clover into the public road she trudged along a tiny bypath, the rich ozone of the open county stimulating within her an independent happiness.

WHEN she caught a low, hollow rumble of wheels coming through the old covered bridge half a mile back, Mandy swung about abruptly, and, shading her eyes, watched and waited.

"Can't just make out—" She stood on one tiptoe and stretched her neck, although there was no obstruction.

"It's a man," she solved exultantly, "but who on earth—'tain't ole man Bundy, 'tain't Bundy's mare. Now who—" Mandy excitedly drew forth from the meal sack her "good bunnet"; thrusting the improvised paper sunbonnet into the hedge, she replaced it with one trimmed with somebody's old lace shawl and a moth-eaten wing.

The rattle of a dilapidated carriage was becoming louder. Hurriedly Mandy put on her shoes; she usually carried them until the city limits were reached; she was unaccustomed to the general use of shoes and stockings from the time frost came out of the ground in the spring until it was "right nippy" in the fall; and yet, her toilet completed, Mandy walked demurely along apparently unaware of approaching wheels; not until they were dangerously close to passing her did she look up.

"H'are ye," greeted a jaundice-complexioned stranger pulling at the reins.

"Howdy-do, sir," blankly smiled Mandy.

"Be ye goin' far?" questioned the stranger.

"Right smart a ways."

"Git in?" hospitably offered the stranger.

Digitized by Google

She clambered in quickly, and the vehicle rattling along had become a veritable golden chariot of rosy romance to Mandy. She loosened somebody's castaway velvet cape at her throat to display a necklace of red wax beads, and brought to light a pair of cotton gloves made into mits; their worn fingers being cut away. Mandy did the talking. She told the man all about herself—and then she had told him all about himself—that is so far as she could offer information applicable to any lonely stranger. Finally at the end of three miles she advised him to get married. Then she, too, fell silent, waiting. She waited half a mile and was becoming disheartened. The next quarter mile she wiped a tear with the back of her made-over mit.

"My ole woman's only bin dead now goin' on to two months," her companion at last volunteered.

"She'll never be deader ten years from now!" argued Mandy, her tears drying with this encouraging confidence.

The stranger shuffled uneasily and pulled at his whiskers, but eying Mandy thoughtfully for the first time, acquiesced, nodding. "'Tis so, 'tis so."

"And life is short," she reminded him.

"Wait not fer another tick—what ye have to do, do quick." He laughed down at the woman by his side, but not derisively.

"Yas," enthusiastically exclaimed Mandy, emphatically in earnest.

Absently dangling the frayed end of the whip over the horse's back he asked abruptly:

"Ken ye spin?"

"Ken I spin?" Mandy's tone not only discouraged further cautious investigation but intimidated him into another siege of golden silence.

"What ye mean, spin?" she asked uneasily, after a too prolonged interval.

"Ye didn't reckon I meant spin the plate, did ye?" he laughed with quiet sarcasm.

"Well—a—that's all I ever had to spin," she admitted vengefully.

AFTER leaning far over the dashboard to whisk off a horsefly he turned his whole attention to Mandy.

"So ye never did do any spinnin'?"

"Sa—ay," Mandy flared, "what's all this here spinnin' argyment fer? Hev ye got a idee that any second woman hain't a-gona see to it that the's been enough spinnin' done spun to last 's long as she lives?"

The man blinked rapidly as she indignantly continued:

"Do you ever stop to think that yer second woman hain't a-gona marry ye to do yer spinnin' and yer corn plantin', and feed hogs, and make soap, and all, besides takin' care o' you?"

"Jes' set round and be company?"

"Yas," happily exclaimed Mandy. "'Stid o' bein' a hired man and a dozen hired wimen a-makin' her look like a fun'ral and a-feelin' like she was dead, she will be a-restin' most o' the time, so's to look pleasant and be comp'ny—*comp'ny for you*," she accented to make her meaning clear, whereupon the man suddenly became interested in Mandy's progressive thought and acknowledged its advantage.

"Well, we shor do need comp'ny," he reflected. "When a feller gets 'long in years, when nothin' strikes him interestin' he had oughter git 'im—" stealing a side glance at Mandy—"a spry young woman to help him live up to the times. Yes, that's jes' it. Mary was too busy to ever think o' lettin' loose o' the hard things. Wisht she'd thunk of it though 'fore she died: lived longer I reckon. Does the—second woman—does she reckon on enough bein' already cooked to last a lifetime too?" he meekly continued.

"Ye mean kin I cook?"

"Why—I."

"Yas, I know. I had three men and the most I recollect of 'em was a-tryin' to fill up their stomachs!"

Mandy tried to recall her specialties.

"If ye could jus' taste some o' my pumpkin butter—or else my vinegar pie!"

Her friend looked boyishly pleased, as if not doubting the merits of Mandy's pumpkin butter and vinegar pie: but still he hesitated.

"You say ye had—how many children ye say ye got?"

"Only six," assured Mandy with an emphasis that defied any comment; but the man ventured sarcasm.

"Is that all?"

"They'll be a comfort to yer ole age," defended Mandy. "When ye're too old to be young yerself they'll be round to show ye how 'tis did."

"Um—ugh," he skeptically replied, but after all the mother should be wholly responsible for her children, and all he would need to do would be to show them who was the master. *(Concluded on page 31)*

From Daybreak to Breakfast

By W. Edson Smith

ILLUSTRATED BY HARVEY T. DUNN

A JUNE morning, a very young June morning, for midnight was but two hours gone; a romantic time to loiter among the fragrant, dewy blossoms of some old rose garden; a time for vows and kisses. But in the back room of Simon Spry's place—!

There the ivory ball, which Delano sent spinning viciously along the worn outer rim of the whirling, numbered wheel, emitted its usual rancous monotone; the smoky sodden air was reminiscent of the departed crowd, despite the wide open windows at the rear.

Welsh, who presided over the noisy fortunes of the crap table, was dozing in coatless calm in a shadowy corner, placid and rotund, his chair tipped against the wall. Out in front, Brockett, the night bartender, was heavily clearing away after the last of the celebrating and mourning customers: he had already turned out the lights above and around the flaunting pictures, and the slot machines loomed and leered in the obscurity.

Togo-Ito, who did not claim to be of the Samurai, and who accepted resignedly Go-to-it as a revised version of his name—Togo-Ito had piled chairs and stools on most of the tables after draping their green surfaces in somber gray. The roulette wheel alone, with its fascinating tiers of red and black, its glitter of silver and nickel, had not received his attention.

DELANO stood behind the layout, young and charming, cool and immaculate, and a striking contrast to the gentleman seated in state across the table. Doc Benight was a representative citizen, also a private banker, note shaver, real estate dealer: honest occupations all: yet, looking at his weasel face, his furtive eyes, his ingratiating smirk, his nervous, clutching fingers, one would have supposed him outside the law rather than the blue-eyed young man opposite.

Delano disliked the representative citizen and all his works, despised his overbearing, unpleasant condescension, and hated the spirit of cringing, hopeful greed that impelled him—once in a blue moon or so—to seek the game at an hour when he would be unobserved. Usually he insisted on being dealt faro in a private room upstairs. To-night he had slipped in by the rear door and, emboldened by the deserted rooms, had yielded here to the lure of the clattering wheel. Now his face was wrinkling distressedly at continual losses.

"Thirty-four red." The croupier's voice was crisp. He placed two indifferent finger tips in the center of the vacant number, then with both hands gathered chips and currency into a jumbled heap. The ball sped once more on its monotonous course. Delano stacked checks mechanically, staring out the eastward window the while. A splendid star, swinging at its furthest from the sun, had just risen above the edge of the high board fence and looked radiantly in at the open window. The ball dropped noisily into a pocket and his eyes came swiftly back to the lamp-lit table.

"Seventeen black, and nobody there."

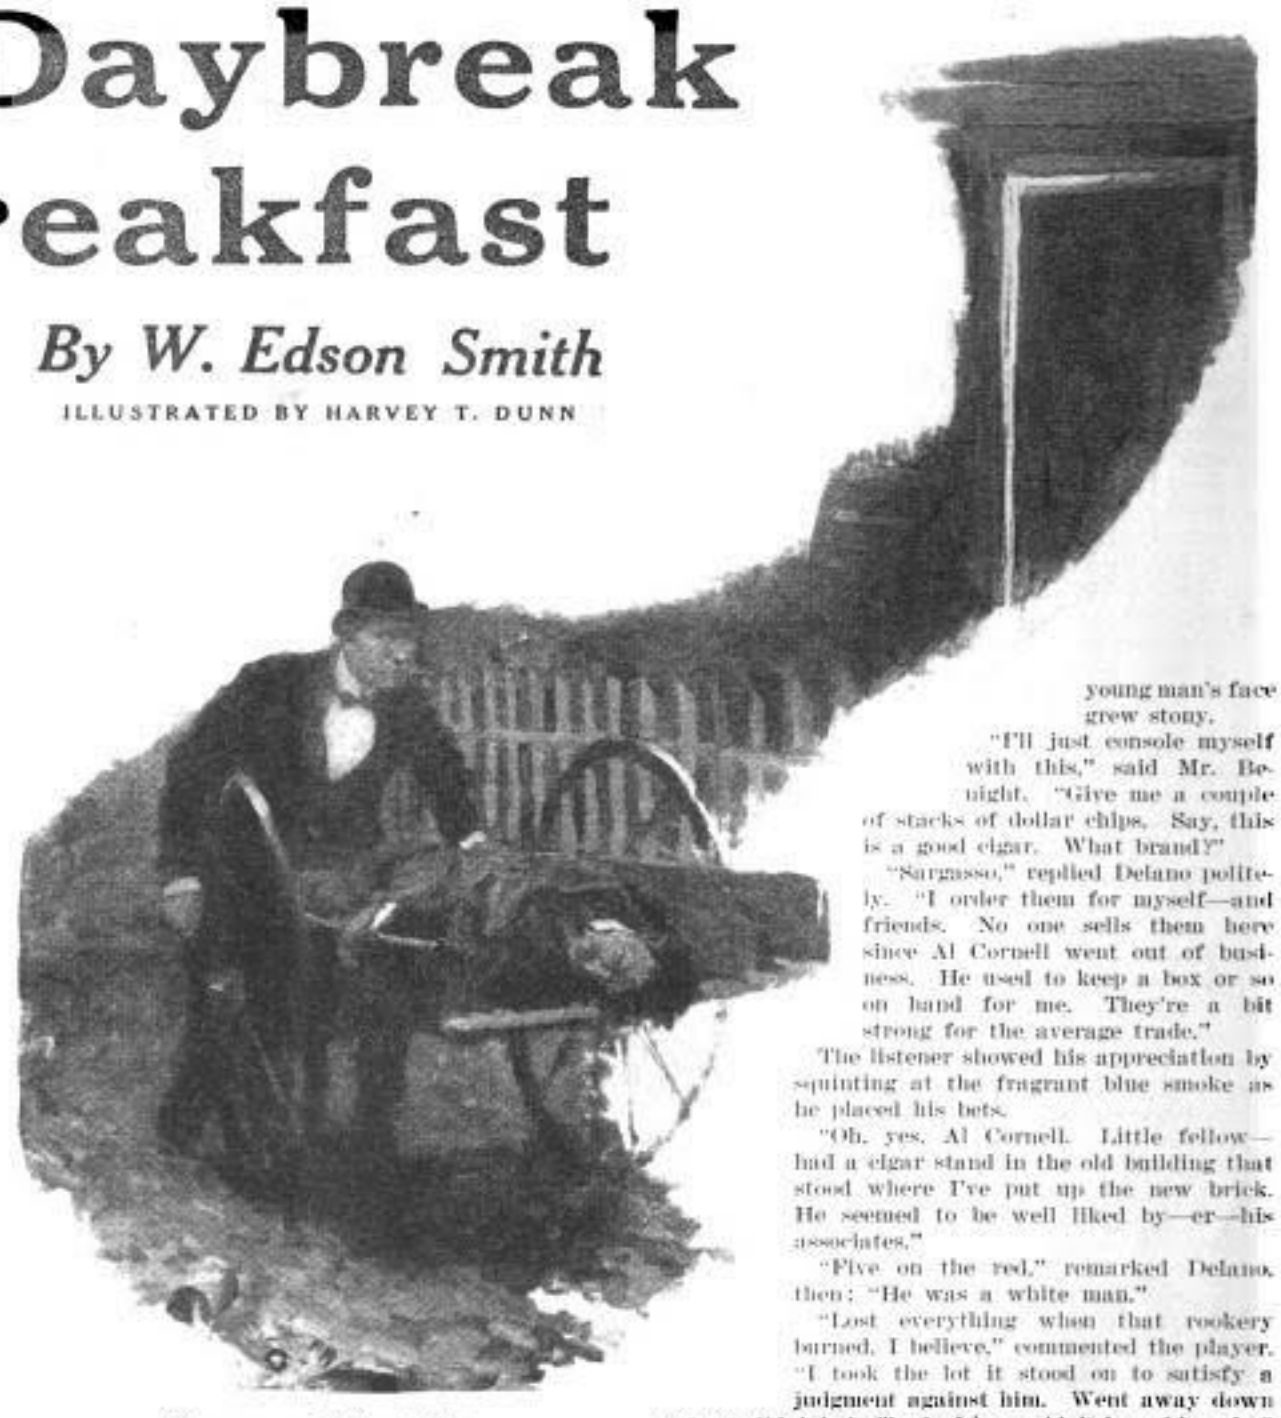
"He, he, he!" It was thorny merriment. "I stumbled against a drunk coming in the back gate—must have tripped my luck. Disgusting the way they let them infest every alley. That fellow was almost directly in the path. I'm going to try two hundred on the twenty-two. You should at least have the porter roll him over to one side—"

"May he R. I. P.," said Delano lightly. "I've no doubt he paid good money for Simon's whisky; surely he can choose his own plot in which to slumber. Thirty-six on the high side—oh, so red. You forgot yourself."

Mr. Benight licked his lips in famished fashion as the wheelman swept the board. With a pretense of good fellowship he leaned forward and plucked a cigar from Delano's pocket. That young man's face grew stony.

"I'll just console myself with this," said Mr. Benight. "Give me a couple of stacks of dollar chips. Say, this is a good cigar. What brand?"

"Sargasso," replied Delano politely. "I order them for myself—and friends. No one sells them here since Al Cornell went out of business. He used to keep a box or so on hand for me. They're a bit strong for the average trade."



The listener showed his appreciation by squinting at the fragrant blue smoke as he placed his bets.

"Oh, yes, Al Cornell. Little fellow—had a cigar stand in the old building that stood where I've put up the new brick. He seemed to be well liked by—er—his associates."

"Five on the red," remarked Delano, then: "He was a white man."

"Lost everything when that rookery burned, I believe," commented the player. "I took the lot it stood on to satisfy a judgment against him. Went away down and out, didn't he? Too bad he couldn't keep his grip."

"He did keep his grip—on some of us," corrected the wheelman sternly.

They were out of the gate by now and the helpless one safely in his cart. "What's that you said?" gurgled Welsh. "You don't mean that I'm to push this cart up the street?"

MR. BENIGHT regarded him with blank acidity. "I wish I had a tenant like him—as he was then—for the cigar stand in my new building," he said. "A splendid location. I've had a number of applicants who are willing to put up a monthly rental, but I want to lease it for three years cash. Two hundred and fifty dollars a year is moderate for such a place. Don't know of a reputable party, do you?"

"Seven red and empty," interpolated Delano. "Play again, Mister Good Player."

"That's five hundred and fifty I've lost." Mr. Benight's tone was venomous and laden with feverish greed. "I'll get you this time and then some."

Digitized by Google

fifty on the first column and a hundred on the red. I'll get it back. Here's where I even up. I must quit anyway. Very foolish of me to start playing downstairs. Of course it's merely pastime with me—merely pastime."

Delano picked the ivory ball deftly from a pocket and sent it scurrying. The representative citizen's eyes clung to it with tense eagerness.

"Togo-Ito," called the wheelman maliciously to the porter, hovering in the background, "we won't keep you waiting—oh, so much longer, I surmise."

The ball slowed, struck against the inner wheel that was racing in the other direction, leaped out to the rim again, hung for a long instant, then chatteringly dropped into its appointed place. Delano carelessly annexed the stakes.

"Thirty-three, black," he bulletined pleasantly, "clear across the fence from you."

"It's a crooked wheel!" erupted Benight crazily. "I haven't won a bet since I came in. I'll swear it's wired. You're a great bunch to brag of your square games—Simon and you and your whole crowd—"

DELANO methodically flattened the newly won bills in the cash drawer. The level look from under the green shade caught Benight—caught and held him. The man back of the look lifted the center of the roulette wheel from its pivoting support, showing the open space beneath.

"Take a peek," he invited frostily; "you're talking rather foolish about this layout, especially when you're in less than a thousand. Don't observe any network of wires, do you? Come behind if you like. Watch me lift the table from the floor—so. You should realize the fact that we're not intelligent enough—out here in the sand hills—to manipulate an electrical apparatus. We let the Easterners do the high-brow work." The smiling mouth hardened and the tone changed.

"The fact is—" he went on, "you're wearisome. If Simon was present he'd surely get a long starter from the bar and rap you a couple for luck; I'll merely bid you a kind good evening, Mr. Good-Loser, Esquire. Game closed."

Doc Benight opened and closed his mouth twice before speech came.

"I'm not through playing yet. Don't I get a chance to break even?" he snarled excitedly. "I'm putting a hundred here on—"

"Oh, yes, you are, and oh, no, you're not," mocked Delano, "red lights make thin skins. We pride ourselves too, on belonging to the Band of Mercy—but you're outside the pale. I said: 'Game closed.' Take your money off the table. What—must you go, really? Seeing it's you, I will give you a chance. I'll bet you ten cents that you're nasty tempered enough to kick that poor drunk 'bo as you go out. Two to one."

DELANO stared after the other as he turned and went. When the rear door jarred shut, the young man walked the width of the room and awakened the sleeper by the simple device of tilting his chair forward. Welsh grunted violently.

"Ugh!" he yawned. "You made me bite my tongue—and woke me when I was dreaming that I had my poultry ranch. I've *always* wanted one!"

"You shall want it no longer. I'll supply you with all the chickens you need on the trifling condition that you let me turn them loose—you to run them down," offered his friend generously.

"Now you don't say!" rejoined the plump one ungratefully—"but you needn't trouble yourself. The fowls you would supply, my master, would undoubtedly shed search warrants instead of feathers."

"Let's get out of here!" Delano's voice was tired and impatient. "We'll walk a ways before we turn in."

"Not far, mind you!" stipulated Welsh. "I remember our last stroll. Miles and miles! Never again. Not having knickerbockers and short socks I can't qualify as a Boy Scout. Only a couple or three blocks—out to the edge of the lone prairie, then back. How much did that old bird leave in your keeping?"

"About nine hundred."

WELSH pursed his lips.

"Phew! Nice bit of overtime. You're certainly a favorite son. No wonder Simon passes over 20 per cent as your private graft. And they all seem afraid to holler in front of you. Now me—if I win a dollar off some guy, he makes me give it back with a drink to boot, and like as not slaps me. What for are you taking that roll with you? Why don't you leave it in the safe with the rest? Can't you trust Simon any more?"

Delano eyed him. "They don't squeal in front of me, eh?" he fumed. "You could have heard old Benight in the next county. I'm taking this along," he continued, "because I may decide to go up to his elegant bachelor quarters and ram it down his throat. Simon told me

"It's a crooked wheel!" erupted Benight crazily. "I haven't won a bet since I came in. I'll swear it's wired!" Delano methodically flattened the newly won bills in the cash drawer

to do as I liked with a bad actor—either give him back his money or give him what for."

"You give Doc Benight back his money," said Welsh, "and it'll be over my dead body. You'd be flying in the face of Providence. It's a kind Fate that makes him buck the Tiger every so often. Though usually he splits and hedges and whipsaws till he can hardly lose. Let's just look up and say the gods are kind and then proceed to revive those dollars. I bet every one of 'em has been squeezed so that we'll have to rub 'em to start their circulation."

Delano grunted. "But I tell you I'm sore at the old coot because he put me in a bad light with *me*. He got my fur up and I sawed him off—closed the game—with him loser and wanting action. It looked cheap, and it was. I know how I'd feel if somebody did it to me. It was a piker trick and I'll have to square it somehow. Oh, I don't care a tinker's dam about him losing the money, but the finish makes it a sad nine hundred to go to bed with. Anyhow, let's be on our way. Here's your coat and here's your hat, and here's your cigar—now a light. Shall we go the back way? Careful with your feet! Don't stumble! It's mighty dark out here with the moon down. Say, look at that whopping morning star, Welsh. It's pretty near as peaceful as a small moon itself. Don't it make you want something different, old man—far from sand hills and shanties and suckers? Something—"

"Yes, yes," murmured Welsh, slanting his long cigar so that the red glowed on a level with one eye. "Be calm. All of us have had those burning thoughts. Maturer years will instill a liking for common daylight. Of course, I realize what a great big thrilling world it seems to one so young. Now, if you'll kindly open the gate we'll wander where there's more fresh night air and less sour beer. These kegs aren't as empty as they might be."

Delano, going forward to fumble with the gate, stepped back suddenly.

"Jove!" he said. "That gave me a start. It's a bum asleep. Benight said he was lying here, but I forgot for the minute."

"Bye-lo-land, eh?" remarked Welsh. "Step high and wish him clear skies for all such naps."

"Wait," Delano stooped, match in hand. Light flared over the prostrate figure, then died. He lit another, close to a grimed, grizzled face. The flame was stirred by a stertorous breath.

"Good Lord!" The match burned Delano's fingers before he dropped it. "Good Lord, Welsh! It's Al Cornell—good old Al."

Welsh verified the statement.

"It sure is!" he assented. "What d'ye know about that! Poor, poor devil!"

Delano straightened up. The two were silent in the summer darkness. Welsh's cigar still glowed redly, but Delano's was dull under the ash.

"It's been five years," mused Welsh retrospectively, "five years. Al never was any good after that building burned and his little old cigar stand in the front end went with it. Poor Uncle Al! He sure thought a heap of his small hole in the wall. Owned the building too, you remember. That was what hit him hard. All he had, and his insurance had pefered out. A hand-picked stock of cigars went, too. He was a good fellow; a mighty good fellow always—if he didn't lay up a cent."

"Why couldn't he have started up again?" queried Delano, sudden fury in his heart at the grim handiwork huddled there by his feet: "Everybody liked him! Anybody would have staked him!"

"UH-HU'H!" rejoined Welsh. "Only they didn't. Cornell was a backward cuss when it come to shoutin' his own troubles, and somehow that sympathy you speak of only resulted in plenty of folks setting up the drinks. Kind of got him going, and he was soon well along. After that there was nothing to it. He wasn't much inclined toward booze naturally, either. He's been gone from town all of four years. Well, he's too far down now. Slip this dollar into his vest, so he can have a drink when he wakes up: that's when the grind comes. Don't reckon he's such an early bird these days. He used to sleep behind the counter of his stand—they snaked him out in a hurry the night of the fire—it had a removable glass front. And, what with that paint store in behind, and a breeze romping along at forty miles an hour, it needed to be removable.

"They used to say Al sold cigars to both the milkmen—he was up that early. Tough world! Here old Benight's just got his new building done, after letting the site stand vacant these years since that same blaze. And he's even got a cigar stand in front—a dead ringer for the old one, only a heap sportier. Wonder who'll have the place?"

"I say," Delano began to laugh softly, merrily in the darkness.

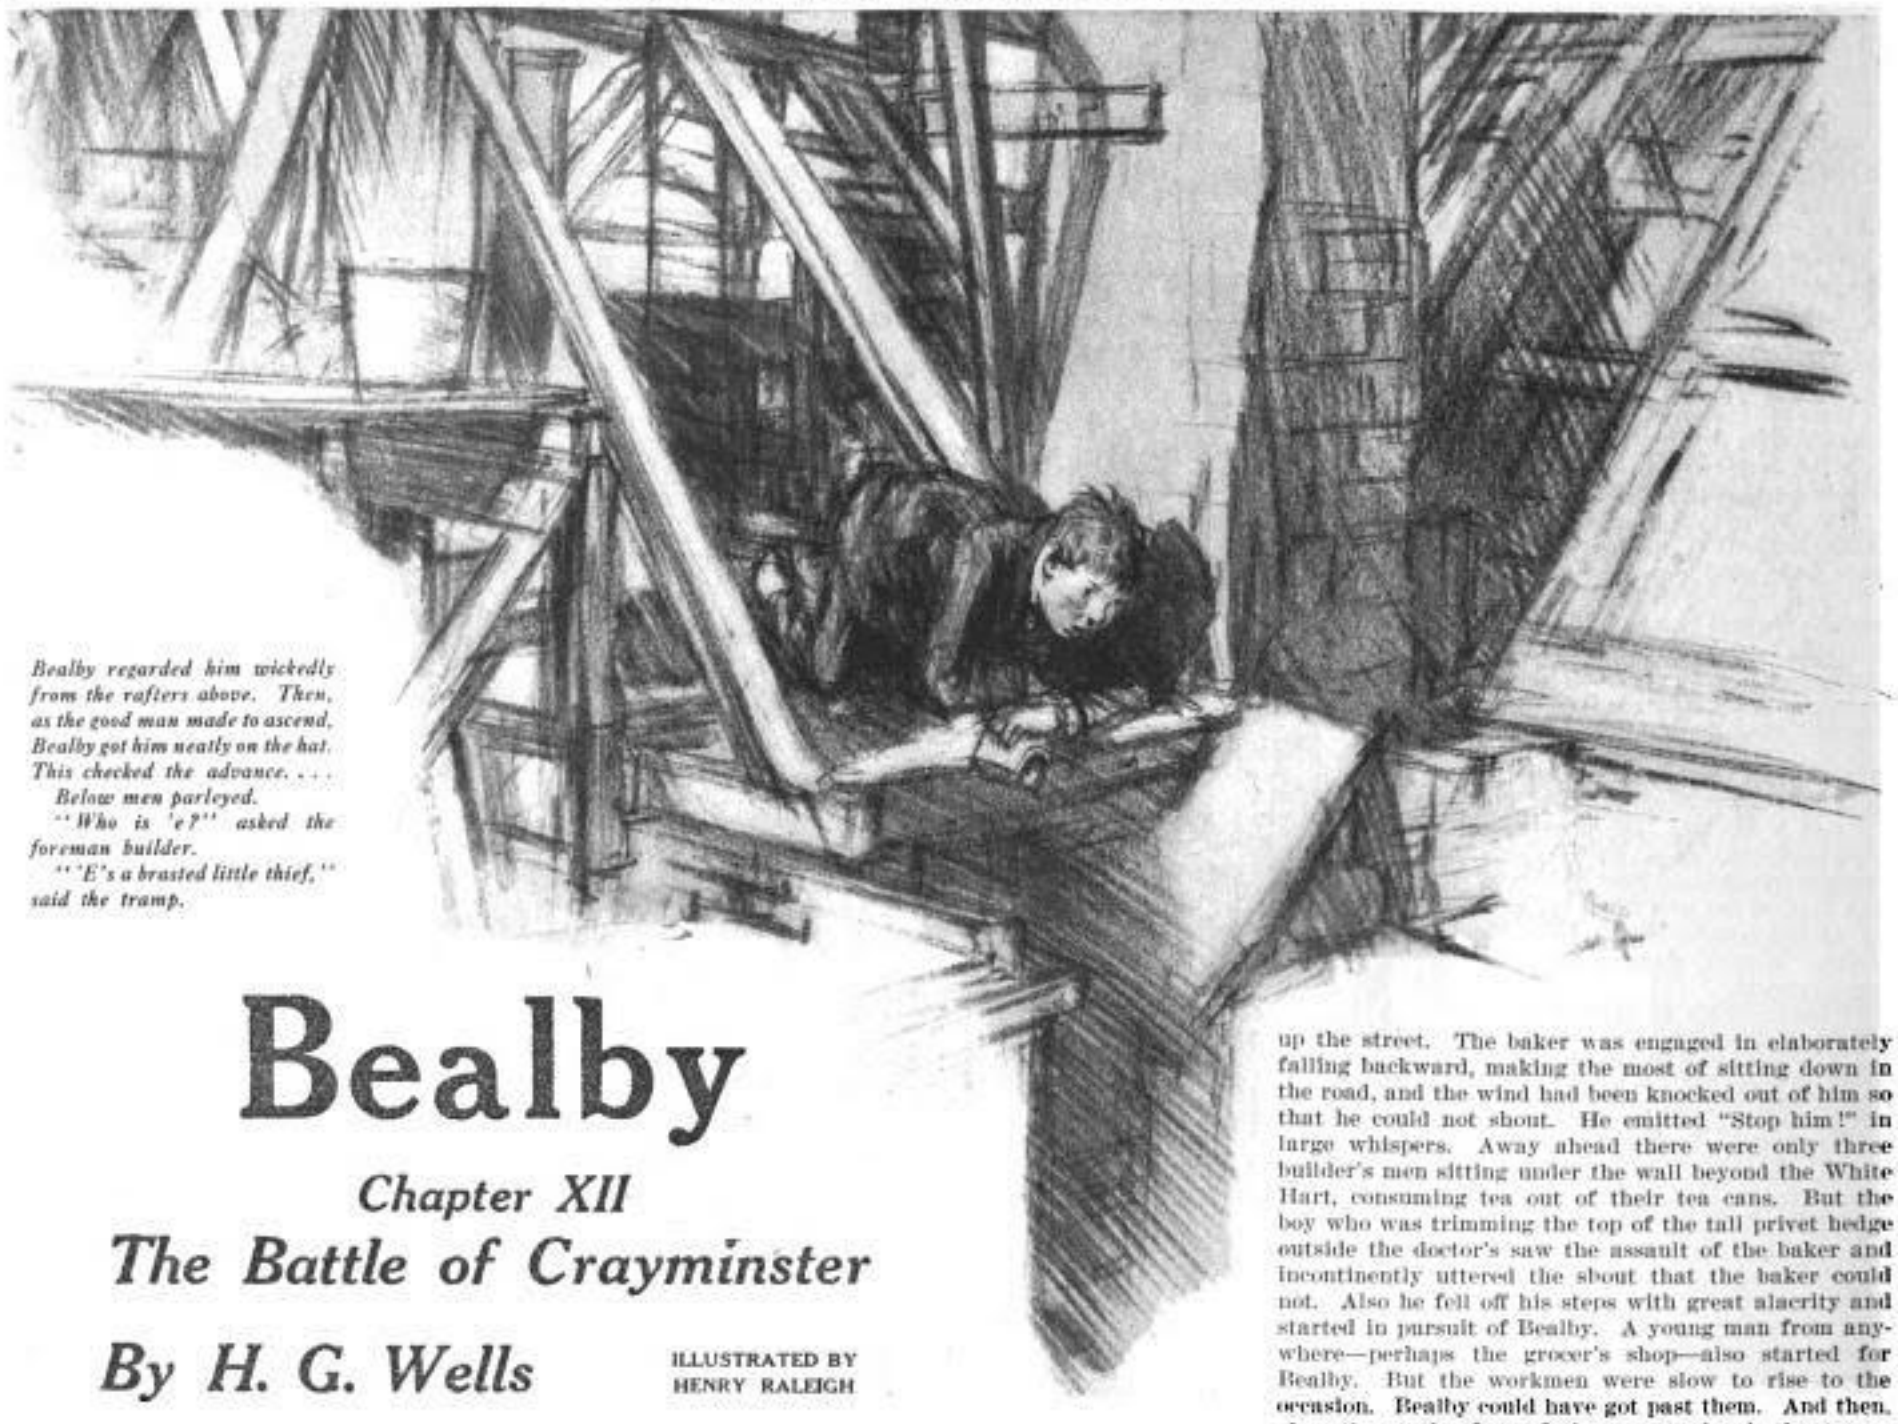
"You're a hard-hearted customer sometimes, my son," commented the other lily.

"I've got an idea. I'm going to try an experiment—" began the wheelman, unheeding.

"Count me out!" interjected Welsh hastily. "I know those experiments. They're too much like work to suit me."

"We have to hustle," Delano had turned business-like. "Get hold of his feet."

"Who—me—?" objected Welsh. "What the—"



"Yes—you! You slopped over a minute ago. Now grab hold—easy there! I don't want to waken him—not that it seems likely—"

"Togo-Ito," he resumed gravely as, a moment later, they deposited the flabby, unconscious burden close to the wall in the rear room where the Jap was busy: "Togo-Ito, excuse yourself from mop one minute. You know razor where can get? Also you got cot in your bunk room, maybe so?"

THE Jap nodded, eyes twinkling. He liked Delano for many reasons small, and one great. Chief of the minor reasons was the fact that Delano never garbled names any more than he did facts; if a Japanese porter happened to glory in the name of Togo-Ito, why, that was his name and he got the full benefit of every syllable. And when Delano made fun of quaint English, it was the fun making of friend with friend.

"Do thus and so—and before so, get large hand-cart from across-street grocery, so quick, please—very swiftly. Then get razor—all things as gentleman's servant. Go by Honorable Todd's clothing store—rouse him from sleep. Much drink last eve—much rouse. Room up over. Give this money; inform Honorable Todd (*Concluded on page 20*)

Bealby regarded him wickedly from the rafters above. Then, as the good man made to ascend, Bealby got him neatly on the hat. This checked the advance. . . .

Below men parleyed.

"Who is 'e?" asked the foreman builder.

"'E's a brasted little thief," said the tramp.

Bealby

Chapter XII
The Battle of Crayminster

By H. G. Wells

ILLUSTRATED BY HENRY RALEIGH

BEALBY was beginning to realize that running away from one's situation and setting up for oneself is not so easy and simple a thing as it had appeared during those first days with the caravan. Three things he perceived had arisen to pursue him, two that followed in the daylight, the law and the tramp, and a third that came back at twilight, the terror of the darkness. And within there was a hollow faintness, for the afternoon was far advanced and he was extremely hungry. He had dozed away the early afternoon in the weedy corner of a wood. But for his hunger I think he would have avoided Crayminster.

WITHIN a mile of that place he had come upon the "Missing" notice again stuck to the end of a barn. He had passed it askance, and then with a sudden inspiration returned and torn it down. Somehow with the daylight his idea of turning King's Evidence against the tramp had weakened. He no longer felt sure. Mustn't one wait and be asked first to turn King's Evidence?

Suppose they said he had merely confessed. . . .

The Crayminster Street had a picturesque, nutritious look. Halfway down it was the White Hart with cyclist club signs on its walls and geraniums over a white porch, and beyond a house being built and already at the roofing pitch. To the right was a baker's shop, diffusing a delicious suggestion of buns and cake, and to the left a little comfortable sweet-stuff window and a glimpse of tables and a board: "Teas." Tea! He resolved to break into his ninepence boldly and generously. Very likely they would boil him an egg for a penny or so. Yet, on the other hand, if he just had three or four buns, soft new buns! He hovered toward the baker's shop and stopped short. That bill was in the window!

He wheeled about sharply and went into the sweet-stuff shop and found a table with a white cloth and a motherly little woman in a large cap. Tea? He could have an egg and some thick bread and butter and a cup of tea for fivepence. He sat down respectfully to await her preparations. But he was uneasy.

HE KNEW quite well that she would ask him questions. For that he was prepared. He said he was walking from his home in London to Someport to save the fare. "But you're so dirty!" said the motherly little woman. "I sent my luggage by post, ma'm, and I lost my way and didn't get it. And I don't much mind, ma'm, if you don't. Not washing . . ."

All that he thought he did quite neatly. But he wished there was not that bill in the baker's window opposite and he wished he hadn't quite such a hunted feeling. A faint claustrophobia affected him. He felt the shop might be a trap. He would be glad to get into the open again. Was there a way out behind it, for example, a policeman blocked the door? He hovered to the entrance while his egg was boiling, and then, when he saw a large fat baker surveying the world with an afternoon placidity upon his face, he went back and sat by the table. He wondered if the baker had noted him.

He had finished his egg: he was drinking his tea with appreciative noises, when he discovered that the baker *had* noted him. Bealby's eyes, at first inanely open above the tilting teacup, were suddenly riveted on something that was going on in the baker's window. From where he sat he could see that detestable bill, and then slowly, feeling about for it, he beheld a hand and a floury sleeve. The bill was drawn up and vanished, and then behind a glass shelf of fancy bread and a glass shelf of buns something pink and indistinct began to move jerkily. . . . It was a human face and it was trying to peer into the little refreshment shop that sheltered Bealby. . . .

Bealby's soul went faint.

HE HAD one inadequate idea. "Might I go out," he said, "by your back way?"

"There isn't a back way," said the motherly little woman. "There's a yard . . ."

"If I might," said Bealby, and was out in it.

No way at all! High walls on every side. He was back like a shot in the shop, and now the baker was halfway across the road. "Fivepence," said Bealby and gave the little old woman sixpence. "Here," she cried, "take your penny!"

He did not wait. He darted out of the door.

The baker was all over the way of escape. He extended arms that seemed abnormally long and with a weak cry Bealby found himself trapped. Trapped, but not hopelessly. He knew how to do it. He had done it in milder forms before, but now he did it with all his being. Under the diaphragm of the baker smote Bealby's hard little head, and instantly he was away, running up the quiet, sunny street. Man when he assumed the erect attitude made a hostage of his belly. It is a proverb among the pastoral Berbers of the Atlas Mountains that the man who extends his arms in front of an angry ram is a fool.

It seemed probable to Bealby that he would get away up the street. The baker was engaged in elaborately falling backward, making the most of sitting down in the road, and the wind had been knocked out of him so that he could not shout. He emitted "Stop him!" in large whispers. Away ahead there were only three builder's men sitting under the wall beyond the White Hart, consuming tea out of their tea cans. But the boy who was trimming the top of the tall privet hedge outside the doctor's saw the assault of the baker and incontinently uttered the shout that the baker could not. Also he fell off his steps with great alacrity and started in pursuit of Bealby. A young man from anywhere—perhaps the grocer's shop—also started for Bealby. But the workmen were slow to rise to the occasion. Bealby could have got past them. And then, abruptly at the foot of the street ahead, the tramp came into view, a battered, disconcerting figure. His straw-colored hat, which had recently been wetted and dried in the sun, was a swaying mop. The sight of Bealby seemed to rouse him from some disagreeable meditations. He grasped the situation with a terrible quickness. Regardless of the wisdom of the pastoral Berbers, he extended his arms and stood prepared to intercept.

BEALBY thought at the rate of a hundred thoughts to the minute. He darted sideways and was up the ladder and among the beams and rafters of the unfinished roof before the pursuit had more than begun. "Here, come off that," cried the foreman builder, only now joining in the hunt with any sincerity. He came across the road while Bealby regarded him wickedly from the rafters above. Then, as the good man made to ascend, Bealby got him neatly on the hat—it was a bowler hat, with a tile. This checked the advance. There was a disposition to draw a little off and look up at Bealby. One of the younger builders from the opposite sidewalk got him very neatly in the ribs with a stone. But two other shots went wide and Bealby shifted to a more covered position behind the chimney stack.

From here, however, he had a much less effective command of the ladder, and he perceived that his tenure of the new house was not likely to be a long one.

Below men parleyed. "Who *is* 'e?" asked the foreman builder. "Where'd 'e come from?" "'E's a brasted little thief," said the tramp. "'E's one of the wust characters on the road." The baker was recovering his voice now. "There's a reward out for 'im," he said, "and 'e butted me in the stummick."

"'Ow much reward?" asked the foreman builder.

"Five pound for the man who catches him."

"'Ere!" cried the foreman builder in an arresting voice to the tramp. "Just stand away from that ladder . . ."

WHATEVER else Bealby might or might not be, one thing was very clear about him, and that was that he was a fugitive. And the instinct of humanity is to pursue fugitives. Man is a hunting animal, inquiry into the justice of a case is an altogether later accretion to his complex nature, and that is why, whatever you are or whatever you do, you should never let people get you on the run. There is a joy in the mere fact of hunting, the sight of a scarlet coat and a hound will brighten a whole village and now Crayminster was rousing itself like a sleeper who wakes to sunshine and gay music. People were looking out of windows and coming out of shops, a policeman appeared and

Digitized by Google

heard the baker's simple story, a brisk, hatless young man in a white apron and with a pencil behind his ear became prominent. Bealby, peeping over the ridge of the roof, looked a thoroughly dirty and unpleasant little creature to all these people. The only spark of human sympathy for him below was in the heart of the little old woman in the cap who had given him his breakfast. She surveyed the roof of the new house from the door of her shop, she hoped Bealby wouldn't hurt himself up there, and she held his penny change clutched in her hand in her apron pocket with a vague idea that perhaps presently if he ran past she could very quickly give it to him.

CONSIDERABLE delay in delivering the assault on the house was caused by the foreman's insistence that he alone should ascend the ladder to capture Bealby. He was one of those regular-featured men with large heads who seem to have inflexible backbones; he was large and fair and full with a sweetish chest voice, and in all his movement authoritative and deliberate. Whenever he made to ascend he discovered that people were straying into his building, and he had to stop and direct his men how to order them off. Inside his large head he was trying to arrange everybody to cut off Bealby's line of retreat without risking that anybody but himself should capture the fugitive. It was none too easy and it knitted his brows. Meanwhile Bealby was able to reconnoiter the adjacent properties and to conceive plans for a possible line of escape. He also got a few tiles handy against when the rush up the ladder came. At the same time two of the younger workmen were investigating the possibility of getting at him from inside the house. There was still no staircase, but there were ways of clambering. They had heard about the reward and they knew that they must do this before the foreman realized their purpose, and this a little retarded them. In their pockets they had a number of stones, ammunition in reserve, if it came again to throwing.

Bealby was no longer fatigued nor depressed; anxiety for the future was lost in the excitement of the present, and his heart told him that, come what might, getting on to the roof was an extraordinarily good dodge.

And if only he could bring off a certain jump he had in mind, there were other dodges. . . .

IN THE village street an informal assembly of leading citizens, a little recovered now from their first nervousness about flying tiles, discussed the problem of Bealby. There was Mumby, the draper and vegetarian with the bass voice and the big black beard. He advocated the fire engine. He was one of the volunteer fire brigade and never so happy as when he was wearing his helmet. He had come out of his shop at the shouting. Schocks, the butcher, and his boy were also in the street; Schocks's yard, with its heap of manure and fodder, bounded the new house on the left. Rymell, the vet, emerged from the billiard room of the White Hart, and with his head a little on one side was watching Bealby and replying attentively to the baker, who was asking him a number of questions that struck him as irrelevant. All the White Hart people were in the street.

"I suppose, Mr. Rymell," said the baker, "there's a mort of dangerous things in a man's belly round about 'is stummick?"

"Tiles," said Mr. Rymell. "Loose bricks. It wouldn't do if he started dropping those."

"I was saying, Mr. Rymell," said the baker after a pause for digestion, "is a man likely to be injured badly by a blaw in his stummick?"

Mr. Rymell stared at him for a moment with unresponsive eyes. "More likely to get you in the head," he said, and then: "Here! What's that fool of a carpenter going to do?"

The tramp was hovering on the outskirts of the group of besiegers, vindictive but dispirited. He had been brought to from his fit and given a shilling by the old gentleman, but he was dreadfully wet between his shirt—he wore a shirt, under three waistcoats and a coat—and his skin, because the old gentleman's method of revival had been to syringe him suddenly with cold water. It had made him weep with astonishment and misery. Now he saw no advantage in claiming Bealby publicly. His part, he felt, was rather a waiting one. What he had to say to Bealby could be best said without the assistance of a third person. And he wanted to understand more of this talk about a reward. If there was a reward out for Bealby. . . .

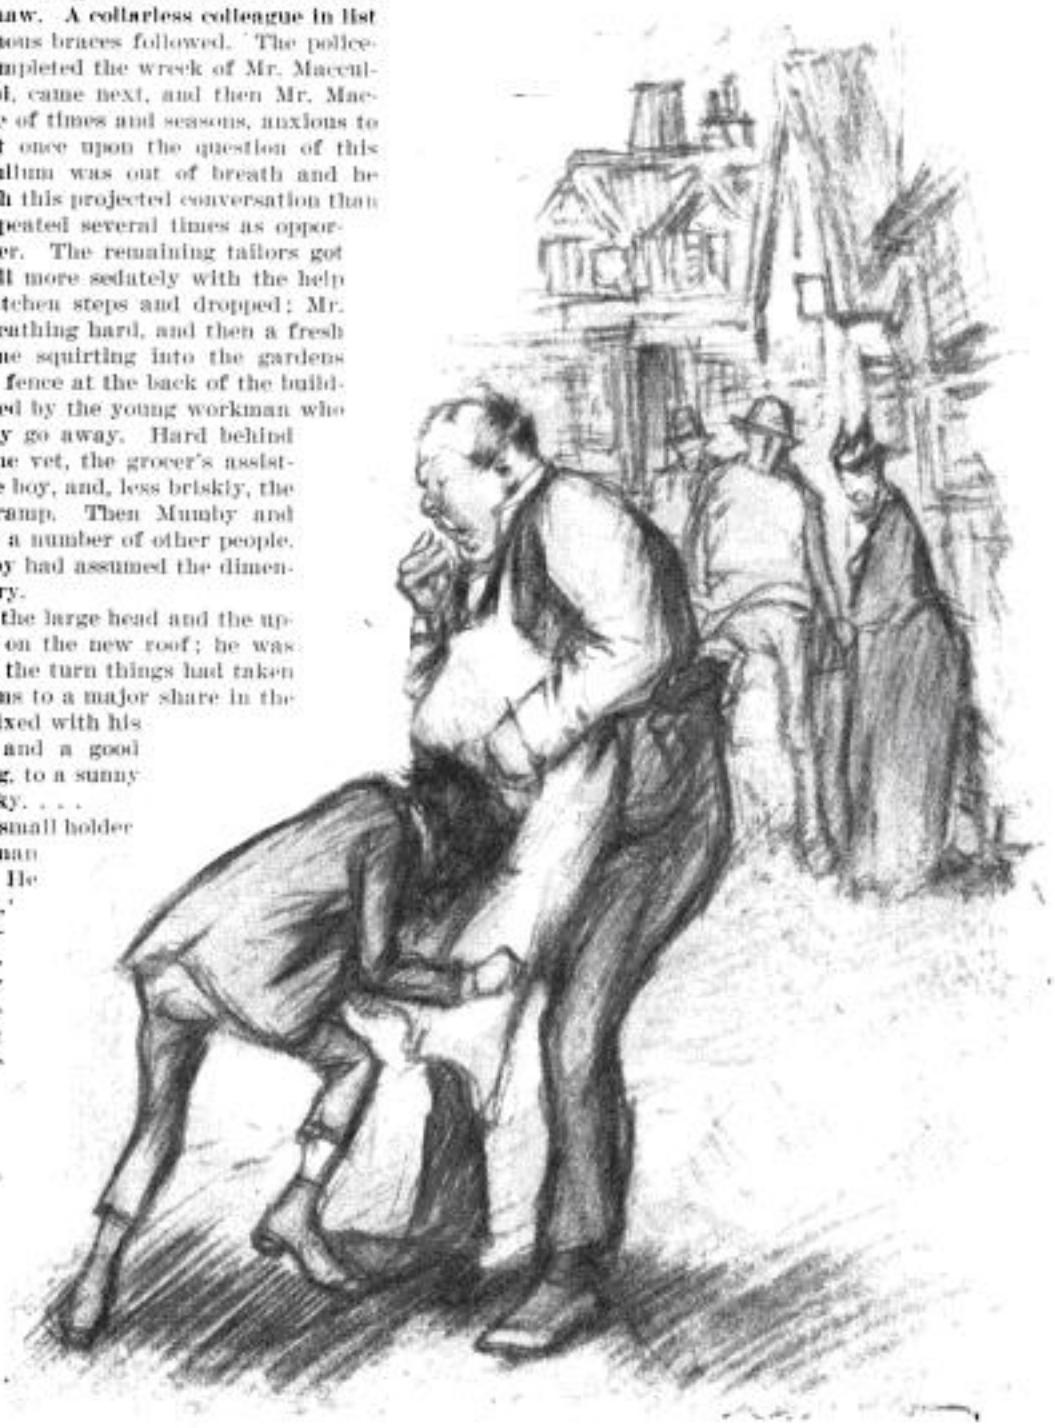
"That's not a bad dodge!" said Rymell, changing his opinion of the foreman suddenly as that individual began his ascent of the ladder with a bricklayer's hod carried shieldwise above his head. He went up with difficulty and slowly because of the extreme care he took to keep his head protected. But no tiles came. Bealby had discovered a more dangerous attack developing inside the house and was already in retreat down the other side of the building.

HE DID a leap that might have hurt him badly, taking off from the corner of the house and jumping a good twelve feet on to a big heap of straw in the butcher's yard. He came down on all fours and felt a little jarred for an instant, and then he was up again and had scrambled up by a heap of manure to the top of the butcher's wall. He was over that and into Macculium's yard next door before anyone in the front of the new house had realized that he was in flight. Then one of the two workmen who had been coming up inside the house saw him from the oblong opening that was some day to be the upstairs bedroom window, and gave tongue.

IT WAS thirty seconds later and after Bealby had vanished from the butcher's wall that the foreman, still clinging to his hod, appeared over the ridge of the roof. At the workman's shout the policeman, who with the preventive disposition of his profession, had hitherto been stopping anyone from coming into the unfinished house, turned about and ran out into its brick and plaster and timber-littered backyard, whereupon the crowd in the street, realizing that the quarry had gone away and no longer restrained, came pouring partly through the house and partly round through the butcher's gate into his yard.

Bealby had had a check.

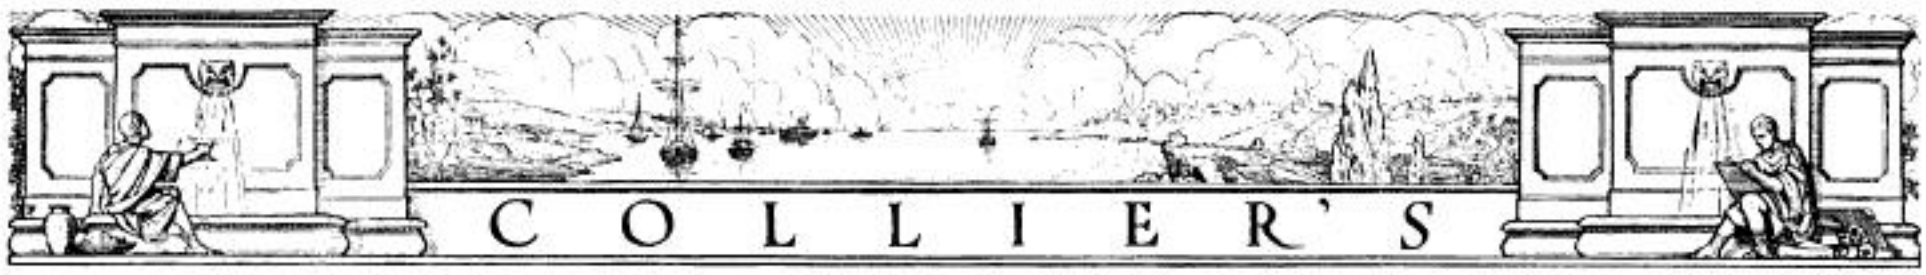
He had relied upon the tarred felt roof of the mushroom shed of Macculium, the tailor and breeches maker, to get him to the wall that gave upon Mr. Benshaw's strawberry fields and he had not seen from his roof above the ramshackle glazed outhouse which Macculium called his workroom and in which four industrious tailors were working in an easy dishabille. The roof of the shed was the merest tarred touchwood; it had perished as felt long ago; it collapsed under Bealby; he went down into a confusion of mushrooms and mushroom bed; he blundered out trailing mushrooms and spawn and rich matter; he had a nine-foot wall to negotiate, and only escaped by a hair's-breadth from the clutch of a little red-slippered man who came dashing out from the workroom. But by a happy use of the top of the dustbin he did just get away over the wall in time, and the red-slippered tailor, who was not good at walls, was left struggling to imitate an ascent that had looked easy enough until he came to try it.



FOR a moment the little tailor struggled alone, and then both Macculium's little domain and the butcher's yard next door and the little patch of space behind the house were violently injected with a crowd of active people, all confusedly on the Bealby trail. Some one, he never knew who, gave the little tailor a leg-up and then his red slippers twinkled over the wall and he was leading the hunt into the market gardens of Mr. Benshaw. A collarless colleague in list slippers and conspicuous braces followed. The policeman, after he had completed the wreck of Mr. Macculium's mushroom shed, came next, and then Mr. Macculium, with no sense of times and seasons, anxious to have a discussion at once upon the question of this damage. Mr. Macculium was out of breath and he never got further with this projected conversation than "Here!" This he repeated several times as opportunity seemed to offer. The remaining tailors got to the top of the wall more sedately with the help of the Macculium kitchen steps and dropped; Mr. Schocks followed, breathing hard, and then a fresh jet of humanity came squirting into the gardens through a gap in the fence at the back of the building site. This was led by the young workman who had first seen Bealby go away. Hard behind him came Rymell, the vet, the grocer's assistant, the doctor's page boy, and, less briskly, the baker. Then the tramp. Then Mumby and Schocks's boy. Then a number of other people. The seeking of Bealby had assumed the dimensions of a Hue and Cry.

The foreman with the large head and the upright back was still on the new roof; he was greatly distressed at the turn things had taken and shouted his claims to a major share in the capture of Bealby, mixed with his opinions of Bealby and a good deal of mere swearing, to a sunny but unsympathetic sky. . . .

Mr. Benshaw was a small holder a sturdy English yeoman of the new school. He was an Anti-Socialist, a self-helper, an independent-spirited man. He had a steadily growing banking account and a plain but sterile wife, and he was dark in complexion and so erect in his bearing as to seem a little to lean forward. Usually he wore a sort of gray gamekeeper's suit with brown gaiters (except on Sundays, when the coat was black), he was addicted to bowler hats that accorded ill with his large, grave, gray-colored face, and he was altogether a very sound, strong man. His bowler hats did but accentuate that. He had no time for vanities, even the vanity of dressing consistently. He went into the nearest shop and just bought the cheapest hat he could, and so he got hats designed for the youthful and giddy, hats with flighty crowns and flippant bows and amorous brims that undulated attractively to set off flushed and foolish young faces. It made his unrelenting face look rather like the Puritans under the Stuart monarchy



HE WAS a horticulturist rather than a farmer. He had begun his career in cheap lodgings with a field of early potatoes and cabbages, supplemented by employment; but with increased prosperity his area of cultivation had extended and his methods intensified. He now grew considerable quantities of strawberries, raspberries, celery, sea kale, asparagus, early peas, late peas, and onions, and consumed more stable manure than any other cultivator within ten miles of Crayminster. He was beginning to send cut flowers to London. He had half an acre of glass and he was rapidly extending it. He had built himself a cottage on lines of austere economy, and a bony-looking dwelling house for some of his men. He also owned a number of useful sheds of which tar and corrugated iron were conspicuous features. His home was furnished with the utmost respectability, and notably joyless even in a countryside where gayety is regarded as an impossible quality in furniture. He was already in a small local way a mortgagee. Good fortune had not turned the head of Mr. Benshaw nor robbed him of the feeling that he was a particularly deserving person, entitled to a preferential treatment from a country which in his plain, unsparing way he felt that he enriched.

In many ways he thought that the country was careless of his needs. And in none more careless than in the laws relating to trespass (*Concluded on page 28*)

With a weak cry Bealby found himself trapped. Trapped, but not hopelessly. He knew how to do it. He had done it in milder forms before. . . . Under the diaphragm of the baker smote Bealby's hard little head

The Promise of America's Future

IN THE PAST AND THE IMMEDIATE PRESENT, the war, of course, has caused us as a nation some confusion. This is being effectively remedied and will soon be in the past. For the future it is possible to say, in the words of one of the most thoughtful leaders of American finance and industry, that, if we have wise leadership, the *permanent result upon American industry and commerce of the present European war will be of a beneficence such as to stagger the imagination.*

Guilt Is Personal

WE SHALL OBEY President WILSON's neutrality order faithfully. All the same, we know the man who, stripped of monarchical prerogatives, in any American court, under American law, could be indicted and convicted for incitement to murder.

Do What George Has to Do

THE GOVERNMENT REVENUE is going to be cut down from 10 to 20 per cent by the war. To meet this situation the Democratic party is planning to impose new taxes and raise the revenue to the old figure. A good many private businesses have had their revenues cut more than 10 per cent by the present war. Private business has not the easy recourse of laying more taxes. It has to adjust itself by reducing expenses. Can't the Government do the same? There is plenty of public opinion in the country in favor of economy. The trouble is, it is not organized.

The Only Way

IN ENGLAND the war has brought to poverty a large number of persons who were formerly well to do. Their tragedy is the result of a calamity that no one could foresee. No parent can be certain that his children may not some day come to poverty. There is no guarantee against it. The best insurance is to teach them to work. Probably the best asset any youth can have is the ability to cultivate the soil. That is the most permanent and universal of trades.

The Future in Europe

THE PRESENT WAR is not likely to last long, for the bonfire now raging is bigger than the woodpile. Modern methods of census, of transportation and communication, have made nation and army practically synonymous. When the forces now arrayed are exhausted there will be no great reserves to be brought up. The human powder will have been burned. It is not apt to come to this, for Germany must win at once or face the certainty of slow and complete defeat. Mediation will then be preferable, and seems likely to be inevitable. In the meantime the war will settle the status of international law, whether it is a force binding on all nations or only a pompously worded code of voluntary practices. The future of certain dynasties will also be determined: whether the three Kaisers are to govern in Austria, Germany, and Russia, or whether public opinion is to be organized for effective control of public policy, as in our own country. It is absolutely certain that the future must see constructive action taken to secure lasting peace in Europe. This will not be done by discriminating against races; no one expects to see Slav farm laborers barred out from Germany or German bank directors outlawed in London; but it must be arranged so that no set of power-crazed men can use the strength of a great people for international piracy. This may mean dividing Germany and Austria into a number of smaller countries, about equal to Holland or Switzerland. Perhaps Europe may rise above this, banish all these dynasties and coteries of autocracy, and organize some larger political integration, some great federated government which shall reflect and conserve the essential unity of European civilization. Time will show. Meanwhile, for millions of people, this war means laying aside for an indefinite time the policies that look to the future, and devoting all the power that years of toil have slowly created to achieving poverty, suffering, and death.

A Poor Halfway Measure

THERE HAS NOW BEEN TIME for the thoughtful to look into the long expected freight-rate decision by the Interstate Commerce Commission. It proves to be a half-baked, shuffling piece of business which settles nothing very much and distinctly unsettles confidence in the commission. The decision is based upon what we believe to be an unsound conception of the commission's powers and of the nature of the railroad business. A regulative body of this sort is useful in proportion as it keeps in touch with facts and acts with quick decision on matters brought before it. (The recent decision was six months overdue.) Regulative bodies are obstructive and inefficient in proportion as they assume to themselves the tardy dignity and stuffy bureaucratic fussiness of the wrong sort of courts. When, in addition, they wait on events and balance up what they want the railroads to do against what they are willing to concede to the railroads, the whole thing tends to become a messy sort of farce. The railroads of this country constitute a great national service and must be treated as such. Rates must be based on what is best for the country's development, not on arbitrary and meaningless apportionments of expenses between freight and passenger traffic. Service is the goal of regulation; cost is a delusion. The Interstate Commerce Commission, in this decision, has shown itself to be, as compared with the Supreme Court, very distinctly on the wrong track and very distinctly employing the wrong methods. The final misfortune would be to have this sort of bureaucracy in full charge of our railroad operations as it would be under Government ownership. We want more and better regulation of the railroad problem.

The Man Who Made Money Out of It

FROM the confession of a man who committed a hideous murder: I am twenty-seven years old and live with my mother at 2025 Walnut Street. I'm a salesman, selling pickles. I returned home from work in the afternoon on July 7 and *then went out and visited saloons and had a lot to drink.* Later in the day I met my father, who lives at 1808 Fulton Street, and *we went to more saloons and I had more drinks.* I took a walk over on Madison Street in the evening and about eight o'clock at night I saw the little girl in the passageway between two houses.

We know nothing in our civilization worse than the fact that men who stimulate other men to drink whisky are permitted to enjoy all the prerogatives of civilization in Baltimore, Louisville, Peoria, and other cities where the distiller is the prince of business.

The Heart of It

THE HEART OF THE LIQUOR PROBLEM is to be found in this passage which we find in a Chicago paper described as a quotation of a notice on the price list of the Richelieu Wine Company, 9 West Randolph Street:

HINTS ABOUT SERVING

A diner should always have easy access to the wine list and after ordering should be promptly served. This course often results in a second bottle being used.

The occasional drinker is often tempted to order wine when he sees the list lying before him: if it is not in sight, the chances are he will not feel any particular desire to drink wine with his meal.

If wine is ordered do not place ice water on the table.

Keep in mind these suggestions.

There is the great point: If a man is engaged in the selling of booze he is also engaged in *stimulating its consumption*, in persuading and overpersuading people to drink it. We can't think of any way of making money quite so odious as this.

Good Reading

A FRIEND of COLLIER'S who lives in western Canada sends us this:

EDITOR COLLIER'S: EDMONTON, ALBERTA.

You have my hearty congratulations on the series of "SAM ARNOLD" stories by GEORGE RANDOLPH CHESTER, now running in COLLIER'S. I may have a wrong point of view, but it seems to me that SAM ARNOLD is the best sort of modern minister. To be sure, he is no expert in Hebrew and would turn up his freckled nose at Greek, but he is a minister of righteousness just the same. Raising a dead town and preaching salvation by progress may not be taught in the average theological seminary, but to my mind they are articles of the modern Christian's creed fully as important as the raising of LAZARUS and the preaching of salvation by grace. COLLIER'S does not pose as a religious weekly, but I get more inspiration out of it than from several publications professedly pious.

Yours sincerely,

CHARLES F. POTTER, Pastor First Unitarian Church.

It will be a refreshing novelty to Mr. CHESTER to receive praise from the pulpit, for his inimitable WALLINGFORD suffered a good deal of disapproval from earnest persons who thought it was not a good thing for growing boys to read. They felt that WALLINGFORD's joyous path through a world of victims of his smartness had a tendency to set up false ethical standards. It put a premium on short cuts and led unthinking youths into the delusion that there might be permanent satisfaction in getting rich quick through devious ways. It is probably a valid objection to WALLINGFORD. For our mature selves we distinguish

THE NATIONAL WEEKLY

between the characters in fiction that we like and those whose conduct we approve. We, too, like Mr. Chester's Sam with the ginger-colored hair, but we confess to an unregenerate preference for Wallingford.

Incidentally—

IT HAS BEEN A LONG TIME since we read a good new story of the love of a young man for a girl. Isn't this sort of story written any more? We should like to get hold of some.

The $25,000 Hen—When?

AND RESUMING THE SUBJECT of May Rilma, the $25,000 cow, let us who think of a setting hen's time as the synonym of negligibility contemplate for a moment the possibility of a $25,000 hen. The average hen puts in so much of her time clucking, setting, molting, and otherwise restricting output that she does pretty well if she lays us her ten dozen eggs a year. But turn now to the prize hen of the Oregon Agricultural Experiment Station, which has established a record of 303 a year. What shall we say of her worth? To the uninitiated it might seem obvious that she is worth the difference between 120 eggs a year and 303 eggs a year, or, say, $3.75 per annum for, say, three years—for a hen does not live alway—or, not to put too fine a point upon it, $10 or $11 more than the less efficient biddy. But this would be an abysmal error—for out of their total production the keep of hens must be paid—and all this surplus is profit. And is this all? Nay, nay! Dr. Raymond Pearl of the Maine Experiment Station has proved that, while the ability and disposition to lay a common union-scale output of eggs goes with every hen, supreme talent along this line is inherited in a peculiar sex-linked manner. The Oregon hen's 300-egg capacity would not descend to her daughters, but to her granddaughters through her sons. It is obvious that if one could place one of these sons at the head of a flock of consorts able to keep house and lay eggs as his mother used to do, the chicks would inherit egg genius instead of egg talent from both sides of the house, and, after the heredity had been steadied by line breeding for a few generations, we should have a breed of 300-egg hens. Now the State of Iowa alone has more than 20,000,000 hens. An increase in the profits per hen of $3 a year would mean $60,000,000 more egg money to Iowa than she now receives, and she leads all the States in that respect, we believe, already. And the Oregon hen, if she could be used to establish the 300-egg breed, would do her half at least of the job of giving one State in the Union an increase in annual income of $60,000,000, and all other States and foreign nations in proportion. Wouldn't she be worth $25,000? We pause for a reply, and for our readers to rally—merely observing in conclusion that the real men of the day seem to be these agricultural experts.

More Nature Faking?

Cartoon by F. G. Cooper

Keep Our Money at Home

THE REFUSAL TO APPROVE a loan from American bankers to one of the belligerents was indifferent law but sound common sense. It is characteristic of Bryan's homely mind to have arrived at the right result by the wrong method of thinking. He put the disapproval on the ground that it would have violated neutrality. That is nonsense. It is no more wrong to sell credit to a belligerent than to sell wheat. But we ought to keep our money at home. A dollar can't be in two places at the same time. It can't be in Europe paying a soldier to kill and in America paying a laborer to lay ties on a new railroad. The latter is the best place for all the dollars we have.

The New Justice

NEXT TO BEING PRESIDENT, the greatest achievable dignity in the United States is to be a Justice of the Supreme Court. That office is dignified largely because a long line of high-minded men have held it in honor and filled it worthily. Probably the first thought which comes to a newly appointed justice, if he has imagination, is the burden put upon his conscience, not to let his conduct take anything from the accumulated traditions and dignity of the seat in which he is to spend a few brief years before he passes on. Mr. McReynolds has a conscience equal to much more strain than is likely ever to be put upon it. The qualities that have been most apparent in his public career are conscientiousness, devotion to principle, a disposition to stand all the more ruggedly by his convictions in proportion as that stand is likely to cost him discomfort. He comes to his office at a time when just that quality, the willingness to endure unpopularity, may be extremely valuable to the nation. His appointment is a credit to President Wilson.

The Late Pope

A GENTLE AND LOVELY old man whose soul had been washed wholly pure by long years of abstinence, self-restraint, high thinking, and a sort of right living which was not merely a serene freedom from worldliness, but was a determined contest to be more perfect each day than the last. A life that makes the most blameless of worldly careers seem ignoble. Its rewards were what he would most have wished, and were adequate. Many millions of people, of many tongues and many colors, thought of him whenever they reflected upon the better part of themselves, and associated him with all their hopes of a happy and sinless future.

Abolishing the Small Towns

THE ATCHISON (KAS.) "GLOBE" has evolved this principle of classification:

> A small town is one in which a silk hat attracts as much attention as the fire department.

It is just as we thought—there are no small towns in this country. The United States has nothing but cities. Kansas proves it.

Belief

SOME SCHOOL CHILDREN in New York object to singing certain songs because they imply a religious belief. Says a newspaper:

> Half of the older ones insisted that they didn't believe in any religion. "I don't believe in no religion," said one boy. "And if you go down the street you will find lots more who don't either." "That's it," put in a girl. "We don't go in for any religion, for *we don't know where we go when we die.*"

This pathetic childish materialism may perhaps be blamed on New York's cosmopolitanism and the consequent high death rate among traditions. Yet many older persons no doubt use the same logic and explain that they don't believe "because they don't know where they go when they die." In the meantime, however, we are all living. Too much emphasis used to be placed on the part of death in religion: religion as a living faith is what sane men focus on to-day. Call your religion what you like—but believe—and then prove it somehow. Faith in man is good; faith in both man and the Son of Man, better. A life bounded by self is a tragedy for the individual and a curse for the mass. It is bad policy and worse science. Civilization without belief is no more thinkable than lighthouse building without stone or skyscraper construction without steel. The man who does not believe is out of tune internally and externally—in town and country—on the street and in the forest. Happily, the school children who do not believe have plenty of time left. Experience is a good teacher.

As England Goes to War

By Henry Beach Needham

THE "one bright spot" Sir Edward Grey declared to be Ireland. Therefore a Hibernian paradox is apt. The calmest spot is near the center of the explosion! As I recall the state of things and of minds in New York at the outbreak of the Spanish-American War, there was an excitement unending greater than on election night, and a tension more gripping than in the panic of '93. Comparatively, that war was a skirmish. This! No man can foretell.

And yet there is a quiet, dogged calmness unbelievable. But let no one think that the people fail to comprehend what they are up against. For a week before the declaration of war the English papers set forth every possible angle of the impending conflict. It was not yellow journalism—it was unemotionally tragic. "The blackest day the city [the financial district] has known for more than twenty years," wrote a member of Lloyd's on July 30. Failures were numerous. Then, for the first time in its history, came the closing of the London Stock Exchange. Next the bank rate went higher than ever before in the memory of the oldest financiers. The banks closed Saturday noon, intending to open Tuesday after the August bank holiday, but, as it turned out, to remain closed for almost a week. Then—that same day—gold and silver took wings, seemingly. A five-pound Bank of England note, legal tender, was less useful than one's personal check. Up to the hour of the declaration of war against Germany the attitude of the English irritated me. They gave no signs of a proper realization of what was threatening. Their attitude became so exasperating on the morning of the bank holiday that I began to talk. I was vividly reminded of the play, written by an English army officer, and produced not only in London but in the United States, entitled, "An Englishman's Home." It was a call to arm—to make ready; it was a tragic commentary on unpreparedness. And I believe that I saw around me this play—in the life. (As a matter of fact, the English are most excellently prepared.)

The first scene, if you remember, emphasized the Englishman's participation and absorbing interest in sports and games. There was the first-born, a young man in his twenties, talking football, nothing else, and poking fun at his future brother-in-law, who had foolishly joined the Yeomanry. At the close of the scene the John-Bullish father grabs the sticks from his youngest and shows him how to play that silly spool game—Diabolo! Then appear the German soldiers. At the end the Englishman, his family killed or in flight, finally roused to fighting mettle, seizes a gun in defense of his home—and is shot down.

The Steady-Going Englishman

I INTIMATED that I could not help recalling this play. The Englishman and his wife and his cool-headed son took my talk calmly. It didn't annoy them—it didn't influence them in the slightest. They went to the Goodwood races just the same. They played their games. They did as they were accustomed to do, which meant that they exercised as much as they could in the open air. They were fit, and they kept themselves fit. *And they didn't worry.*

With the newspaper headings like, "On the Brink," "War in the Balance," and "Greatest Conflict in History Threatened," staring them in the face, the English remained unexcited. They kept their heads. They didn't run round in circles. They waited until by the King's proclamation they were called out, then they headed for their "depots" soberly but coolly. It was the best lesson in reserve I ever hope to have.

If, ignorant of a state of war, you dropped into London to-day, you would find it practically no different from what it was on your last visit. Around Buckingham Palace and in front of the War Office there are crowds, and cheers are occasionally heard, but otherwise London moves majestically along as usual. Perhaps you would see more soldier men than normally on the sidewalks—stared at with a greater interest; but in other respects it's the same substantial London.

In the vicinity of the big hotels they were repaving one side of the Strand. It was the day after the declaration of war. The smell of the cedar blocks took me back to the first paving of Cottage Grove Avenue, Chicago, when I was a boy. I had watched that great public work with curiosity, and lo! fringing the walk were Londoners supervising this bit of repaving! Somehow the homely incident typified the universal calm.

France, Germany, Austria, and Russia are under military rule. But democratic England, at this writing, continues under civil authority. The Government, we read in the press, has taken over the railroads. But

"Nothing hysterical, and no grumbling," says Mr. Needham. "The men went willingly, uncomplainingly . . . to perform a service rightly expected of them"

trains run on schedule with surprisingly little delay considering the added burden of military transport. In beautiful Surrey, forty miles from London, in the never-bustling town of Haslemere, the realization of war did not come until the King's proclamation. Before, residents went to the railroad station for the latest news in the afternoon papers, and the intelligence thus gained, after unwonted crowding at the news stand, was discussed among them without temper as they returned to their shops or their homes. But the new interest in public affairs didn't at all ruffle the tranquillity of life in "Peaceful Valley," as Haslemere, nestling among the hills high above sea level, might be called.

But on August 4—the day "our" war began—there was posted on the town hall the King's proclamation. This royal command called out the reservists, also the Territorials—volunteers or militia. It was about six o'clock in the evening when the important notice went up. Everybody in town read it. The proprietress of the White Horse Hotel, where I was domiciled, sent her son Billie, aged nine, to "read every word of it." Because, she told him, "some day you will want to remember you read the King's proclamation."

At the edge of the cluster of Britons who were suddenly called to arms I studied the faces and listened to the talk. From the look of them they might have been reading a notice relating to the payment of the dog tax. And their comment was disappointingly commonplace: nothing the least heroic about it—no "For God, King, and Country."

"That's you, John," or "We'll start for the depot to-night," were average remarks. Nothing hysterical, and no grumbling. The men went willingly, uncomplainingly—more than that—to perform a service rightly expected of them. I wonder if the same spirit generally moves conscripts?

He Sticks to Type, this Britisher

ABOUT nine o'clock a number of Territorials gathered in the "King's Arms," and singing began. What was that familiar air, those stirring American words? "Three cheers for the red, white, and blue!" No wonder I was thrilled.

That swinging air will be the popular battle hymn with the volunteers in this great struggle. Over here it is called "The Red, White, and Blue"—not "Columbia"; but the air is the same and the chorus much the same. And the English-speaking people of America, unless their sentiments are swayed by a contrary allegiance, will no doubt be singing the chorus, "Three cheers for the red, white, and blue," to hearten the forces of civilization!

The calm of the Briton is first of all racial. Who are the English? Unrelenting Saxons, who, though conquered in turn by Angles, Danes, and Normans, finally swallowed up all three, and imposed their language, their customs, and their institutions upon the quondam invaders. Or, as Price Collier so admirably answered the question, Who are the English, what are the English? "They are Saxons, who love the land, who love their liberty, and whose sole claim to genius is their common sense."

To this might be added in our vernacular: You can defeat 'em, but you can't lick 'em.

As they fought for their liberty, so they fought in the world for their own brand of civilization, and with one notable exception, which modesty prevents us mentioning, they fought successfully in the long run. They haven't forgotten their victories. Not that they boast of them, for they don't, but they expect you to remember how and when they conquered. This record in battle, if not brilliant altogether, is surely overwhelmingly persistent. Which necessarily imparts calm.

Then the life they lead, and have always led—so much of it in the open air, and with such a consistent measure of hardening exercise, naturally gives them confidence. They have health, they have rare staying qualities, and the possession of this breeds courage and coolness. And in this crisis they are calm, for another and greater reason still, because *they have decided issues for themselves.* No autocracy has hurled the English into international strife. Their truly *representative* and quickly *responsive* Government—of which the world presents no fair equal—has gone to war when every chance for peace failed. There was no "speech from the throne" insisting upon warlike measures and hinting vaguely at obligations which were pressing but which could not be disclosed. There was no "executive session" to consider business of state in secret.

Every step of the way there was indeed "pitiless publicity." Everything was open and aboveboard and wonderfully impressive.

The clear and convincing speech of Sir Edward Grey was instantly received with general approval. There was ungrudging acclaim from all parties for the statesmanly utterance of the Prime Minister—a speech bound to live in history; for Mr. Asquith made it certain to Englishmen and to the enthusiastic colonists everywhere that the sword has been drawn "in defense of principles which are vital to our civilization."

The Spartans of 1914

THEY are answering, the unmarried young Englishmen between eighteen and thirty, enlisting quietly and calmly, without a particle of heroics. If you look for heartbreaking human-interest stories over here, you don't find them. What I am going to tell is—well, it's English.

There is a young man in town, a clerk in a bank, who is in his early twenties. He is an only son, and his mother is a widow. Yesterday she left her home and visited the town, and she and her son had afternoon tea together. In the parlor of the inn, when the "rite" was over, I learned that the lad was trying to get in the cycle corps—at any event was sure to enlist.

"How you must hate to have him go," said Mrs. Reade, the proprietress, to the old lady.

"That's why I came down here to-day—to make sure that he was going," replied the old lady firmly. "He would be no son of mine if he didn't go!" And she added:

"Mrs. Reade, if this hotel is commandeered for a hospital, I want you to send for me at once. I'll come instantly and nurse."

Not Spartan—Saxon! Unrelenting, persistent, consistent purpose; quiet, dogged calmness—that's all.

The Business Man's Opportunity

By A. W. Shaw

Editor of "System"

IN ESTIMATING the effect of the European war I can speak only in terms of true business activity. I do not know how speculative enterprise will be affected. I speak from the standpoint of the man who buys and sells goods—the man who makes commodities and puts them on the market.

From this point of view the United States is in the position of one of four great competing concerns when the other three have shut down. England, Germany, France, and the United States are the four great competitors for the world's business. They are the four mammoth industrial and commercial units of the world, and three of them have shut down.

The result must be a transference to the fourth unit of most of the demand for goods formerly supplied by the other three, and, in addition, the demand for goods needed by the other three themselves, since they have now become nonproducing consumers.

This is exactly what will happen in this country if the war is prolonged. In spite of all apparent hindrances and difficulties like the interruption of shipping and complexities of finance and trade relations, we can make the safe fundamental generalization that the nations must turn to us to supply their wants.

No country was ever in better shape to meet extraordinary demands. We have bumper crops, insuring an abundant food supply that will command good prices, and this in turn goes far to insure stability for the effective purchasing power of the American people. Another factor insuring our purchasing power is that the demand finds us in a period of contraction. Merchandising and production have been on a hand-to-mouth basis with us lately. There are no large stocks or oversupplies. This guarantees that the wheels will have to keep moving right along: it guarantees steady domestic buying, which in turn guarantees an important basic demand as a foundation for the new demands from abroad.

Getting Along Without Our Imports

NOW to take advantage of this situation the business man, it seems to me, must first analyze the normal American demand for American-made goods, and over against this he must set off for special consideration the American demand for goods that are, in whole or part, foreign made. He must canvass our imports, and then bend all his energy to seeing how much of this latter demand can be diverted (1) to American supply of similar goods and (2) to American supply of substitute goods. Here in a nutshell is the business man's opportunity. Let us see what it means. For instance, in 1913 we imported $5,000,000 worth of macaroni. We make a first-rate line of macaroni here, and by proper effort we can divert that $5,000,000 item to the American supply. We imported a million-dollar item in mineral water which can be easily diverted. We imported nearly $5,000,000 worth of champagne and $6,000,000 of still wines, and there is scarcely an acre in the United States that will not grow grapes. I put down here a very short list of the value in round numbers of our 1913 imports in goods that can be supplied identically by home industry:

Linens	$22,000,000
Laces, lace goods, etc.	31,000,000
Cotton wear	13,000,000
Handkerchiefs	2,000,000
Pig iron	6,000,000
Wire	6,000,000
Cheese	9,000,000
Olive oil	6,000,000
Beet sugar	4,000,000
Rice meal	2,000,000
Buttons	2,000,000
Clocks and watches	3,000,000
Copper	8,000,000
Cotton thread	4,000,000

These are a very few of the immense number of items that can be diverted to the American supply. We even imported half a million dollars' worth of lead pencils in 1913. Every one of these items represents a golden harvest for American business. Within a week of the outbreak of the war John Wanamaker had an advertisement in the New York papers, stating that he was already arranging with *American manufacturers* to supply him with the goods cut off from importation.

There is another immense number of items which can be diverted by substitution. The discovery and promotion of effective substitutes offers a limitless field for the ingenuity of American business. For instance, our finer book paper is made with German sulphite and English clay. It is perfectly possible to find an acceptable substitute. Mr. Edison said yesterday that if the war keeps on, all the moving-picture shows will stop, but they won't. The supply of horsehide

The Opportunist

"I'm very sorry, madam. Here is my card; perhaps I can be of service to you"

Cartoon by F. G. Cooper

covers for baseballs is showing signs of running short, but we will not stop playing baseball. American resourcefulness will rise to every occasion, and in many cases the substitute will be so effective that when imports are resumed it will have the market.

It must be remembered that outside the bare necessities of life every commodity is in competition not only with other commodities of the same order, but with *all* gratifications that may be had at about the same price. Thus a bottle of imported champagne, for instance, is in competition with opera tickets and silk stockings. It may be, therefore, that the word "imported" may lose some of its glamour after this war is over and cease to be as great a factor in gratification. The American consumer may decide that he would rather have his homemade substitute plus an extension of his purchasing power. He would rather have a bottle of American champagne plus an opera ticket than foreign champagne plus the satisfaction of looking at the label.

Home-Grown Talent

MANY of the predictions of disaster seem to me to be made without realization that there has never been a pressing demand on American genius and ingenuity in these directions. For instance, a man in the woolen-cloth trade told me last week that there was no chance for his industry because it was impossible to get dyes. We imported in 1913 alizarin dyes to the value of nearly $2,000,000. When I asked him why we could not produce these in America, he said we did not have the chemists. This is absurd. We have as clever chemists as there are anywhere. The truth is that it has never been particularly profitable for them to be busy on this line. It was too cheap and easy to get dyes from abroad. But now our chemists are going to throw real Yankee emergency energy into this and a hundred similar problems, and I, for one, don't worry about the outcome.

To say that we have never done a thing is not the same by any means as saying we cannot do it. This is a very important thing to be borne in mind when we are tempted to be discouraged by reports of trade conditions. In 1913 we imported nearly $13,000,000 worth of coal and tar preparations. It is said that we can't supply this demand. Now, does anybody really believe that American business men are going to fold their hands and watch $13,000,000 worth of any kind of demand go begging? Hardly. Well, then, if we don't believe it, what is the use of talking as though we did?

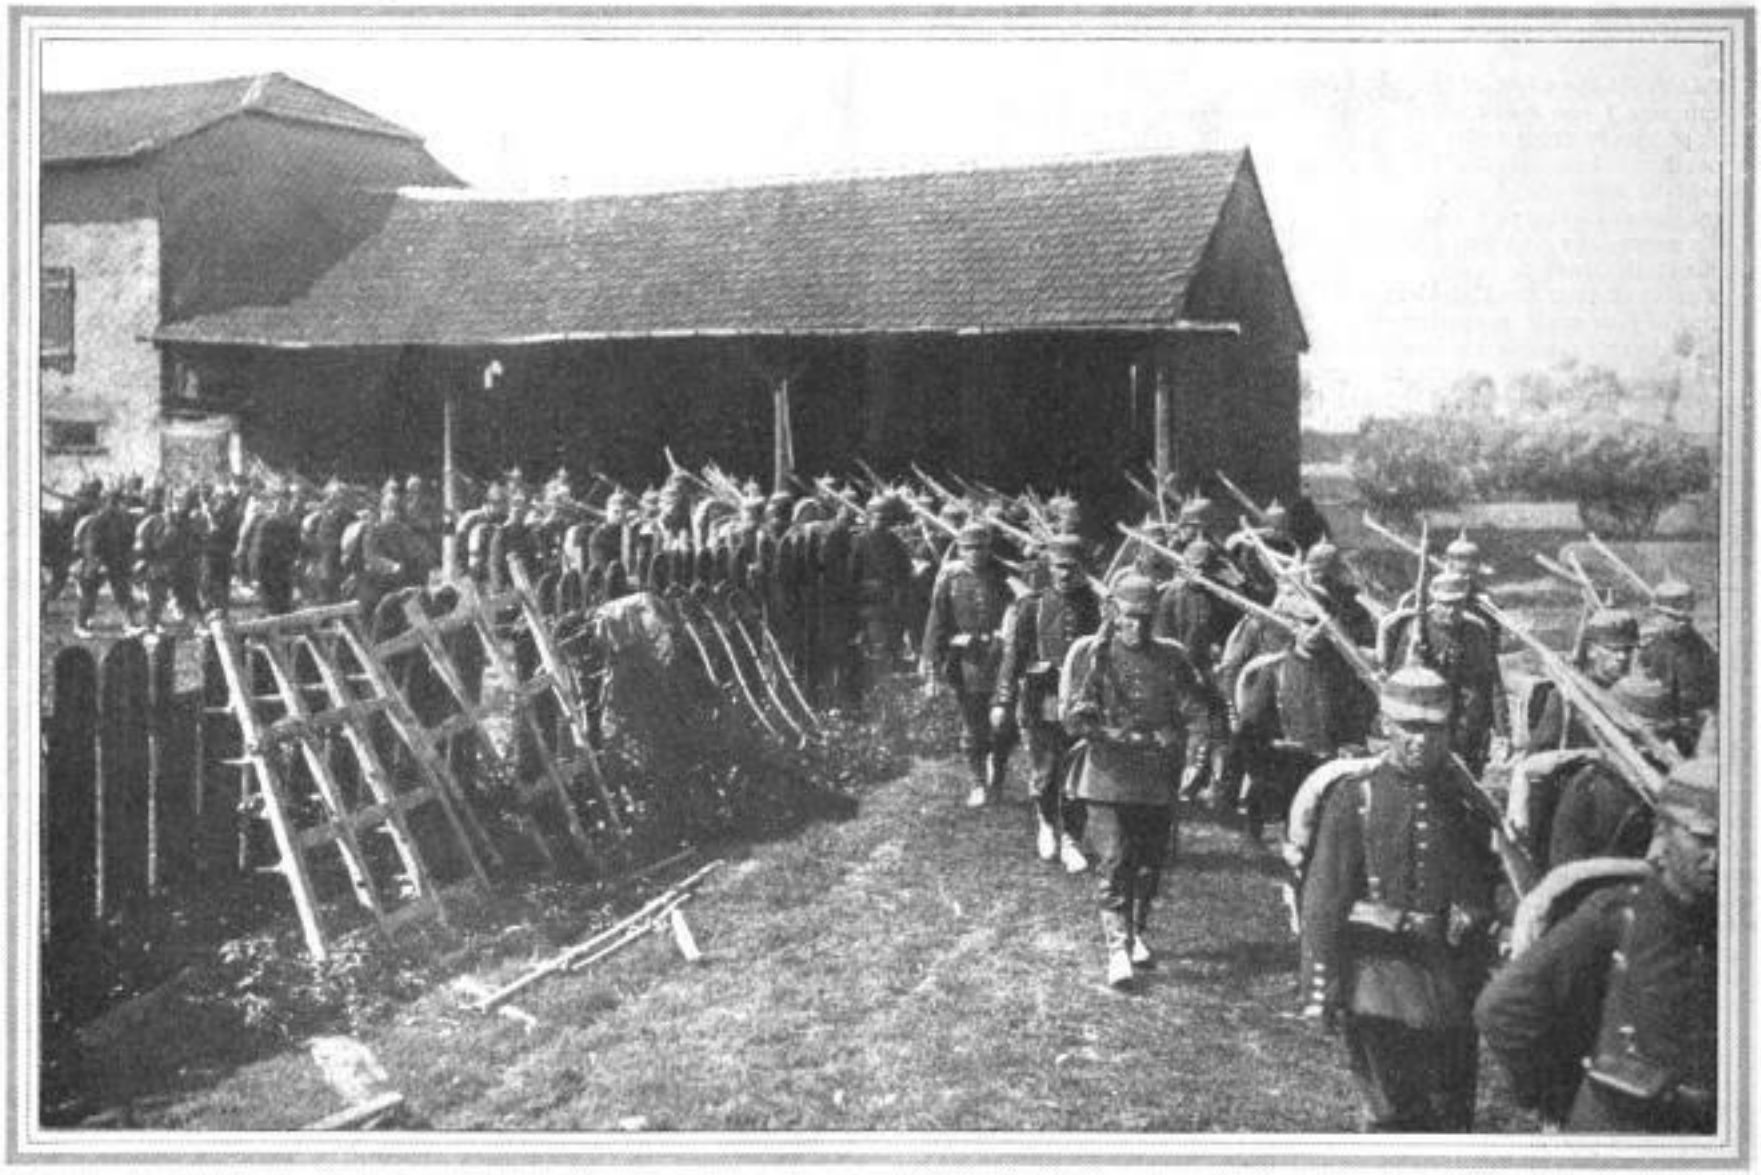
The Yankee Mind

THERE will be a good many readjustments, but every one of them will react to the permanent advantage of American business. There is nothing about them to cause despondency. Take the trade in novelties, for instance. I read the other day a long piece about the hard luck of the importer and how he will inevitably have to go out of business. Not if he is a real live Yankee. Look at it: We imported $7,000,000 worth of toys in 1913—just the one item of toys. What that importer will do is to get some designs of his own, hustle around and find somebody to make them up for him, and then go out after his slice of that $7,000,000 worth of business. People who see calamity ahead seem to think American business men have no adaptive power and no initiative, whereas we are particularly strong in both. The whole history of American business proves that we are the people who are really trained in emergencies and therefore best qualified to meet the very condition that confronts us now.

We are in the position among the nations now that New England was in among the warring States fifty years ago. The labor market was close; the demand for commodities was heavy. There was an immense stimulation put on ingenuity and inventive genius, largely in the direction of automatic or semiautomatic labor-saving machinery to take the place of the workers who had gone to war. In consequence there were more patents issued at Washington during the Civil War than in all the preceding years of our history.

During the fifteen years of the Napoleonic Wars our foreign trade increased over 450 per cent, forging ahead at the rate of $7,000,000 gain a year. It must be remembered, too, that this business was largely in the mere carrying trade. We exported little foodstuffs and manufactures because we were not equipped for it: whereas our equipment as carriers was exceptional. Now it is the other way round. We have an adequate agricultural and industrial development and very little equipment as export carriers.

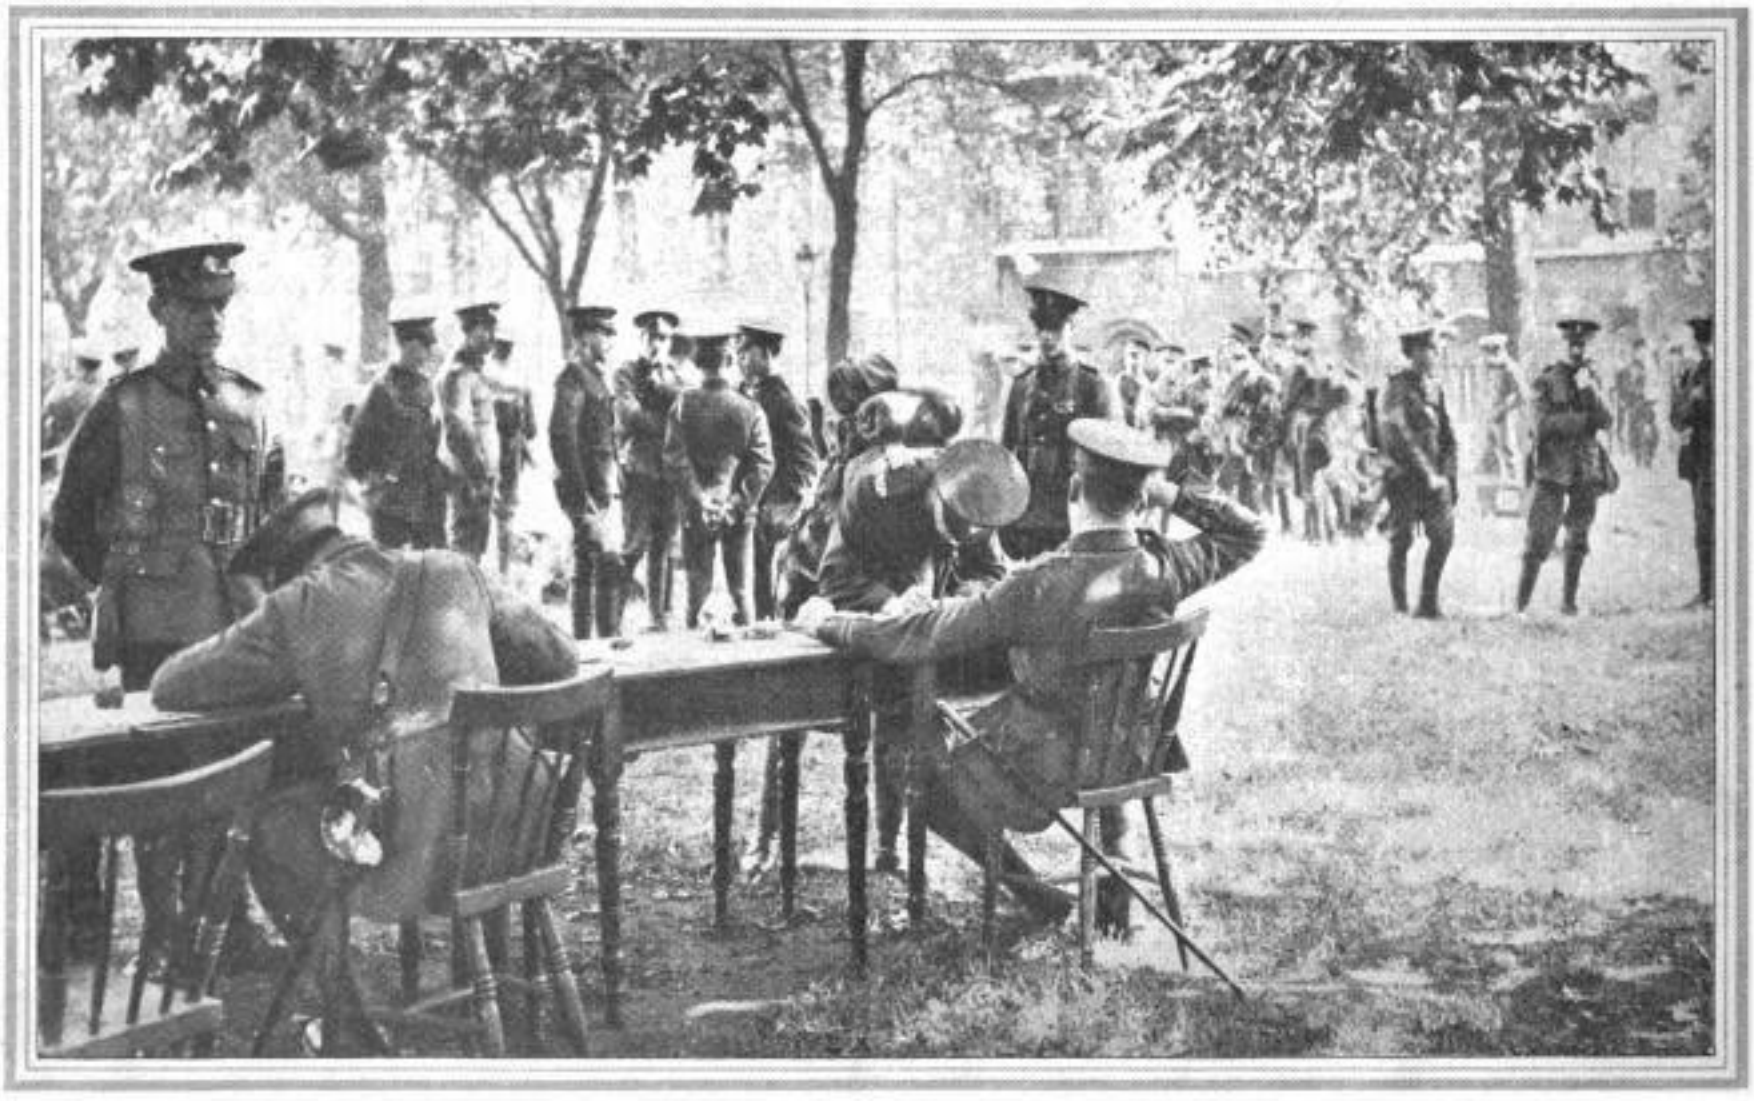
Our Lack of a Merchant Marine



SOME people see in this latter fact an inhibition on prosperity which is not evident to me. How are we going to reap European war prices for our foodstuffs, they ask, if we cannot ship the crops for lack of American carriers?

In my judgment it is even a little better for us if we cannot unload our crops over there too fast. If we do, no doubt we will get fancy prices. But if we cannot ship them and have to keep them here, they will sell at normal prices and keep the cost of our own living well in hand. It is the old story of the two farmers: one sold his corn crop outright, while the other fed his corn to the pigs and then sold the pigs. It is more advantageous, in other words, to dispose of our food products at a cheap rate to feed men who are busy making goods and then sell the goods. Cheap food, plus a tight labor market caused by a big demand, comes pretty near being an economic ideal. So I believe the temporary inhibition on large food-supply shipments will work far more to our advantage than our disadvantage.

Predictions of trouble for certain industries also seem to make the mistake of regarding those industries as set off entirely by themselves and not as affected by a strong derived demand from other industries. An emergency demand for textiles, for instance, of the magnitude that is bound to come from the warring nations' necessities,



(Continued on page 27)

Husbandry Lags and Hunger Stalks in the Wake of Europe's War

THE German infantry, in the photograph above, on the march in Alsace, the scene of much of the hardest fighting in the European war, is only a part of the story. The rest is told by the inanimate objects. The farmer has unhitched his team from the wagon in the barnyard and hurried off to join his regiment without taking time to pitch the load of hay into the barn left. And in his absence the farm becomes a highway for an army, which cares not what it tramples under foot. This farm, like hundreds of thousands of others in Germany, Austria, Servia, Russia, Belgium, England, and France, the seven nations involved as we go to press, is left to the care of women and children and old men. Crops are perishing in the fields from lack of laborers, and Europe is already clamoring for American food products.

ON ITS WAY TO JOIN THE FRANCO-BELGIAN FORCES *the British expeditionary army moved with clockwork precision. The snapshot above was taken as some of the English soldiers were waiting at Westminster Abbey, London, for orders to sail for France. They crossed the channel under close guard of warships. Their arrival was the occasion for an enthusiastic demonstration. The French officers and soldiers and the populace greeted them with cheers for England*

Digitized by Google

—But They Came Too Late to Protect Belgium

THE photograph above, reproduced by COLLIER'S exclusively, shows a part of the English army under General French as it was marching from Havre, just after landing on French soil, to join the other allies at the front. In the large snapshot below is seen a regiment of French infantry, headed by its brass band, passing through a village on the way to General Joffre's battle line. The swiftness with which the French and English forces mobilized has not been questioned, but many close observers of the war are uncertain as to whether the two larger allies did all they could to protect Belgium. French and British military authorities maintain that their armies were held back for strategical reasons, and that in the long run the Belgian sacrifice will prove to have been better, not only for the larger allies, but for Belgium itself.

England's Nightmare—A German Invasion

ONE of the greatest calamities an Englishman can imagine is a German invasion of his country. It almost makes him shudder to think of the Kaiser's forces marching into London as the Prussians marched into Paris in 1871, because he knows that that would be England's crowning humiliation. And to make sure that the Germans are not going to effect a landing at some out-of-the-way point, the Government has placed an especially large number of lookouts along the coast to watch for possible invaders. The man in the oval is stationed on a promontory overlooking the Channel, not far from London. Germany would have to drive the allies from northern France and cripple the French and English navies before the Kaiser would attempt to throw an army across the Channel in an effort to take London or any other part of the United Kingdom. At the hour we go to press German aircraft are the only immediate menace to life and property in England.

A Belgian heralding the German advance

The enthusiasm of Joffre's army as it marched to the front was like that of the Old Guard as it followed Napoleon

Pickups

By Grantland Rice

Hinkey's Assignment

WITHIN the next few days Frank Hinkey will inaugurate the Blue mobilization for 1914.

The Silent One in all his historic football career never faced a harder job. It is up to him to revive the old Yale tradition of victory. He takes charge after several lean Yale years. And beyond him wait Harvard, Princeton, and Washington and Jefferson, with three of the best teams they have ever known—three formidable machines. To say nothing of Colgate and Notre Dame who carry possibilities of power and who are coming to strike hard at any vulnerable spot in sight. It will take a first-class machine to escape at least three defeats—and something more than a first-class machine to roll back Nassau and Cambridge. Both have old revenges to establish from the Hinkey barb buried in their systems over twenty years ago.

And if Hinkey, with the war schedule he has to face, can lift Yale back to the crest, he will be a greater coach than he was an end—and no better end ever repulsed an assault.

The Old Cub Shadow

FOR five campaigns, from 1906 through 1910, the shadow of the old Cub machine fell athwart the Giants.

In 1911 it was thought around Manhattan Isle that this once dreaded shadow had been eliminated for good. When Chance, Tinker, and Evers passed from Chicago ranks in turn, the Cub spell was thought to be ended for good and all.

But there is still a sable section of the old Cub shadow above Giant pennant dreams. Through the closing days of August, the one club snarling at Giant heels—with its hot breath blistering the back of Giant necks—was Boston. And in the ranks the main soul of the Boston uprising was Johnny Evers. Batting with deadly timeliness around .300 and fielding with all his pristine brilliancy, the renowned Trojan, who ten years ago declared an eternal vendetta against the Giants, stood again as one of the main obstacles to New York's success. Outside of Stallings there was no greater factor in Boston's miraculous success. In spite of the many crushing blows that he had received from the mailed fist of Fate, Evers was again happy in the thought that he was able to help harass the leaders, even if not to help in actually crushing them again to earth.

The old Cub shadow had drifted away for a while and shifted its position. After long absence it rose again in a new quarter. But it has still been casting gloom over the sweep of Giant dreams—dreams that embraced a fourth successive pennant with the battle over by September.

The International Summing Up

	Games	won	lost	pct.
John Bull	7	5	2	.714
Uncle Sam	7	2	5	.286

HERE at the end of another vanished summer we are able at last to take up the international summary and break the bitter news.

Accustomed as he was to dine upon Lion's flesh year after year, the famished and startled Eagle has flown to his bleak eyrie to think it over—and plan for revenge.

We all knew that sport, at its best, was a bit uncertain—but we thought there might be a limit. Apparently there isn't.

Out of seven starts our Uncle Samuel winds up with a record of two victories and seven defeats for a percentage of .286—a percentage that even Yanks, Browns, Reds, or Dodgers at their worst would have considered raw.

Out of seven starts, John Bull emerges with five victories and two defeats for a mark of .714—estimable figures even for the Mackmen to shoot at.

And only nine months ago, after a surfeit of triumphs, we were extending deep sympathy to our rivals across the sea and hoping they might brace up sufficiently to make it interesting at least. We beat them at court tennis and at rowing—they beat us at relay racing, golf, polo, boxing, and tennis. Young Jay Gould and the Harvard second crew saved us from total annihilation. And all this in a season where we expected to glide gently along with only a check or two here and there to show that a competition was established in a minor way.

On top of which we have no alibis to offer. In each instance our best was beaten—and our best trained to the hour for the battle ahead. It was not through carelessness nor through overconfidence. No one could have made keener preparation than our Messrs. Travers, Ouimet, Evans, McLoughlin, Williams, Ritchie, or the others submerged by an unexpected landslide.

We merely lacked the material to meet such people as Brookes, Wilding, Captain Cheape, Larry Jenkins, Arnold Jackson, and several others that the British Empire was able to put into the field.

Of the seven leading events, four were fought out here and but three across the water, so even this alibi is denied us.

They came to our shores on four occasions and took away three trophies. We invaded their land three times and achieved but one scalp.

In the three leading internationals—polo, golf, and tennis—we failed to hold a cup. Our main solace was that Mr. McLoughlin, by beating Anthony Wilding and Norman Brookes in 6 sets to 1, proved himself to be the greatest tennis player alive. But that wasn't enough to save the Davis Cup a 12,000-mile journey to rest again under the flickering light of the Southern Cross.

In conclusion it might be whispered that if any country could afford an off-year, it was the United States, and that England is deserving of immense congratulation for emerging so suddenly and swiftly from the rut and fighting her way back again to the top.

Beyond the Score

Who shall say when the Game is done
What man lost and what man won?

Who shall say that the victim fought
With smaller courage for his part?
Who shall say that the victor wrought
With braver soul and finer heart?

Who shall say that the gleaming stars,
Radiant on the winner's scroll,
Will shine more brightly than the scars
Of him who fought to a hopeless goal?

Who shall say when the Game is done
What man lost and what man won?

World Series Chatter

LATE August records show that the Mackmen are batting just a trifle more robustly this season than last. That they are just a trifle steadier in the field. That they are getting just a bit surer pitching. And if needed there is a chance that Jack Coombs will be able to render assistance to Bender and Plank—who have averaged 8 wins out of 10 starts. Outside of which there is every reason in the world for Athletic followers to be intensely depressed over the World Series outcome.

The Next Campaign

JUST how deeply the European war will cut into the international program of sportive competition no man can say. It will certainly produce a lull for some time to come. But when "no braying horn nor screaming fife at dawn shall call to arms" and the feast of vulture and wolf is over, this country will be more than ready to start back after some of its captured trophies.

The United States of America has been on top too long to relish a habitat in second place. At polo, tennis, and golf especially, America will make a determined onslaught. By the time the next date is set we will have a new polo arrangement—with the promise of brilliant aid for Maurice McLoughlin in pursuit of the Davis Cup.

There are young stars coming on along all lines and it isn't likely that America will lack material—nor that she will rest content in second place. Too much victory produces a lack of interest—and of energy. The late campaign will add to the keenness of future internationals—and will produce thrills that were never known before when victory was taken for granted in advance.

The Duffer Exclaims

Conversation is vexation;
A stymie brings a frown;
A putt for a three so startles me
That I seldom get it down.

Considerable Corpse

JUST as the Feds were supposed to be disintegrating and ready to blow apart, they step out and annex Fielder Jones at a $50,000 tax for a three-year term.

The old White Sox leader has carried a number of specialties in his day, but none of them was ever closely associated with a corpse.

Either the Feds have come to stay for a while or their Mr. Gilmore could step out to-morrow and trade John D. Rockefeller a toothpick for a lumber yard.

Short Marches

The favorite Biblical quotation in the Boston camp to-day is said to be this—"The last shall be first."

In summing up Matheweson's eight defeats up through August a keen-eyed critic discovered that he had lost one game to the Cardinals, one to the Braves, and six to the Giants.

The game of war knows but one official score keeper. His name is Vulture.

R. Burns vs. G. Stallings

THE late Mr. Burns may have been a greater poet than Mr. George Stallings of the Boston Braves, but we doubt if he would have made as able a baseball leader.

When harassed by a slump, as we recall the lines, Mr. Burns had about the following to say:

"Och—thou art blest compared with me—
The present only toucheth thee—
But backward now I cast my e'e
On prospects drear;
And forward, though I cannot see,
I guess and fear."

On the first day of July Stallings, in casting his e'e backward, could only look upon fourteen seasons of Boston defeat and disaster. His present complications were even worse—for his club was a hopeless last. Yet, in looking forward, he neither "guessed nor feared." He merely kept on fighting—with the result that the main baseball laurel for 1914 will go to him and his stalwart little clan, regardless of who may win a flag or the big October series.

Such stalwart uprisings as the Braves have furnished are not only good for the game—but for humanity as well. They are shining examples to those buried in the rut—and far out of the reach of fame. They prove that for those willing to fight on, regardless of all odds, it is never too late to start back up the hillside for the forest. They keep from fading out the pennant dream of those in the Game of Life who are tailenders and out of the running. They show that for the entry who refuses to quit, the Promised Land is never out of reach.

France Marches Singing

(Continued from page 6)

guide the "militaires." Reservists bound for Nancy and Bar-le-Duc, this way! For Mézières and Laon, over there! At the gates no one but the mobilized may enter, not even a reporter provided with a "coupe-fil," adequate in ordinary times for a passage through the police lines.

But to-day—NO!!! Paris is under martial law. High atop the station stands the heroic statue of Strasbourg, welcoming the sons of France to her long, long, looked-for deliverance.

In a constant stream the men come up—on foot, in taxicabs and fiacres, in carts and trams and Metro, and all their weeping familles with them. But it is the men who are weeping now as well as the women. That's where I caught the sharp, acrid scent of war's first tragedy.

Paris Is Out of Small Change

I NOTICED Webster pulling out his handkerchief to dry his eyes, and looked. I saw a youth with a purple face and trembling mouth turn at the last moment, tear off a little shoe from his baby, kiss it, kiss it, kiss it, stuff it into his sack—and go. Men were kissing men.

Chocolates were handed over at the last moment, rings plucked off and pressed on lovers' fingers. I saw one stupid-looking bourgeois take out his clasp knife and saw a lock of hair from an old lady's gray head. But there was little time for prolonged adieux: to be late to the rendezvous meant disgrace.

"Send me a pretzel from Berlin!" cried a girl of the streets; she gave a queer laugh, then down her rigid face the tears poured in streams.

Wagonloads of ouvriers drove up with flags, singing. Sharp, bright, spick-and-span officers in blue and red and gold and shapely legs and boots, with coquettish beards and eyeglasses, were very important now; everyone watched them. How languid and elegant they were, how jauntily they tried to conceal their own consplcuousness! Their saber tips clashed on the sidewalk. Was it accidental?

"Have a cigarette?" Webster asked me. I took one. "Got a match?" I looked in my pockets. Not a single one—not even the abominable little sulphur affairs that workmen use. We turned to ask a light of some one—who? No one was smoking. "Funny!" said Webster. So we walked about to find some one from whom to borrow a light.

In all that throng, not one! What did it mean? Simply, that nobody "had the price." Money? Oh, yes. I could have borrowed a hundred francs easily enough? But a sou? Not much. The city was out of small change.

The Wolf Is at the Door

THAT was when we first began to realize what a state of siege meant. Surely, war *is* hell if one cannot buy a package of cigarettes in Paris. But, for most of us, it was virtually true. For days we had begun to feel the stringency. We first heard rumors, then bank notes were refused at the cafés. By the first day of mobilization everyone had become a miser. A fifty-centime piece looked as big as a silver dollar. To have twenty-seven francs was affluence—to have five hundred, but in bills only, was beggary. One hated to buy a paper, much less a drink.

The main question was whether or not we ought to lay in stocks of candles, wine, and sardines.

I met a man from Chicago who had been carrying round twenty one-hundred-franc notes for two days and was still unshaved.

Shutters Go Up

THERE was much talk of the new fractional paper currency, the five and twenty franc notes that have lain so long in the treasury that the blue ink has changed to green. Prepared for such an emergency as this, it was not until the second day of mobilization that its issue was decided upon. We had seen pictures of the bills in the newspapers, but they were still inaccessible. On Monday there was a line of four abreast waiting before the Bank of France, extending all the way round the Palais Royal clear to the Théâtre Français. Men and women spent the night there, holding their places. Well, it is better to go without cigarettes than do that.

It is better even to go without clean collars, to walk across the city, even to go thirsty.

There's little need of money anyway, for the shops are closing rapidly, more and more daily. On the Rue de la Paix the jewelers have removed their precious stones and valuable articles from the windows.

Shutters are going up all over town. Not a restaurant, café, bar, or tobacco shop is open anywhere near the Gare de l'Est even in the daytime.

"A Bas les Allemands!"

BUT it is not only the going away of the men that has caused business to stop. It is not even the scarcity of change. It is also the mobs. No shop with a German sign is now safe during the first days of the reaction against the Teutons.

The crowds that paraded with the tricolor, singing "La Marseillaise" and shouting "To Berlin!" have been augmented by the riffraff of the city, Apaches and hoodlums. More than once they have stopped at a Vienna bakery or a Munich beer saloon and smashed the windows, broken the chairs, upset the tables, and emptied the beer into the street. In the Rue Montmartre a Frenchman named Yarf has reversed the letters and changed his sign to "Fray" to evade the mob.

All over town now, wherever Rhine wines are sold or where Alsatian brands are advertised, one sees on the windows the announcement: "Maison Française," or "The patron is a sergeant of the Territorials and has rejoined his regiment." "Ici, tout, le monde est Française." Indeed, many timid ones are not content with that, nor with the red, white, and blue placards:

"Closed on Account of the Mobilization."

They have even pasted their military papers to the window, in token of loyalty and service; they have pasted up their cer-

The Traveling Salesman

By William Maxwell

ILLUSTRATED BY WALTER J. ENRIGHT

It's queer how much better some hotels look on the pages of the Hotel Guide than they do when you pull the pen out of the potato to write your name in the guest book

HOW easy it is to say "I am managing the traveling force of So and So." Easy to say and it sounds good, too; but it isn't an easy thing to do. In fact, I never saw anyone really manage a force of traveling men.

One of the reasons why it is hard to manage traveling men can be found in a little red book called "The Official Hotel Guide." This book contains the names of most of the hotels in the United States, and a majority of them are unconscious foes to efficiency on the part of their guests as well as remarkable examples of inefficiency themselves. The bad cooking, untidy housekeeping, and general squalor of the average commercial hotel make it difficult for a commercial traveler to maintain constantly the fervid enthusiasm about his house, his goods, and his job that the man who is "managing" him counts on when figuring out the "propositions" that are to be "put acrpss" by the traveler.

A traveling man leaves the home office with fresh samples in his sample case, crisp new bank notes in his pocket for expenses, and the instructions and admonitions of the sales manager at least partially remembered and understood. He is filled with determination to make this trip the biggest one on record. He will show everybody what he can do. Yes, sir, he feels just like tearing up the earth this time. He is brimming over with enthusiasm, energy, determination, self-confidence—and anything else you care to name that a traveling man should brim over with when he starts out on a trip.

Handicaps at the Start-Off

"TACKS-EE-KER, sir?" Yes, why not ride down to the station in a taxi? It won't cost much more than that big imported cigar the boss gave him yesterday. So down to the station he goes in a taxi.

"Couldn't get a lower for me, could you? Well, I guess I'll have to take an upper then." An upper berth and a nice bright light right over his head until midnight; the Junction at five in the morning, with a zealous porter waking him at 4.15; connecting train due to leave the Junction at six; saloons just opening up; cold gray morning; little drink wouldn't go so badly; bad habit to drink before breakfast—but then; say, that new cocktail the sales manager ordered at luncheon yesterday was a pretty tasty drink—wonder if the bartender over there could mix one; exit drummer; so much for the first leg of the trip.

The train proves to be late, but not late enough to permit breakfast uptown at the junction. It finally comes along. There is no dining car, for this kind of a train doesn't pamper its passengers. The candy butcher would think you were trying to "kid" him if you attempted to buy a twenty-five-cent cigar. It's just a plain train without any frills on it. Our traveling man arrives at Brownsville in a drizzling rain. The bus bounces him up to the Central Hotel, where breakfast has nearly run its course. The members of "Within the Law, No. 13 Company" are the only guests left in the dining room. The leading woman looks at him disdainfully and remarks to her companion: "These drummer dumps are fierce, ain't they? Did you taste that coffee? And look at the toast, would you—and the butter—that surely must be goat-milk butter."

It's a Fierce Trip All Round

OUR traveling man doesn't hear the leading woman's comment. He only sees her, and, as he slides into his chair, murmurs to Maggie, the head waitress: "I see you've got some show people," to which Maggie replies, wrinkling her nose scornfully: "Yes, and thank heaven they're goin' to leave on the eleven o'clock train. They're something fierce, them show people."

It's fierce all round. The leading woman was right when she said "drummer dumps" are fierce—at least she was right about some of them. On the other hand, Maggie was right about show people. They get pretty fierce when they go against a fierce drummer dump. People who have lived most of their lives at actors' boarding houses and hotels that print "Steam heat in every room. Special rates to the profession" on the hotel stationery will go up in the air a mile when they get a week of fair to medium, pretty much on the average commercial hotels; but the poor old traveling man is expected to take fifty-two weeks of it, if need be, and never make a murmur. In fact, when he asks for a salary raise, the sales manager is mighty apt to say: "And you must not forget that we are paying your expenses. You're living on the fat of the land at our expense." I know sales managers say that and believe it, for I've said it myself. It's queer how much better some towns look on the map than they do when you meet them face to face, and how much better some hotels look on the pages of the Hotel Guide than they do when you pull the pen out of the potato to write your name in the guest book—no, I mean register your name under the vividly colored date slip furnished by the enterprising manufacturer who imagines that these slips are bringing his product into prominence. I know he is enterprising, but I can't remember his name or his product. Can you?

These Discouraging Hotels

ENOUGH of this. Let us get back to our hero, by this time laboriously excavating with a cloudy spoon the interior of a spongy orange. He is feeling rather seedy. If any comparison can be drawn between a small orange full of large seeds and a traveling man who feels decidedly gone to seed, he is the seedier of the two. He feels, and rightly, that the Junction bartender did not make that cocktail exactly as it was made at the sales manager's club. Instead of whetting the appetite, as any well-connected cocktail is supposed to do, this particular cocktail is exciting premonitions of an untimely headache. The lumpy oatmeal seems more lumpy; the leathery beefsteak more leathery; and the muddy coffee more muddy.

Out in the "office" after breakfast, he moodily lights a cigar and momentarily pauses to examine with feigned interest an ammunition manufacturer's familiar lithograph of a sportsman shooting ducks, and a harvester company's equally familiar calendar illustrating a blood broiler down stage in an Old Homestead costume against a back drop that depicts a wheat field and a binder, with the company's name on it in letters of disproportionate size. He then moves over to a shoe manufacturer's map of the United States, and discovers the interesting geographical fact that Brownsville is located on the right eyebrow of the shoe company's salesman for this particular State.

Seeing Smith

AT 9.30 he starts out to see Smith, his Brownsville customer. He doesn't feel quite so brisk or confident or enthusiastic as he did the day before when he left the sales manager's office. Then his territory was a map containing so many towns and so much possible business. To-day it is merely a collection of places with bad hotels and worse railroad connections. Yesterday Brownsville was a dot on the map and a possible thousand-dollar order. To-day it is an ugly country town that he wants to leave behind him as soon as possible. Maybe he can get through with Smith in time to get away on the eleven o'clock train. Smith never was a very live wire, and there's not much use of springing the sales manager's new scheme on him. Of course it's all right to mention the scheme to Smith, but hardly worth while to take up much time with it. "I'll get his order for what he wants and get out at eleven o'clock, I guess."

Avoiding Waste of Time with Smith

WELL, he made the eleven o'clock train and had a game of pitch with three other salesmen. Nice fellows they were, and all four worked the next town in three hours and got out of it together on the 4.15 train. Two of them had intended to spend a little more time with their customers and wait for the 7.30 train, but it did seem a shame to break up the pitch game. That night they had a real sure enough pitch game, and our man lost seven dollars, but he didn't care much about the loss until the next morning when he got up with a slight headache. His orders for the previous day hadn't been sent in, so he sat down before breakfast and, instead of the comprehensive reports he had intended to send the sales manager, wrote briefly, as follows: "Was too busy last night to send in my daily reports. Inclosed find orders from Smith of Brownsville and Jones of Newtown. Best I could do. They wouldn't consider your new scheme, but I will try it on everybody just as you said. Want to get over the territory as rapidly as possible, so as to keep ahead of Blank & Co.'s man. Will be in Summit Sunday. Change route card accordingly. Haven't had time to make up those new reports on Brownsville and Newtown. As you know, a traveling man doesn't have much time to fill out reports, but will do the best I can."

Communicating with the Home Office

THE sales manager reads the letter and says to himself: "That fellow's a hustler. He's not much on making reports, but I suppose he's right: a traveling man doesn't have much time." It's rather funny how sales managers fall for that "too busy to make reports"

Digitized by Google

idea, inasmuch as most of them have been traveling men themselves.

Getting back to our hero again. Ten days pass, during which, by sundry economies, most of the seven-dollar loss at pitch has been absorbed by the expense account. Scarcely anything else of great moment has occurred, unless the breaking up of the pitch-playing quartet can be so regarded. In a couple of towns the trains ran in such a way as to give our traveling man a good deal of time in each place. In the first he caught up on his reports. In the second, having nothing better to do and having breakfasted uncommonly well (good hotel there), he tackled his customer on the sales manager's new scheme. It took all morning and then two hours more after luncheon to do it, but he finally put the scheme over—which only goes to show, you know, that some merchants will take hold of a sales manager's schemes and some won't.

What Became of the New Scheme

THE hotels got no better: same way about trains; rotten weather, too. Time passed. Cosmopolis for the third Sunday. Gee, a traveling man leads a pretty hard life. Well, anyway, there's always a good bunch Sundaying at Cosmopolis; wonder if that plump little brown-eyed waitress is still there; she certainly was a good fellow.

The sales manager's new scheme? "Oh, I put that over with one fellow, but most of 'em don't seem to take to it, and I don't press 'em very hard. The fact is, for the last two or three days I haven't mentioned it to the trade at all. I'm trying to get over my territory, you know, and get what business there is in sight. Cosmopolis for Sunday? Betcher life."

After a while the sales manager, back in the home office, takes stock of his pet scheme. He folds up the papers and tucks them away. "The boys have even quit referring to it in their reports," he says to himself. "I suppose they don't want to rub it in on me. That scheme apparently was a lemon. Of course the new fellow out in Iowa is doing pretty well with it, but I guess his territory is different from the rest. I'll let him go along as he's doing now, but as far as the other boys are concerned, I guess I can count on them to get all the business there is in sight without any new schemes."

Problems of a Sales Manager

NO, I'm not trying to be funny, and I don't care how many sales managers and traveling salesmen read the foregoing and say "Not me"—or "I." No sir, I don't care what they say. I know that human nature, country hotels, and local trains have wrecked more good sales plans than you can shake a stick at.

Manage traveling men? Anybody can make a traveling man call his laundry by some other name in his expense account. Anybody can make a traveling man fill out route cards and send them in. Anybody can stick tacks in a map and do the other things that tradition ascribes to the management of traveling men, but who ever really managed a force of traveling men?

I have always liked to try to manage travelers, but, then, there are always men who like to play a hard game. I believe in all the modern frills, including maps and tacks and geographically arranged card files with significant colors for the cards, for a sales manager needs to have before him a graphic picture of his territory, just as a general needs campaign maps and the best obtainable information about the opposing forces. However, as they are generally used, the maps, cards, tacks, etc., of a modern sales department probably do not yield a direct return commensurate with the cost of their maintenance; but unless they are very sadly misused, I believe they have a considerable indirect value. For example, a map system properly kept up is a constant accusation of the sales manager. No sales manager nor sales force ever works a territory the way it should be worked; that is impossible, for perfection is never attained in any sales department; but when business is good, sales managers are prone to become self-satisfied, and the worst thing a sales manager can do is to become satisfied with himself and his department. If the true conditions are kept constantly before him in graphic form, no sales manager can ever get in that state of mind. Furthermore, the geographical point of view must be constantly maintained if a sales manager is really going to manage sales and not let sales manage him. A gratifying volume of business does not necessarily signify selling efficiency, but an accurate knowledge of the weak points in the territory and an intelligent and persistent attack on those points is almost certain to bring about increased sales. Among other arguments in favor of the geographical form of attack is the fact that traveling salesmen are sometimes inclined to avoid the towns where their services are needed most and are much disposed to underestimate the importance of small towns, particularly small towns that have bad hotels or poor train service.

The Geographical Attack

THERE was once a time when a certain reaper company had very decidedly the lion's share of the reaper trade. Their binders and mowers were popular with the farmers. They were lenient in their collection methods. They had the pick of the implement dealers for their agents. They seemed as strongly intrenched as a manufacturer of a competitive article could be. Their branch managers were the overlords of the implement business. Their traveling salesmen were envied by the travelers of all the other reaper concerns. Perhaps a part of this envy was occasioned by the fact that most of this particular reaper company's dealers were located in fair-sized towns—"electric-light towns," as they were known twenty years ago. A man who traveled for this reaper concern could on the average stop at better hotels and ride on better trains than the men who worked for the other reaper companies. Since this company had in most cases the best dealer in each of the best towns, the other companies had to take second choice in those towns. One of the other companies finally decided that it would rather have the best dealer in a poor town than the worst dealer in a good town. So the other company commenced to specialize on the small towns, and ultimately it had the electric-light towns hedged about with crossroads dealers. In a good many ways these crossroads dealers did not compare favorably with the dealers in the electric-light towns, but they covered the territory so thoroughly that their efforts gradually brought results, and when both companies merged some ten or twelve years ago each company was doing about the same amount of business.

The sales problems of a reaper manufacturer are, of course, very different from those of a manufacturer of high-priced confectionery or expensive corsets, but the geographical attack has a suitable adaptation for every selling problem.

What Is Up to a Sales Manager

THE geographical attack requires the routing of traveling men—not necessarily prescribing in what order nor upon what days they shall visit certain towns, but at least instructing them as to what towns they are to visit. Some sales managers refrain from doing this, and say in effect: "Our traveling men know more about their respective territories than we do." This is a damaging admission for a sales manager to make. While a traveling man may know more about some things in his territory than the sales manager can know or needs to know, no sales manager should permit himself to know less than his traveling men about the important territorial facts. One reason why a manufacturer who operates through branch offices is usually able to show a higher degree of sales efficiency than the manufacturer who does not is because a branch manager, without conscious effort, acquires a knowledge of his territory that a general sales manager does not get without the most persistent effort, nor retain and make useful without the painstaking compilation and maintenance of convenient and graphic records.

But why, in an article about managing traveling men, should I talk about geographical attack and the mechanics of sales management when the principal problem is a human problem—a very human problem. The average human mind is not very ready in its grasp of the thoughts that emanate from another mind. Even when I agree with your views and indorse your plans, I probably do not more than half comprehend the underlying reasons that have influenced them. Accordingly, when I attempt to carry out your plans, I fall far short of doing and saying all that you had in mind. I may omit to do or say the very thing that would have made your scheme a great success.

Comprehending the Boss

I AM quite sure that not more than one traveling man in ten fully understands what his house is trying to accomplish. This is partly the fault of the traveling man and partly the fault of the sales manager—mostly the sales manager's fault, I think. Of course the traveling man knows that his house wants him "to go out and get the business," but he rarely has that sympathetic understanding of the sales manager's selling schemes that would enable him to put in those finer touches of salesmanship that correspond, for example, with the suppleness of a champion billiardist's wrists or the delicate sensitiveness of a premier jockey's hands. Speaking of billiards in comparison with salesmanship, the attitude of the average traveling man toward salesmanship is a good deal like my own attitude toward billiards. I know that three balls are used in the game, and that if I make one hit each of the other two I thereby score a point, but I have never taken the trouble to study either angle or stroke, and I play no better game to-day than I did ten years ago. The average traveling salesman takes the same pains to comprehend the true inwardness of his sales manager's plans as I have taken to master the true inwardness of billiards. This is partly because scarcely anybody can exactly understand the ideas of anybody else, but principally because scarcely anybody really cares very much about the ideas of anybody else.

When you explain your ideas to me you must do one of three things to get me to make an intelligent and sincere effort to carry them out. You must

His orders for the previous day hadn't been sent in, so he sat down before breakfast and wrote briefly

Elgin Wonder Tales

The Horse That Fell at Klipriver Drift

A CORRESPONDENT of the London "Daily Mail" writes: "In 1900 I purchased an Elgin in Capetown. I carried it with me during the Boer War, and it was put out of action by the fall of my horse at Klipriver Drift. I had it restored to order in Johannesburg, *and it kept perfect time.* I have carried my

ELGIN Watch

in the Arctic Circle, and it has been a faithful friend on or about the Equator. It dropped overboard in the river Congo, was fished up by a diver, and suffered no ill effects. It was broken again by a fall in Tangiers, at the time Raisuli captured Mr. Perdicaris, and was restored at Gibraltar."

This is proof positive of the Elgin's accuracy and service, and illustrates the Elgin system of interchangeable parts which make quick repair possible by any jeweler—anywhere.

either make me think they are my own ideas or you must intimidate me, or you must be very, very convincing—more convincing than I have ever yet known any sales manager to be.

Now we have arrived at the kernel of the matter, and if there is any value in this article, here it is: Sales managers issue instructions and counsel with the fatuous belief that such instructions and counsel are studied, pondered on, understood, and heartily indorsed by the traveling men who receive them. Not once in ten times is this the case. A traveling man may take any one of a dozen different views when he receives instructions from h's manager. Here are some of them: (1) "I'm always willing to follow instructions from the house, but I know these won't work in my territory, and I'll soon convince the house of that." (2) "What does this fellow know of conditions in my territory; this may be all right in other territories, but not in mine." (3) "I guess this guy thinks I don't know how to handle my trade—wants to tell me just how to do it." (4) "What do you know about that—trying to tell me—me who was in this business before he was out of grammar school." (5) "I'm going to quit—if I can get another job." (6) "That's what I've been doing right along—not just that way, but the same thing; thinks he can tell me something, does he?"

Pointers for Sales Managers

THESE are some of the things traveling men say when they get your letters of instruction, Mr. Sales Manager. Now and then a new man or some chap who has taken a fancy to you will say, "That's a good idea," but you must figure that he probably doesn't more than half understand what your idea is, and if he does, his enthusiasm and interest are not likely to survive a week of bad hotels and bad train service.

When I am managing traveling salesmen I try to remember that I am managing a bunch of the finest fellows in the world, who are up against a mighty tough game. I try to remember that they know a lot about the business—more about some phases of it than I do. I am willing to let them help me form the sales policies of the company. I like to get them all together and "choose up" sides, like an old-fashioned "spell-down" contest. One side represents the customers' side—the buying side; the other side represents our side—the selling side. Then we go to work and collaborate on a complete selling plan. The fellows on the buyers' side try to spike or blow up the guns of the fellows on the selling side. Sometimes we spend a whole day on a single point, but before we finally decide what it is best to do and say on that point, everyone—both the buyers and sellers—must agree that the thing we have decided on is the very best thing to do and say. Point by point we work up a complete sales plan with the exact detail and dialogue of the approach and all of the subsequent steps of a sale. When it is finished, each of the traveling men solemnly subscribes to the fact that it is his plan—not mine—and fares forth to slay the trade with a weapon of his own fashioning. Even so, I have heard that some of the solemn subscribers later went back on their solemn oaths and said it was all—well, you know, what kind of foolishness. However, that doesn't matter, for I have used this method for several years, and, on the whole, it has been successful, although, after an interval, country hotels and local trains will reduce almost to zero the effectiveness of any selling plan that can be devised.

With reference to the second method of getting traveling men to embrace unreservedly a sales manager's schemes, viz., scaring them into it, I must confess that I have never tried that plan. When a traveling man doesn't do what you want him to do, and persists in his obstinacy, he ought to be dismissed, and his dismissal probably has a good effect on his fellows, but I have never been able to bring myself to dismiss anyone in a way to accomplish that effect in the fullest degree, which is one reason why I am not a good sales manager.

As to being convincing with a traveling man—well, if you can be that, you don't need to read this or any other article on the management of traveling men, and probably haven't.

The Hair

By ANTHONY EUWER

Oh, the ways of the Hair they are various,
Its career not a little precarious;
Ofttimes we may note
One alone and remote,
Then again it may be quite gregarious.

Expense Accounts

I AM practically through. I could talk about expense accounts, I suppose, but that is a delicate subject. It is a noteworthy fact that most of the men who now sit at sales managers' desks are men whose expense accounts in their traveling days were extremely moderate. I don't know of any sales manager who was ever an expense-account grafter—or who even tried to "break even" when he was on the road. I know I wasn't smart enough to do it, and when I was called in to the home office to take a position there, I actually didn't know enough to charge up my railroad and sleeping-car fare.

I thought my job ended while I was on the road and that my new job didn't commence until I arrived at the home office. Can you beat it?

A Final Word or Two

I HAVE written quite a lot about the management of traveling men. There is a lot more I should like to write, but it scarcely has a place here. I believe in letters of a certain sort ahead of the travelers and letters of another sort—to which they contribute—behind them, but that again gets into the mechanics of the game, so I shall have to profess that the foregoing is all I know about the broad principles of the very difficult science of really and truly managing traveling men—except one thing: go easy on the "bawl-outs"; if possible, temper with some praise every letter of criticism: if that isn't possible, it's pretty nearly time for something stronger than criticism.

Brickbats & Bouquets

MY private opinion is insignificant, coming from a high-school student. But it is my spontaneous approval of your attitude toward the present Administration. Your viewpoint is broad and generous. That is, to give a man credit for what he does, even though he be a Democrat. Reading your editorial page and your "Comment on Congress" is a profitable pleasure, worth far more than the purchase price. If ever a magazine deserved to earn dividends it is COLLIER'S. EDWARD M. FORD.

✚

Whatever faults it may have, COLLIER'S has done a clean thing in dealing with quackery and kindred evils, and it deserves praise for its support of Woodrow Wilson, even if the support is tinged with bitterness.—Temple (Tex.) *Mirror*.

✚

GLENDIVE, MONT.

Permit a word of commendation from a reader for the last dozen years. In COLLIER'S I have found a correlation of all those processes which go to make American life what it is to-day. In modern life we are constantly living in a "new" era of criticism and experiment. As the years pass the ideas are gradually changed, but all according to some definite plan of the universe. No other magazine that I know of so reaches every stratum of the masses as does COLLIER'S. You can go out into the sheep camps of this State, and there find the lonely herders eagerly scanning their latest copies of your magazine. Similarly, you might drop into the First National Bank of this city and find the president of it deeply engrossed in some story or leading editorial. There seems to be something to interest every phase of humanity. Your pages are indeed a wonderful assortment of the moods of life as we live it.

The editorials are superb. I generally turn to them first and leave the fiction for a later perusal. FOREST GAINES.

✚

RICHMOND, VA.

I want to express to you my high estimate and appreciation of the great work you are doing in all reform measures. You are exposing the terrible curse of strong drink, fake medicine, and other immoral measures from week to week with great power.

I consider your periodical the strongest national support we have, which should be taken and read religiously by all good citizens. We should have it in our homes, in easy access to our children. Such literature is sound, clean, and wholesome.

I greatly enjoy COLLIER'S contents from week to week, and as long as you advocate the principles that you have been and now are advocating, I do not expect to allow my subscription to expire.

May God speed you in this great work.
R. S. BARMOUR.

COLLIER'S WEEKLY, which prides itself on its etherealized English . . . editorially criticized "An example of poor English composed and printed by students of the University of Oregon." On the same page and in the leading editorial of the current number is this sentence: "Senators and Congressmen who differ from him (President Wilson) and from us, on the Mexican embroglio, have just as good consciences."—Bellingham (Wash.) *Herald*.

✚

AUSTIN, TEX.

Your editorial pages are worth twice the price you ask for the paper.
R. W. DICKARD.

✚

BERKELEY, CAL.

I indict you for circulating through the United States mails some of the most amateurish and puerile fiction that I have ever read in a national magazine of your standing. . . . I should always take COLLIER'S for its splendidly "forward-looking" policies and its magnificent editorials and special features even if it did not have any fiction at all.
T. R. BARRETT.

Apperson Light "Four-40"—**$1485**

Demand This Car

Built by Elmer and Edgar Apperson, for the past twenty-two years designers and manufacturers of quality cars for exclusive buyers.

Men Buy It—Because of its honest construction, rugged strength, simple design, excessive power, light weight and operative economy.

Women Select It—Because of its style, beauty, refinement of detail, simple control, ease of riding, luxurious comfort and graceful proportions.

Builders for Particular People

are Elmer and Edgar Apperson. These two men, long experienced in building high priced motor cars for those who demand the best, have an ability not usually found in Motor-car Manufacturers. Designing and building motor cars always for those who want nothing but the best has trained them to a quality production. Every Apperson car is built under the direct personal supervision of both of the brothers. As a result, their product has come to be known as

"The Car Apart"—

or the "Different" Car as so many call it after having an opportunity to try it out. It steers differently, rides differently, looks differently—IS different from any other automobile. The reason for the difference is found in the fact that the Apperson represents the life work of two great men. Pride in the product bearing the Apperson name has meant more to these men than money. During all their

22 Years Making Motor Cars

Elmer and Edgar Apperson have been true to their ideals. It is only within the past few years they have ever considered building popular priced cars. Finally in response to the demands of Apperson enthusiasts they have this year—for 1915—decided to build a line of cars suitable for all classes. In building as they have, heretofore, nothing but the highest priced cars they have had to cater to the women of the foremost families of America and Europe. As a result in their cars

The Springs and Cushions Are Designed for a Woman's Comfort

The cushions are of the proper thickness and made of springs of the right construction. The backs of the seats are made to fit the backs of the ladies of the household. By paying attention to these minor but very important details the Apperson Brothers have built a car in which you can motor across the country with the comfort of the Pullman.

The Famous Apperson Motor

known on two continents to be the best and most powerful gasoline engine for its size ever built, is a marvel of engineering skill. Fitted to it is the smoothest operating clutch ever made for motor cars. This is the Apperson metal clutch, patented by Elmer Apperson and used exclusively upon Apperson cars. It is practically indestructible. The electric lighting and starting system is the separate unit type. No complications are possible. For ignition, high tension Magneto only, is furnished in a well-known German make. These things appeal to men and the

Style, Beauty and Refinement

built into the Apperson are attractive to the ladies. The gracefully tapering hood connecting as it does, the new V shaped radiator with the full streamline body, gives to the car a stylish distinctiveness. Only the most modern accessories, in accord with the design of the car, are used.

In short, Elmer and Edgar Apperson have built a "High Priced Car" to sell at a Popular Price.

HAVOLINE OIL

For that long run—
Carry a can in your Car
"It makes a difference"

in the efficiency of your engine, by decreasing its frictional loss and enabling it to develop maximum power. In this manner it enhances the general serviceability and endurance of the motor and greatly lessens upkeep cost.

It forms a lubricating "cushion" of equal thickness between the moving metals—thus preserving them against the rigid endurance test of the long run. Here's why this "cushion" retains its life and serviceability:

Havoline Oil is made only from *one uniform base crude* of tested quality.

It is manufactured by our "special process" which leaves the *individual molecules unscathed*, retaining the "rubber-ball" springness of the oil. Nevertheless it is entirely freed from floating carbon and impurities.

Buy the Oil in the Blue Can
2 Five-Gallon Cans to the Case.

Tell us your make and we'll tell you your grade.

Ask your garageman or write us direct for testimonials of *Havoline* users who own your make of car. Write for the "Lubrican" our booklet on Lubrication.

France Marches Singing

(Continued from page 21)

tificate of qualification as French electors. Some signs are more pathetic. "Henri Raymond and his two sons have joined their regiments and have left for the mobilization. Long live the French Alsace-Lorraine! This café will be used as an auxiliary hospital by the Red Cross."

Of course it is not merely hoodlumism that has wrecked the shops and beaten up occasional blue-eyed, light-haired foreigners. Rumors spread thick and fast. That first week of mobilization even milk depots were wrecked, and milk so scarce, too, that the poor were refused more than three sous worth at a time. By a curious bit of good luck I happened on the real cause of the destruction of the "Maggi" milk depots, numerous all over Paris. The Maggi is, or is supposed to be, a German company: at least, it was first successful in Germany. I was at the Prefecture of Police, trying for a "*compe-fil*," or police pass, and overheard the Division Commissionaire talking excitedly at the telephone to his chief.

"They are saying that Maggi has left France with twenty millions of gold!" was the burden of his communication.

Destructive Mothers

ALREADY the report, true or untrue, had spread over the city. From woman to woman the story went. "What? I have two sick children, and they refuse me milk for them? They shut up their shops just when we are all alone and with little money? Oh, those pigs of Germans!" Down the streets of the quarter the protest ran, growing stronger, more definite, more excited and angry, till the men were aroused and swarmed with the women to the Maggi depots.

There was a big, fat woman, so I was told, a very Amazon, who led the mob. She waved a ferocious club. "*A bas les Allemands!*" (Down with the Germans!) she yelled, and plunged into an inflammatory harangue. With the chorus of bloodthirsty mothers it was like a devil's mass before that door for fifteen minutes before anything happened. Passers-by hardly knew what was the trouble until her club went up. Then, bang! smash! at the windows, and the door was kicked in. The crowd of furies swarmed into the shop and proceeded to smash it up. Slam went the tin cans of milk amid the shouts and curses of the very people who needed it most.

I reached the Maggi station in the Rue de Seine half an hour after it was demolished. Not a scrap of glass as big as a monocle was left in the sashes. Inside, chairs, tables, dishes, topsy-turvy on the floor, and in the street a puddle of white from gutter to gutter, with two cats placidly lapping it up.

All over Paris the official placards begin to bloom—from the President of the Council, from the President of France, from the Prefect of Police, from all officials and sundry, beseeching the citizens to "Keep calm! Keep cool!" "The nation is rallying: your women and children will be taken care of! Let us have no parties, but make one common cause against the enemy. *Vive la France!*" But what are these reassurances compared with the news from the embassies, through the War Office, via the newspapers? Germany is alone against the whole of an outraged Europe!

The Efficient French

THE newspapers were selling like hot cakes now, but it was a queer cent's worth you got for a sou. Already, in view of the famine of paper, they had begun to reduce their size. "La Liberté," "Le Journal," all the more important papers, were down to a single sheet. "La Presse" is but a half sheet, a Lilliputian journal. As good as the rest, however, for what we need—the truth, and so easy to read! All contain the same news. Only one war correspondent is permitted with the army, the Havas Syndicate representative, and his reports are rigidly censored. All other information comes through the Ministry of War. No doubt American correspondents are hurrying over to "do" the war. Why, they will have trouble even in getting into Paris.

For this is a war that is being conducted on strictly business methods. There is a good efficiency engineer directing things. The reprovisionment of Paris is being attended to scientifically. You can buy just so much potatoes, so much meat. Prices are regulated, destitute families are provided for, transportation will soon be in working order again. But at present we are in a state of siege, and it is hard to get out of the city.

So, curiously enough, it is left for the strangers in Paris to suffer the first inconveniences of war: the foreigners, and, as they are furthest away from home, above all, the Americans.

Pity the Tourist

I CAME across two young American school-teachers in the Avenue de l'Opéra. They had saved $500 apiece for their trip and had arranged it so that they would, in normal conditions, arrive in Liverpool for their boat home with about $5 apiece left. They were washing their own underwear and waists and stockings, and ate at the cheapest cafés. That is, they had eaten two days ago. What would become of them? There are thousands in as bad a fix: millionaires who can't get credit, ladies of fashion who have had to walk from one end of the city to the other in slippers, have sat up all night for three days. The bankers have stopped payment. Checks are worth nothing. So, like a storm, burst the wrath of the American tourists that attacked the embassy.

I went over to the banquet room of the Grand Hotel to have a look at my countrymen in a mass meeting of protest. I didn't at all care to get out of the country myself, but, Lord, how *they* did! The original Mr. Pip was there with his daughters, and dozens more like him. Women, women, and women, all worried, all pretty, all perfectly willing to get acquainted with anyone who spoke American. Two committees were drawing up elaborate, long-winded resolutions behind closed doors while the impatient crowd awaited an answer to the prime question: "What are you going to do about ME?" I roamed and listened.

"I shouldn't be surprised if she had got out of Germany, though . . . Yes, my wife's in Switzerland: only safe place; she can stay there forever, for all I . . . No, I get a cable every two hours regular. 'Why no answer from my cable of yesterday? Why no answer to my cable of this morning?' And here I am ruining myself sending message after message. . . . Yes, Cook is charging 25 per cent premium for cashing. . . . Paid more for a passage on the *La France* than a good automobile would have cost. . . . Come down to my hotel, then, they'll trust you. . . . Say, we Americans ought to get together and take care of these women: why, if we only would . . . I say, cable Wilson there's fifty thousand Democrats stranded here, and he'll get busy. . . . Only four francs left, but, well, I've simply *got* to get that hatpin. . . . Say, ain't that Senator Mulkins? Why, *he'll* be able to do something, sure! . . . Well, if that little peach in green can stand it, *I'm* in no hurry!" and so on.

Yes, it's lucky for the American tourist these days if he knows of a good little peach in green! For, apart from such a flirtation, there is little to do. Paris, gay Paris, has dwindled to the status of a little country town. In a Middle-Western town, though, one can at least go to the "depot" to see the train come in. You can't do even that now in Paris.

All the shops are closed except a few of the big stores, which are almost empty, with clerks reading the war news, and those little places that sell provisions. Think of being in Paris and not being able to buy anything! No museums are open, no theatres. The cafés are shut by law at eight o'clock at night. After that one's only entertainment is to go down to some of the bridges over the Seine and watch the searchlights playing about the Eiffel Tower, looking for flying machines from Germany trying to drop a bomb into the wireless establishment.

Dilemma

HOW shall we Americans escape from this drizzling, mournful city? It is hard to find a cab—impossible to get trunks moved. There are no trains leaving anyway, so *that* question is settled. The next question is, How shall we *stay*? For the hotels are closing, too! Cooks and waiters and clerks, yes, and the fat, placid proprietor, too, is gone or is just going to the war. We shall have to stay on the street.

But no, we can't even stay on the

Digitized by Google

street without a "permis de séjour." Foreigners are given two days in which to comply with the formalities—get a passport from their consul, a certificate of residence from their hotel or pension, and then have the papers examined and annotated by the police.

How Could They Know?

ALL this, however, is easier said than done. I went to the United States Consul's office—what an office! Up three flights of stairs in the Avenue de l'Opéra. Yes, up three flights of stairs, if you can get up. But you can't. Positively not, unless you walk, climb, crowd, push past the mass of pretty girls and old ladies, fussy gentlemen, young men, aunts, grocers, millionaires, and professors from Chicago, Milwaukee, St. Paul, and points West and South. The only thing is to sit down on the stairs, as these young ladies do, and talk it over. Every fifteen minutes the crowd moves up another step. Mental arithmetic proves that it will take at least four hours to get inside and find out what in thunder the Consul General, the Vice Consul, and his assistant Consuls are doing to take so interminably long. Suddenly there is a commotion on the landing above. A large black satin-headed lady has fainted! She is handed down to the concierge, and whisky is given her by a man with a cropped mustache whom she will never see again.

On the stairs worldly-wise young girls, traveling alone, discuss the situation in a businesslike manner, and prepare to hold the fort till midnight. But not I.

There are three good rules for the American tourist: 1. Ask three different officials what time your train starts. 2. Don't be afraid to tip anybody if you want favors. 3. Use your common sense in preference to all advice, even this. I acted on Rules Nos. 2 and 3. Descending, I succeeded in bribing the concierge to let her doubting husband take me upstairs on one of the little domesticated hand elevators Paris enjoys. It cost only a franc—and a twinge of conscience as to the actual importance of my errand, about which I had been so very glib in my American-French way.

At any rate, I got in at last and received, not a beautiful engraved passport, but a miserable purple typewritten sheet certifying that I was an American citizen. How they knew I was I don't know. The stenographer who typed my name in the blank was so confused and tired with writing names for twenty hours that he actually spelled mine right for the first time in years!

She Was from Valparaiso, Ind.

AT the Bureau de Police of my quarter such tactics were impossible. You can't fool much with martial law: tips are useless here, too—you must do what you're told. So I waited a while on the sidewalk, receiving gratuitous lessons in every European language. Negroes, Chinamen, Poles, English women, Russians, and Italians stood, massed, on that narrow sidewalk all day long. The Americans did not.

"I'm from Valparaiso, Ind.," a tall young lady with glasses finally announced to her English-speaking friends, "and I'm happy to say that God, in His infinite wisdom, endowed me with a small bunch of common sense. This informs me that when I want anything of anybody I have to work for it and perhaps wait for it. But when anyone wants anything of *me*, *they* have to wait or else give me a decent show to give it to them. I'm in no hurry to leave Paris, and I don't propose to stand like dumb-driven cattle at the pasture gate waiting to be milked. I'll stay till exactly twelve-thirty and then I go to lunch. God save the Commonwealth of Indiana." And at twelve-thirty, go she did.

The rest stayed. They stayed through sun, through shine, and through rain. It rained cats and dogs, too, that day, believe me! At five I walked leisurely to the bureau and obtained my permit to breath the air of Paris.

The Pressure on Food

THE air of Paris! Every day it rains, every day more shops close, every day the food grows poorer. The chocolate grows thinner day by day. At dinner we have steerage steaks. The little pats of butter on your heavy bread (no *petits pains* now) grow fewer and fewer. And yet no soldiers on the streets, no drums, no music, no crowds, for crowds are not permitted. It is a strange, quiet, dull, uncomfortable, mournful place of women and old men.

To-day Clementine came to me—I'm in a pension now, the Foyot has closed. "I must go on the fifteenth," she said. "They can't even pay me my thirty francs a month. What shall I do?"

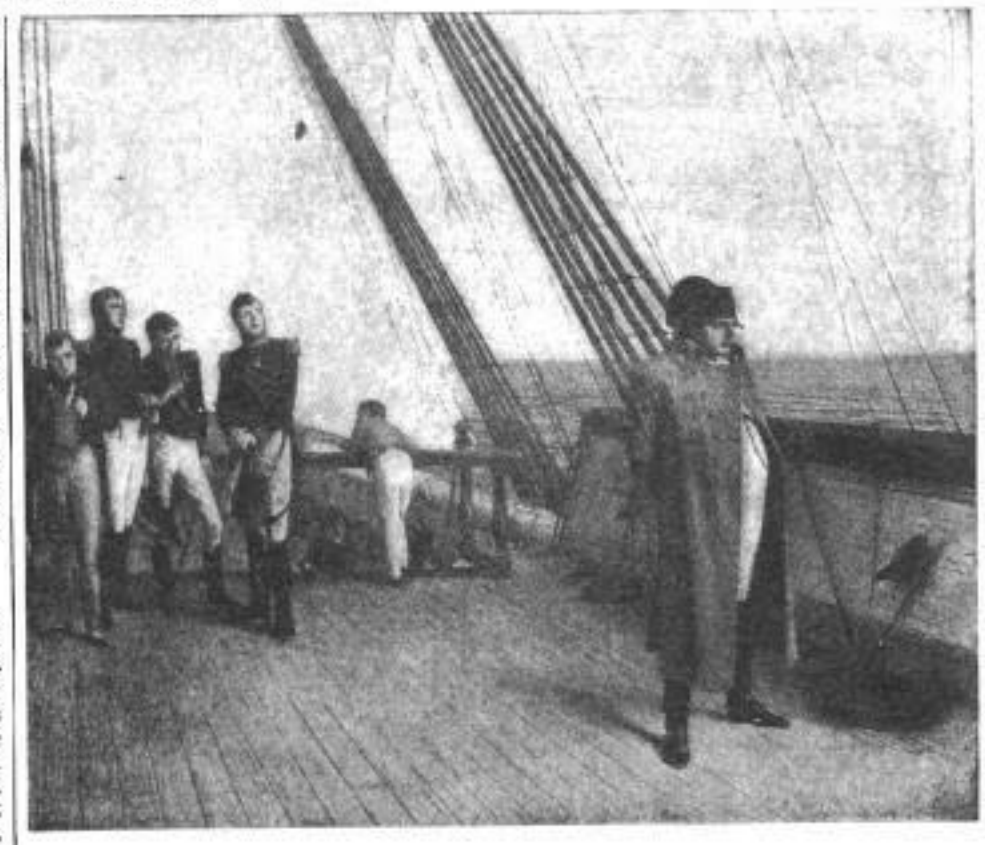
What shall she do, indeed? What will ten thousand mothers, wives, and sisters do? Not even steerage steaks for them! No need for the police to inspect *their* bags at the market; no danger of *their* buying more than they are allowed, getting up and going for it at five-thirty in the morning, to get there before all is sold. The Department of Public Assistance must soon take care of them.

Will They Return Victorious?

WHAT will happen, no one knows. No one will know until the fourteen days of the mobilization are completed, till the autobuses come back from the front, till the old men of France come into Paris to take the places of the young men gone to the army. Then things will settle down, or there will be a new order. All will be arranged, for the war is being run like a business. And meanwhile it rains, rains, rains, rains, rains.

But of one thing every man and every woman of France is certain. We shall not have to wait a year for another "fourteenth of July" for another more splendid, more glorious Independence Day! The whole civilized world is with us: our fight is the fight for humanity! And when our victorious troops *do* return there will be a greater feast day than Paris has ever seen—a feast of youth and song, of love and kisses. Yes, I have seen kisses wanton and kisses of despair. What will the kisses be when the youth of France come marching back again, to restore the gayety of Paris? May I be here to see! *Vive la France!*

The Business Man's Opportunity



Continued from page 17

plus our own, plus the warring nations' export markets (South America, Oceanica, the Orient), is bound to make a strong normal demand, and more, for belting, for packing, for babbitt, for machinery, for parts—the derived demand in this line alone will be felt powerfully at the end of ramifications into a hundred other established industries. I confess I cannot at this moment think of a manufacturing industry that seems likely to miss enough effect of this derived demand to put it below normal.

In fact, it seems to me that we had better keep an eye on our present equipment. I doubt (this is only an opinion and I do not speak with certainty), I seriously doubt, whether it is adequate. Certainly we have no surplus stocks—we have no spare stuff to dump, and we must do some lively going before we get any. Certainly, also, there has been no pressure on production these past two years. I think it very likely, therefore, that in that period there has been no extraordinary outlay on equipment. We know this is true of the railroads and they are usually a pretty good gauge. If I am right in this conjecture, the machinery manufacturers will realize it in a hurry. In addition to equipment, we ought also to consider the labor market. If America has to care for her European competitors' demands, supply their export market, and look after her own home trade, she will need fully as good a supply of labor, at least, as she is likely to find available.

Changes in Our Labor Market

THERE will be an important cessation of immigration from the war area, and a slight exodus, probably, as well, of aliens with citizenship in the countries involved, going home to join the armies. It seems highly probable to me that as much as 2 per cent of the male working population of the United States, or about 900,000 workers, would be affected by these causes. In this case we will see a great stimulation of the invention and manufacture of automatic machinery. This situation will be helped, too, by the high price of labor. The reason why the United States has always led in the development of labor-saving machinery is because we have always had to deal with

Just a Century Ago All Europe Was In Arms Against *Him*—

At thirty-six Napoleon had conquered Europe. He had forced his way from a petty officer's rank to the command of a continent. The seeds of the present European war were sown in his meteoric career.

Have you ever read an interesting popular account of the life of the "Man of Destiny"?

Do you know why Holland and Belgium were organized as neutral states after the battle of Waterloo?

Do you know how the Grand Duchy of Luxemburg came to be?

These questions and 500,000 others are answered in the new history, written for the modern busy men—

The Lodge History of Nations

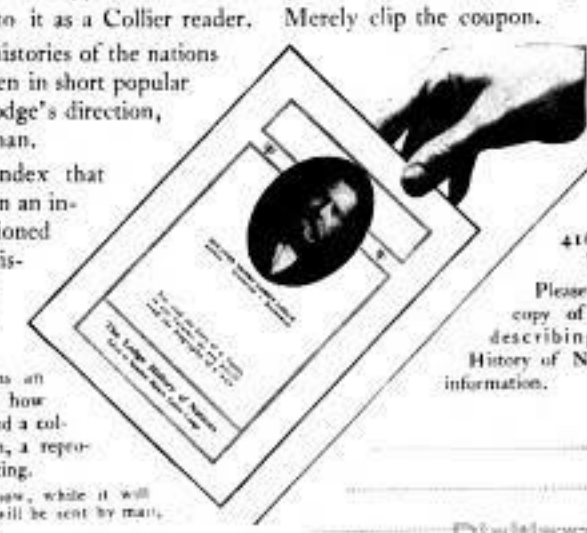
"The story of each nation in a single volume like the biography of a man"

To-day, while every edition of the newspapers is centering your interest on Europe, you can begin to master—in a few pleasant moments each evening—the whole stirring history of the great European nations.

A year from to-day you will really know those nations—their past struggles, their geography, their resources and strength.

Now, while your interest is stirred, is the time to acquire that knowledge of history which is the surest mark of a really well-read man. Now is the time to cultivate in your children that love of historical study that helps to success.

Your Copy of This Free History Booklet is Waiting



We are holding your copy of this free history booklet awaiting your request. You are entitled to it as a Collier reader. Merely clip the coupon.

It tells how the histories of the nations have at last been written in short popular style, under Senator Lodge's direction, for the busy modern man.

It tells of the index that enables you to locate in an instant any place mentioned in the newspaper dispatches or any historical personage to whom they refer.

The booklet contains an essay by Senator Lodge on how to read history profitably, and a colored frontispiece illustration, a reproduction of a historical painting.

Ask for your copy now, while it will mean so much to you. It will be sent by mail, free; merely clip the coupon.

P. F. COLLIER & SON

"He lives down on the river road, in the shabby, weather-beaten house on the left. You can't miss it."

Shabby and weather-beaten! A striking landmark, no doubt. The porter at the railroad station didn't mean to give the place a black eye, but that is what he did. Too bad the owner hadn't used

Dutch Boy White Lead

mixed with Dutch Boy linseed oil and tinting colors. Then the directions might have been, "That fine looking house on the left." There's nothing like timely white-leading to enhance the value of buildings and keep them a credit to the neighborhood.

Write for our Paint Adviser No. 711—a group of helps, Free

NATIONAL LEAD COMPANY

New York, Buffalo (John T. Lewis & Bros Co., Philadelphia), Boston, Chicago, Cincinnati, San Francisco, Cleveland, St. Louis (National Lead & Oil Co., Pittsburgh)

high-priced labor. In countries where labor is cheap the stimulation to economize it is absent. But here, as a result of this war, it seems inevitable that there should be a great deal of new business for machinery manufacturers, and particularly for those who handle devices or services for increasing organization efficiency.

Machinery in Place of Men

THIS condition will be heightened, also, in case there is any considerable exportation of foodstuffs with a consequent expansion of agriculture. This is an added reason—this effect on the labor market—for us to be willing to ship foodstuffs slowly. Industrial wages are always regulated by agricultural wages. There is always a large supply of marginal low-grade labor which will swing into agriculture or swing into industry according to the existing rate of wages. If agricultural wages are higher, the manufacturer will find himself with fewer of this class of labor to depend on, so all the more energetically he must seek the aid of automatic machinery and all the higher he must raise his organization efficiency to make up the deficit. And in his ingenuity and long-practiced ability in this line the American business man has an immense reserve power for the task of handling Europe's largest markets on top of a brisk home trade and in the face of the tight labor market.

The Danger of Losing Our Heads

BUT the American business man's situation, wonderfully favorable as it is, has specific dangers, first of which is perhaps the temptation to overexpansion. We must not get inflated ideas of a permanent market from a situation that is abnormal and temporary and be led to tie up too many of our assets in permanent improvements for handling unusual volumes of business. We must do exactly what we would in any opportunity to increase our sales—study the market, study *what* demands are coming to this country, determine what share we are individually to get, what the chances are of making that demand permanent, and then go ahead strongly and conservatively on the basis of that knowledge, bringing ourselves up to a maximum of efficiency in production, distribution, and organization.

Another very serious danger lurking in this situation is the temptation to neglect the good will of normal American customers. It will be very easy for us to be stampeded and lose our heads. As emergency orders come piling in, the pressure of production at temporarily attractive prices may easily lessen our distributing efforts at home. We must remember, first, last, and always, that the long-time market is here, and that the fundamental principle of business wisdom is to serve that market first. Neglect of this policy spells disaster. I can see a $200,000 emergency order breaking up many a business, and the competitors who didn't get the big order swimming on and swimming through because they kept the good will of their long-time market at home.

Our Permanent Foreign Trade

ALL the emergency demand set up by this war is not going to stay with us, but we can keep a good deal of it by proper management. The war offers an excellent chance to build permanent business relationships where we were heretofore unknown. A great many opportunities in foreign trade will come to us—they must do so, for there is no place else for them to go. Very well—let us try to keep them all. If we do we will lose them all. We have the chance to take our pick. Let us do that. Let us pick out among all these opportunities those which may be made permanent to the best advantage, and then stick close to those. Let us do by them just as their former exporters did in terms of credit, style of goods, packing, shipment, and in every way give them the service they have been accustomed to and as much better as they want and we can make it. This is the way to turn the present emergency to permanent advantage, and by so doing—not trying to do too much, but doing what we undertake a little better than it was done by the foreign business men who preceded us in the market—we will get and permanently hold a very large share of the world's business.

The Muscle Builder for Dogs

Feed your dog well and it will serve you better. A food that supplies all the necessary elements is

Champion Dog Biscuit

It is made of clean, sweet meat, cereals and flour perfectly blended—no waste products used, no preservatives—it is a clean, wholesome food that will keep dogs healthy, vigorous and in good coat.

Miss Baldwin's

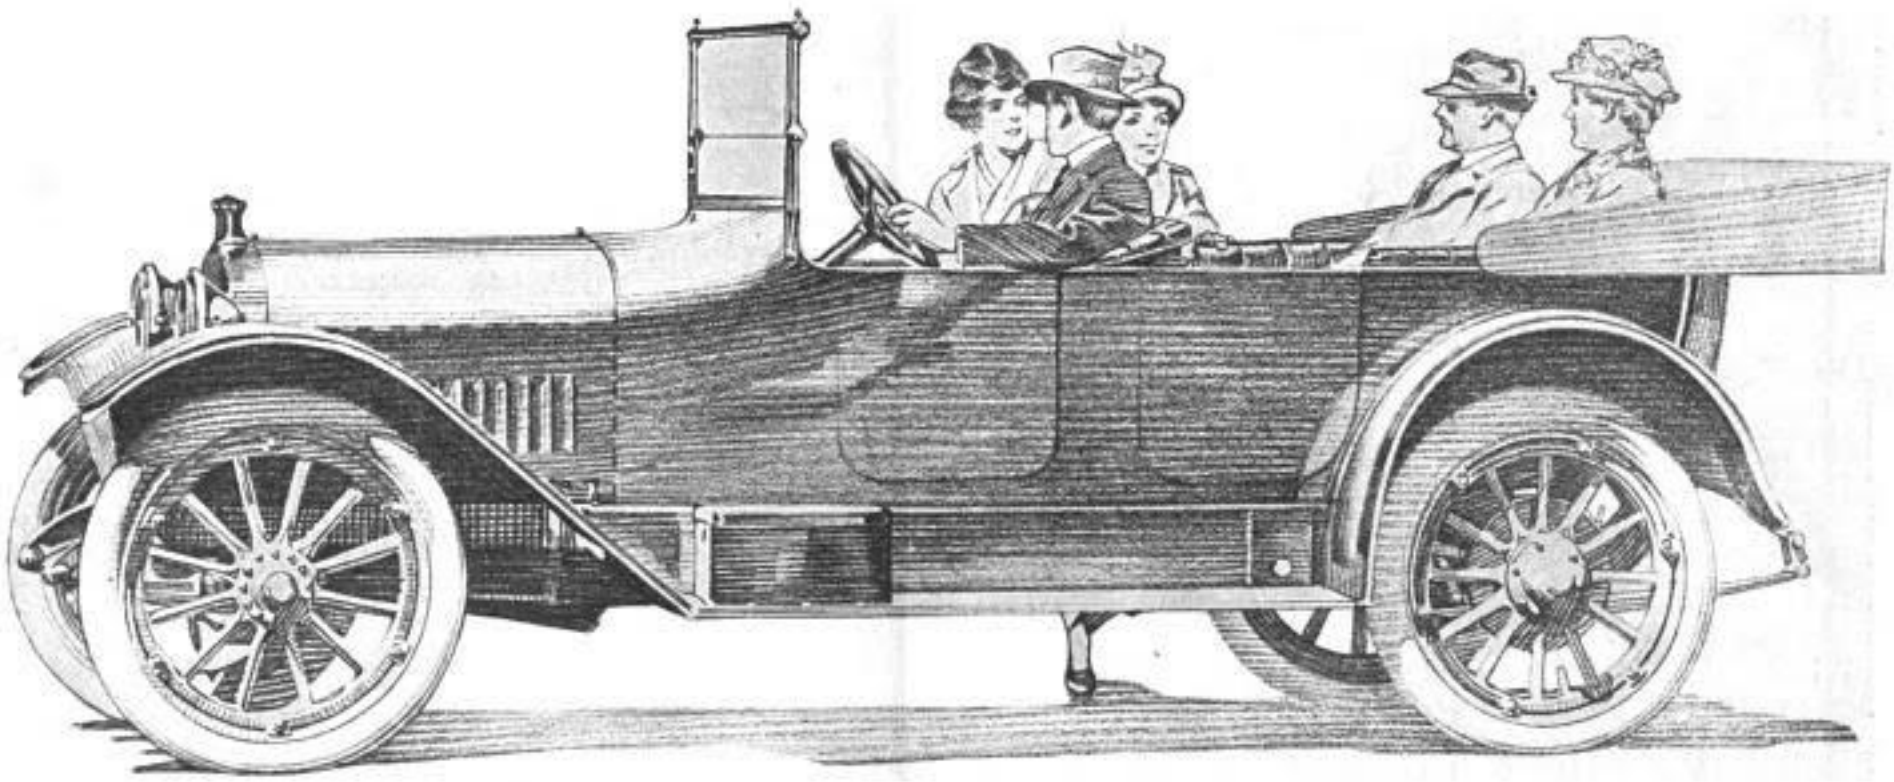
Bealby

[Concluded from page 13]

Across his dominions ran three footpaths, and one of these led to the public elementary school. That he should have to maintain this latter—and if he did not keep it in good order the children spread out and made parallel tracks among his cultivations—seemed to him a thing almost intolerably unjust. He mended it with cinders, acetylene refuse, which he believed and hoped to be thoroughly bad for boots, and a peculiarly slimy, chalky clay, and he put on a board at each end, "Keep to the footpaths. Trespassers will be prosecuted, by Order," which he painted himself to save expense when he was confined indoors by the influenza. Still more unjust it would be, he felt, for him to spend money upon effective fencing, and he could find no fencing cheap enough and ugly enough and painful enough and impossible enough to express his feelings in the matter. Every day the children streamed to and fro, marking how his fruits ripened and his produce became more esculent. And other people pursued these tracks, many. Mr. Benshaw was convinced, went to and fro through his orderly crops who had no business whatever, no honest business, to pass that way. Either, he concluded, they did it to annoy him or they did it to injure him. This continual invasion aroused in Mr. Benshaw all that stern anger against unrighteousness latent in our race which more than any other single force has made America and the Empire what they are to-day. Once already he had been robbed—a raid upon his raspberries—and he felt convinced that at any time he might be robbed again. He had made representations to the local authorities to get the footpath closed, but in vain. They defended themselves with the paltry excuse that the children would then have to go nearly a mile round to the school.

IT was not only the tyranny of these footpaths that offended Mr. Benshaw's highly developed sense of individual liberty. All round his rather straggling dominions his neighbors displayed an ungenerous indisposition to maintain their fences to his satisfaction. In one or two places, in abandonment of his clear rights in the matter, he had at his own expense supplemented these lax defenses with light barbed-wire defenses. But it was not a very satisfactory sort of barbed wire. He wanted barbed wire with extra spurs like a fighting cock; he wanted barbed wire that would start out after nightfall and attack passers-by. This boundary trouble was universal; in a way it was worse than the footpaths which after all only affected the Cage Fields where his strawberries grew. Except for the yard and garden walls of Macculium and Schocks and that side, there was not really a satisfactory foot of inclosure all round Mr. Benshaw. On the one side rats and people's dogs and scratching cats came in, on the other side rabbits. The rabbits were intolerable, and recently there had been a rise of nearly thirty per cent in the price of wire netting.

MR. BENSHAW wanted to hurt rabbits; he did not want simply to kill them; he wanted so to kill them as to put the fear of death into the burrows. He wanted to kill them so that scared little furry survivors, with their tails as white as ghosts, would go lolloping home and say: "I say, you chaps, we'd better shift out of this. We're up against a Strong, Determined Man. . . ."



I have made this lengthy statement of Mr. Benshaw's economic and moral difficulties in order that the reader should understand the peculiar tension that already existed upon this side of Caymminster. It has been necessary to do so now because in a few seconds there will be no further opportunity for such preparations. There had been trouble, I may add very lustily, about the shooting of Mr. Benshaw's gun; a shower of small shot had fallen out of the twilight upon the umbrella and basket of old Mrs. Frobisher. And only a week ago an unsympathetic bench, after a hearing of over an hour and in the face of overwhelming evidence, had refused to convict little Lucy Mumby, aged eleven, of stealing fruit from Mr. Benshaw's fields. She had been caught red-handed. . . .

1915 Hupmobile

Car of the American Family

$1200

Complete

For the third time the Hupp Motor Car Company has produced a car which will prove immeasurably superior, we believe, to any that assumes to compete with it.

The first Hupmobile 20 made for itself, and held against all rivalry, an immense following, at home and abroad.

The "32" put the Hupmobile into another class, and surpassed the "20" in world-wide popularity.

This new Hupmobile bids fair to eclipse them both, as the very utmost a motorist can desire.

A highly specialized, individualized, Hupmobilized motor car, which gives you, we believe, more service and comfort for your money than you can find if you comb the market a dozen times over.

Listen to the details:

Specifications

More Power

Motor, 3⅛-inch bore by 5½-inch stroke; cylinders cast en bloc, with water jacket space between barrels; valves 1½-inch clear diameter, mushroom tappets, with special shape cams, very quiet; valve spring chamber closed by oil-tight cover, so that contacts are made in an oil bath. New shape combustion chamber, larger valves and larger cylinder bore produce more power. Multiple disc clutch, with thirteen 13-inch plates.

New Type Carburetor

Horizontal type bolted directly to cylinder block. Gas passage between cylinders, so that intake manifold is heated its entire length, assuring complete vaporization of even the heaviest gasoline.

Improved Oiling

A system already highly efficient made still better. Pressure feed from flywheel to main bearings and connecting rod bearings; cylinder walls lubricated by mist from crankshaft.

Modern Ignition

Ignition from storage battery, with automatic spark advance. Type rapidly being adopted by progressive engineers.

Single Unit Electrical System

Generator and starting motor combined, driven by silent chain from front end of crankshaft. Supplies current for starting, ignition and lighting. Makes motor non-stallable. Westinghouse 12-volt system.

Longer Wheelbase; More Room

Wheelbase, 119 inches; tires, 34 by 4 inches. Roomy five-passenger body; 2 inches more leg-room in front, 7 inches more in tonneau; full tufted upholstery; concealed door hinges, flush handles. Front springs, 37 inches long, practically flat; rear springs, semi-elliptic, 52 inches long, swung under axle; springs self-oiling. Brakes, 14 inches in diameter.

Left Steer, Center Control

Steering wheel at left; gear change and hand brake levers at driver's right.

Model 32

Complete with electric starter and lights, demountable rims, oversize tires, 33x4; tire carrier at rear, **$1050**

With regular equipment of top, windshield, gas lamps, etc., but without special equipment noted above, $950. Prices, f.o.b. Detroit.

Price in Canada, $1250, f. o. b. Windsor, including electrical and other special equipment noted above.

Speedometer, starting and lighting switches mounted flush in center of cowl board. Speedometer drive from transmission.

Non-Glare Dimmer Headlights

Hupmobile design. Upper half of headlight glass corrugated. Kills reflector glare, complying with many city ordinances and giving full illumination on road. One bulb in headlights, dimmed at will through resistance in switch. No side-lamps.

Equipment and Other Details

16-gallon gasoline tank in cowl; rain-vision windshield, fixed uprights, lower half adjustable for ventilation. One-man type top, attached to windshield. Crowned fenders, with flat edge and without beading. Tail lamp exclusive Hupmobile design, illuminates license plate and entire width of road for considerable distance behind car. Non-skid tires on rear; demountable rims; carrier at rear for spare rim and tire. Lighting and ignition switches controlled by Yale locks. Speedometer. Robe rail, foot rail and cocoa mat in tonneau. Color: blue-black with maroon running gear.

Price, f. o. b. Detroit, includes complete equipment.

Price in Canada $1400, f. o. b. Windsor, with complete equipment.

Improvements

Longer wheelbase
More room
Improved body
Improved upholstery
More power
Larger bore
Larger valves
Better carburetion
Improved combustion chamber
Special quiet cams
Valve tappets operating in oil
Improved motor lubrication
13 clutch plates
Intake manifold water jacketed
New type radiator
Improved steering
Easier clutch operation
Improved starting and lighting
Non-stallable motor
Improved ignition
Left drive
Larger pedal pads
Rear springs semi-elliptic
Longer front springs
Springs self-lubricating
Larger wheels
Larger gasoline tank
One-man type top
New windshield
Transmission speedometer drive
Lock on ignition and lighting switches
Automatic spark advance
Throttle lever on steering wheel
Ignition and lighting switches on cowl board
Exclusive non-glare dimmer headlights
Exclusive design tail light
Improved axle shaft and hub connection
Non-skid rear tires
Illuminated speedometer
Linoleum-covered running boards
New style top cover
New side curtains to swing open with doors
Crowned fenders
Heavier flywheel
14-inch brakes
Concealed hinges
Flush door handles inside

Hupp Motor Car Company, 1230 Milwaukee Ave., Detroit, Mich.

Is your Water Supply Satisfactory?

This FREE BOOK will help solve your problem

It tells how to choose and install the pumping equipment best suited to your requirements—insuring you unfailing service at economical operation. It tells exactly what each system will do and how much it will cost.

DAYTON WATER SYSTEMS
FOR HOMES FACTORIES AND FARMS

We build every practical type of hand or power driven pumping system, for deep or shallow wells, open or private tank, for city or country homes, factories, farms, greenhouses, country clubs or hospitals.

Dayton Systems have fewer parts—run more evenly and quietly—require less attention and cost less per year of service than any other. Their compact arrangement makes installation easy and inexpensive.

Modernize your home with a "Dayton System". Send today for your copy of the free book "Water Supply".

From Daybreak to Breakfast

Concluded from page 11

much thus: Delano say that Honorable Al Cornell has come back—oh, shy, and to pick out some good clothes—*good* clothes—and give you in haste—no time—quick fit guess at—many question some other day. Bring all—shoes, shirt, hat—to new building up street in one half hour. Hustle!" The last word came out by itself—dynamic. "Hey, Brockett!"

Brockett entered the alcove as Togo hurried away. He surveyed the two—then glanced at the prostrate figure.

"Yes, dear Brockett, pray attend," put in Welsh with earnestness, "we don't know exactly what we're doing, my young friend and I, but—" Delano interrupted, indicating the dirty heap of flotsam with his patent-leather toe.

"Brockett," he said, "that's Al Cornell—our Uncle Al!"

In his turn the bartender lowered his bulky figure to make sure. Rising, he scratched his head.

"You're right," he said simply; "say, I'm sorry I didn't recognize him last night. He slipped in when I first came on and I sold him two quarts of booze, I wasn't noticing—took him for an ordinary 'bo. Reckon he got around both quarts. If I'd a spotted him—"

"Just as well," broke in Delano, "he'd 've landed it anyway. As it is, we're probably the only ones who are wise to his being in town. And Al is going to be one of these fellows who come back. You'll see him do it."

"If one might ask details," murmured Welsh; "not expressing doubt, you know—"

Delano turned with sparkling eyes.

"Details!" he cried. "Don't you get the idea yet? There isn't a soul on the street at this hour. Our style of people have just turned in—the other sort aren't up. And Step-and-a-Half always disappears at ten."

"Don't speak lightly of our police force," begged Welsh; "he has the rheumatism and the night air is awful bad for it. He told me so himself."

There came a noise at the door. "Cart at gate," advised Togo, beaming at them.

"Good enough!" approved Delano. "I'm glad you came around that way. Hurry, fellows! Everybody lift a pound and we'll soon have the old scout in his carriage. Hike-O, Togo-Ito, and get your junk together. Twenty minutes to travel on. Brockett, hand me that old horse blanket from behind Simon's desk. We'll put it over him. Gentlemen all—Simon'll be glad! If anybody should meet you, Welsh, you can say that you're moving—cheaper to move in the small hours than to pay rent. Brockett, cheer up. You're no pallbearer. This is a different proposition. Your white is in perfect accord."

THEY were out of the gate by now, and the helpless one safely in his cart. Brockett was wiping a purple face on a snowy apron.

"What's that you said?" gurgled Welsh in a horrified whisper. "You don't mean that I'm to push this cart up the street?"

"Not at all, not at all," soothed Delano. "Straight up this alley—that's two-thirds of the way—then down to the corner and there you are. I'll be on the spot almost as soon as you."

"Quitter!" accused Welsh. "For why don't you lend a hand, you blamed one-man Sunshine Club?"

"Perhaps it is nothing," retorted Delano with justifiable indignation, "perhaps it is nothing to rout out our conservative Real Estate and Loans, old Benight, grouch and sulks and all; and tickle him with his lost treasure until he signs a three year lease to that cigar stand and hands over the key. I bet he spits at me like a cross kitty at first. But, however he hates the sight of me—oh, such beautiful yellow money! He'll succumb, never fear. The quicker in that I'm going to give him the balance of what I took from him as a bonus for swift action. He won't let that get by. On the side, I'll have squared up that joker trick; but that's a detail. This is going to be a fairy tale for true. Uncle Al will wake up just where he left off before the fire. It's too bad he can't have a bath—"

"Oh, I daresay I can attend to that, if you wish," interrupted Welsh bitterly, as he poised the handle of the cart preparatory to starting; "anything in the line of duty."

"Don't get smart," counseled Delano. "After we unload him in his new location and Togo-Ito is at work you can race back and Brockett'll load you up with Simon's extra stock of cigars. There'll be enough to make a showing. We'll put his copy of the lease in his pocket with a small roll to start on and the key to the shebang to keep it company—then pull the door shut. But for Heaven's sake, stow your gab and drive along. See that light beyond the sand hills? Night's about done."

IT was eight in the morning. The sun was glaring hotly on the white alkali of the unpaved street, giving fair warning of greater savagery at noon. Al Cornell was slowly wiping the top of a show case with a new chamois skin. The show case formed part of the front wall of a shallow niche abutting on a street corner. At intervals the little man would pause and peer wonderingly, almost tenderly at the boxes of cigars in the cases, mystification in his kindly, haggard eyes. After a time he left the shining, speckless glass and, sitting upon the edge of a narrow cot behind and almost out of sight, unfolded a crackling paper on his knees, reading it and the attached receipt for the tenth time. While reading, he absently fingered a moist twist of bills with one hand and smoothed the silver gray hair on his temples with the other. A raindrop, miraculous in view of the ceiling overhead, splashed on the paper.

"It couldn't be anyone else," he whispered. "There's not another soul in this whole God's country would take the trouble—but it's just the way he'd go about it. Don't I remember other times—I can't ever tell him—how I feel—he's not that kind— But I can do one thing—I'll always have a box of Sargassos ready and waiting—out of sight—just for him— Maybe he'll know by that—I think he'll know—"

He wiped his eyes hastily on a very new coat sleeve at the sharp metallic rap of a coin on the glass.

"Mornin' friend," said Delano glumly. "What'll you smoke, Welsh?"

"Give me one of them," said Welsh. "Fair looking lady on the box cover, even if she has poor taste as to tints. These cigars are all alike, though—hum."

"You ought to stock up, Al," reproved Delano, as he helped himself liberally; "get some good brands. Why not?"

"I'm—I'm going to—" hesitated the object of criticism. "Delano—Delano—I'll have some Sargassos for you—for you—" He stopped short. Delano eyed him keenly.

"You're looking fagged," he said. "Pull your door shut and come over and have a drink."

The gray-haired man on the other side of the show case looked down the road to where a diminutive whirlwind was scooping a spiral of white dust into the clear air. "No," he said quietly, "I'm on the wagon for good, boys. It's all right I don't know—guess I didn't sleep very well. I—I had—a bad dream."

"So did I," chimed in Welsh: "the darndest dream! Thought I was pushing a handcart up a dark alley!"

"Oh, dry up!" broke in Delano roughly. "Let's go to breakfast. So long, Al."

The Deaf Hear

Write for our big introductory offer on the latest scientific hearing instrument, the perfected 1914 Model

New 8-Tone Mears Ear Phone

EIGHT times as efficient, EIGHT times as powerful, EIGHT times as convenient, EIGHT times as helpful as our former One-Tone model, and with double the efficiency of our well known 4-tone. Eight different sound adjustments, instantly changed by a touch of the finger.

Free Trial *Sold only direct from our New York office on trial at our expense.* Test it for 10 days. It costs nothing if you do not want to keep it. Easy monthly payments if you wish, at the lowest net laboratory price direct to you. Send for this offer and the Mears Booklet—FREE.

Mears Ear Phone Co., Dept. 2346, 45 West 34th Street, New York.

"America will now be in the unique position of being compelled to conserve its human resources. Seventeen million men have been withdrawn from the industrial activities of Europe and five billion dollars will be destroyed if the war lasts more than a month. The United States will be asked to supply the goods for South America and the Far East which formerly came from Europe. Germany and Great Britain annually export more than five billion dollars' worth of commodities. This year they cannot supply these goods. Can we?

"American industries are confronted with a stupendous task. The markets of the world open up to us. Congress will take care of the merchant marine, and, by the cooperation of American bankers, the finances of the country. Will our business men take the opportunity afforded them?"

(Printers' Ink—Aug. 19, 1914.)

Mandy's Methods

Concluded from page 10

"I'm—ugh," he repeated more encouragingly, for he clung to the pleasing idea of the "comp'ny" to his declining years. "Well," he concluded as he whipped up "ole Moll," "I 'low we might's well git it over with to-day so we won't have to come to town agin a-purpose. We'll go to a justice o' peace—what say? My name's Tweester."

"Well, I don't know," Mandy reconsidered, carefully touching a red wax head to see if the heat was melting out its color. "I don't know—ye got yer life assured?"

"Why—er—no, madam," Tweester answered with some asperity, suspicion dampening his enthusiasm; he warily asked: "Did yer other man—all them others—did they have their lives insured?"

Mandy returned with a withering look, and innocently exclaimed:

"Their lives insured! Do ye think I'd be so uncommon pilticlar about the next un if they'd amounted to enough to 'a' kep' their remainin's out o' the potter's field and not 'a' left their widders an' children po'pers?"

SHE allowed her indignation a moment's time to cool before explaining:

"You see I'm fair to middlin' young, and you are older. The chanees is that if I marry ye I'll be a widder agin! An' fer jus' that there reason you kin see to ut that ye don't leave me a-crawlin' out o' the little end o' the horn agin."

Tweester nodded his sympathy, but only shuffled his feet and urged "ole Moll" on by a click of the lines across her back. Mandy caught the silent sympathy and pulling at his shabby coat sleeve smiled up at him.

"Will ye do that fer me? Will ye? It's only a-askin' to be kep' out o' the poorhouse when ye're gone. It's that, er ye don't git me?"

"Waal," he drawled at length, "hein's ye're set on havin' it thataway, I promise."

"You'll have it all did 'fore we git married?"

"I'll have it all drawed up 'fore we drive back hum."

"We—el, guess that'll do," consented Mandy, although not quite satisfied with waiting. "You kin drive to the justice o' peace, then."

When they finally reached the city, he bought her a bridal bonnet and white slippers and they were married. They spent one long, sunny summer day sightseeing in the city, and Mandy remarked, as she blew out the gas at the hotel that night:

"Well, John Tweester, this here's bin the splendidest weddin' tower I ever had!" And the bridegroom was so gratified that he did not notice she had blown out the gas.

THE next morning Mandy was miraculously brought to life, but she returned to Jonathan Creek wearing widow's weeds and a crêpe veil draped from the silver blue bridal bonnet with its red roses and wheat trimming. She drove back alone with the shambly horse and rattly carriage. She felt like to burst with a great lump of importance which grew larger and larger as, nearing home, she dwelt upon the sensation which she was about to usher into the dead little town. The bitter pill of being again a "widder" was sweet-coated—"looket what a noted woman it's made o' me," she reflected as she jogged along. "I've brung fame to Jonathan Creek; writ up with big headin's about a fair bride a-blowin' out the light. Wisht I'd knowed it was so dangerous, though, I'd 'a' yanked the hul thing right off an' throwed it out the winder." Her mind again reverted to the advantages she was bringing into her native town. "Fame, yes, an' wealth—fine horse and carriage, an' ten dollars left out o' the price o' the fun'ral. And these" (most important of all), "these cloze; couldn't find a higher priceter bunnet in the country." She urged the horse to a faster trot, impatient to be the object of the town's curiosity—and envy. When she finally sauntered the nag through Jonathan Creek's main thoroughfare, it was with a feeling of triumph, a supercilious pride over those who had always looked down on her.

She felt rich in her newly acquired possessions; the horse, the carriage, the ten dollars, and her mind didn't wander long from the silver blue wedding bonnet with the mourning veil.

Retaliation was sweet; when the blacksmith at the edge of town casually looked up as she passed, Mandy's head tilted upward and she saw him not. But she listened. The musical clang of the anvil ceased and she heard low voices, and out of the tail of her eye glimpsed men gesticulating mysteriously, taking minute inventory of "The wealth" as she paraded slowly. Bill Brown looked absently out of his store door; he stumbled over loose warped boards as he ran to rouse the barkeeper in the next building.

"Abe—by gum—come quick, here comes the widder bride! Call yer ole woman!"

Evidently they had read the city papers and were expecting something unusual. Mandy stolidly moved down the gathering line, her head firmly supported by the thought of that three-columned newspaper article "with my new name, Mis' Tweester, all mixed in and my picter!"

No one ventured the customary condescending "Hello, Mandy," and she passed on confirmed in her own importance. When the six descendants sighted the turnout, they made one mad, screaming, fighting race to reach the "widder bride," Memorie-Ann, gaining on Marg'et-Seleuer—was rudely grabbed after and thrust sprawling into the dust to be stumbled over by Hannah-Melissie. The two scrambled up, Memorie-Ann losing no time, but Hannah-Melissie waited to catch up the crying Emmie-Viollie, and swung her along at a pace so swift that she only touched the ground with her little toes.

JOHN-HARKLESS had reached the horse and sat astride its back. Patience-Amanda had reached the bonnet.

"Say, maw," she breathlessly exclaimed, "who give 'em to ye? They bin talkin' a awful lot 'bout ye, maw. Say, did ye git us a new paw what went an' died? Say them looks jus' like roses. What's this piece o' black stuff on fer? Hain't this here a whackin' fine wagon though! That wheat looks like reel too. Say, maw, wasn't the' nothin' in new paw's pockets what'd bin nice to 'a' brung to us?"

The horse had stopped, its nose to the ground, fatigued and thirsty.

Memorie-Ann was clinging to the wheels, Hannah-Melissie tumbled the baby in, and managed to pull herself in after her.

"Oh—oh, looket maw!"

"Looket maw's white slippers!"

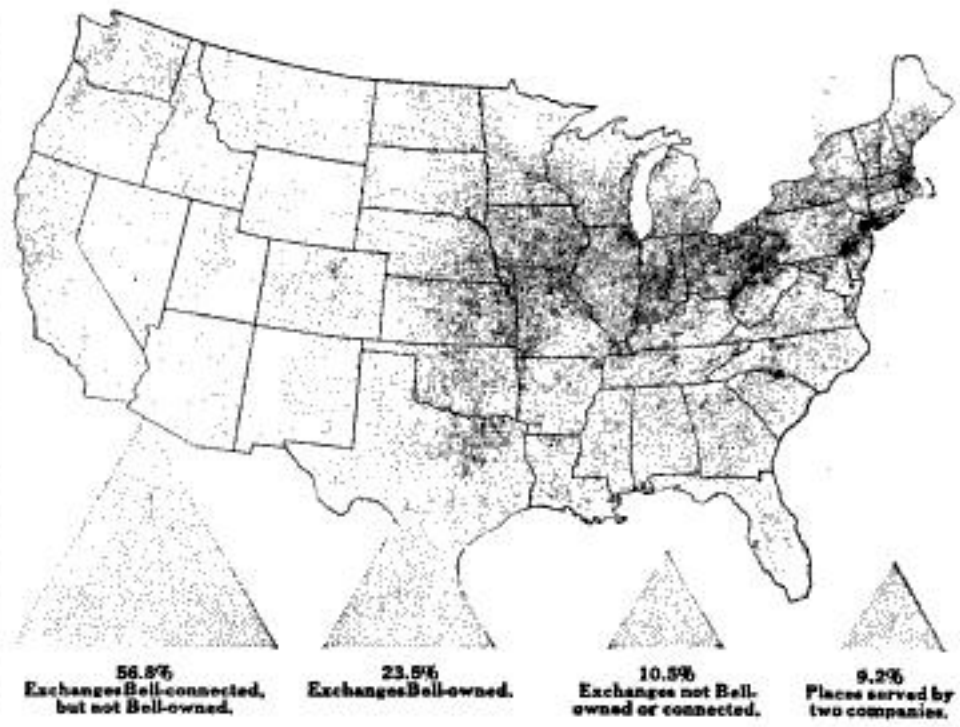
"Whatcher bring us—whatcher bring us?"

"Kin we have this here buggy to play in, huh?"

"Can't we play with the horse, too—no?"

"Oh, maw, there ain't no ghost of a steppin' paw what's gona stan' at our bed in the nighttime, is ther, if we ain't good? That's what Zek Ryan says."

"Say, maw, you look like the circus lady what rid in the chariot with a flyin' thing a-hangin' to her bunnet, only hern wasn't black."



Little seven-year-old Hannah-Melissie saw none of these striking features; crowding close, and closing her little hand around her mother's finger, she searched—and found—the heart of the woman.

"Maw, ye ain't feelin' bad, are ye? Maybe anyhow, 'fore winter comes agin you can find another man. Even if ye don't"—with a heroic gulp—"the neighbors'll keep us an' give us hoods an' thick cloze, maybe. Don't you go feelin' bad, anyways." The little hand stole up under the wonderful bonnet and affectionately smoothed back the straggly locks under its lacy brim.

MANDY'S tears blurred out everything but her children. But Mandy had a courage worthy of a heroine.

"Yas," she answered, patting Hannah-Melissie as she wiped her eyes. "Yas, 'bout six months more 'fore zero time's 'nough. B'lieve I'll kill a chicken fer supper and go over to Bill's and git some o' them there pink frosted ginger cookies fer the younguns. My, won't they think we're rich! Hain't nobody gona ketch me a-squallin' over spilt milk. Six more months 'fore zero, an' that's long 'nough to git a man in if I could only persuade 'em to live. Now, the first thing, I gotta go to work and hunt up that there coffeepot."

What the Telephone Map Shows

EVERY dot on the map marks a town where there is a telephone exchange, the same sized dot being used for a large city as for a small village. Some of these exchanges are owned by the Associated Bell companies and some by independent companies. Where joined together in one system they meet the needs of each community and, with their suburban lines, reach 70,000 places and over 8,000,000 subscribers.

The pyramids show that only a minority of the exchanges are Bell-owned, and that the greater majority of the exchanges are owned by independent companies and connected with the Bell System.

At comparatively few points are there two telephone companies, and there are comparatively few exchanges, chiefly rural, which do not have outside connections.

The recent agreement between the Attorney General of the United States and the Bell System will facilitate connections between all telephone subscribers regardless of who owns the exchanges.

Over 8,000 different telephone companies have already connected their exchanges to provide universal service for the whole country.

*OPPORTUNITY FOR OUR MANUFACTURERS

"Those who have made a close study of the situation foresee tremendous gains in our foreign trade. American manufacturers have an opportunity to capture the foreign markets, not merely for the time being, but to secure a permanent footing that we could not possibly have gained in the next fifty years under normal conditions. That will place us far in the lead of our foreign competitors."

"Our opponents in the world's markets have turned their attention from the great fight for the world's trade and are bending every effort toward destroying one another in physical conflict. Their capital is being withdrawn from industry and commerce and is being directed toward the cause of Mars; their men are being drained from the mills, the shops and the offices to become human targets. Our opponents are seeing red, and soon the great overseas commerce they have so laboriously built up will have fallen away and dwindled to a mere shadow of its former volume. . .

Barney Has a Hunch

(Continued from page 8)

it pursued him. As soon as the collie had a fighting hold on it, he began to yell shrilly: "Here, you! Lea' me alone! Here! Leggo, will you? Here! you! Call off yer dog!" He pulled, and the dog pulled, backing into the gate; and when a man came running from the house to see what was the matter, the case against the dog needed no telling. "Leggo my coat," Barney was panting. "I'll kick yer head off! Leggo, will you! Leggo!"

THE man was Barney's suspect, without his Panama hat.

"Colin!" he cried. "Colin! Stop it, sir!" He caught the dog by the collar and cuffed it. Barney dropped his end of the coat. The man got it away from the dog as a woman ran out in a kitchen apron, calling: "What has happened, Charles? What is it?"

He replied: "Colin has attacked this boy."

"What for? What was he doing?"

"Search *me*," Barney answered. "He didn't say a word. He just jumped out an' grabbed me, an' I dodged, an' he got the coat."

The dog was barking protestingly, but he could not make himself understood.

"Bad dog!" the woman scolded him. "Go in the house, sir. You bad dog, you. Did he tear it?"

"I guess so," Barney said. "I heard it rip."

"Give it to me. I'll mend it. Oh, you bad dog. How dare you!" She took the coat and turned back to the house with it, driving the crestfallen dog before her.

"I hope he hasn't spoiled your coat," the man apologized. "I never knew him to do such a thing before." He added suspiciously: "I could have sworn he wouldn't attack anyone—unless he was badly provoked."

"That's all right," Barney said. "If I'd seen him first he wouldn't 'a' got me. I didn't notice him in the dark."

"What were you doing?"

"Mindin' my own business."

"Do you live around here?"

"Nope."

THE man was scrutinizing him as well as he could in the faint moonlight, and Barney's manner resented the scrutiny.

"Where are you from?"

Barney did not answer.

"You're not a country boy."

"Never mind about *me*," Barney said. "Gi'me the coat an' I'll get along."

"You're from the city, aren't you?"

"What city?"

"New York."

Barney looked down at his feet, kicked at a tuft of grass in the path, and did not reply.

"What are you doing away out here?"

"Answerin' questions."

The man laughed. "What's the matter? Have you run away from home?"

"That's all right," Barney said. "I can take care o' myself. If you'll gi' me a glass o' milk er somethin', I'll call it square."

"There's a town just over the hill. Got any money?"

"Sure. I'm a millionaire. I'll split some wood fer you, if you'll gi' me some bread and butter."

"All the wood's split." He went down into his pocket and drew out a quarter.

BARNEY took it ungraciously. "What's the matter? Runnin' some sort o' joint in here?"

"What do you mean?"

"Well, first you got a dog that tries to chew me up, 'cause I come past the gate. An' then you stand me off fer a bite to eat, like you was afraid to—"

"Not at all," the man said hastily. "Come along. We can give you something to eat anyway." He started up the path and Barney followed him grudgingly.

"Sorry if I didn't seem quite hospitable," he said in an attempt at jocularity. "We haven't any servant just at present, and my wife has to do the cooking. Sit down on the veranda here, till I speak to her."

"I only wanted some bread and butter—an' somethin' to drink."

"All right. Make yourself comfortable." He waved his hand at a wicker chair and a hickory rocker on the veranda. Barney chose the wicker chair.

There were no lights in this wing of the house, which overlooked the road. The only light that Barney had seen was shining on a bush from a distant window where some one was evidently busy in the kitchen; he could hear an occasional clatter of plates. Between him and the lighted window, the whole house was dark, but he did not know who might be watching him from that darkness, so he kept his eyes off of it, and settled himself wearily in the easy-chair, and put his head back against the cushioned headrest, and showed no interest in anything.

THEY found him apparently asleep there when they came back—the woman with a tray of food, the man with a green-shaded reading lamp. The light woke Barney. He sat up, rubbing his eyes. They placed a porch table before him and arranged on it the tray and the lamp.

"I'retty tired, eh?" the man said.

Barney nodded, his eyes on the food. He reached a slice of buttered bread before the tray was on the table, and proceeded to "wolf" it. He did not look at his hosts. The lamp on the table shone full on him, and left them in obscurity. He pretended to be hungrily unconscious of their amused scrutiny. When they spoke to him he answered with nods, his mouth full, his eyes scouting eagerly ahead of his appetite.

The man sat down on the edge of the veranda smoking his pipe. The woman cut the top off a boiled egg, poured Barney's tea for him, and put cream and sugar in it. Then she drew up the hickory rocker beside the lamp and applied herself to the sewing of his coat, while the man began to sound and examine him with mildly humorous hints and queries.

BARNEY did not need to invent the story which he allowed them to draw out of him. It was the story of a boy whom he had known in Hudson Street, a motherless newsboy whose drunken father used to beat him regularly to make him give up the money he earned. He ran away and lived on the streets, supporting himself. Then the father put the police after him, and he was arrested and sentenced to the Reform School, but his sentence was suspended on condition that he gave up his "bumming" and remained at home. When he could endure it no longer he fled again, but this time, to escape the New York police, he went tramping, and Hudson Street heard no more of him.

BARNEY'S manner accepted such a father as a natural fact of life, without any emotional embellishment or indignant comment. The woman put down her sewing and poured him another cup of tea and eyed him in silent pity. She was a capable-looking young housewife, of a prettily maternal aspect, and Barney's face and hands needed washing.

The man showed his sympathy by asking: "What do you intend to do? How do you expect to make a living?"

"Search *me*," Barney said. "I'll strike a town somewhere an' sell papers er shine shoes, I guess."

The collie dog sat watching him distrustfully until he shared a slice of bread with it. He did so with the secret thought that he would have to "get next" to that dog if he was to do any sleuthing on the premises; but he was aware of the glance that the couple exchanged when they saw him so forgive his enemy out of a natural kindness of heart. The dog seemed less touched than they.

The man asked: "Where are you going to spend the night?"

Barney answered: "I thought maybe you'd let me bunk in yer hayloft."

He looked doubtfully at his wife. "We haven't any hayloft," he said.

She put in: "He could have the maid's room—over the kitchen. I'll make it up."

She left them. After a moment's silence the man followed her. And when they were gone Barney turned to make a face, tauntingly, at the dog.

He was sure, from their manner, that there was some concealment of guilt in the house, and he was satisfied that he could find out what it was before morning if they let him spend the night under their roof.

A Song of Rain

By CHARLES HANSON TOWNE

BRIGHT rain of April, light rain of June,
Bless me, caress me, sing me your tune,
Ah! how I love your delicate call!
Who would be absent when soft rains fall?

Sad rain of Autumn, mad rain of tears,
Beat louder yet through the sharp, stinging years.
Flail me, assail me, goad me with pain,
Yet will I love you, sad Autumn rain!

Cold rain of Winter, chant your refrain;
Never forever I dread you again.
Youth fears your sorrow, faints at your tears,
But Age reads your wonder in the wise years.

WHEN they returned he was apparently half asleep again, and he mumbled a prompt acceptance of the woman's proposal that he should go to bed at once. She led him around the front of the house to the kitchen porch, and the kitchen light was still the only one to be seen. Of the kitchen itself he looked only at the doors. One that was closed evidently led to the dining room and the rest of the house; one that was open showed the stairs to the upper floor; a third was the back door to the yard; a fourth, under the staircase, might be the door of a pantry.

She lighted a candle and ushered him upstairs to a tiny room that had a sloping ceiling, a single window in the gable end, and no door except the door to the stairs. At that side of the room in which there should have been a door communicating with the other rooms of the upper floor, there was a blank partition wall of rough plaster. It was a satisfactory arrangement for isolating a servant from the family privacies in a small house, but it did not appeal to Barney. He had counted on being able, from the upper hall, to spy on whatever was being done below stairs.

THE room was bare and clean, with no furniture but an iron cot, a kitchen chair, a sort of camp washstand, and a little dresser. "I'm afraid we haven't any night clothes that will fit you," she said, putting down the candle.

Barney replied ungraciously: "I'd be asleep 'fore I could get into 'em anyway." He did not wish to encourage her in any solicitude concerning him; it might prove embarrassing if she came back to see that he was sleeping comfortably. He sat down on the side of the bed and began to unlace his shoes.

She accepted her dismissal. "Good

Digitized by Google

night," she said. "We have breakfast about seven. I'll call you."

He mumbled "G'night." He dropped his shoe heavily on the floor as she descended, and though she closed the door at the foot of the stairs, and he could not hear her in the kitchen, he dropped the other shoe as noisily when he got it off. Then he stripped to his undershirt and trousers, blew out the light, threw himself heavily on the bed in the hope that its creaking would be audible, and lay on his back, listening.

HE listened and listened, but he could hear nothing except the incessant stridulant drone of insect mechanisms out of doors.

He sat up to look out of the window, and there was nothing to be seen but leaves and moonlight.

He crawled to the sill in the hope that there might be the roof of a lean-to below the window. There was none. And the moon was so bright that he could not have climbed out with any safety in any case. And there would be the dog to betray him even if there had been no moon.

He got his little electric lamp from his hip pocket and tiptoed to the stairs. A cautious flash showed him the door below him. He descended in the darkness with infinite precautions, waiting and listening after every movement. There was no sound from the kitchen. And when he had lifted the latch and opened the door an inch or two there was no light to be seen except the moonlight, that came through the kitchen windows. He shut the door behind him, to leave no evidence of his passage in case his retreat was intercepted and he had to hide downstairs. He moved inch by inch toward the closed door of the dining room. He saw a faint crack of light beneath it.

THEY were in there then. If he could get that door open, perhaps he could hear them. He approached it stealthily. He raised his hand to the latch. A low growl checked him.

It was the dog, in the dining room. It had scented him. It began to bark. Some one called to it from the other end of the house, and Barney fled.

But he did not flee upstairs; that would have been a final confession of failure. He made for the pantry door that he had noticed—intending to hide until the alarm had subsided—and when he plucked the door open he found himself at the head of cellar steps. He went down them swiftly by the light of the pocket lamp and stood waiting at the bottom, in the darkness, looking up, listening breathlessly, ready to retreat further if he heard anyone coming. He was enjoying it like a game. In case he was caught he had a story ready, to the effect that he had been too hungry to sleep, so he had sneaked downstairs to smouch something from the pantry.

In the cool underground silence he found that not only could he hear the growling dog as clearly as before, but he could hear much more clearly the distant voice calling: "Be quiet, sir! Be quiet! What has got into that dog to-night?"

HE flashed a furtive light around him; he was in a little food cellar of hanging shelves and larder cupboards. He saw an open door that led through a stone foundation wall into another part of the basement. And it was from this direction that the muffled, angry voice seemed to come.

He sneaked to that door as softly as a cat, barefooted on the cement floor. The dog was quiet again. In the doorway he could hear a distinguishable murmur of several voices sounding through the thin floor above and ahead of him. He stood there, grinning to himself in the darkness, at the end of his hunt.

He had them.

It was a man and two women, and he could hear them distinctly when he had picked his way to the farther end of the cellar, across the clutter of lumber and garden tools and packing cases and discarded furniture—mistering the flashes of his lantern for fear some cellar window might betray a sight of him. And the first words that he heard concretely gave him the solution of the Baxter mystery.

"But, my dear Bessie," the man was arguing, "if your father got your letter, why should he offer this reward? There's no sense in it. He *can't* have got it."

A girlish voice answered: "Yes. He did. I know why he's doing it, but I can't explain without being unfair to dad."

The woman murmured something reproachfully. The man began to move, heavy footed, around the room. "Did you tell him where you were?"

"No. I simply told him not to worry about me—that I'd be all right."

"Well, if he got the letter he's concealing it from the detectives, isn't he?"

"I suppose so. Yes."

THE man sat down with a bump. "I suppose you know what you're doing, but I'll be hanged if I can see any sense in it. I'm not thinking of myself, but if you're found here—"

"Well," she said, "I'll go somewhere else then."

There were confused words of remonstrance, of angrily apologetic explanation and self-defense, of affectionate reassurance. Out of it all the girl's voice rose impatiently: "Well, dad's doing it to deceive Mr. Huntley. That's why he's doing it. He's in a—he's in trouble—money troubles. And he couldn't refuse his consent to our marriage—to Mr. Huntley. And *I* couldn't refuse to marry him either—without making it worse for dad. That's why I got engaged to him in the first place—to get him to help dad. And don't you think dad tried to force me to, either—or even asked me to—for he didn't. And when I saw he wasn't going to help dad till after we'd be married—and he wouldn't help him at all if I backed out of it—I—well, I 'disappeared.' And dad's just pretending he thinks I've been kidnaped, so as to hold Huntley. And Huntley's paying the detectives and all the rest of it. People think we're rich, but dad's lost everything, and we haven't a cent, and unless Mr. Huntley helps him through with this scheme of his I don't know what will become of him."

"Why is it that each prefers
Another's to his own?"—Horace.

SHE had begun to sob, and the conversation became an incoherent jumble of voices, consoling her, sympathizing with her, reassuring her. Barney did not wait to hear it out. He had heard enough to satisfy himself. It was Elizabeth Baxter. She was hiding there. And overcome with a superstitious fear that now, at the very moment of success, something might happen to betray him and spoil it all, he started back to his room on tiptoe, holding his breath.

THAT fear did not leave him till he had regained his room safely. There he allowed himself only an excited chuckle as he slipped off his trousers and hopped into bed in his undershirt. He gave his pillow a jubilant thump and butted his head down into it, hugging himself. Wait till he saw the boss! Then he lay perfectly still, curled up in the cool sheets with his secret, smiling ecstatically. He could go downstairs in the morning and eat his breakfast in all innocence, and say good-by without letting them suspect anything, and slouch off up the road with his coat over his shoulder, on his travels again. And as soon as he was out of their sight he would "beat it" to Findellen, catch the first train to New York, and come dawdling nonchalantly into the Babbing Bureau to report to the boss that he had found Elizabeth Baxter!

He fell asleep while he was dramatizing that scene with Babbing—after he had worked Babbing up to such heights of admiration of his cleverness that the scene was already too heart-tickling to be anything but a dream itself.

IN the morning everything happened very much as he had planned. After breakfasting in the kitchen he got away without betraying himself to anyone but the dog, at whom he winked triumphantly as he departed. He made short work of the road to Findellen, thanks to a passing farm wagon that gave him a lift. He arrived at the railroad station only a few minutes before a train full of commuters returning to New York for their day's work. And when he looked from the bow of the ferryboat at the sky line of the city he found it quite as he had pictured it, except that it showed no excited appreciation of the change that had come, overnight, to the status of the Baxter case.

His interview with Babbing was the only event that did not work out as he had expected. Babbing was walking up and down his private office thoughtfully when Barney entered to see him. He asked at once: "Where have you been?" but without looking at Barney and without stopping in his walk.

Barney closed the door. "I been searchin' fer this Elizabeth Baxter—an' I found her."

Babbing continued with his thoughts. It was some time before he asked, almost absentmindedly: "Where?"

"Out near a place called Findellen, livin' with some folks she knows."

"What took you out there?"

Barney described his expedition from the moment that he had sold a newspaper to the man in the Panama hat, down to the successful issue of his adventure, when he had stood in the cellar of the bungalow and heard Elizabeth Baxter overhead. Babbing seated himself at his desk in his swivel chair, but he turned aside from Barney with his eyes on the window noncommittally. Barney, standing before the desk, with a hand on a chair back, like a boy before his teacher, went from assured eagerness to uneasy apprehension as he talked. He looked anxiously at Babbing's plump, inscrutable profile when he had finished. There seemed to be something wrong.

BABBING asked: "What do you mean by 'a hunch'?"

"Well, gee," Barney said, "the minute I saw that guy readin' the paper I knew he was wise to somethin'—"

"You knew it? How?"

"I—don't know. I guessed he was."

"What were you doing when he came up to you?"

"Watchin' fer the Brooklyn fellah."

"What were you thinking about?"

"I—I dunno."

"As a matter of fact, you weren't thinking of anything, were you? Mind perfectly blank?"

Barney did not answer, and Babbing wheeled around in the chair to face him. As their eyes met, Barney turned pale.

"Got another hunch, have you?" Babbing said fiercely.

"I, Personally, Make the Blend for 'Whip'"

There are great family names with whose mere mention we associate a field of endeavor. So associated are the names "Goodyear" and rubber, "Steinway" and pianos—"Patterson" and tobacco. For over seventy years the Pattersons have been identified with the best in smoking tobacco.

The pipe smokers of America can thank their stars for the latest product of the Pattersons' activity—the mildest, most fragrant, most satisfying smoke Virginia ever produced.

Mr. M. C. Patterson himself blends "Whip" because he is the kind of man who loves his art and wants to work. The life of leisure does not appeal to him.

Mr. Patterson says: "This art of blending is something unteachable. I can't explain how I do it.

"But I want all pipe smokers to know that at last I have perfected the blend I have been working on for years. I want to tell them that in 'Whip' I have produced the pipe mixture that satisfies me.

"I want to tell them that we're proud of our name and proud of 'Whip'—that we are willing that these two be judged together."

OUNCE TIN FREE

Mr. Patterson will gladly send you a regular one-ounce can of "Whip" absolutely free, if you will write him a postal card giving your address and that of your dealer.

There is no profit in giving tobacco away, and you may be sure his only reason for doing so is his confidence that you will want to smoke "Whip" regularly once you try it.

"Whip" is put up in one-ounce tins at 5c., two-ounce tins at 10c.; also in handsome Pottery Patented Self-Moistening Pound Humidors.

Patterson Bros. Tobacco Co., Inc.
Richmond, Va.

Also makers of "Quoted"—the big 2½ oz. 10c. tin—a little stronger than "Whip" and, we believe, a little better than many 2-oz. 10c. tobaccos.

THE
RECORDS OF CONGRESSMEN

FOUR hundred and thirty-five Congressional vacancies and thirty-one Senatorial vacancies will be filled at the primaries this summer and the election next November. In the great majority of cases the present incumbents are candidates for reelection. The best basis for determining whether they should be reelected is, to a large extent, the way they have voted upon important measures. Collier's Washington Bureau will provide the record of the votes of any Senator or Congressman on every important roll call since March 4, 1909. This service is entirely free of charge. Give the name of the Congressman or Senator whose record you wish and address

COLLIER'S WASHINGTON BUREAU,
901 Munsey Building, Washington, D. C.

Agents Wanted—Toilet Preparations, Full Line. We want about 50 more representatives at once. This is an opportunity. Write for full particulars. Venus Co., 21 East Illinois St., Chicago.

Will classified advertising in Collier's pay me?

IF you have a meritorious article, if you have attractive letters and pamphlets describing the article, if you answer inquiries promptly and courteously, and if you allow your agents liberal profits, **THEN**—classified advertising in Collier's will pay you.

BUT if you fail in any of the particulars mentioned it is very probable that no classified advertising can be made to pay you.

Barney stiffened to meet the shock.

"You're fired," Babbing said. "Sit down." Barney stumbled and sat down weakly in the chair.

"You're fired for leaving your post without permission."

Barney pleaded chokingly: "Well, gee, chief—"

"I'm going to see this man Baxter privately. He has concluded a consolidation of water power companies out West and Huntley is president of the new concern. It's in the morning papers. Now, if what you overheard is true, he'll pay the five thousand dollars reward as soon as he understands that we claim the money without making public anything about the case—even to Huntley. Understand?"

BABBING nodded at him grimly. "I'm willing that half of this money should go to you. You're wasting your time here. What you need more than anything else just now is an education. Twenty-five hundred dollars will pay your way for a year or two—"

"I—I don't want it, chief, I want to—"

"It doesn't matter what you want. You're discharged from this office and you can't come back until you've learned to read and write and *speak* English."

Barney's heart began to beat again. "Will you take me *back?*"

"If you want to come—then—yes. Glad to have you."

"Well, gee, chief—" Barney was smiling, almost in tears.

Babbing continued quizzically, settling back in his chair. "You have the making of a detective in you, I'm sorry to say. There's no doubt of it. And if you want to make a living out of it, I can't stop you. It's as good a way as another, I suppose. You either have the aptitude for it, or you haven't. It isn't a science. It's an art. You can't reduce it to rules. It's intuitive. All the science in the business can't take the place of the 'hunch.' If you can get the right hunch, all you need is an education."

"Yes, 'r," Barney beamed.

"Very well, then," Babbing rose. "Go home and tell your mother, I'll be around to see her to-night, after I've settled with Baxter."

"How long'll it be?"

"How long will what be?"

"Before I can come back?"

"That depends on how you apply yourself to your studies."

"Gee!" Barney said, "I'll 'ply myself."

"Good," Babbing held out his hand. "Good-by meanwhile. And good luck."

Barney shook hands shyly. "Thanks, chief. The same to you."

"All right. Run along now."

Barney hurried obediently to the door. "I'll be back," he grinned, "before you miss me—wit' a leather medal."

"If you come back wit' dat Bowery accent," Babbing said to a letter that he had opened, "I'll throw you out the window. Get out of here." And Barney went, giggling, with his very ambiguous past happy behind him, and his equally ambiguous future very promising before.

A SWEEPING VICTORY!

Marking the End of the Creations of Yester-year —the Styles That Were, and Are No More.

Gone for good are the knobs and angles and patchworks of ancient styles. They are swept away to the limbo of the wheezy "one lunger" and the oil lamps. In their place is a new vogue for America—a new and infinitely finer fashion—the European streamline. *And the Detroiter ushers it in.*

A **genuine** streamline—not a catchphrase. Frame melts into fenders; fenders into hood; hood into body; body into running board. **You cannot say where one part ends and another begins.**

The Detroiter is absolutely the first actual European streamline in America; first high speed, long stroke, ball bearing motor; lightest car of its class; biggest car for the money; with a chassis construction that has always made the Detroiter the criterion of mechanical genius.

The 1915 Detroiter

Other models, without starters, $850 to $925

Just as this new Detroiter made a clean sweep of everything that binds cars to the commonplace in design—

Just as the Detroiter type of long stroke, high speed, ball bearing and fuel saving motor made a clean sweep at the Indianapolis race, driving the first four winners across the line—

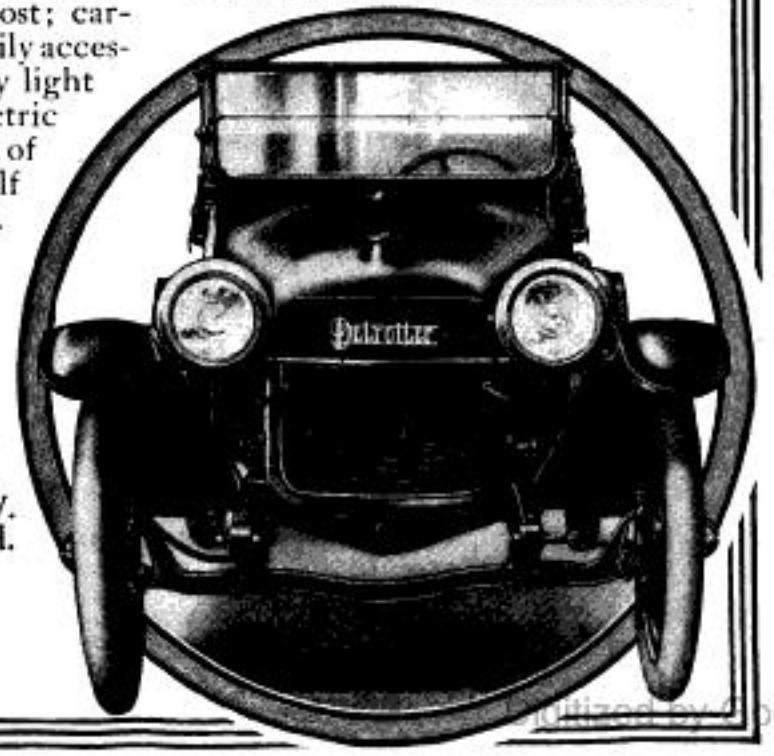
Just as this matchless car fairly swept the convention of Detroiter dealers off their feet when it was unveiled for the first time—

So has its instant popularity won a sweeping victory everywhere. It marks the end of the creations of yester-year—the styles that were, and are no more.

Here is the limit of beauty, durability, value. This is the leader.

Thirty-five special features give the last extreme in refinement—**and they all come in the list price they** are not "extras."

Just notice these new conveniences. The recording instruments combined in one unit, every control at your finger tips. Carburetor adjustment on the steering post; carburetor itself raised to an easily accessible point. An emergency light and cigar lighter. A red electric flash that warns against lack of oil.—And these are only half a dozen of the thirty-five.



The Detroiter, like the Gold Standard, is the basis for calculating your money's worth. *Send today for our illustrated folder.* See a Detroiter dealer. Put in your order quick.

$1050

Complete with Westinghouse Starting and Lighting Equipment.

35 Special Features

The biggest car at the price.
Lightest car of its class—under 2300 pounds.
First complete streamline. Crowned fenders.
112-inch wheelbase.
32 horsepower.
Worm-driven silent starting motor.
Full-floating rear axle.
3-point platform rear spring suspension.
Actual one-man top.
14-inch service brake; 10 inch emergency.
Four 24-inch doors.
Non-skid rear tires.
Aluminum and linoleum running and floor boards.
20-operation finish. Luxurious upholstery.
5-passengers without crowding.
Fuel tank in cowl.
Ventilating, mist-vision windshield.
Ball-bearings throughout.
Multiple disc clutch in oil.
Duplex tire carrier in rear.
Center one-lever control.
Rounded radiator with radiator mud shield.
Twin searchlights.
Emergency search lamp.
Electric cigar lighter.
Aluminum covered instrument board. All recording instruments combined in one unit.
Positive gasoline gauge.
Electric flash oil gauge.
Carburetor above frame.
Both automatic and manual spark advance.
Both foot accelerator and hand throttle.
Horn button in center of steering wheel.
20 to 25 miles per gallon of fuel.
100 miles to quart of lubricant.
Willard LBA battery.

MAZDA

"Not the name of a thing, but the mark of a Service"

The "Lamps of the Sky" -and the Lamps of the Earth

THOSE wonders of the heavens, studied always by a multitude of astronomers, have been unfolded more rapidly because the scientists have *worked together*, comparing and sharing their individual discoveries.

In electric lighting the same principle of multiplying brain power is exemplified in MAZDA Service to manufacturers.

The sum of accomplishment in electric lighting science shines today in the MAZDA lamp, which at the present time gives from *three to six times as much light* as old style carbon lamps at the same cost for electricity.

To *carry forward* their work on the great world-problem of the best and cheapest light, the distinguished technical experts in the Research Laboratories of the General Electric Company at Schenectady are pursuing ceaseless investigation and experiment. In their selective labors they are not only sharing the advantages of individual research and discovery in this country but are keeping in close touch also with great experimental laboratories of Europe.

MAZDA Service means that the Research Laboratories are furnishing the fruits of the sustained investigation at home and abroad to the factories of the General Electric Company and of other Companies entitled to receive this Service and the progressive results of this service to manufacturers are embodied only in lamps that are marked MAZDA.

So that the mark MAZDA on an incandescent lamp means today, *and will always mean*, the operation of this important manufacturing aid —the concentration in this lamp of the latest and best thought of the world's masters of light.

THE mark "MAZDA" is your assurance—whether you buy the lamp today or at any future time—that you have the incandescent lamp that sums up the latest efforts of the broadest lamp service in the world.

Digitized by Google

Howard E. Coffin Says:

"This new HUDSON Six-40 fulfills all my ambitions. In little and big things—in type and detail—it is my conception of the ideal car. And the 47 experts who have worked for four years on this exquisite model with me, all concur in this opinion."

That's Our Answer

That's our answer to all conflicting views. We must expect them in this hard-fought field.

Howard E. Coffin has led for years in motor car designing. He has pioneered the most important motor car advances. If there is in designing one final authority, Mr. Coffin is that man.

But he never works alone. Forty-seven engineers on the HUDSON corps have worked with him four years on this model. This is their composite idea of the apex in car building.

Then last year's model much like this went into thousands of hands. It met every test which a car must meet, without bringing out a fault or shortcoming.

Any owner of a HUDSON Six-40 will say with Mr. Coffin, "This is my ideal car."

Apex Features

The Six, in our opinion, is the apex type. It means continuous power, persistent torque. And that we consider the ultimate.

This new-type motor—small bore and long stroke—seems to bring operative cost to the minimum. It has saved about 30 per cent.

In lightness, no sturdy car of this size and capacity can hope to far excel this. The Six-40 weight—2,890 pounds—is the record today in this class. Built in cruder ways—as cars used to be—this car would weigh 4,000 pounds.

In beauty and equipment, in comfort and convenience, it is quite apparent that no man as yet sees a way to betterment.

In quality, the very lightness shows this car's supremacy. In price, our $1,550 is the lowest yet attained in a car of the HUDSON class.

Hundreds Shipped by Express

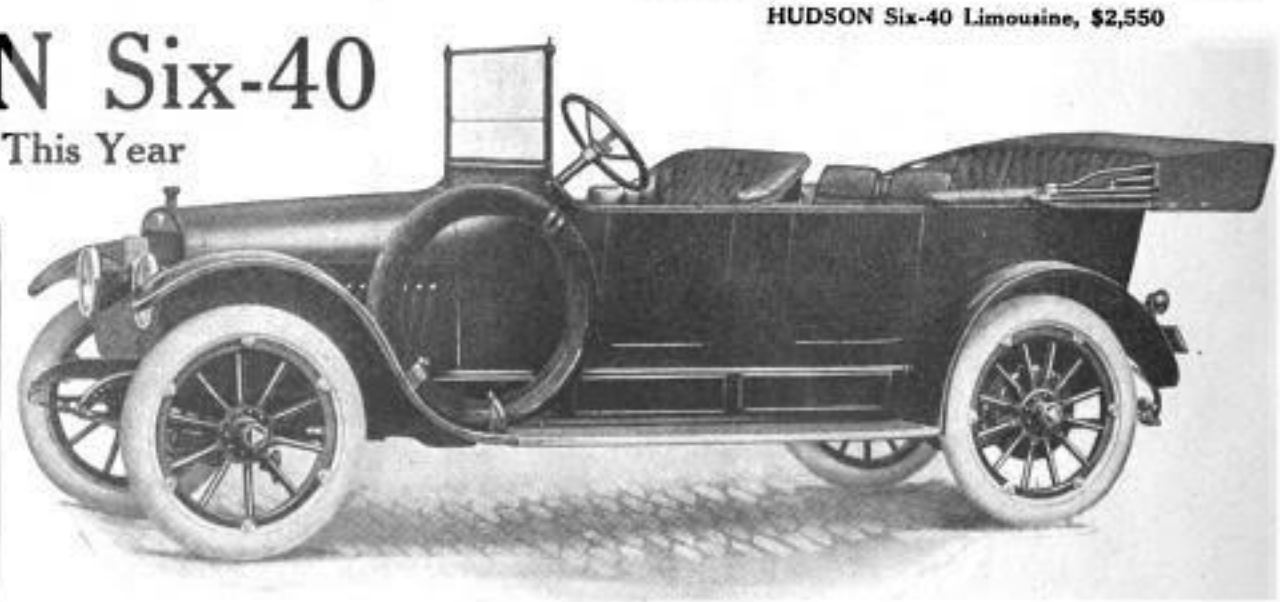
We trebled our output this year because of this car's popularity. But the demand for this new model swamped us. In August, every HUDSON dealer outsold his allotment.

To cope with this call, 45 per cent of our shipments so far have gone out by express. We have shipped solid trainloads by express to save delay for buyers. That is unprecedented in the automobile line.

For September, we increased our planned output one-third. Today you can get prompt delivery. We still ship by express, when necessary, rather than keep men waiting.

Go see this car. All things considered, it's the finest example of the new-day car you will find in any showroom now.

Hudson dealers are everywhere.
New catalog on request.



HUDSON Six-40 Limousine, $2,550

HUDSON Six-40

$1,550 This Year

A perfect streamline body.
Disappearing tonneau seats.
Invisible hinges.
Hand-buffed leather upholstery.
"One-Man" top with quick-adjusting curtains attached.
Gasoline tank in dash. Tires carried ahead of front door.
Dimming searchlights.
Simplified starting, lighting and ignition system.
Wires in metal conduits.
Locked ignition and lights.
New-form speedometer drive.
New-method carburetion.
Automatic spark advance.
Trunk rack—electric horn.

7-Passenger Phaeton, $1,550. 3-Passenger Roadster, $1,550. 3-Passenger Cabriolet, $1,750. 4-Passenger Coupe, $2,150. All f. o. b. Detroit.

Canadian Prices: Phaeton and Roadster, $2,100 f. o. b. Detroit, Duty Paid.

TIMKEN
BEARINGS & AXLES

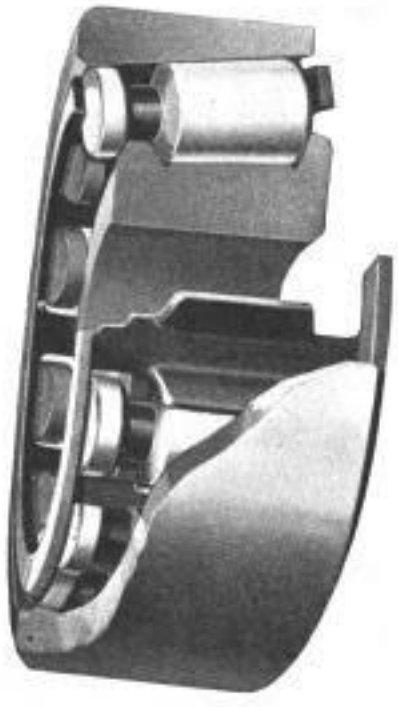
When Your Motor Car Takes the Curve

With a flash and a roar the limited train sweeps by and takes the curve.

Huge locomotive, heavy steel cars—the embodiment of terrific force!

The train tends to keep on in a straight line—yet it does round the curve. Why?

Little flanges on the wheels press sidewise against the outer rail and force a change of direction.



So, when your motor car takes a curve the same force, the same pressure—differing only in degree—is at work.

Rubber tires grip the road, but the heavy chassis struggles to keep on in a straight line.

You feel the force sliding you along the seat. This "end-thrust" concentrates in the centers of the wheels. Axles try to push out through the hubs toward the outside of the curve.

Something must hold the axles back and yet allow the wheels to turn freely. This severe task falls to the wheel bearings. And the bearings must at the same time carry the weight of the car and its load.

It is because of this double duty that it is so important to have good wheel bearings.

A Timken Tapered Roller Bearing partly cut away to show the relations of the parts. Note the taper of cone, rollers and cup. Note also the two ribs on the cone—the "tracks" that keep the rollers in perfect alignment.

The Timken Bearing meets side pressure or "end-thrust" in addition to vertical load because its rollers are tapered and revolve at an angle to the shaft. The tapered construction also makes the Timken adjustable for continued full efficiency throughout the life of the car.

A Bearing That Meets End-Thrust In Addition to Vertical Load

It is one of the distinctive features of the tapered roller bearing that because its parts are conical instead of cylindrical it sustains immense pressure from the side at the same time that it is supporting the load, from above. A glance at the picture at the left shows why this is so.

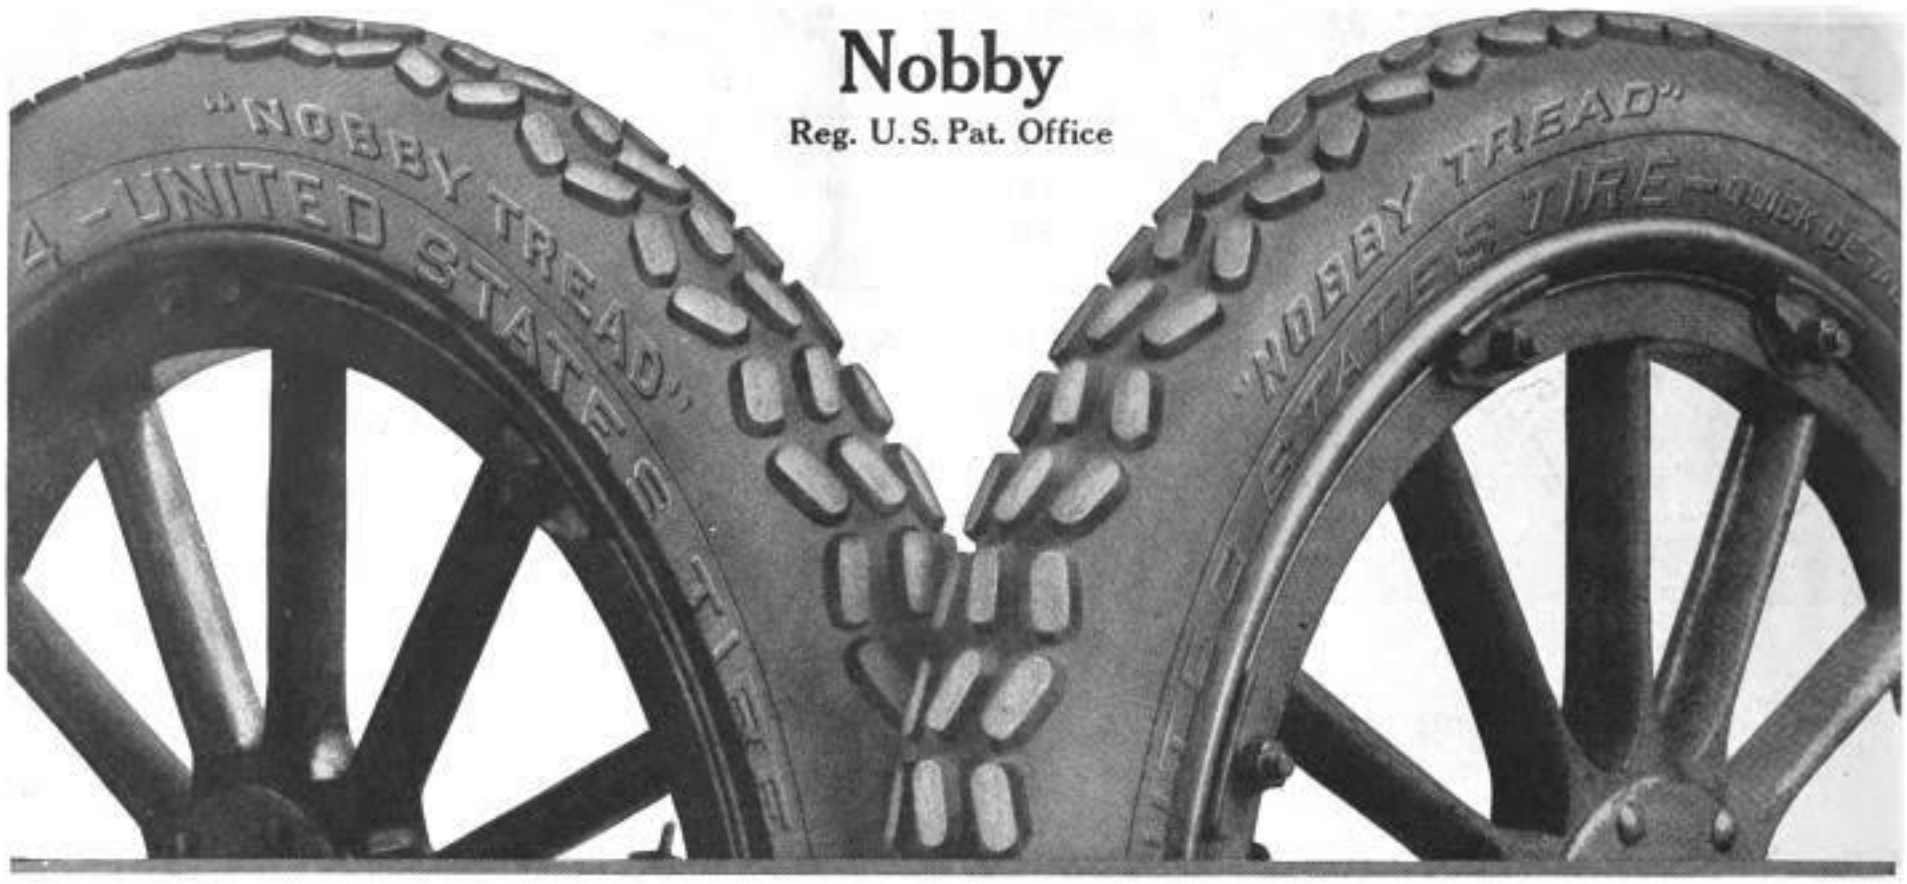
All the pressure, both vertical and horizontal, is distributed over lines as long as the rollers instead of being concentrated at mere points. This wide distribution of pressure prevents undue wear.

And It Is Adjustable

The same tapered construction of the Timken Bearing makes it possible—by moving the cone, rollers and cup into a little closer contact—to entirely offset the effects of the slight wear that will come after many thousands of miles of travel. That is, the Timken is adjustable.

Thus the universal satisfaction with Timken Tapered Roller Bearings in the wheels of hundreds of thousands of high-grade motor cars is due to basic principles of design that are right.

And for the same reason there is the same universal satisfaction with Timken Bearings at the *other severe service points*—in the transmission, in steering knuckle heads, on the pinion shaft, at each side of the differential, on the worm of a worm drive truck.



Points where end-thrust piles on radial load, and adjustability enables the owner to keep his car tuned up to full efficiency as it grows old in service.

End-thrust, vertical or radial load, adjustability, line contact vs. point contact and many other things about the Timken and other types of bearings are discussed clearly in an interesting booklet "On Bearings." This and a booklet "On Axles" and a list of "The Companies Timken Keeps" will be sent free, postpaid, on your postcard request for the Three Timken Booklets. No salesman will call. Write Dep't B-5, either Timken Company.

First Cost "Jokers"

"First cost" saving is an "ostrich way" of figuring tire economy—the only true way is to figure on the ultimate cost of your tire service.

The "bargain price" first cost of a tire is the "joker" in your purchase unless the tire adds up enough actual mileage to make it the cheapest tire in the end.

Veteran car owners know this—serious minded business men know this—that is why "Nobby Tread" Tires are the largest selling high-grade anti-skid tires in the world today.

"Nobby Tread" Tires "make good." They actually give the

Cheapest Tire Service

Automobile owners everywhere are rapidly learning to buy tires on a real business basis, viz:—the basis of ultimate economy.

And remember this—investigations prove that with "Nobby Tread" Tires punctures are 90% less than with the average tire.

These are the reasons why "Nobby Tread" Tires are today the largest selling high-grade anti-skid tires in the world.

Based upon their remarkable mileage records

"Nobby Tread" Tires

are now sold under our regular warranty—perfect workmanship and material—BUT any adjustments are on a basis of

5,000 Miles

Thousands upon thousands of veteran motorists now use "Nobby Tread" Tires on their front and rear wheels through all seasons, because they give real anti-skid protection and the lowest cost per mile.

United States Tire Company

NOTE THIS:—Dealers who sell UNITED STATES TIRES sell the best of everything.

The Siege of Liege

I—Shrapnel

By George Lynch

"DICK DONOVAN," the well-known writer and fellow war correspondent, was a short time ago interesting himself in the development of the island of St. Helena as a health and pleasure resort. I think we all know some one that the place would suit. It was pathetic to watch the people looking out from the Digue here for the ships from England while the sands of their hope and confidence in being able to hold Liege were running out. A week was the utmost, they thought, and they were counting the days. It would have been worth while, from the point of view of the moral effect alone, if we had sent a Margate excursion steamer full on account—or even a penny steamer load.

Ostend is almost deserted, most of the hotels closed, the banks ditto—no people making any money except one little group, the men with telescopes. They were having the time of their lives—sometimes there would be a little queue or a group waiting their turn. After the news of Friday night of the 25,000 killed and twenty-four hours' armistice, however, confidence returned and anxiety for the arrival of "les Anglais" dwindled away. The telescope men joined the great multitude of the unemployed.

When that news arrived, I had gone in to the Kursaal to see the latest telegrams and was talking to a Belgian friend and his wife—a very beautiful woman. She raised her long-lashed gray eyes and said: "Why do you not come—come quickly—when we so want you, Monsieur Lynch?" "Everything comes to him who waits," was the best answer I could make, although it sounded rather cruel.

It was only a few moments after when a door swung open violently and a stout little man, waving a bulletin sheet above his head, called across the room to his wife: "I have good news, my dear, beautiful news," and read the bulletin aloud to a delighted crowd. The Belgians are not as excitable as the French, but the effect was electrical—pent-up, acute anxiety verging on hopeless despondency had possessed them; and in a moment they were transfigured with joy, exultation, and thanksgiving. I turned to madame. The gray eyes were brimming with tears, and her lips were trembling as she whispered: "It's true—everything comes at last." It is extraordinary how this country has been honeycombed and infested with spies. Six were shot this morning. Men in some high positions, like a very rich banker at Antwerp, and men who have lived twenty and thirty years in Belgium. For some time recently their favorite disguise was to get themselves up as priests, but some were caught dressed as women. Arrests are being made every day—a motor car drives up to a house from which three gardes civiles, with rifles and bayonets fixed, emerge; an excited crowd gathers, shouting, shaking their fists and spitting, while execrations and names are being howled out, then probably a pale-faced and cowering figure is hauled out and they drive off. Only a few days before war was declared an attempt was made to blow up the bridge at Zeebrugge. I went there to inspect what is certain to be one of the principal points of debarkation of our troops. It is one of the most extraordinary places I have ever seen in any part of the world. I was stopped and carefully examined in approaching the place, and told on no account whatever to photograph. It consists of an enormous pier 2,800 meters long that took ten years to build, with sufficiently deep water for the largest liners to berth alongside. Then there is an enormous new hotel, two villas and a hotel de ville, big enough for Bruges, which can be seen in the distance. A hotel de ville without the "ville"! The chief industry of the town is selling picture post cards. Up to a few days ago half the town—viz., one of the villas—was the property of a German officer who had bought it three weeks ago. He made such a hurried departure that he left behind him a quantity of detailed plans and drawings, photographs, and other incriminating documents. The only wonder is that he did not blow up the open ironwork section at the mainland end of the bridge.

The defenders of Liege snatch brief moments of sleep between attacks by the Germans. "Our men are almost dying from privation," says a Belgian officer. "Yesterday I counted eight hundred Belgian dead"

Generous Hearts

THERE was not a solitary vessel of any sort alongside the pier; nor, on inquiry from the inhabitants of the hotel, could I learn that they had ever seen one alongside. Pier and hotel were built by the Government at enormous cost, the idea being that Atlantic liners would be induced to call there, but up to the time of going to press they have not called.

A casual remark made by me yesterday was suggestion sufficient to prompt the performance of a very fine and patriotic act. I was talking to Mr. Maurice Harvey, one of those genial, big-hearted men who make the world a sunnier place to live in by simply being in it. Among various commercial interests, he owns the palace of amusements directly behind the royal palace.

"What an ideal hospital for wounded officers it would make!" said I. He agreed. Then, after a few moments' thought, he said, striking the table: "By Jove, I'll give it!" And he is going to.

The building itself, lofty, airy, and well-ventilated, might have been built for the purpose, and within a few yards away are the hotels, villas, and boarding houses where all the wives, sisters, cousins, and aunts can stay until their dear ones completely recover, helped by the glorious air of Ostend, with the slumberous sound of the surf curfewing restlessness at night and calling sleep as no other sound in the world can. There is strenuous activity everywhere around the country, except at Zeebrugge, the city with a future; but that pier will be alive within a few days. There is no "feverish" activity about these Belgians, but strenuous work, carried on with the rapid and smooth effectiveness of perfect organization. All the horses are commandeered, of course. When I asked a brewer friend of mine if he had brewed sufficient for the wants of a hundred thousand thirsty tommies, he assured me he had, but that distribution would be his difficulty. I suggested, on the principle of oil transportation, laying a pipe-line to follow the track of the army. He was rather struck with the idea, but a little consideration made me realize how injurious it might be to the cause of the Triple Entente. Just imagine how the Germans would fight if they knew there was a pipe-line of beer direct from a brewery in the enemy's rear! Why, it might change the course of the war and alter the map of Europe.

II—The Brunt of the Battle

Extracts from Letters I Received from a Belgian Officer at the Front

SATURDAY.—Many of our men are almost dying from privation. Three German regiments lost their way; many were killed, the rest taken prisoners. We have caught Germans dressed in Belgian officers' and soldiers' uniforms, one dressed as a woman and one as a priest, and were inquiring about our movements and giving our men poisoned chocolates. Two will be shot to-night. We will have a big battle to-morrow; Germans

Digitized by Google

are massing up. For the first time I have had a good dinner: two hares, bread, wine. Oh! what a dinner! A best for the first time also.

SUNDAY.—There were spies even in our own ranks—they killed officers and men and killed wounded with the butts of their rifles. From certain companies only six and eight were not killed. More officers are killed; for the Germans, who shoot well, pick them out.

Very expert shots have been selected to pick off officers because they think we are like their troops, who get demoralized when their officers are killed. They make a mistake.

With or without a head, our men go on. We are north of Liege, approaching the ford. Where we are there are 12,000 Germans facing 1,200 of ours. When the Germans come on our wounded they hit the life out of them with the butt ends of their rifles. They trample upon our dead and wounded. We have seen no more airships. When we attack the Germans with the bayonet they throw up their hands. We are more afraid of the spies, however, who are everywhere. We do not know whom to trust. When we find them they are shot within a quarter of an hour. The German bayonet is much longer than ours and has a very sharp edge, which makes a gash like a razor.

The Germans are traitors; they despise all the laws of war. We should never have pity on them. It is only now I really know them. To attain what they want they would kill innocent little children. I have two hundred cartridges; I hope to kill two hundred Germans with them. Yesterday I counted eight hundred dead Belgians. Inhabitants of Liege behaved splendidly, fed the soldiers, brought us food while we were fighting. I slept so well that I forgot we were at war. It was the mistress of the school who fed us, at much trouble. All our soldiers are doing their duty splendidly. We kill no more uhlans; when we take up our rifles and cover them they throw up their arms—they are cowards at heart. At night, when all seems quiet, they start sniping.

Once the German soldiers lose their officers they are like lost sheep. Our men fight on intelligently, and everyone becomes more courageous and is then an officer to himself.

Think of it—some of the spies were commanding our artillery! The majority of the Germans, the ordinary lot, waste a lot of ammunition. They all are too high. Ours don't fire until each covers his man.

III—Our Lady of Deliverance

CREDO!

It is a mighty thing to hear and see a people pray. Until to-day what had been graven on my mind as the most impressive prayer scene of my experience was when, at a memorable time, looking down from the gallery of the Mosque of St. Sofia, I saw the Moslems pray on brilliant prayer mats covering the vast space under the wide span of that magic-hung dome; they knelt and bowed as the surface of a ripe cornfield does to the summer breeze, as the cry of "Allah il allah" . . . in passionate wail of supplication rose from that great worshiping multitude of the children of the Prophet.

Though less dramatic or emotional, to-day's scene was to me far more deeply impressive. Undemonstrative and restrained these Belgians are, and all the noblest and best of Brussels were there gathered within the venerable walls of that glorious old cathedral.

Never since it was built could it have been more full, never had the people who built it more reason to gather there to pray! Valiantly as the Belgians had withstood the first German attack, the ominous quietude of these last two days meant only that thousands more were gathering for the next onslaught. Probably there was not a single member of the vast congregation who had not a relative or at least friends under arms. Only a few miles away their David was waiting for the next onslaught of Goliath. Therefore in their sore need they had gathered to supplicate the intercession of Her who had been their help in times past and to carry Her image in procession just as their ancestors had done long years ago. The best and noblest in the land lent their shoulders, many of them bowed by the weight of financial affairs, and under a gorgeous baldachin followed the Cardinal-Archbishop of Brussels, Monseigneur Messier, bearing the monstrance containing the sacred Host. As the procession moved slowly round, the voices of the vast multitude in solemn hymn, blending with the pealing organ, swelled in one great volume of sound until one fancied the clusters of Gothic columns might be organ pipes breathing their booming music on high against the lofty roof.

Impressive! It was a scene I shall never forget. The dim cathedral, specked with countless candles held by the people—the light from the sinking sun streaming through the great rose-stained glass window; the gorgeous vestments, the incense rising from the censers swung by the acolytes in scarlet soutanes, but above all the sense of fervor and belief that emanated from the prayerful throng!

THE image of the Virgin and Child was replaced upon the pedestal; a hush fell, as if from the high altar; the Cardinal raised the sacred Host in benediction. Every head was bowed; a beautiful woman who knelt beside me was bedewing the marble pavement with her tears—a silvery bell rang out on the silence.

Our Lady of Deliverance!

Will their prayer be heard?

Drawn by E. Fuhr from a Sketch by George Lynch

In Brussels, just before the Burgomaster surrendered the keys of the city, an automobile swept through the streets laden with men displaying German helmets that had been captured before Liege. A very little later the capital lay supine under the overwhelming numbers of the invaders

The German War Lust

By Robert Crozier Long

DRAWING BY C. R. WEED

(Written in the British Ambassador's train between Oldenzaal and the Hook of Holland)

"THE most awful thing in war is the singing." "Im Krieg man singt; das ist der schrecklichste der Schrecken." So wrote the dead novelist, Paul Heyse. Having reached the Dutch frontier, after twenty-five hours' railroad traveling through a tempest of war songs, I say that Heyse is right. I heard how seven Russians of the frontier patrol were burnt to death near Wirballen; and it made no impression on me. Nor will, I believe, the inevitable "five-million battle." But I shall remember to my dying day how Germans sang their war songs while the train of Ambassador Goschen, the leader of their foes, steamed slowly toward the neutral frontier of Holland.

This is the most marvelous thing of the Armageddon. For six hours after leaving Berlin I saw few signs of war. I saw at Docberitz twenty aeroplane frames, without motors or wings, heaped by the depot. They looked like roes' skeletons. I saw trains of ununiformed reservists steaming east. The trains were adorned with green branches and white derisive inscriptions. The soldiers had chalked on the doors their views of France and Russia. "Imagine," said the Belgian Minister Beyens, "a German who chalked anything on a railroad car in peace time!" War brings liberty!

Singing the British Out

I FIRST believed that there was no war when the Germans began to sing. They sang first, I think, at Hanover. Our train drew up at a platform crowded with reservists in civilian clothes. Each man carried a neat cardboard box with his effects and food.

The news spread like fire that here was the British Ambassador. "Der Botschafter Goschen!" the envoy of Germany's latest, greatest, most inexorable foe. Then the reservists, pale-faced shopmen and clerks, began to sing as only Germans sing. A few menaced. They sang "The Watch on the Rhine," the most terrible of war songs, which to France's "Marseillaise" is as a steel bar is to a rapier. After Hanover, Germans sang all the way. At Wunstorf, our next stopping place, we were sung to by Red Cross girls. This was more terrible still. It was pitch dark. Behind the barrier inclosing the platform crowded the whole Wunstorf population. On the platform, so close that they breathed against the windows, were two hundred girls. The car in which I was dining with the "Standard" correspondent stopped opposite the middle of the singing group. At first the girls made no demonstration. Then a whisper passed round. "Der englische Botschafter!" ("The English Ambassador!")

The girls began to sing. For half an hour they sang, "Germany, Germany Over All," to Haydn's heart-searching music. Plain repetition without taking breath. They changed to "The Watch on the Rhine" and sang it thrice. Then our train left. The girls waved their hands ironically. They kept perfect order. But the drilled singing, the spiteful, sardonic faces, and the last contemptuous movement of the hands! I shan't forget it. All that night, whenever we stopped at wayside stations, we heard from disciplined throats that Germany would be "over all in the world," and that "The Watch on the Rhine" was "honest and true." Ehrlich und treu! I began to wish that the crowds would throw stones or raid the train. But every half hour instead rang out the tremendous singing. The exception was the last station we passed before the Dutch frontier. Here there was hardly a soul in sight. Only a sentry, a station master, and a small boy. A little attenuated, spiderlike boy swinging a vast wooden sword, on his head a ridiculous toy Pickelhaube helm. The boy looked at us, asked the sentry a question and began to cry. Then for a moment he straightened himself, held out his sword, and began in the thinnest of squeaky trebles to whine "The Watch on the Rhine." After the martial chanting through the black of the past night, it seemed a whimsical imp's mockery. So we were sung out of Germany.

Overnight the Socialists Become Patriotic

I LEFT Berlin after nearly six years' residence as correspondent of the London "Westminster Gazette," and other journals and reviews. Our train carried off the British Ambassador, Sir Edward Goschen, with staff, the Belgian Minister with staff, about ten newspaper correspondents, and a few lucky Britons who managed to get German Foreign Office passes. I had arrived in Berlin from Saarow by the Lake of Scharmuetzel on the day of Franz Ferdinand's assassination. So I witnessed the whole preliminaries of Europe's Armageddon tragedy, the human and social sides of which I shall now describe.

"We shall defend ourselves to the last breath of man and horse. And we shall be victorious in this fight, even against a world of enemies. Forward with God, who will be with us, as He has been with our forefathers"

The war made Germany united, unanimous, and resolute. This momentous fact transcends all controversies as to historic and diplomatic origins. The first effect was the death of Internationalism. Internationalist Social-Democracy with its 2,300,000 registered adherents and its 4,250,000 Reichstag voters vowed to a man to support the Kaiser's policy. In the Reichstag on August 5, the Red Deputy Haase declared that Internationalism admitted the right of every nation to self-defense. The Reds would support no war of conquest. They desired peace whenever the foe wanted it. But they voted as a man the war credit of $1,250,000,000. When Haase, one of the reddest of Social-Democrats, made this historic demonstration, the whole Reichstag applauded. Even the tough Junker-Conservative leader, Heydebrand und der Lase, rose demonstratively from his seat.

The Kaiser Bids the Multitude Pray

NOW to the human factors of the war. I put Wilhelm II first: he has sent to the front six stalwart sons; he goes himself; his nephews, cousins, and remoter relatives go. They go not as shirkers, as ornaments, as inspiration, but as soldiers and sailors. I saw the Kaiser on the day of his arrival from Potsdam. That was on Friday, July 31. A tremendous bass voice bawled from a window of the Kaiser chambers overlooking the Lustgarten: "Quiet, the Kaiser will speak!" Wilhelm II, accompanied by the Kaiserin, by Princes Adalbert and Oscar, walked on to the raised terrace. He looked pale, yellow, old, soldierly, resolute. I saw his lips moving; but knew his words only next day. The speech contained a defense of Germany's efforts for peace, which were in vain. The enemy forced on war! Note the sentence: "Man drückt mir das Schwert in die Hand!" ("They have thrust the sword into my hand!") And he bid the multitude disperse to the churches and pray.

The Kaiser later drove down the Unter den Linden in his yellow motor car, heralded, as ever, by trumpets. I saw him again on Saturday evening after mobilization was proclaimed. Again he appeared before the Schloss. He proclaimed that Germany was as one man, and that he forgave his enemies and all who had spoken ill of him.

Crucial Midnights

THIS was a memorable day. At the preceding midnight Germany had sent Russia the twelve hours' ultimatum and got no answer. If M. Sazanoff gave Count Pourtalès an answer, if Count Pourtalès sent it to Berlin, it never arrived. War was certain. The Kaiser proclaimed the fact by appearing in the dull gray-green field uniform of the Feldjaeger Corps. As he spoke, red mobilization posters began to flame on the pillars. They proclaimed the mobilization arrangements for eight days and ended with "U. S. W." That meant that the further mobilization order would be proclaimed later. Germany did not give away the exact duration of her mobilization. Nobody knows it except the higher staff. I heard officers arguing on the subject.

At 5.45 a Reichstag deputy mounted the top of an automobile about a hundred yards to the east of the Russian Embassy and shouted: "War is declared." I was on my way to the Russian Embassy and I gave this news. The news was wrong. War was not declared in formal fashion. I met in the embassy the Ambassador, M. Sverbeyeff; Prince Vassiltchikoff and M. Catargi, secretaries; Captain Behrens, the naval attaché, and some other old friends. Sverbéyeff knew nothing. He had heard that a Russian reply had been sent off at midnight (immediately on receipt of the ultimatum). This information was apparently wrong. He had not been at the Foreign Office since Friday morning, and had no notion of what was going on. He and his staff feared to go into the streets. I laughed and told them stories of the perfect order prevailing. Events proved them right. When they were leaving Berlin, already seated in their automobiles, a vicious attack was made by the mob. Police President Jagow, who dragooned Berlin successfully during four years of peace, failed miserably to keep order during war.

The disorderly parties were largely disreputable cosmopolitans from the Friedrichstadt district. Most Berliners behaved well. The house porter of my apartment at Berlinerstrasse, Wilmersdorf (himself a Landsturm man already notified that he might be required), behaved toward me after the British declaration of war precisely as he had before. I offered him money and he refused it. From commissions which he had done for me he knew that the newspaper correspondents were short of funds.

War Decimates Every Family

EVERY German rushed to serve his country. Every father and mother rejoiced. I shall give only cases known to me personally. When mobilization was proclaimed, the only son of my friend and house colleague, Herr Herrmann, a talented architect, was sailing a yacht on the Lake of Constance. He was twenty-three years old, had never served, but had been sent straight to the untrained Ersatz-Reserve. He would now be trained for four weeks, then sent to the front. His father, his mother, and his little sister, Antonie Herrmann, wept all day. Not because death had drawn nigh; because they feared young Herrmann would not hear of the mobilization order, would arrive late, and bear the innocent disgrace of involuntary desertion. When he arrived their joy was greater than if he had returned unscathed from a battle. This sentiment compared nobly with the conduct of the ambassador of one of the belligerent powers. In reply to my question to this high diplomat how many of his four sons would serve, he said: "Thank God, only one. This boy"—here he pointed to a good-looking, six-foot lad of twenty-odd—"wants to volunteer. But I won't let him. His mother . . ."

I heard a story of a Landsturm man who offered to personate a Landwehr man to whom for family reasons field service was an exceptionally severe blow. He risked getting himself and his friend shot. From the clerk in my bookseller's store, Hahne of Joachimsthaler-

Digitized by Google

strasse, I heard of another striking case. On July 30 a young German arrived from Paris. In 1911 he evaded military service, made for New York, and was last employed as a mechanic by a French auto firm. He was hiding in Berlin. Asked why he deserted, he answered: "I could not stand the thought of service." Asked why he returned, he answered: "To serve, but only if war comes." He was advised to come out of hiding, report to the War Office, and take advantage of the coming amnesty for deserters. He refused, because in that case he must serve whether it came to war or not. This was a weak, puny, timorous man, who dreaded the rude barrack life and the Feldwebel's curses. The army seemed to him the worst of lives. But to serve his country he would put up with the army, perhaps with torture and death as well.

I could fill pages with the greatness and baseness of Germany in her hour of trial. War makes all men whiners or actors. Two years ago at Bogados, near the Chataldja lines, a Greek deputation begged me and my friend, Francis McCullagh, to ask the British fleet to come to their protection. Why? Because their hens had been eaten by famished Turks. Ten days later General Popoff, commander of the First Brigade before Chataldja, told me of a Bulgarian who was court-martialed and shot because he stayed behind to defend a Turkish family against marauders until gendarmes could arrive to protect them. That was the way at Berlin during the momentous days beginning July 30.

Knaves and Fools of War Time

SOME Germans acted basely, filled their houses with provisions, and tried to exploit the universal misery. A small tradesman, whose shop is on the ground floor of my house, boasted that he had bought up $750 worth of flour, and would sell it for $4,000. He reckoned without his host, as next day General von Kessel, commandant in the Mark, declared the maximum price of flour to be not more than 30 pfennigs a pound. Another rascal in our quarter frightened housekeepers into buying flour at 110 pfennigs a pound. A Charlottenburg trader caught in such villainy shot himself. The locksmith Adolf Henckel, also of Charlottenburg, was sent to force the locks in the house of an officer newly arrived in Berlin. He carried off the silver spoons. He was arrested and shot. Order was good; this is the only case I know of shooting for other causes than espionage and treason. War baseness and timidity have their humorous features. A frightened English governess asked the British Embassy to have the war postponed for half a day. She wanted to get to Frankfort on the Oder. I have written elsewhere of the apothecary of Nollendorf Platz. He is historic. General von Kessel's billposters pasted their blood-red mobilization placards over his advertisements of a cosmetic. He implored the general to bid the billposters in future to leave his advertisements in peace.

An Englishman's Praise of Germany

BERLIN army officers behaved well. The war transformed and transfigured the stiff Herr Lieutenant. Often the officer in peace is a bit—well, Zubern says enough. When danger drew nigh, these officers behaved with courage and calm. They were heroes of a war-mad populace, yet unspoiled. In the Bayerischerplatz district where I live are many officers and many Englishmen and Americans. After the automobiles disappeared I traveled daily many times on the underground in trains crowded with officers. There was no pose, no pathos, no advertised heroism. The officers looked well. They were already wearing the new gray-green field uniform, with light-colored straps. The Pickelhaube helmet, including the spike, is covered with a nightcap of uniform material. This is to prevent the glittering metal parts presenting a target to sharpshooters. In some cases the cap did not entirely conceal the spike, and brass nickel parts showed through the openings.

Most persons in these trains knew I was an Englishman. An officer even asked to look at a copy of my paper, the "Westminster Gazette." That was on Wednesday, after England had declared war. He read an article not too friendly to Germany and returned the paper with thanks. The conduct of officers strongly contrasted with that of the police and of some civilians, who roughly arrested and sometimes mishandled British subjects. My conclusion is that Germany in the hour of peril showed the vast national advantage of drill, of discipline, of class codes of honor, even when these codes (as in all militarist states) are perverted or exaggerated.

Human, all too human, were the blunders of suspicious soldiers, policemen, and civilians. On August 1 the War Ministry issued a request that Germans should watch out for spies and take preventive measures against the throwing of bombs from trains on to bridges. An hour later I saw the inside of a train at Friedrichsstrasse station placarded with bright red notices rehearsing this request. The public with ultra-human zeal set to work to help the authorities. They seized or demanded papers from every Russian. Later they arrested Englishmen. Americans who spoke English in public places shared the same fate. The populace seized suspicious-looking Germans and did not stop until several officers in uniform, on the way to

Into the Battle

By GRANTLAND RICE

INTO the battle the Trooper speeds
As the bugles call and the drums respond;
Into the fight as the captain leads
Where the low line waits on the hills beyond;
Waits for the signal — then the crack
Of blue steel rimmed with a crest of flame,
And few ride back on the homeward track
Where many rode when the order came.

Into the battle the Trooper speeds,
Into the line where the rifle rings,
But little the Trooper hears or heeds
The song of hate which the shrapnel sings —
The roar of battle — the curse — the shout —
The crash and clamor of friend and foe —
The riderless horse that wheels about
And gallops past to the plains below.

For out from the smoke wreath, far away,
He hears the patter of little feet;
The dim, far call of a child at play
With babyhood laughter, low and sweet;
The murmur of voices, dream-swept far
From the little path to the cottage gate,
Where eagerly under the evening star
Mother and child in the twilight wait.

Into the battle the Trooper speeds —
But somewhere out from the Far-off Lands
An echo drifts where a soft voice pleads
And the tender pressure of little hands;
A mother's lullaby from the night
And a call to the Great White God in prayer
That one will come from the far-off fight
To those who wait in the darkness there.

fight for their Fatherland, were under arrest as spies. A reserve officer, who appeared in the street in faded trousers and a new tunic, was seized by a mob that asked him if he was "the Frenchman who poisoned the wells at Metz." In peace time the officer would have sliced off the amateur detectives' arms, and a court-martial would have acquitted him. The officer behaved calmly, laughed at the crowd, and allowed himself to be taken to the police station.

Once at least the biter was bit. Among the crowd hunting spies in the Charlottenstrasse was a zealous cashier who was bringing a wad of money to pay laborers on the Tempelhof Field. After patriotically helping to apprehend a "spy" he made off. Five minutes later he himself was arrested. He protested.

"My German accent proves I'm no foreigner!"

"It proves you're a spy. Spies always speak good German."

Here the crowd began a search. No money was found. "He's certainly a spy," shouted the chief amateur detective. "He hasn't got a pfennig on him."

"Not a pfennig!" roared the mob.

Here a searcher unearthed a thousand marks in small notes.

"That proves he's a spy!" bawled the crowd. "He got it from France in small notes so as to bribe our brave soldiers. Who gave you the money?"

And, having with true German punctiliousness counted the money, made a memorandum and given the "spy" a receipt, they proceeded to beat him. A policeman ended the comedy. My old friend, Samuel Beach Conger, Associated Press correspondent, was seized at Gumbinnen as a Russian spy. As he lay in jail, Berlin newspapers reported that "a Russian grand duke had been arrested at Gumbinnen." Only war transfigures mere newspaper men into grand dukes.

Brides Waiting in Line

THE first result of mobilization and war was a rush to the churches. Marriage and death were indissolubly combined and every betrothed soldier set about to wed. A decree proclaimed that for Nottrauungen (immediate marriages of soldiers) banns and other formalities were dispensed with. Between Saturday morning, August 1, and Tuesday at twelve, there were 4,400 such weddings. Half were solemnized on Sunday. I saw some of this. I was driving past the red brick church in Wilhelmsaue where my own child was christened. Outside were twenty-odd couples in a queue, as if waiting for a theatre, not for marriage and death. Some soldier bridegrooms were in uniform; reservists were in mufti. The reservists carried the inevitable cardboard box. I saw two girls in the queue keeping places for bridegrooms who had not yet come, and I saw men keeping places for their brides. The parties were of all classes—rich girls in wedding dress who had come in motor cars, servant girls with red arms straight from their work.

Mars Vanquishes Eros

WITH these "war marriages" the God of War deals grimly. The reserve artillery lieutenant, Nielsen, came from his regiment at Chemnitz to Berlin to marry the niece of General Berndt, commander of the Twelfth Artillery Brigade at Neisse. In Berlin he found that she had got a special permit to travel, and had left by train for Chemnitz, intending to wed him there. The trains crossed. Lieutenant Nielsen, unwedded that evening left for the front. In addition to many Bismarcks, Buelows, Moltkes, and members of other famous families, the Kaiser's two sons, Princes Oscar and Adalbert, were among the bridegrooms—both nice clean-living, patriotic lads. Oscar's marriage to Countess Ina von Bassewitz was solemnized at Schloss Bellevue, in North Berlin. Adalbert married Princess Adelheid of Saxe-Meiningen. I am told that he kissed his bride after the ceremony and immediately left for headquarters on the North Sea. Such partings were illuminated by hope. One of my servants told me a story more terrible. It concerns one of her own cousins. The story I almost shrink from printing, for I believe it is unexampled even in the incalculable tragedy of war. Here is the story:

The Gefreiter (private absolved from sentry duty but not yet with noncom's rank), George Lepsius, was obliged to report himself at barracks at 11.40 a. m. At 11.45 the regiment would march to the Potsdamer Railway depot, en route to Colmar. Lepsius was engaged to an attractive shop girl, Marie Schulze. At 11.15 the soldier decided for a war wedding, made for his sweetheart's house at Teltow, and carried her off to the Teltow Trinity Church. She went in her working clothes.

On the way the pair stopped, and, failing to find orange blossoms, bought a bouquet of lilies. By 11.30 the wedding was almost over. When the soldier bridegroom put the ring on his beloved's finger, she dropped like a stone. Her forehead struck the altar steps. The pastor undid her bodice, put his hand on her heart, and ejaculated:

"Your unhappy bride—"

"Ihre ungluckliche Braut—"

And he stopped. Lepsius for a moment seemed dazed. Then he looked at his watch, put a lily in the dead girl's hand, and, making a military salute to the pastor and clerk, tramped out of the church.

Marconi *vs.* Hymen

By Frank X. Finnegan

ILLUSTRATED BY ERNEST FUHR

SOMEBODY, who ought to know, once observed with an air of authority that all the world loves a lover, since which time the statement has been generally accepted at its face value; but in the case of Peter Weber, dyer and cleaner, of Halsted Street, we note an exception.

The antipathy of Mr. Weber did not run against lovers in general. It was reserved in all of its Teutonic strength for a tall, thin young man who answered to the name of "Bill" when he was behind the counter in Deist's grocery store, but who preferred to be called "Mr. Harding." Halsted Street, not being given to exaggeration in the matter of social forms, compromised by calling him "Billy." And the genesis of Mr. Weber's loathing for the agile young man lay in the fact that Billy aspired to annex Lena, the daughter of the house of Weber, to the name of Harding.

With this object in view, Billy put in most of what waking hours he could spare from the exactions of the grocery business burning incense before the shrine of Miss Weber; the same taking the tangible form of ice-cream sodas, trolley rides to amusement parks, visits to tango temples, lengthy strolls in the park, occasional club sandwiches, and very frequent conferences on benches in shadowy nooks. Herr Weber, having scented from afar the atmosphere of adoration that radiated from Billy when he was within the zone of influence, issued a ukase that was intended to end his hopes summarily.

OF COURSE the command that the grocer's assistant should bask no longer in Lena's smiles, and should squander his wages in some other direction, served to bring about that secrecy and stealth which only feeds the flame of love.

"He is after a wife with money, this fellow," Mr. Weber stormed at his red-eyed daughter after his third and fourth warnings had been ignored. "Why should he have the nerve to hang around after you—such a grocery clerk? You ought to be ashamed—a daughter of mine! You should get a business man when you get a husband—somebody with money in the bank, that amounts to something. A grocery clerk! Humph! If I see him again with you some time I'll break his back! He thinks something should be coming to you if I die; that's what it is!"

Lena was not without a flash of her father's spirit. She dried her tears at that and raised her chin rebelliously.

"He is nothing of the kind—a fortune hunter!" she retorted. "He's an honest, hard-working young fellow that's ready to make his own way. And if he should look ahead a little and figure on his wife bringing him money to start in business for himself," she added, "would you count it against him? That's what you call smart when somebody else around the corner does it. That's the kind of a fellow that gets along, you say. But when it comes into your own family it's different."

HER father removed his pipe to stare open-mouthed at the rebel. The feminist movement had not touched his placid existence. In the scheme of things as he understood it, womenfolks did what they were told.

"Tell me something," he said heavily, "am I the head of my own house?"

Lena did not reply. He took it that his question did not require an answer.

"Then I am telling you this fellow Harding is no good," he declared. "I don't want you should have anything more to do with him. And if you don't do what I say—if you should be such a fool as to marry him—not a dollar of mine do you ever see. I'm through with you. You understand me, Lena? Then that's enough I have said."

Followed a fortnight of secret trysts and stolen meetings and of whispered messages over Mr. Weber's own telephone wire while he played pinochle in Heidelmeier's back room; vows were repeated with a bland disregard for the Weber bank account, upon which Mr. Weber believed all things must hinge. Finally, on a balmy Saturday morning, little Miss Weber, in her jauntiest tailor-made, crowned with a military confection that had graced a Halsted Street window the day before, stood at the rail of the *City of Ludington* and looked anxiously down upon the dwindling crowd that passed in over the gangplank.

"You're Lena Weber," the brisk young man declared. . . .
"Well? Supposing that I am," Miss McMullen returned.
"What's the big idea of you weaving up here and telling me about it?"

HER heart began to beat faster and a puzzled little frown deepened between her blue eyes as the last of the excursionists, basket laden and with umbrellas and raincoats trailing behind them, came hurrying along the pier to be swallowed up in the laughing, chattering crowd aboard the big steamer. The whistle boomed out its warning above her while she still strained her vision along the deserted pier and the deck hands began hauling in the gangplank.

AROUND the corner of a red freight shed beside the pier a stout woman with a heavy suit case suddenly appeared on the run, waving her hand bag frantically at the steamer and squealing for delay. Two freight handlers helped her over the trembling gangplank, to the admiration of a thousand spectators along the rails of three decks, the ropes were cast off, and the *City of Ludington* slowly began to move off.

No one noticed Lena's perturbation. The crowds of holiday seekers, setting out on week-end excursions across the lake, or longer vacation trips, were too much concerned in waving farewells to their friends outside the pier railing or in searching for comfortable seats to observe the scared little girl who stood on deck all alone, a suit case at her feet, watching the great buildings that lined the river slip past the steamer as it rapidly forged on its way toward the shimmering lake.

Somewhere up forward a band suddenly struck up a tango melody. There was a quick hustling away of chairs and camp stools, and then the shuffling of feet and little screams of delight that told the dance was on. Waiters, strident of voice and familiar of manner, began circulating through the crowd bearing loaded trays aloft and crying for room. The excursion was on, and in all the crowd only Lena Weber failed to revel in the spirit of it.

FOR nearly a half hour she stood at the rail until the steamer had passed out into the lake and the sky line of the city was beginning to be shrouded in smoke.

Then she took up the suit case and moved slowly through the noisy crowd to a companionway that led to the ladies' saloon, descended the staircase with a brave effort to keep her white lips from trembling, and made her way to a red plush-covered sofa to think things over. She had not reached the seat when she was hailed by a friendly voice that made her drop the heavy bag in her surprise.

"Hello, Lena! Where to all alone?" it said.

She turned quickly and almost tottered toward the young woman who had called to her.

"Birdie!" she shrieked. "Oh, Birdie, I'm—I'm so glad to see you!"

And, by way of proving it, she immediately burst into the flood of tears that she had been struggling so hard to hold back.

Miss Birdie McMullen, the queen of Halsted Street, elevated her eyebrows a trifle and seized Miss Weber by both hands.

"You seem to be tickled to death to have me horn in on your party," she said. "If you loosen up like this when you're glad, Lena, I'd certainly hate to meet you at a funeral without any rain proof. What's the idea?"

LENA continued to weep for a few moments, while Birdie regarded her curiously. They were by no means close friends, but Miss McMullen knew the Weber girl as she knew pretty much everyone in Halsted Street, and knew something of the loneliness and hard work Lena had known since her mother's death three years before. On her part, the dyer's daughter looked up to Birdie McMullen as to one on a plane many degrees above her own, and to which she would never aspire.

"I look foolish crying when I say I'm glad to see you, don't I?" Lena admitted, dabbing her eyes with her handkerchief. "But I couldn't help it, Birdie. It looked so good to see you when I'm in such trouble."

"In trouble?" Miss McMullen repeated. "There it goes. I knew I couldn't get over to South Haven for a couple of days without bumping into some one who was going down for the third time and yelling to me for a life preserver. Well, come over here and tell me about it," she went on, slipping a motherly arm around the girl's shoulder. "What on earth are you doing in this bunch of week-end highflyers if you're in trouble?"

She led Lena to the red-plush sofa, and they sat down, the younger girl still weepy and shaken. They had the big room to themselves for the moment save for a woman at the farther end who was intent upon caring for her baby.

"Why, that's just it, Birdie," Miss Weber explained. "It was all right when I started out, but—but it's happened since then. I'm eloping," she added, looking up timorously.

"Eloping! Then, believe me, you're right about that trouble stuff," Birdie rejoined. "Where's the other half of the sketch?"

"Who?" Lena asked.

"The provider—the busy Jimmie of the affair—the man, silly! You're not eloping with the suit case, are you?" Miss McMullen rejoined.

"Oh, that's what's the matter!" Lena exclaimed. "He didn't come!"

BIRDIE sat back and looked at her accusingly.

"See here, Lena Weber," she said, "if you're trying to get by with a single-handed elopement, don't spring it on South Haven. They're used to the real article over there in flocks and bunches, but it takes at least two to make an elopement look natural—sometimes three if pa gets on the trail fast enough to grab a train in Chicago and get over there ahead of the steamer. What seems to have happened to your bridegroom?"

Miss Weber clouded up again, and her tears flowed afresh.

"I don't know," she wailed. "He was to meet me here on the boat, and we were going to be married in South Haven this afternoon, and—and here he's missed the boat or been murdered or something, and I'm here all alone. Oh, Birdie, what am I going to do?"

"Don't cry all over this nice red sofa and get it spotted up; there's a nice girl," Birdie advised. "And he could easily miss the boat without being slaughtered—I've known a lot of people to do that. All you've got to do is loll around here in a steamer chair until we get to South Haven, and then take a train back home. You can get there by eight o'clock, and you needn't tell everybody along the road where you've been and

Digitized by Google

what's happened. And after you've put your little suit case away in the clothes closet just get your Wandering Willie on the telephone and find out how about it. That's all easy enough, and I don't see any reason for you doing a Brodie over the side of the boat."

"But—but what will I tell my father?" Lena sobbed.

"Say, you're going to have a lot of nice long hours to figure out what you'll tell him," Miss McMullen said. "The less fathers know about elopements the better for all hands round and ladies change. Haven't you got a cousin or an aunt, or something handy like that, where you could have gone for the day? Relations ought to be of some use, you know."

LENA looked up at her tragically through her tears. "How can I?" she wailed. "I left a note telling him I was running away with Will Harding to get married!"

"That does mix things up a whole lot," Birdie admitted. "I never could see why you high-strung young things, that dash to the altar up a sidetrack instead of taking the main line, always have to scatter a lot of literature around for father. He'd find it out fast enough without any inside information in advance. So it's Billy Harding that you've almost eloped with, eh? Well, you might do worse, Lena. If he's really missed the boat and hasn't got cold feet before making the big jump, things ought to straighten themselves out all right when we get across the lake. We might telephone him from over there, or something like that. Cheer up, and don't have a red nose for your wedding," she added, patting the disconsolate fugitive on the shoulder. Miss Weber sniffed into her handkerchief a few times more, wiped her eyes, and tried to smile recognition of this optimistic outlook.

"I should have let him come with me right from our corner, the way he wanted to," she said, "but I thought I was going to be smart. Will had to attend to some business for his boss this morning that couldn't be put off, and I told him to go ahead and do it and meet me on the steamer. He gave me my ticket so I could come aboard, or I would have been waiting for him on the pier. I wish now he hadn't," she added miserably.

"Well, that wouldn't have helped much so long as you dropped that line to papa telling him you were going to grab a new home," Miss McMullen assured her. "You certainly stirred up your dad when you propped that on the pincushion and tiptoed out the back door. You don't expect to find the doormat, with 'Welcome' tattooed on it, laid out for you now unless you come home holding Willie by the hand, do you? Not if I know Pa Weber, and I've met him now and then in the last ten years. No, indeed, fraulein. We've got to frame up some way of putting this thing over now that you've made a flying start."

"But Will won't know where I am!" Lena protested.

"He knows you're on this steamer, and I don't see what's going to keep him from beating it over to South Haven on the railroad and being on the pier over there when you land this afternoon," Birdie said. "If he's as keen for getting you as he ought to be, he'll be there all right. And if he isn't we'll think of something positively unique to do then. You can jog along with me, you know, and I guess pa will have to stand for that if he hears about it. I'm going over to meet Evelyn Maguire at the Sterlingworth and put in a few days of high-class loafing on the hotel porch. You can have a single-handed honeymoon with us if Billy has jumped the track. Come on and check your vanity bag anyhow and let's go up on the deck."

Two hours later the girls were chatting over their luncheon in the dining saloon when a steward passed through the room carrying an envelope and paging Miss Lena Weber. That young woman, listening in frightened disbelief to the sonorous repetition of her name, seized Birdie's hand convulsively. "He's calling my name!" she whispered. "What on earth can it be?"

"Let's ask him," Miss McMullen suggested. "I'm a frost as a mind reader."

"Oh, no! I'm afraid!" Lena gasped. "It's—it's something about Will!"

"I'll take it," Birdie said, signaling to the steward. "Something about Will is what we need to find out just now."

"Miss Lena Weber?" the steward asked.

MISS McMULLEN nodded, and he handed her an envelope.

"Wireless telegram for you," he said. "Sign the book here, please."

Birdie scribbled Lena's name on the line he indicated, and when the boy had passed on ripped open the envelope. Miss Weber was regarding the yellow paper with awe and fascination. It was the nearest she had ever approached to that modern marvel, the marconigram. "Oh, Birdie! What is it?" she whispered nervously.

"You don't mind my reading this?" Miss McMullen asked—the slip being only half withdrawn.

"Go on! Go on! I wouldn't look at it for a million dollars!" Lena assured her. "I was always afraid of telegrams. And a wireless—oh, my good gracious! I think they're terrible!"

BIRDIE had drawn out the message and glanced over it. She elevated her eyebrows as she read, and then looked at her timid companion with a broad smile.

"Well, your friend William is game all right," she said. "He hasn't taken it on the run off the dock nor backed away from the bridal noose, as you have been fearing away down near the paper soles of your Oxfords. Your cruel parent has had him tossed into jail for a few hours, but now that he's been sprung he's fleeing to you on the wings of love, aided in spots by the Pere Marquette Railroad. Listen to this:

"Arrested this morning for abduction, charged by your father. Bailed out too late to catch boat. Coming by train. Be careful. Think he has telegraphed South Haven officers to arrest you on landing. Cheer up. I'll be on the job. WILL."

"He was arrested?" Miss Weber gasped, horror dawning in her eyes.

"Yes, but it didn't take," Birdie said. "That's what you get for scattering good-by notes behind you when you leave home to elope, young woman. Your father probably found your note and went on the warpath—I can see him now tearing up one side of Halsted Street and down the other, yelling for the Fire Department and the Board of Health to come and lend him a helping hand. And then he spotted your handsome hero beating it over the grocery route, making his last collections for Old Man Deist, and called the copper off the corner to drag him to the dungeon.

For nearly a half hour she stood at the railing

Some excitement around those old corners this morning after we left, Lena. And if the newspapers get hold of it you can be in vaudeville before the week is out. I wonder if Bill can do any of these tangerine dances?"

"How can you joke about it?" Lena quavered. "And they're going to put me in jail, too! What's that for? Is it a crime to get married these days?"

"I know people who think it's a lot worse than murder," Miss McMullen asserted, "but they don't count. You needn't fret about getting arrested in South Haven, Lena. I don't propose to have any copper butt in on love's young dream with a night stick while I'm the chaperon of a perfectly good elopement. How old are you?"

"I'm nineteen next October," Miss Weber returned.

"Well, that's good enough at home, but you'll be twenty-one by the time you get to South Haven," Birdie declared. "You've aged terribly crossing the lake. And I'm just waiting to see somebody arrest you for taking a trip to South Haven with me. We could collect a million dollars' damages from the State of Michigan and make the Governor come around and apologize. The police are an awful scream, aren't they?"

"How do you mean?" Lena asked wonderingly.

"Why, that bunch back home lock up Billy Harding for abducting a girl who isn't even in town, and over here the chances are they'd be ready to grab you for eloping without a bridegroom. For a herd of mental mastodons, I'll pick the average police station and take 'em as they come."

"But if pa does telegraph to the police in South Haven," Lena persisted, "would they have any right to arrest me, Birdie?"

"Nothing worries the police less than what they have a right to do," Miss McMullen replied. "I've never known a copper yet to get embarrassed and resign because he'd made some kind of a break about agresting somebody. They're more likely to bounce a two-foot hickory club off the prisoner's skull for showing them up. Just wait until we get ashore and then we'll see what will happen."

But things began to happen some little time before the *City of Ludington* tied up to her South Haven pier. A tug came fussily out to meet the steamer, and from it a lantern-jawed young man leaped aboard as soon as the vessels touched. He made his way direct to the captain, the purser was called into conference, and a few minutes later the wireless operator was summoned. Then a call went out for the steward who had delivered the message addressed to Miss Lena Weber, and after the official heads had been together a while longer, that excited youth came bearing down upon Lena and Birdie, with the newcomer forging along in his wake.

Lena and Billy swarmed into the room without waiting for permission, hand in hand, and smiling happily upon the world. "Well, we're married!" Billy shouted, and then stopped short at sight of his father-in-law

THEY were sitting in a quiet spot on the after-deck under an awning, quite apart from the restless and impatient throng of holiday makers, who had flocked forward to watch the deck hands preparing for the landing. The steward pointed an accusing finger at Miss McMullen.

"That's her," he declared triumphantly, turning to the capable-looking person behind him, who at once stepped to the front. Lena had started to rise, with one hand pressed against her fluttering bosom, but Birdie pushed her down again to the seat.

"Just keep quiet and let me handle this," she murmured. "It's all right."

"You're Lena Weber," the brisk young man declared, aiming another forefinger at Birdie. "No use trying to deny it—I've got witnesses right here that you're her."

"Well? Supposing that I am," Miss McMullen returned. "What's the big idea of you weaving up here and telling me about it? You don't imagine they've been holding out on me about my name all these years, do you?"

He smiled down on her sarcastically and placed his hands on his hips, in the attitude of one appraising a new specimen.

"Fresh, eh?" he said. "I guess they didn't get after you any too soon. Why, say, kiddo, you don't have to ask me what it's all about. You got a wireless today tipping you off that

The Turning of Joe

By Frank A. Halverson

ILLUSTRATED BY S. J. WOOLF

"MISTEER DRIVER, me gitta car dissa time?"

Joe, the little Italian miner asked the question eagerly as he darted out from under the brushing into the heading. In his voice was quavering entreaty. He leaned his hard, callousel hands on the empty coal car, and gazed appealingly at the trip rider.

"Sure, Joe, take a car!"

"Gooda man!" Joe ejaculated gleefully. Cars were coveted treasures to the miners. Each one filled with coal meant money on pay day.

With animated haste, Joe uncoupled a car and pushed it over the switch. When he had it in the parting, he stopped for breath and removed the oil lamp from his cap and trimmed the wick. Its burst of light revealed the dark-arched tunnel of the heading partly filled with shifting dust and powder smoke. The gleam also played on Joe's face and showed the swarthy features streaked and grimed with coal soot. His eyes were small, but wonderfully bright. With a sweep of his hand he brushed back his curly hair, replaced his cap, and putting his weight on the drawbar of the car he pushed it into his room.

"Hurry up, Joe!" Jack the driver urged, "Mike's coming!"

"Badda man, Mike!" Joe muttered excitedly, "he steala my car. No giva me turn!"

JACK understood the law of the mines. Cars were to be evenly distributed among the men; but little Joe, not being able to defend himself, was continually victimized.

"Get in before Mike comes!" Jack warned. "He'll take your car again. It is his turn to lay off. Hurry!"

Joe was off with his car instantly. He knew that Mike would be after him. His evident fright made Jack smile in pity.

The other miners were coming out on the heading with their cars; the rumbling of wheels stopped at switches and partings; their lamps lit the entryway, looking like electric bulbs on a city street.

"Say, driver, move on!"

The voice was a bellow, hard, rasping, domineering.

"No car for you this time, Mike," the driver replied.

"To —— there ain't!"

Mike crawled past his car and came out on the entryway. He was a giant. With a great intake of breath he straightened up to his full height. On his face was a settled snarl. His shirt was gaping open at the throat and his broad breast was ridged with muscle. With his powerful arms swinging, he walked down to the driver and inquired: "What did you say about my car?"

"None for you," Jack repeated, but he put no grit in the assertion. "You've got more than the other men now. Every man is supposed to receive an equal share."

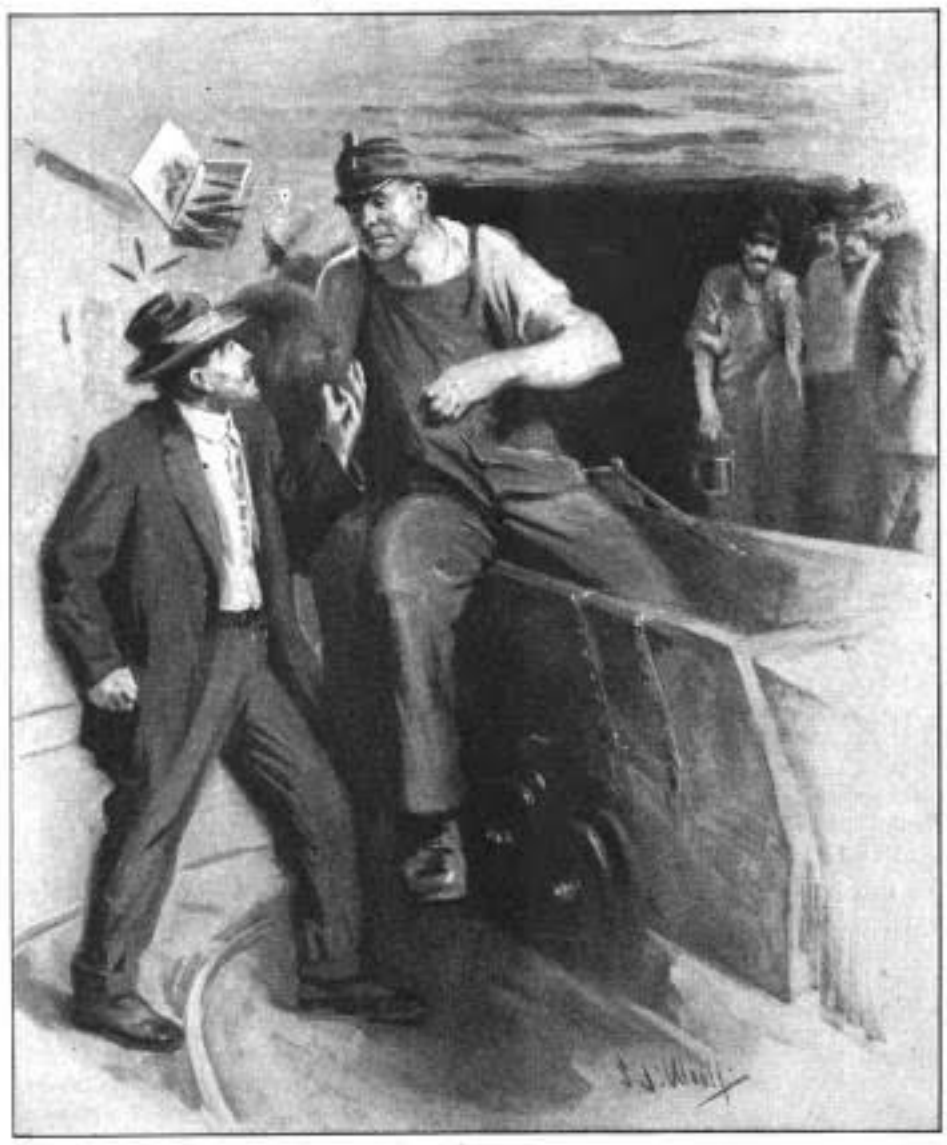
BIG MIKE laughed gratingly, showing his yellow teeth. "Since when, Jack? Say, what are you going to do about that dago?" Mike's words were a sneer.

"Give him a square deal," Jack reasoned pleadingly. "He's got a wife to support and a home to maintain. He's not earning his salt. You're taking his cars every day."

"He has no business in here!" Mike bellowed angrily, "he should be starved out." He cursed "that dago."

The rumble of Joe's empty car mingled with the malediction. Mike hurried down to Joe's parting and peered into the room. He could see the Italian's lamp moving ahead in the murky shadows.

"Bring that car back!" he shouted with an oath.



Joe increased his speed, intent on filling the car.

With rapid suppleness, Mike darted under the slate brushing and running a little distance up the road shouted again: "Push that car out! It's mine!"

"Wassa matter dis!" Joe returned, blocking the car and hastily throwing a few shovels of coal into it. "You no gitta dis-a-one! It'sa mine."

"It is? I'll show you!"

Joe shoveled with speed, the glow from Mike's lamp was coming closer; Mike was using all the blasphemous words his limited vocabulary contained in berating the little Italian. When he reached the coupling link he grasped it and gave it a violent pull; it resisted his effort; failing on his knees, Mike reached out his hand and removed the sprag that was holding the car—his head was level with the wheels; so intent was he on taking the car that he did not notice Joe. The latter had raised his shovel and an ugly light burned for a moment in his eyes; a frenzied hiss through his bared teeth gave him away. Mike heard it and looked up. "You would, would you!" he shouted, springing to his feet.

The happy father walked over to Mike. "Misteer Mike, taka a smoke." Mike's answer was a quick, upward blow of his arm. He hit the box and the cigars scattered in many directions.... He roared and cursed Joe's son

"No, no Misteer Mike," Joe pleaded, changing instantly. The spark of manhood was gone, every lineament of Joe's face betrayed fear; he was trembling in uncontrollable fright, he sank on his knees, whining and groveling in front of the tyrannous Mike.

With a raucous laugh, Mike raised his heavy shoe and planted a solid kick in Joe's ribs. "That's good medicine for dagoes!" he gloated leeringly.

Some of the miners had gathered near, but a tense silence, broken only by heavy breathing, bound them. The blackened faces of the men disclosed strong emotions. They were cowed by fear. Mike was the master and none disputed his sway.

A rumbling indicated that Mike was bringing the empty car back. The miners gazed at one another. Some of them swore, but not loud.

"It's a shame!" Jack the driver still protested. "Mike does as he pleases. That car gives him three to-day and Joe has not received any yet. Yesterday Mike had seven and Joe four. Is that justice? God, if I were a little heavier—"

"Cut it out, Jack," a miner interrupted, "don't fly off the handle and get your looks spoiled. Joe's only a dago."

"He's a man," Jack hurled back, tears of anger in his eyes. "We're a cowardly set to let Mike boss us!"

THE men were uncoupling their own cars in passing their switches. All seemed in a hurry to get in to their work. Secretly they resented Mike's abuse of Joe; yet none wished or dared to offend the powerful bully.

When Jack reached the face of the heading, he unhooked the spreader and turning the mule around he connected it on the entryman's car.

"What han wrong?" inquired Lars, coming out from under the brushing and resting his elbow on a lump of coal. "You han long time!"

Jack touched the muscles of the big blond Swede's arm and exclaimed: "Man, if I had your strength, I'd lick the dirtiness out of big Mike. He took the dago's car again. I'd kill him," he burst out in helpless rage.

"Ban dago that little man?" Lars questioned.

"Yes."

Jack told the story hotly. Lars's blue eyes snapped.

"Aye han come down next time," Lars confided with determined finality. "Mike he do that to little man—he do to me the same. He nice man to me." To impress Jack of his ability, he took a lump of coal off the car and crushed it in his powerful hand. "How Mike like that squeeze?" he queried.

The driver's countenance flushed eagerly; if Lars took a hand it would make it easy to give every man his share of cars.

THE miners were in the rooms when Jack came spragging the loaded trip past Joe's parting; stopping the mule and peering into the latter's place, he could discern a feeble flicker from Joe's lamp and Joe lying in a huddled position by the track.

Coming closer to the little man, he heard him moan as if in great pain.

"Are you hurt?"

But Jack could make out no words in the low whining that came from the shaking little miner. His nerve was gone.

Jack said to himself bitterly that he himself was no better, for he would flunk at a show-down with Mike. Game! Fight! What chance had Joe? What chance had he?

"Come on, Joe," Jack advised, "go out and tell the boss."

Jack departed and Joe continued his crying. The big sleek rats came out from their hiding places and hopped from stone to stone, with shrill squeaks. The air was cold, but Joe did not feel it. The sweat was boiling from him. With a painful effort he crawled to where his lamp lay and brushing the coal dust off the wick, still with the lamp in front of him, he bowed his head in his hands, moaning and sighing. How could he cope with Mike—he, the little foreigner, detested, snubbed, and spit upon on all occasions?

On the following morning when the miners were waiting for the trip to pull in, they heard some one coming down the track and whistling lustily. The gay notes came from the Italian quarter of the mining settlement.

Sandy MacPherson, mine foreman, stopped and listened. A smile broke over his dour face. It was such a strange thing for Sandy to smile that the waiting miners took notice, and watched with the more interest the path that led from the settlement up to the mine.

"Well, of all things!" Sandy exclaimed.

COMING briskly up the path was little Joe. His face shone, he was wearing his best suit of clothes, the pride of the company store—several sizes too large for his person, they were; a rubber collar circled his neck; the roomy, baggy trousers hung on a belt, and their sag necessitated several rolls at the bottom; the broad stub shoes had been treated to a liberal coat of polish.

"Gooda mornink!" Joe's military salute was debonair.

"Same to you!" Sandy ejaculated, "but wha' in blazes is the meaning o' this?"

From inside his coat Joe brought forth a box of cigars. "Bigga boy comma my house! Take a cigar-r-r!"

"I'll be blamed!" Sandy burst out vehemently. "Ye'll nae be so happy when ye have two or three or maybe mair. Aye lad, I ken yer feelings the noo. Here's congratulations and lots o' them." He grasped Joe's hand and the muscles of the new-made father's face twitched at the strength of the grip, but—"Taka more smoke, misteer boss." Joe urged gamely.

"Aye, lads," Sandy called, "step up and have a smoke on Joe's boy. It's a proud man he is. I ken weel how it is."

Sitting, unnoticed in the first car of the trip was Mike. He did not come up with the other men to partake of Joe's treat, but sat (*Concluded on page 26*)

COMMENT ON CONGRESS

SENATOR THOMAS P. GORE of Oklahoma is not one of the least desirable of the Democrats in Washington. Indeed, as politicians go, he belongs rather at the better extreme. But so prevalent is the idea abroad of appealing for reelection on the basis of success at the pie counter that he, too, relies on it. He has flooded Oklahoma with letters (under frank, of course), in which he says:

I had hoped to see you personally and to account face to face for my stewardship. I was detained in Washington by the Indian Appropriation Bill. As reported by the Committee to the Senate, this bill carried six or seven millions for Oklahoma. I could not get my consent to leave my post of duty until I had made every effort to *bring this golden tide into our State.*

"Bring this golden tide into our State." Is it too much to say that a politician who talks this way, whose attitude of mind toward the Government is indicated by these words, is hardly deserving of reelection? Senator Gore continues in the unctuous strain of self-sacrifice:

I felt that I ought to sacrifice my own interest rather than sacrifice the interest of my people.

My length of service and committee assignments helped me materially in accomplishing the foregoing results. In the Senate *seniority counts.*

In other words: 1, having been in Washington a long time, and therefore knowing the ropes, can get you more pork than a new man. This circular letter of Senator Gore's, with an odor of cant that hangs round the pork barrel, begins: "My dear Sir and Friend," and closes thus:

With hearty good wishes for your health and good fortune, I am Yours very truly,

Senator Gore has been seen in more worthy rôles than this.

Staying in Washington

WHEN Congress decided to cut off the salaries of absentees, it took belated notice of a scandalous condition. On one roll call last week the entire delegation from Maine was absent. Eight members were absent from Massachusetts, and out of forty-three New York members, twenty-seven were absent. This sort of thing has been going on for a long time. Congress has always artfully avoided adopting any rule which would even permit the public to know when members are present and when they are absent. The only way of knowing is to consult the roll calls on measures which come up, but many days go by without any roll call, and there is really no way of being sure of the percentage of attendance of any one member. An amusing aspect of the present action is that the Republicans claim the Democrats have, in the slang of the day, "put one over on them." Practically all the Democratic members are returned, not at the elections in November, but at the primaries during the preceding spring. This means that all the Democratic members are through with their campaigning, and are perfectly content to stay in Washington. They are enforcing the rule about absentees just at a time when Republican members find it most important to be away from Washington to look after reelection.

A Harassing Menace

THE question of prohibition does not appear much in the dispatches from Washington. But, nevertheless, it is the question which is giving more concern to members of Congress up for reelection than the trust bills or the emergency war measures. The feeling in Washington, even among those who are opposed to the Hobson Bill, is that prohibition is a question which won't stay down. The present movement aims to achieve prohibition on a national scale, by an amendment to the Constitution. This has been indorsed recently by both the Republican and Democratic State Conventions in Kansas. These conventions at the same time instructed their Congressional candidates to pledge themselves in support of the amendment. In Missouri the Progressive State Convention took the same action, and the Democratic State Convention would have taken it but for the strenuous work of Senator Stone. It is safe to say that among the 435 Congressional district elections this fall, in fully three-fourths the liquor question will be right to the front.

"A Little Nervous"

May, in Detroit Times

A Public Service

FEW Congressmen have made themselves more useful in their first terms than James A. Frear of Wisconsin. At the beginning of the present Congress Mr. Frear went to Washington to fight the river and harbor pork barrel, and he has been fighting it ever since. He did all in his power to defeat the 1914 bill in the House, and when it was passed over his protest he followed it to the other end of the Capitol, where he has been furnishing Kenyon, La Follette, and other Senators with information with which to fight the measure. Mr. Frear has a resolution before the House which calls for a thorough investigation of many of the items of the measure. He believes a thorough airing of the bill would make its adoption impossible and lead to the enactment of a law providing for a waterways commission to be appointed by the President, thereby removing the national rivers and harbors problem as far as possible from local influences. Mr. Frear's plucky fight deserves universal commendation, but we think Congress ought to abolish the pork-barrel system without a costly investigation. Another man who is deserving of great credit for his opposition to the pork barrel is Senator Burton of Ohio. Senator Burton is one of the few men in Washington who have fought with sincerity and energy for economy with the public money. He is retiring from the Senate voluntarily; there are fully fifty Senators who would be missed less.

Small But Noisy

THERE can be no doubt that there is a minor section among politicians, conspicuous now among the Democrats only because that party happens to be in power, who have a real antipathy for property and business as such. They make their living by politics, and so have no concern about private property of their own. They are not burdened by the responsibility of making a business keep going. They have no experience of the obligation toward employees and dependents. Their feeling toward property and organized business partakes of a kind of intellectual anarchy. They think that organized business implies a lack of individual freedom, the imposition of one man's will on another's in a way that is distasteful to them as pronounced individualists.

THE RECORDS OF CONGRESSMEN

FOUR hundred and thirty-five Congressional vacancies and thirty-one Senatorial vacancies will be filled at the primaries this summer and the election next November. In the great majority of cases the present incumbents are candidates for reelection. The best basis for determining whether they should be reelected is, to a large extent, the way they have voted upon important measures. Collier's Washington Bureau will provide the record of the votes of any Senator or Congressman on every important roll call since March 4, 1909. This service is entirely free of charge. Give the name of the Congressman or Senator whose record you wish, and address

My Mission and Betrayal in England

By Dr. Armgaard Karl Graves

ILLUSTRATED BY LOUIS FANCHER

DURING 1911 my diplomatic missions piled one upon the other. Of recent years the German has been the most tempestuous of European cabinets. The drama that began with my mission to Monte Carlo and developed through the swift climaxes of the Moroccan affair, the secret conference between Germany, Austria, and England in the Black Forest, that rushed on through the intrigues that preceded the Balkan War, had now lulled, gathering its forces for the present catastrophe—the most appalling war Europe has ever seen. To be sure the terms that the English, German, and Austrian Ministers had agreed upon in the Black Forest were now awaiting ratification by their respective Governments. Bear this in mind—"were awaiting ratification"—for it explains the mission that I was called upon to undertake on November 18, 1911.

I received the usual summons to report at the Wilhelmsstrasse. Instead of being brought before Count von Wedell, I was taken over to the Königgrätzerstrasse, to the German Admiralty Intelligence Department. Here I was introduced to a Captain Tapkan, the chief of the naval branch of the Intelligence Department. The Captain briefly informed me that it had been deemed advisable to send me to England—unwelcome news, this, as you will see. In the usual curt yet polite manner of German officers, the Captain introduced me to three naval experts. One was a construction officer, another in the Signaling Department, the third an expert on explosives and mines. One at a time they took me in hand, grooming me in the intricacies of their respective fields. I sat for hours over diagrams with a naval officer on each side. They brought me before charts that were as big as the wall of the room. These charts gave the exact dimensions and type of every vessel in the British navy. Not only that, I was made to study the silhouettes of all the different types of English warships—why, you will see.

Eternal Vigilance

OBVIOUSLY this special training was significant. Part of my mission to England was to watch the preparations and maneuvers of British warships at the new naval bases on the Scottish coast.

As you may surmise, the situation between England and Germany was peculiar. The secret treaty of the Black Forest was awaiting ratification by the heads of the two Governments. Of course the mass of subjects—indeed not ten men in each country—knew aught of what had transpired near Schlangenbad. Politicians had worked up a war scare to such a pitch that the people of the two nations were ready to rush into conflict. Only a spark was needed to fire the situation. Realizing that under the menace of existing conditions the unforeseen might happen, the Kaiser was not lessening his secret diplomatic intrigues; rather, he was increasing them. It is a fact that even though two nations have a secret treaty, they each remain suspicious of the other. After all, secret treaties have been ruthlessly torn up. The vigilance of European cabinets must be eternal.

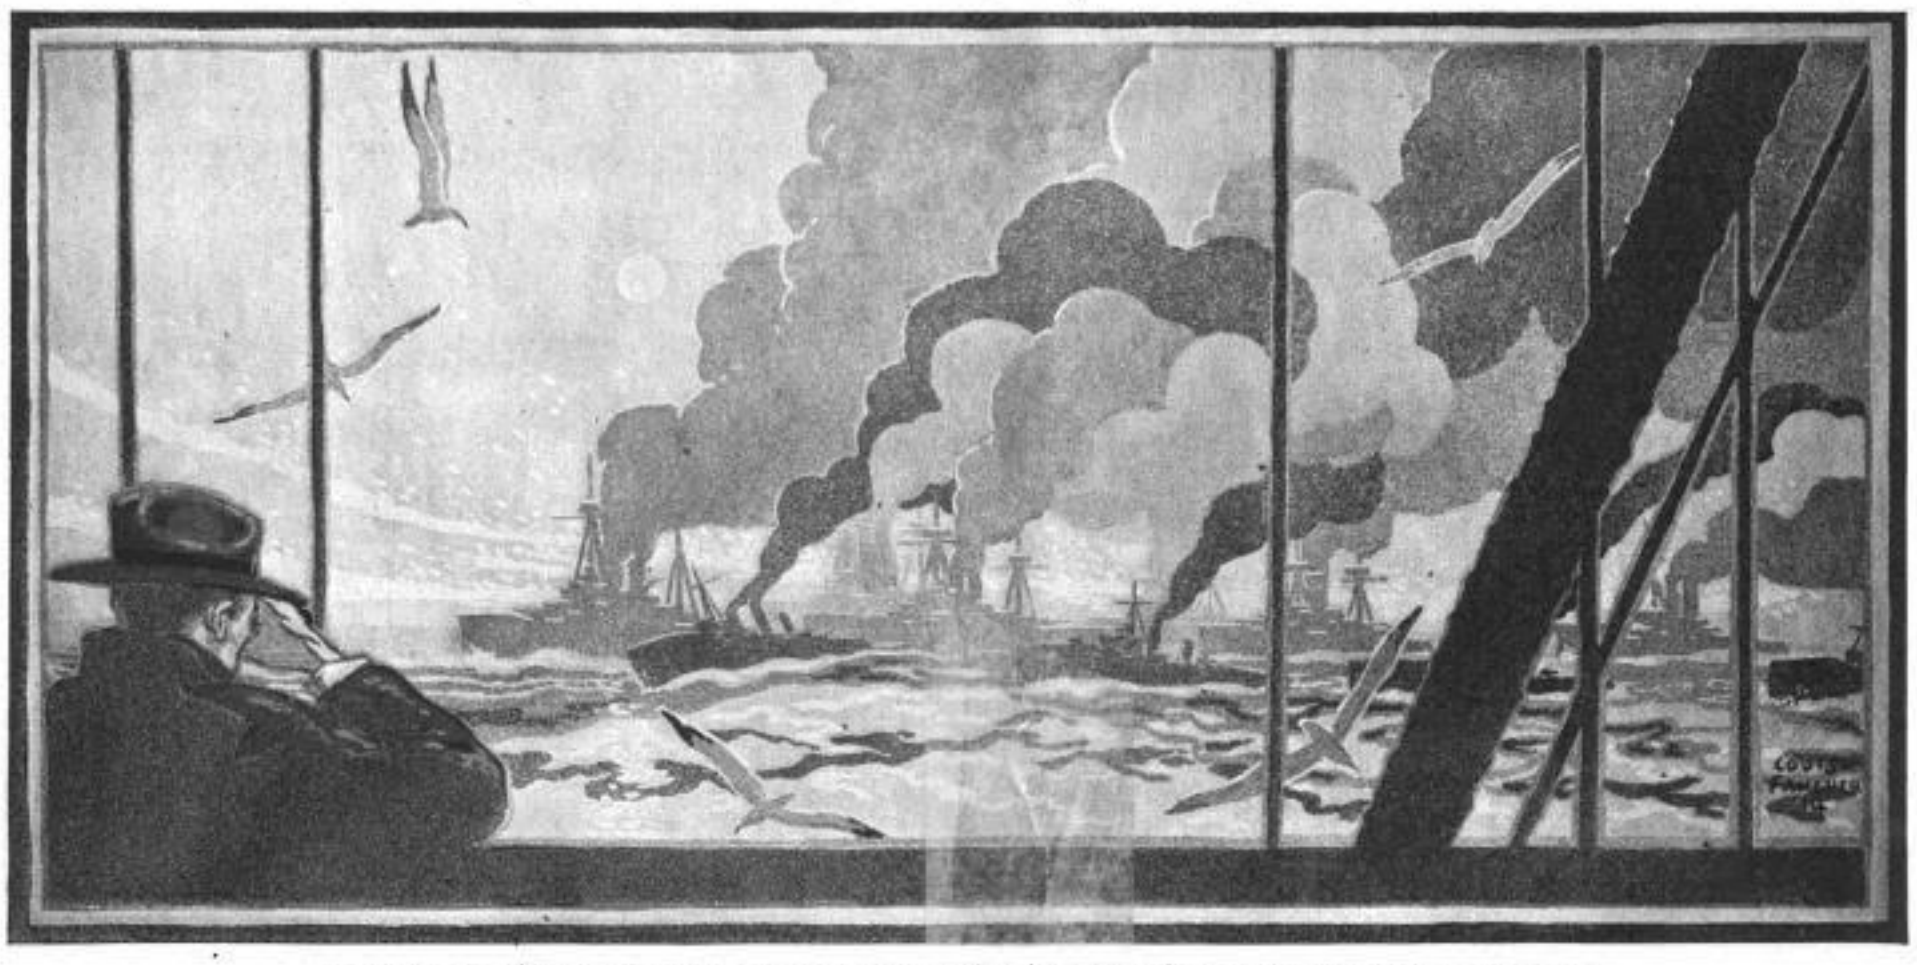
Sent to Scotland

HENCE my mission. It was included in my instructions to watch the movements of British warships off the Scottish coast and promptly cable the German Admiralty Intelligence Department concerning them. This is where a study of the silhouette charts would be invaluable. At night or in fog or early in the morning I would not be able to distinguish the British ships by name. But, knowing the silhouettes of all the naval types—for example, certain kinds of dreadnoughts, powerful cruisers, torpedo-boat destroyers—I would be able to tell just what ships were putting to sea. When I had memorized all the charts my tutors covered the names of the battleships thereon and made me repeat the types. For instance, I would say: "That is a *Queen Mary* type of dreadnought. The other is of the *Ajax* type. That destroyer is of the *Viper* type." And so on. There were well-defined architectural lines to every group of ships in the British navy, and these silhouettes I learned to know by heart before I was permitted to leave Berlin.

Moreover, I had to brush myself up in topography and trigonometry. In England—so I learned from my instructions—it would be necessary to calculate distances, to take observations on the exact nature of the two new naval bases at Cromarty, in the north, and at Rosyth on the Firth of Forth, near Edinburgh.

I was to watch especially the new Rosyth base and to report progress on armaments, new equipment, anything of use to the German Admiralty. I was to keep tab on all the British fleet maneuvers then in progress on the Scottish coast. It must be understood that that new bases at Rosyth and Cromarty were Great Britain's answer to Germany's powerful naval base at Helgoland. So far as Germany's northern coasts are concerned, the Scottish coast is the most convenient point of attack for Great Britain. Fearing the unforeseen spark firing the hostile minds of the peoples of the two nations, Germany was thus preparing to be instantly informed of any sudden demonstration by the English fleets off Scotland. Not a ship could leave either Rosyth or Cromarty without an immediate cable being sent by me to Berlin, reporting how many war vessels and of what type had put to sea; also, if possible, the reason for the movement.

At the Intelligence Department I was given carte blanche as to how to go about my mission. I am frank to say I did not care at all for it. I had good reason to be wary. The suspicious state of England at the time, and a stringent law just passed, made this mission very dangerous as far as my liberty was concerned. There was no danger of a knife thrust, as in the Balkans, but there was of jail. Contrary to all precepts of British law, there had been rushed through the House of Commons a clause so elastic and convenient for convictions that a judge could charge a jury to find a man guilty on suspicion only. As I recall it, the exact wording was:



"Any person or persons making or obtaining any document whatsoever, endangering or likely to endanger the safeguards of Great Britain, can be found guilty notwithstanding there being no consequent proof of any actual offense. A sentence of seven years' penal servitude will be given the offender."

A Plague of German Spies

IT DOES not need a lawyer to point out the tremendous power of prosecution that this added clause to the statutes put in the hands of the English Government. As I stated, it was rushed through the House of Commons, but it was necessary. One has to admit that to be fair. Within six months three German spies had been arrested in England. There was a plague of them. Knowing this and also knowing the general efficiency of England's public servants and system, I was rather loath to stick my head into it. That penalty for being caught—seven years penal servitude—loomed ominously, for penal servitude in England is plain hell. I also knew that, although no passports are required in England, they still know pretty well what is going on, especially as regards foreigners. It is easy to get into England, but very hard to get out. Also, knowing the secret understanding between the two Governments, I had an uneasy premonition that everything was not quite right in the state of Denmark. Subsequent events proved to me that this feeling of mine, very seldom at fault, was correct.

Against My Better Judgment

HOWEVER, strong pressure and great inducements were brought to bear on me, and I undertook the mission against my better judgment. When I left Berlin I was thoroughly equipped to carry out instructions. Every war vessel of the British navy, every fortification, naval base, and depot of supplies was coded in Secret Service ciphers. Arrangements had been made with the Intelligence Department to transmit telegrams to an address in Brussels, Belgium. In the event of this secret channel of communication

At five o'clock in the morning — a gray, rainy, foggy morning, through which the ships moved almost ghostlike — I made out sixteen war vessels. From their silhouettes I knew them to be dreadnoughts, cruisers, and torpedo-boat destroyers. At once I filed a cable by way of Brussels

Digitized by Google

with Berlin being closed, there was another address provided, via Copenhagen, and a third, via Paris. The exact names and places I still remember very vividly.

I went to Edinburgh by way of the Hook of Holland and Folkstone. I went by way of March, not passing through London for a reason. The reason is that at any time, and more especially with the air surcharged with war scares, all Continental steamers and expresses entering London are closely watched. The general traveler does not know that every Dover, Calais, and Flushing Express is met and watched, not only by Scotland Yard detectives, but by special Government officers. As a rule, very little escapes them. Anyone not an Englishman is upon landing likely to notice an elderly, gray-haired, high-hatted English gentleman, who looks like a retired army officer or cleric, and who generally carries an umbrella. If this clerical-looking gentleman decides a foreigner is suspicious, he is closely shadowed from the moment he enters London.

I sat for hours over diagrams with a naval officer on each side. They brought me before charts that gave the exact dimensions and type of every vessel in the British navy

Circumventing this by going via March, I arrived in Edinburgh and put up at old Bedford Hotel on Prince's Street, a quiet, select Scottish hostelry. I registered under my quasi correct name of A. K. Graves, M. D., Truro, Australia. My "stunt" was to convey the impression of being an Australian physician taking additional post-graduate courses at the famous Scottish seat of medical learning. After a few days' residence at the Bedford I installed myself in private quarters at a Mrs. McLeod's, in Morningside Road, near Braids Hill. The ordinary expense provided for my residential quarters was $75 a week. This, of course, did not include "extras," such as entertaining, motor trips, special dinners.

Obtaining Information

FOR the first fortnight I quietly took my bearings, creating a suggestion that I was a semi-invalid.

Having by this time familiarized myself with Edinburgh and surroundings, I made frequent trips to the Firth of Forth, upon which was located the Rosyth base. Now, across the Firth there is a long bridge. It is between the Rosyth base and the North Sea. Warships going to and from the naval station pass under it. But more about this bridge later—something for the benefit of the English Admiralty.

Gradually I worked myself into the confidence of one of the bridge keepers. I shall not give the man's name, for to do so would injure him, and quite unwittingly he gave me facilities for studying the naval base and furnished me with scraps of information that I wanted to know. For this he received no money, and he was not a traitor to his country. Through the little acquaintance I struck up with him, I was able to make a thorough study of the bridge and its structure—a strategic point, the bridge. Also, through the offices of my good friend the keeper, I was introduced to some of his "pals" in the water guard. Because of my intimate knowledge of Robbie Burns, Walter Scott, "inside" history of Prince Charlie, and—ahem!—Scottish proclivity for a drop o' whisky, they accepted me as half a Scotchman.

From the water guard I obtained more definite information regarding the Rosyth base. So much for the topographical knowledge, which could only be obtained through personal contact with men who actually knew every inch of the ground. The charts back in Berlin could not give me that exact information. The higher scientific data of the fortifications and the base I obtained by social intercourse with high-priced officials—officers and engineers at Rosyth—whom I entertained at various times. Of these little entertainments I shall have more to say in my forthcoming book.

A Menace to Britain's Navy

THE schooling I had received in the silhouettes presently came in handy. One night my friend, the bridge tender, learned that the fleet was getting up steam. Accordingly, I stood on the bridge that night and waited, and at five o'clock in the morning—a gray, rainy, foggy morning, through which the ships moved almost ghostlike—I made out sixteen war vessels. From their silhouettes I knew them to be dreadnoughts, cruisers, and torpedo-boat destroyers. At once I filed a cable by way of Brussels, informing the Intelligence Department of the German navy that an English fleet, sixteen strong, had put to sea. Subsequently I learned that in describing the sixteen ships I had made only one mistake.

I may here draw attention and, in return for England's fair treatment of me during my trial, give them gratis this information. *The Firth of Forth Bridge constitutes a grave danger to the Rosyth naval base.*

For this reason: Its location between Rosyth and the sea is a decided menace. In the event of hostilities—in fact, before the outbreak of war—it is no-ways impossible to blow up the Firth of Forth Bridge and bottle all war vessels concentrated at the Rosyth base. They could thus be bottled up for several days powerless while a foreign fleet swept the Scottish coasts. The British Foreign Office will understand what I mean by this: *Look to the middle island.*

After about three weeks I began to be suspicious of being followed. Arriving home one night I noticed that my dress suit was arranged in a different way to what I had left it. I called my landlady and casually inquired if my tailor had been there. She said: "No, Doctor."

"Well," I replied, "what reason have you then to rearrange my clothes?" Her face reddened and she seemed flustered. "I wasn't in your room," she faltered. "I remember now. I believe the tailor was here. One of the servants let him in."

I have no reason to shield Mrs. McLeod, for, with true Scottish thrift, she got as much out of me as she could, and then afterward declared in court that she thought I was a German spy after the second day I had been in her house.

I made it my business to go round to my tailor's within an hour's time, and he contradicted her story. He had not been at the house. To verify completely my suspicions that I was being shadowed, I went the next day into the "F and F," a well-known caterer on Prince's Street. In the writing room I wrote some letters, one of which I purposely dropped on the floor. I withdrew to the washroom and, returning in about fifteen minutes, noticed that the letter had disappeared. Making inquiries of "buttons" and of the "desk girl," I learned that a gentleman had quietly picked up the letter and, without reading it, had put it in his pocket and walked away. That settled it. They were after me.

I hope this particular detective or his superior could read Greek. For they or whoever spent their time translating my letter read an ancient Greek version of "Mary Had a Little Lamb."

Bearding the Police

I RECOGNIZED it as an occasion where I had to make a right royal bluff. I went at once to Police Headquarters in Edinburgh. I asked for Chief Constable Ross, and sent in my card bearing Dr. A. K. Graves, Truro, South Australia. Presently I was shown into the chief's room and was received by a typical Scottish gentleman. I opened fire in this way:

"Have you any reason to believe that I am a German spy?"

I saw that it had knocked him off his pins.

"Why, no!" he said, startled. "I don't know anything at all about it."

"It's not by your orders, then, that I am followed?"

"Certainly not," he replied.

"Well, Chief, it's hardly likely that anything of such importance would transpire without your notice."

"What reason have you to believe that you were followed?" he asked.

"Reason in plenty," I replied. "Some agent had even the audacity to enter my apartments and search my effects. This, as you know, is absolutely against English law, a warrant being necessary for such procedure. If you have any reason to take me to be a German spy, go right ahead now, or let these rather nonsensical persecutions cease. I have taken this up to now to be rather a good joke, but my sense of humor has its limit."

Chief Constable Ross became serious and very gravely said:

"Well, Doctor, you know we've got to obey orders. I'm quite satisfied, though, that there has been a mistake made and you shall have no further annoyance."

He bowed me out. Of course I knew I still would be shadowed, which I did not mind in the least. I reasoned that my visit to the police might make them slow down a bit. Right along I communicated by cables and letter with Berlin, and went the even tenure of my way. About a week after my experience with Constable Ross I received information that a firm of gun makers in Glasgow were constructing some new fourteen-inch guns for the British Government. That meant a change of base.

A Costly Mistake

I AT once made it my business to go to Glasgow and get particulars. I installed myself in the Great Western Hotel, and in a week gained all the information I wanted. It would take too long to detail how this was done, but you have a very expressive American saying, "money talks." I had the plans, firing systems, everything of interest about the new fourteen-inch turret guns. While in Glasgow I received letters addressed to me as James Stafford. I received two such letters, and upon my calling at a G. P. O. for a third I was informed that there was a letter for A. Stafford.

"Oh, yes, that is my letter," I said.

The clerk demurred and replied:

"You asked for James Stafford. Under those circumstances I cannot hand you this letter. It is against the postal law."

Not being in a position to raise a question, I let it go at that, never for a moment thinking that my employers would be so culpably careless as to put any incriminating evidence in the mail. Events proved that that is just what they did. Moreover, I later came to know why that particular letter was addressed not to James but to A. Stafford. All my previous letters were addressed to me as Dr. A. K. Graves and were inclosed in the business envelope of a well-known chemical firm at Snowhills, London, E. C. Of course they were sent from Germany to London and there reposted. The stationery of this chemical firm was obtained so as to disarm any possible suspicion, for European post offices are taught to be suspicious. It would be perfectly natural for me, a physician in Edinburgh, to receive a letter from a very well-known chemical concern.

Caught with the Evidence

WHEN I left Edinburgh to find out about the fourteen-inch guns I gave our people in London instructions to use plain envelopes and to address them to James Stafford, G. P. O., Glasgow. The first two letters were addressed correctly and plain envelopes were used. *The third was not only misaddressed but was inclosed in one of the chemical firm's envelopes*—this, as I later learned, for a reason.

(Continued on page 21)

The attendant knocked on the door, opened it, and announced: "The gentleman." I was facing Sir Edward Grey . . . . looking small in the big armchair

Bealby

By H. G. Wells

ILLUSTRATED BY HENRY RALEIGH

Chapter XIII
A Left-Handed Mascot

"Look here, Mr. Benshaw," he said, "you seem to be under the impression that we are trespassing." Mr. Benshaw was understood to inquire with some heat what Mr. Rymell called it. "We were not trespassing," said Mr. Rymell. "We were following up that boy. . . ."

AT THE very moment that Bealby was butting the baker in the stomach, Mr. Benshaw was just emerging from his austere cottage after a wholesome but inexpensive high tea in which he had finished up two left-over cold sausages, and he was considering very deeply the financial side of a furious black fence that he had at last decided should pen in the school children from further depredations. It should be of splintery, tarred deal, and high, with well-pointed tops studded with sharp nails, and he believed that by making the path only two feet wide a real saving of ground for cultivation might be made and a very considerable discomfort for the public arranged, to compensate for his initial expense. The thought of a narrow lane which would in winter be characterized by an excessive sliminess, and from which there would be no lateral escape, was pleasing to a mind by no means absolutely restricted to considerations of pounds, shillings, and pence. In his hand, after his custom, he carried a hoe, on the handle of which feet were marked, so that it was available not only for destroying the casual weed but also for purposes of measurement. With this he now checked his estimate and found that here he would reclaim as much as three feet of trodden waste, here a full two.

Absorbed in these calculations, he heeded little the growth of a certain clamor from the backs of the houses bordering on the High Street. It did not appear to concern him, and Mr. Benshaw made it almost ostentatiously his rule to mind his own business. His eyes remained fixed on the lumpy, dusty, sun-baked track, that with an intelligent foresight he saw already transformed into a deterrent slough of despond for the young. . . .

THEN quite suddenly the shouting took on a new note. He glanced over his shoulder almost involuntarily and discovered that, after all, this uproar was his business. Amazingly his business. His mouth assumed a Cromwellian fierceness. His grip tightened on his hoe. That anyone should dare! But it was impossible!

His dominions were being invaded with a peculiar boldness and violence.

Ahead of everyone else and running with wild wavings of the arms across his strawberries was a small and very dirty little boy. He impressed Mr. Benshaw merely as a pioneer. Some thirty yards behind him was a little collarless, short-sleeved man in red slippers, running with great effrontery, and behind him another still more denuded lunatic, also in list slippers and with braces—braces of inconceivable levity. And then Wiggs, the policeman, hotly followed by Mr. Macculium. Then more distraught tailors and Schocks the butcher. But a louder shout heralded the main attack, and Mr. Benshaw turned his eyes—already they were slightly bloodshot eyes—to the right, and saw, pouring through the broken hedge, a disorderly crowd: Rymell, whom he had counted his friend, the grocer's assistant, the doctor's boy, some strangers—Mumby!

At the sight of Mumby, Mr. Benshaw leaped at a conclusion. He saw it all. The whole place was rising against him; they were asserting some infernal new right of way. Mumby—Mumby had got them to do it. All the fruits of fifteen years of toil, all the care and accumulation of Mr. Benshaw's prime, were to be trampled and torn to please a draper's spite! . . .

STURDY yeoman as Mr. Benshaw was, he resolved instantly to fight for his liberties. One moment he paused to blow the powerful police whistle he carried in his pocket and then rushed forward in the direction of the hated Mumby, the leader of trespassers, the parent and abetter and defender of the criminal Lucy. He took the hurrying, panting man almost unawares, and with one wild sweep of the hoe felled him to the earth. Then he staggered about and smote again, but not quite in time to get the head of Mr. Rymell.

This whistle he carried was part of a systematic campaign he had developed against trespassers and fruit stealers. He and each of his assistants carried one, and at the first shrill note—it was his rule—everyone seized on every weapon that was handy and ran to pursue and capture. All his assistants were extraordinarily prompt in responding to these alarms, which were often the only break in long days of strenuous and strenuously directed toil. So now with an astonishing promptitude and animated faces men appeared from sheds and greenhouses and distant patches of culture, hastening to the assistance of their dour employer.

It says much for the amiable relations that existed between employers and employed in those days before Syndicalism became the creed of the younger workers that they did hurry to his assistance.

But many rapid things were to happen before they came into action. For first a strange excitement seized upon the tramp. A fantastic delusive sense of social rehabilitation took possession of his soul. Here he was pitted against a formidable hoe-wielding man, who, for some inscrutable reason, was resolved to cover the retreat of Bealby. And all the world, it seemed, was with the tramp and against this hoe wielder. All the tremendous forces of human society against which the tramp had struggled for so many years, whose power he knew and feared as only the outlaw can, had suddenly come into line with him. Across the strawberries to the right there was even a policeman hastening to join the majority, a policeman closely followed by a tradesman of the blackest, most respectable quality. The tramp had a vision of himself as a respectable man heroically leading respectable people against outcasts. He dashed the lank hair from his eyes, waved his arms laterally, and then with a loud, strange cry flung himself toward Mr. Benshaw. Two pairs of superimposed coat tails flapped behind him. And then the hoe whistled through the air and the tramp fell to the ground like a sack.

But now Schocks's boy had grasped his opportunity. He had been working discreetly round behind Mr. Benshaw, and as the hoe smote he leaped upon that hero's back and seized him about the neck with both arms and bore him staggering to the ground, and Rymell, equally quick, and used to the tackling of formidable creatures, had snatched and twisted away the hoe and grappled Mr. Benshaw almost before he was down. The first of Mr. Benshaw's helpers to reach the fray found the issue decided, his master held down conclusively and a growing circle trampling down a wide area of strawberry plants about the panting group. . . .

MR. MUMBY, more frightened than hurt, was already sitting up, but the tramp, with a glowing wound upon his cheek bone and an expression of astonishment in his face, lay low and pawed the earth.

"What d'you mean," gasped Mr. Rymell, "hitting people about with that hoe?"

"What d'you mean," groaned Mr. Benshaw, "running across my strawberries?"

"We were going after that boy."

"Pounds and pounds' worth of damage. Mischief and wickedness. . . . Mumby!"

Mr. Rymell, suddenly realizing the true value of the situation, released Mr. Benshaw's hands and knelt up. "Look here, Mr. Benshaw," he said, "you seem to be under the impression we are trespassing."

Mr. Benshaw, struggling into a sitting position, was understood to inquire with some heat what Mr. Rymell called it. Shocks's boy picked up the hat with the erotic brim and handed it to the horticulturist silently and respectfully.

"We were not trespassing," said Mr. Rymell. "We were following up that boy. *He* was trespassing if you like. . . . By the bye—where *is* the boy? Has anyone caught him?"

AT THE question attention, which had been focused upon Mr. Benshaw and his hoe, came round. Across the field in the direction of the sunlit half acre of glass the little tailor was visible standing gingerly and picking up his red slippers for the third time—they would come off in that loose, good soil; everybody else had left the trail to concentrate on Mr. Benshaw—and Bealby—Bealby was out of sight. He had escaped, clean got away.

"What boy?" asked Mr. Benshaw.

"Ferocious little beast (*Continued on page 27*)

COLLIER'S

Are We Neutral?

WE SHALL OBSERVE President WILSON's neutrality order rigidly. And yet suppose Germany should win? Suppose Germany occupied France, wiped out the British army, and swept the British navy from the sea? Suppose all this had happened and we in the United States had a day or two to think it over? What would we think and what would we do? Our own notion is that if we were guided by ordinary prudence we would instantly recognize the necessity of making our navy not less than seven times as strong as it now is and raising our standing army to a half million. Our German-American friends who criticize us as being prejudiced against the Fatherland would then themselves realize the real situation. With a triumph of the military spirit and of absolutism in Europe, we Americans would have to step against our wills into the shoes that France has stood in now for forty years.

Sandbagging Belgium

THE APOLOGISTS for Germany's war policy, including even such scholars as Professors KUNO FRANCKE and HUGO MÜNSTERBERG of Harvard University, find it curiously convenient to omit all mention of Belgium from their dissertations. They prefer long diatribes on race hatred and commercial jealousy, endless hair-splittings as to the intricate diplomatic chess playing that preceded the explosion. But Belgium is the key to the whole miserable tragedy. It is over eighty years now since Germany solemnly guaranteed the neutrality of that little country. BISMARCK, for all his policy of "blood and iron," his harsh readiness to break eggs to make an omelette, respected that promise during the Franco-Prussian War. Not only did the Germans not invade France by the Belgian road in 1870, but they gave up the project of bringing back their wounded by the shorter route through the neutral territory. The present outbreak finds Germany doing her first hard fighting against Belgium, not England or France or Russia. The promises and precedents of over eighty years are thrown to the winds, and the neutral territory feels the harshest rigors of war. The Germans go even further and demand a $40,000,000 ransom from Brussels, which is the same thing as assaulting a peaceful citizen and then robbing him to pay your expenses. The terrible thing is that these measures are taken at the very start of the struggle, and are, therefore, not the result of dire necessity, but of the coolly and carefully laid plans of the German General Staff. These plans must have been known to the Kaiser and must have been approved by him. Germany, therefore, stands before the world as the embodiment of brutal military force, a power to which no promise is sacred. This insane autocracy no more represents German culture than CROKER or MURPHY represents American political life. These power-crazed militarists at Berlin have bet everything on winning, and the future must show whether the modern world can tolerate any such at the head of a great government and a great people. This is why public opinion everywhere is against the Germans and why it is justified. A teacher who sees no moral wrong in what Germany has done to Belgium is not our idea of a good guide for youth. The men we have in mind are Professor FRANCKE and Professor MÜNSTERBERG of Harvard.

The Case of Russia

SOME ONE MAY ASK why the same reasoning does not apply to Russia as to Germany. Perhaps it does, but we do not see it that way. Both countries have medieval forms of government, but the anomaly is twice as striking in Germany's case, the paradox twice as unforgivable. Germany is a modern and progressive country in everything except its headship; Russia remains in many ways as a child of the white plains, in need of fathership. Moreover, in the event of success on the allies' part, we believe a reduction of armament all around will be enforced by the powers of France and Great Britain. This will affect Russia as well as Germany. If Germany conquers, on the other hand, it will not only mean a survival of the military spirit, but the iron heel will crush whatever remains of freedom in Europe—political, economic, moral. Prince KROPOTKIN, perhaps the best known of Russian anarchists, supports his Government in this war precisely because "the Russian military autocracy will not gain, but all progressive and liberalist forces will be immensely strengthened." Already the Russian Government has found it expedient to promise home rule to Poland, and KROPOTKIN looks for concessions to Finland and to the Jews and to the people of the Caucasus. All this is only repeating history. Emancipation of the Russian serfs followed the Crimean War, a grant of representative government followed war with Japan. It is true that Russia, like Germany and Austria, is ruled by an emperor, and that this war was declared without reference to the people on whom it weighs most heavily. We believe the war will, all the same, let in the light in Russia just as it is putting the light out in Germany.

Our German Spy

ONE INCIDENT OF THE WAR that has entertained us is the light it throws on our own experience of the last six months with a writer, Dr. ARMGAARD KARL GRAVES. Dr. GRAVES came to the office some six or eight months ago, introduced himself as a former spy in the German service, and submitted several articles giving details of his experiences. The articles outrivaled JULES VERNE. Some of the things seemed incredible. It wasn't easy to believe that Germany could do some of the things he described. The fact that the author was a former spy naturally did not encourage belief in his articles. We made all the investigations possible about Dr. GRAVES's past and verified as many incidents as were humanly verifiable. After all the verification we could accomplish we still had some hesitation about publishing the articles, but after they were published none of his statements as to his own experiences were ever successfully challenged. A good many of our readers have amused themselves at our expense by poking fun at some things Dr. GRAVES has said about the German war machine. Our experience with him has tended to give us confidence in his knowledge. He is now in the theatre of the war, under another name and with such disguises as prudence would suggest. If he survives, we hope to have articles from him which, judging from our experience, we think will be more valuable than most correspondence from the seat of war. But if the Germans ever get their hands on him we won't have any articles from Dr. GRAVES.

Good News

IT IS A CHEERFUL ITEM that the war may deprive the United States of many foreign drugs. Our people take too much dope anyhow. What we need is saner eating and exercise and less medicine. The war may be for many of us a valuable compulsory discipline in personal hygiene, a start toward better living.

Villa Now and Villa Then

PRESIDENT WILSON is described by the Administration press as having "his jaw set hard" as he threatens what he will do to various business interests which he says are encouraging VILLA to stand out against the present government of Mexico. If any business interests, for their own purposes, are giving sympathy and encouragement to VILLA, they are only doing what the President of the United States recently did. Doubtless President WILSON can see a distinction between the two cases, but VILLA, being an illiterate brigand, can't. Our own feeling is that neither a business interest nor a government ought to have any sort of understanding with a bandit. When President WILSON's wish to get rid of HUERTA was baffled by that old renegade's skill and stubbornness, then VILLA was taken to the Administration's bosom. He was not only given encouragement and sympathy, but was permitted to have arms. Here, at home, the Administration press used all its facilities to create a public opinion friendly to him. VILLA could last in any American town where his character and deeds were known about as long as it would take the leading citizens to organize a lynching party. WILSON's backing of VILLA was an abandonment of the most fundamental principle of morality for a hurried expediency. It is too much to expect that he can escape the consequences of it.

The Same Old Story

THE PROCEEDINGS of the late New York Republican State Convention, which met very appropriately in one of the decayed-grandeur hotels at Saratoga, read like a volume of epitaphs. The delegates were hand-picked and everything moved without a hitch, the aforesaid delegates being already hitched. WILLIAM BARNES, JR., State chairman, called the meeting to order. ELIHU ROOT, as temporary chairman, made a long speech. It must have been a fine sight to see BARNES nod his solemn approval as ROOT spoke of "the corruption, the profligacy, and the incompetence which have characterized the government of our State under Democratic control." BARNES

Digitized by Google

THE NATIONAL WEEKLY

knows! CHARLES D. HILLES, who ran the 1912 Taft campaign into the ground, was there and "resoluted" vigorously, as did various other venerable landmarks. The fitness of the Republican party to rule was fearlessly asserted, and the usual vague promises were hashed up into a platform. The times call for new men, not compromised and staled by the old partisan machine politics; for new, clear-cut measures, not for the old patchwork of rhetoric; but these needs found no satisfaction at Saratoga. They are asking New York State to come back to the Republican party. Perhaps New York will, but we doubt it.

The American Spirit

TWO INSTANCES of it came to our attention recently. One was a signed and photographed advertisement: "If you can get better tools than mine, then try them." The other is this incident, related in the "Manufacturers' Record":

> The directors of a large corporation had gathered for a conference. In the midst of the gloom one of the directors turned to another and said: "Can you tell me how far a dog can run into the woods?" The other, somewhat ruffled at such a question in time of depression, remarked severely that he supposed a dog could run into the woods just as far as he wanted to. "No," said the interrogator, "when he has run into the woods halfway, he is then running out of the woods."

It is a temper of this sort that keeps our country going.

Looking Forward

IF A HIGH protective tariff can make business good in this country we ought to have it now. This war gives us all the benefits of a prohibitive tariff—and none of the drawbacks. How any man can see anything else than commercial prosperity ahead for the United States passes all understanding.

One Sort of Unemployment

THE ÆSOP OF OUR DAY (human animals only) is probably Mr. WALT(ER) MASON, whom GEORGE ADE has nominated "high priest of horse sense." The essence of many essays, sermons, investigations, and reports is in this one of the fifteen dozen prose near-poems in his volume "Rippling Waters," entitled "Hunting a Job":

> "I would like a situation: I have hunted for it long," said a youth who looked discouraged: "everything that is is wrong: there is no demand for labor, no respect for willing hands, hence the people who are idle are as frequent as the sands. I have waited in the pool hall through the long and weary day, and no lucrative position seemed to come along that way; I have stood upon the corner, smoking at my trusty cob, but no merchant came to hire me, though all knew I had no job; I have sat on every doorstep that against me wasn't fenced, you could scarcely find a building that I haven't leaned against; I have smoked a thousand stogies, I have chewed a cord of plug, I have shaken dice with dozens, I have touched each cider jug to sustain my drooping spirits while I waited for a berth with some up-to-date employer who'd appreciate my worth. But the world is out of kilter and the country's out of plumb, and the poor downtrodden voter finds that things are on the bum."

The whole book is full of the same sort of Americanism and explains very clearly how the United States looks at things.

One on Brother Van Valkenburgh

MR. A. B. DETWILER of Sunlight, Va., sends this account of extraordinary doings at Mauch Chunk. He cut the passage from the Philadelphia "North American":

> MAUCH CHUNK.—WILLIS SHAFER, son of GEORGE BERTINE SHAFER, who was killed by a lightning bolt on Monday and who crawled a mile to Nesquehoning to tell what happened, is somewhat improved. There are indications that both he and GEORGE YOST, who were struck by the same bolt, will recover.

Pennsylvania air certainly does work marvels!

Ich und Bonaparte

By C. R. Weed in the New York Tribune

War and Booze

IN PARIS the Prefect of Police has prohibited the drinking of absinthe. In Berlin, as reported by an eyewitness of the mobilization,

> the soldiers are presented with gifts of everything except alcoholic drink, for an order has gone forth from the Kaiser that, under no pretext, except for medical purposes, is anyone to offer a soldier an intoxicant. The penalties for breaking this order are severe.

The Prefect was sharper than the Kaiser, in that he was not fooled by the old "medical purposes" fake. Both countries got hold of the truth as to the relation between drink and military efficiency. If this stroke of common sense is lasting, part of the cost of this fearful war may be paid out of the money and strength saved by cutting out the liquor.

The Explanation

IN NEW YORK CITY the janitors of the public schools are still part of the political-gang system which used to control all city jobs there. One of these janitors was arrested recently charged with having committed such a revolting crime against a young girl that he had to be imprisoned separately lest the other criminals lynch him. The explanation, as given in one of New York's most reliable newspapers, is as follows:

> He had been drinking whisky in a saloon in Harlem on Thursday night and early on Friday morning, and he was intoxicated when he went to the school at 6.30 o'clock in the morning.

We would like to show this to some respectable churchgoing distiller of Peoria or Louisville or Baltimore who has a small daughter going to school, and find out what he thinks of his trade and how he estimates his own guilt in the matter.

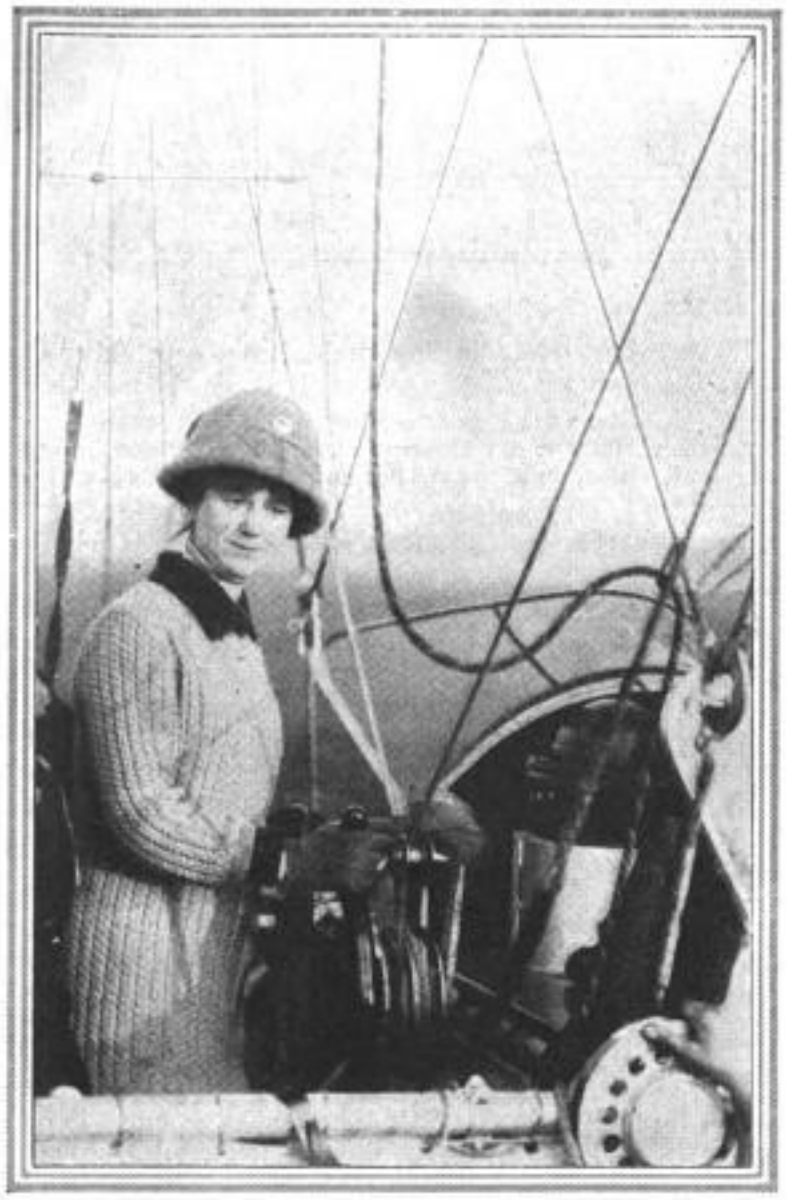
Business of Blushing

WHAT DO YOU THINK is the best editorial COLLIER'S has published since you have been reading the paper? Some one with a rather exalted idea of the merits of COLLIER'S paragraphs urges the issue of the best of them in a book, and if you have kept a scrap book, or have any decided opinions, why not tell us which ones you like best?

Dedicated to the Cubist Fringe of Reform

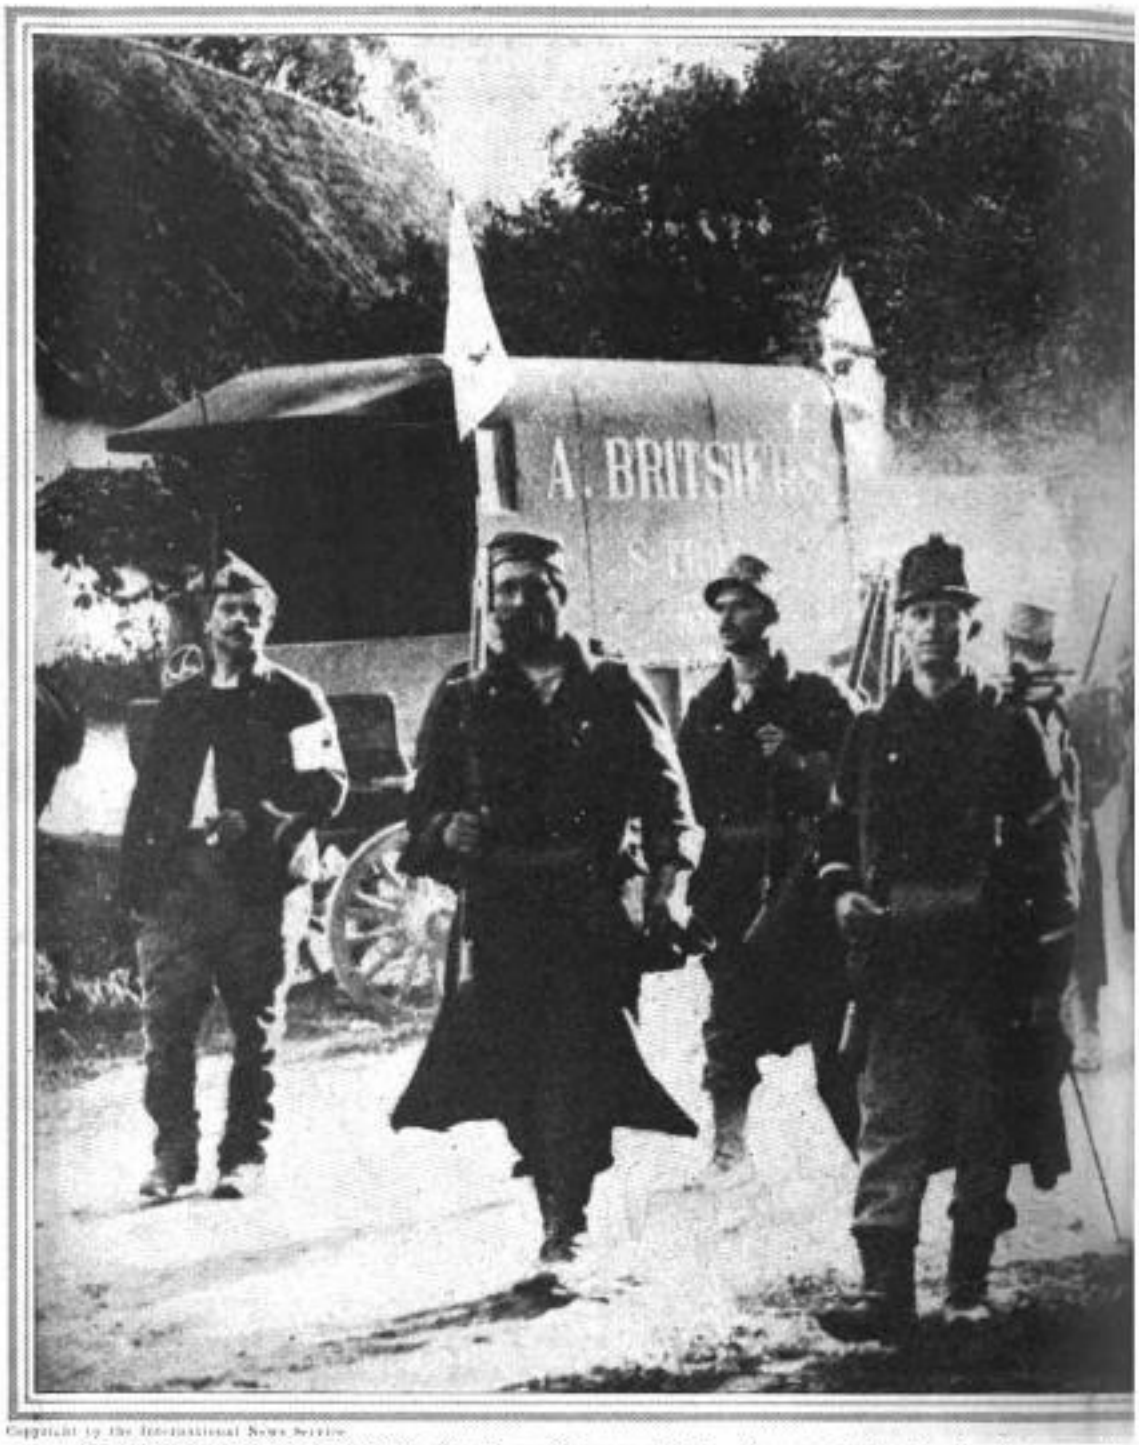
WHEN WE HEAR some of these harebrained agitators talking of "property" as if ownership of it in any degree at all were a crime in some higher degree, we are reminded of LINCOLN'S reply to a committee of the Workingmen's Association of New York on March 21, 1864:

> No man living is more worthy to be trusted than those who toil up from poverty—none less inclined to take or touch aught which they have not honestly earned.
>
> Nor should this lead to a war upon property or the owners of property. Property is the fruit of labor, property is desirable, is a positive good to the world. That some should be rich shows that others may become rich, and hence is just encouragement to industry and enterprise. Let not him who is houseless pull down the house of another, but let him labor diligently and build one for himself, thus by example assuring that his own shall be safe from violence when built.



It is sound common sense like this, and the courage to phrase it justly, that helps to distinguish the responsible statesman from the demagogue and that type of idealist whose ideals are wind and rain water.

Such Stuff as Verse Is Made Of



OUR IDEA of a good occasion for emotional thrills is the British soldiers moving by night and silently entraining, crossing the Channel, and marching into France for the first time in one hundred years. If there is any poetry left in KIPLING we ought to have it now.

The Camera's Story

MISS ELFRIEDE RIOTE *is the only woman military airship pilot in the Kaiser's service. The entire corps of Zeppelin drivers, of which she is a member, is subject to the call to the front in the present war. Up to the time we go to press, aircraft as instruments of destruction have been rather disappointing. The largest number slain in a single instance was when a Zeppelin killed twenty-six non-combatants at Antwerp with a bomb intended for the Belgian royal family. Women and children were among those of the slain, and the incident has been denounced as one of the worst outrages ever committed by civilized men against the rules of warfare*

The Novo Idea—

"Contracting is profitable in proportion as Power displaces Labor"

A Novo Engine will do a given piece of work at a small fraction of what it would cost to do the work by labor. As one contractor put it, "Bid low—and put Novo on the payroll."

You can do all of your pumping with Novo Diaphragm, Centrifugal, or Suction and Force pumping outfits.

One contractor, instead of wheelbarrowing his concrete up inclines, put a Novo hoist at work and raised the barrow to the proper level by slipping rings over the handles and catching the wheel with a hook.

Novo is the cheapest possible power for concrete mixers. A Novo Hoist, rigged to a scraper, will fill your trenches at half the cost of hand labor.

"Bid low—and put Novo on the payroll"

NOVO REG. U.S. PAT. OFF. **ENGINES AND OUTFITS**

NO TANK
NO FAN
NO FREEZING TROUBLE

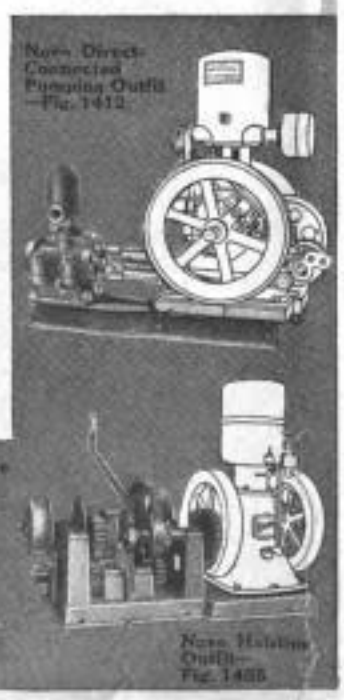
With a little ingenuity, any contractor can put a battery of tireless, dependable Novos at work and cut down his costs enormously.

Novo never shirks—it works from whistle to whistle and sets a pace your workmen must keep up to.

Reliable Power in All Weather

The whole secret of profitable power is reliability. As long as the engine runs, you are making money—when it stops—you lose.

Novo is unquestionably the most reliable power for construction work. It runs in all kinds of weather. Although watercooled, it cannot be damaged by freezing.



In construction, Novo is compact, simple, solid and fool proof. It is infinitely superior to steam, for licensed engineer and fireman are not needed and there is no question of local ordinances regarding types of boilers.

The Novo is an elastic unit. Most of the Outfits are mounted on trucks. *Novo is "The Engine for Every Purpose."*

NOVO Engines can be furnished for operating on gasoline, kerosene, alcohol, or distillate.

Send for the Free Book

We have published a book, "Reliable Power," which fully explains Novo features and lists seventy-odd Novo Outfits for contractors and other users of portable power. A few of these are shown below. This book contains profit-making suggestions that will prove invaluable to any contractor. In writing, please use your letterhead, for the book is expensive and we want it to get into the right hands only. It is free.

NOVO ENGINE CO. 460 Willow Street, Lansing, Mich.
CLARENCE E. BEMENT, Secy. and Mgr.

DEALERS: This advertisement will bring thousands of inquiries. Many from your own locality. Ask us for our dealer proposition. Novo offers you a permanent and profitable business.

The "Turcos" or African Troops of France

By WALTER S. HIATT

THE use by the French of her fierce African troops in this war, and her reliance on her Algerian colonies for food if the war lasts long, has here passed all but unnoted.

Yet there is more than this in Africa's rôle. She is as much the cause of this war as she was of that between Carthage and Rome in the older days of the world, when the great Hannibal first led black troops into Europe.

If Germany wins, France stands to lose an empire which for a half century she has been silently building up in Africa.

We who live on this side of the water know little of the immense fertility of this African continent and of France's loot held there. We do not realize that France is mistress of nearly 50 per cent of a continent which comprises one-fifth of the land of the globe; that she holds nearly one-half of an area larger than the North American continent by just two million square miles. Her actual holdings in Africa take in a rich area nearly twice that of continental United States. They reach from the banks of the Congo River to the shores of the Mediterranean, and from the Atlantic seaboard to the fertile valley of the Nile.

The newspapers here are raving over the expenses of this European war. The money spent in it is a mere bagatelle to the wealth of empire that may be won or lost by it.

England almost went to war with France sixteen years ago because the latter was too rapidly absorbing the African Continent. When Captain Marchand took the territory covering the water sources of the Nile, with the ultimate possibility of diverting them into the Sahara Desert, the Fashoda incident was created. England demanded his retreat with war as an alternative. France withdrew Marchand, but the incident left a bitter feeling. The truth is that the continent of Africa, some thirty years ago was stolen and divided like a big, luscious pie among various European nations, and Germany came late at the cutting. Worse yet, France having seen the pie first, got the biggest share.

Making the Desert Bloom

WITH all Germany's wonderful commercial expansion, which was accelerated by the billion of dollars she exacted as war indemnity from France in 1870, she has ever felt the need of room for territorial expansion. She has citizens who make excellent colonists, but she has had no place to send them. England, France, Holland, and even little Belgium, with its rich African Congo, had all got the start of her. Often must Germany have regretted that she did not also exact from helpless France African territory as well as Alsace and Lorraine. But in those days African territory was little valued.

Setting foot on this African territory in 1815, in the same year that the United States suppressed the pirates at Tunis, in 1830 France really took Algiers, the city and province, to-day only a two days' journey across the Mediterranean from her port of Marseilles. Under such governors as the first—General Charon—year by year, slowly, in the happy-go-lucky, apparently aimless fashion which is the seeming vice of the French, she made headway in northern Africa. Even her deep defeat at the hands of the Germans in 1870 did not stop her.

And this empire, though founded on a dream, is not fruitless. It is one of solid commerce and prosperity. Soldiers of France, in their advance, have not left a trail of blood and fire. When possible they have used the champagne bottle and a few decorations of the Legion d'Honneur which the natives prize even above the vain French. They have built roads that the Romans might have envied; they have run steel rails through desert and mountain and forest, through far Abyssinia to connect with the Sudan railroads on the Sobat River.

French engineers have drilled wells and drawn water where there was none. The more daring of them propose to tap the Mediteranean and make the Sahara an inland sea of fertile coasts as it once may have been. They are doing with Africa what we have done with our own great American desert, so primitive and dreary only thirty-five years ago.

"When the English occupy a country," runs an international saying, "they build a customhouse; the Germans a fort; the French a road." To-day the French have 6,000 miles of railway, 25,000 miles of telegraph, and 10,000 miles of telephone in Africa. Trees, grass, cattle, oats, wheat, dates, wine, grapes, olives, potatoes, and beans are grown in abundance. The fisheries of the coast country have been made productive.

Doughty Black Soldiers

WHETHER France will be tricked out of her African possessions—to which, incidentally, may be added the huge island of Madagascar on the southeast coast—as France has of so many of her colonial possessions—is yet to be seen. It is well worth Germany's time and money to try it.

But in the present war what Germany has long feared has come to pass. France is using her black army! Two years ago General Friedrich von Bernhardi of the German army wrote: "If the French succeed in making a large African army available for a European theatre, the estimate of the French army as compared to ours will be quite different."

The quality of these troops is excellent. Hardy by nature, the best of training has been given them. The example is set by the regiments of wild white troops known as the *légion étrangère* and the *battalion des joyeux*. These troops, made up for the most part of Frenchmen too wild to serve in home regiments, have the reputation of fearing neither God nor man. Their battle cry is: *"Il y a de la goutte à boire là haut!"* (There's something to drink up there!) The African troops, made up of Arabs, Berbers, and other races, led by French officers, are apt pupils for war. They obey an order even better than white men, and have never been known to shirk their share of a fight.

In the initial mobilization of French troops, an army corps of these troops were thrown across the Mediterranean, protected by the powerful French fleet at Toulon. With war undeclared at the end of July, by August 8 black troops were leading bayonet charges at Altkirch and Muelhausen on German frontiers.

France may yet find that the greatest of her achievements in Africa has been the building up of an army there. In peace times the army is limited to about 75,000 men, with perhaps a half million to draw upon for war. Has France affronted civilization by bringing into action on Christian European soil black and Mohammedan troopers? Has she hazarded the moral superiority of the white man? Perhaps. Still, has not the white man disgraced his moral superiority by his desire for *la goutte à boire là haut!*

My Mission and Betrayal in England

(Continued from page 14)

No one having called for it, the letter was returned to the chemical company. At their office it was opened and found to contain a typewritten letter in the German language and five ten-pound notes on the Bank of England. The contents of the letter were such as to lead the firm to call in the police.

On a subsequent Sunday afternoon I had just put on my evening clothes, for I was awaiting a party of gentlemen who were coming to dine with me in the hotel at Glasgow. There came a "buttons" who announced: "There's a gentleman downstairs to see you, Doctor."

A premonition stole over me. I knew that my guests would not have sent for me to come down, but would have been announced. I realized that if I was going to be caught there was no avoiding it. Secret Service makes a man a fatalist.

I took the precaution, however, to slip inside my dinner coat, just under the arm, my little bag of chemicals, so often handy in an emergency. Then I went downstairs; one hand was thrust in my pocket, the other folded across my breast, so that I could snatch the little bag of chemicals in case of need.

Arrested as a Spy

I HAD hardly reached the last step of the grand stairway when four six-foot two-hundred-pound plain-clothes men pounced upon me. I had to do some swift thinking. I could have flung the chemicals in their face and escaped, but I knew I could never get outside of the British Isles without being caught—outside of Glasgow for that matter. Such resistance would only aggravate matters still more, so I let my hand fall down to my side. More for the fun of it than anything else, I guess, I got on my high horse and demanded to know what was the matter.

"You'll soon know," the chief of detectives declared.

He then ordered his men to search me, and seemed amazed when they couldn't find any six-shooters, daggers, or bombs. I was taken back to my room and there he began going through my effects and bundling them up. I knew I was up against it, but I wasn't going to make it any easier for them. I requested Mr. Morris, then manager of the Great Western Hotel, and another witness to be called into my room. These gentlemen were kind enough to put down on paper a description of all my effects that were being taken away by the police. I was extremely careful to see that they noted and described all papers and written matter of any kind. There are often produced in court documents that are not found on a Secret Service agent at the time of his arrest. The chief of the detectives, whose name I have forgotten—I recall him as an uncouth, illiterate bungler who subsequently tried to get a lot of publicity out of my arrest, as if he himself had detected the whole concern, instead of having it thrust under his nose by the London chemical company—was preparing to ride over me roughshod. I insisted that he read the warrant for my arrest, and with much grumbling he finally did so. It had been issued under the new spy clause that had been rushed through the House of Commons. I was charged with endangering the safeguards of the British Empire.

I spent the night in the Glasgow City Prison, and was taken the next day before a magistrate and formally committed to a Sheriff's Court. Within a week my case had come up before the Sheriff's Court. Waiving preliminary examination, I was committed for trial to the Edinburgh High Court. It is significant that the extreme length of a committal without trial, under British law, is one hundred calendar days, which hundredth day, up to the last minute, I certainly waited. They were trying to find out my antecedents, but they did not succeed.

A letter from the Lord Provost informed me that all material for my defense should be in his hands a day before the trial. I had no defense. I neither denied nor admitted anything. I replied to his Lordship that I was unaware of any offense—there was no need of any defense. My attitude was a profound puzzle—which was as I wanted.

If you care to look over the back files of the English and Scottish newspapers of the time you will read that my trial was "the most sensational court procedure ever held in a Scottish court of justice."

Now I shall reveal every circumstance of it. For the first time I shall explain how, why, and by whom I was secretly released when even the German Foreign Office thought me in jail.

Against me the Crown had summoned forty-two witnesses. They included admirals, colonels, captains, military and naval experts, post-office officials—I cannot recall what all. The press from all parts of Europe—for all Europe was vitally concerned in this trial—was strongly represented. My memory shows me again the crowds that packed the High Court of Justiciary at Edinburgh on the first day of the proceedings. The imposing names connected with the trial, the strange circumstances, a spy—moreover, a German!—these things brought the excitement to fever heat.

Presiding was the Lord Justice of Scotland, himself no mean expert in military matters. The Solicitor General of Scotland, A. M. Anderson, K. C., who prosecuted for the Crown, was supported by four associates. The Government had indeed an imposing array of bewigged, black-gowned, legal notables marshaled against me. Those familiar with English court procedure know the impressive manner with which justice is dispensed. Punctually at ten on the morning of June 3, 1912, my trial opened. At the time, I am frank to say that I did not think there was a chance of a verdict of guilty being brought in. The evidence against me was too vague.

The Trial a Model of Fairness

EXPRESSING astonishment at my refusal to accept counsel, his Lordship promised to guard my interest on legal points, and guard it he did. Repeatedly he pulled the Solicitor General on more than one point. I am frank in my admiration of British justice. My trial was a model of fairness.

On the first day I waived examination on all witnesses but the naval and military experts. I directed my fire against Admiral Adair, now chief of the Beardmore Gun Works in Glasgow. The Admiral, a typical English gentleman of the naval-officer type, long, lank, with a rather ascetic, clear-cut Roman head, not unlike Chamberlain in general appearance, even to the single eyeglass, did not make much of a showing as an expert witness for the prosecution. The Admiral was called in on testimony concerning the new fourteen-inch gun. The point they were trying to establish was that it was impossible for a man to have my knowledge of these guns unless he had obtained it first-hand from the works in Glasgow. Of course that brought the testimony into technicalities. I managed to involve the Admiral into a heated altercation on the trajectory and penetrating power of the so-much-disputed fourteen-inch gun, when suddenly he checked himself, faced about, and refused to answer in open court.

I maintained that my knowledge of guns was such that I did not need to spy to obtain the things I knew. Subsequently, after being cross-examined by me, another of the Government's naval experts informed the Court:

"It is quite possible for one with a ballistic knowledge, such as the defendant's, to be able, with very little data, to arrive at accurate conclusions regarding our new fourteen-inch gun."

The upshot of it was that the first day of the trial ended with everybody positive that I would not be found guilty on the charge of obtaining secret information about their guns. Of course all this information I had obtained.

On the recess I was pleasantly surprised when a court orderly brought me refreshments from the judge's own table with his Lordship's compliments.

The Text of the Letter

THE second day of the trial brought the chemical firm's letter into the testimony—the letter that had been refused me and had in turn gone back to the chemical company. Very gravely A. M. Anderson, Crown prosecutor, read the contents of this letter aloud. It was:

DEAR SIR: *We are pleased to learn of your successful negotiation of the business at hand. Be pleased to send us an early sample. As regards the other mat-*

10% More for Your Money

Quaker Oats is put up also in a 25-cent size, nearly three times as large as the 10-cent size. By saving in packing it offers you 10 per cent more for your money. See how long it lasts.

Spirit-Giving Quaker

Every Luscious Flake Holds Vim

Quaker Oats—what a wondrous food!

With the flavor and aroma of a sweetmeat or a dainty, it's a storehouse of virility.

Every dish is a battery of energy, to act on mind and muscle. It tends to change the weak and languid into human dynamos.

Besides that, it's a balanced food. Every element your organism needs is found in Quaker Oats. And some rare ones are there in abundance.

Yet this vim-food is a delicacy—the best-loved of all the grain foods.

What a mistake folks make—especially mothers—who fail to serve enough.

Quaker Oats

All the World Prefers It

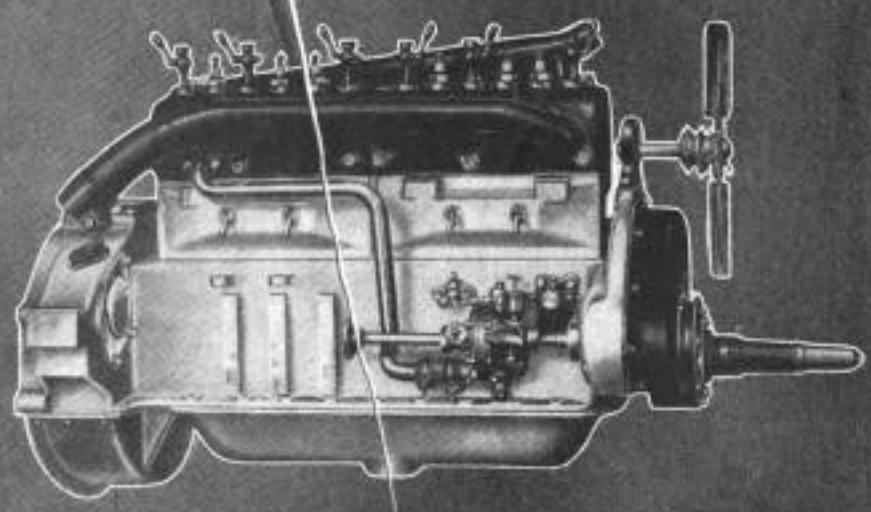
This food of foods should be served, we claim, in its most inviting form. That means Quaker Oats.

We leave the little grains for horses. For human food we pick out only the plump and luscious oats. We get but ten pounds of Quaker Oats from a bushel.

You see the result in these big, white flakes. You scent it in the fine aroma. You taste it in the or.

We have made this premier food delightful. Now from all the world over people send to us for it. Its countless lovers in a hundred nations serve it every morning.

Yet Quaker Oats—made of queen-grains only—costs you no extra price. And it costs you no trouble to get it. Say to any grocer that you want Quaker and he'll send you these luscious flakes.



Please remember that.

Quaker Cooker

We have made to our order—from pure Aluminum—a perfect Double Boiler. It is extra large and heavy. We supply it to users of Quaker Oats for cooking these flakes in the ideal way. It insures the fullness of food value and flavor. See our offer in each package.

10c and 25c per Package
Except in Far West and South

The Extra Guarantee

CONTINENTAL MOTORS — AMERICA'S STANDARD

Price is what one gives—Value is what one gets back. The return on an investment in a Continental Motor (representing one-quarter of the total manufacturing cost of a motor vehicle) is fixed and sure. It is a handsome interest—even interest compounded—in the form of year after year of most satisfactory service.

Continental Motors

The Continental Motor Manufacturing Company is the world's greatest buyer of high grade motor material; is backed by a decade of success; possesses the finest equipment for accurate and cost-saving work; has the men who know how.

Solely by the combination of *all* these can be made possible such extra value as distinguishes every Continental Motor.

And only as the months and seasons go by, is the full worth of the extra materials, tests, and scrupulous inspections of a Continental made apparent. On the day of resale—then is the last extra value of a Continental revealed. For a car is as young, or as old, as its motor.

Over one hundred firms are now building into their product the "extra value" of Continental Motors. Tens of thousands of users are benefiting thereby. Choose what type you will, but *insist* on the Continental-powered truck or pleasure car.

CONTINENTAL MOTOR MFG. CO.

ter in hand, I do not know how useful it will be to us. In any case my firm is not willing to pay you more than £100 in this case.

It was unsigned. While reading, Anderson held the five £10 notes in his hand. Upon finishing he began a vigorous indictment, which in substance he declaimed in this way:

"On the face of it, this letter does not seem suspicious. But if you gentlemen will recall the times of Prince Charles's insurrections—a period when intrigues were going on—you will remember that in communications of this sort a government was always referred to as a 'firm.' If this was an honest business letter, why was it inclosed in the envelope stationery of a company that knew nothing about it? Why was this letter unsigned? Why was cash inclosed with it? What was his firm willing to pay £100 for? Gentlemen, the reasons for all these things are obvious."

Still, the letter puzzled not only the Court, the jury, the newspapers, but all England. For the first time I shall now explain it:

It was from the German Government. By the "business in hand" they meant a new explosive and slow-burning powder that was to be used in the new type of fourteen-inch turret guns being made in Glasgow. Some of that explosive was in my possession. The fact that it was not discovered in my effects, nor that anything else incriminating was found on me, is because the secret agent who knows his business leaves nothing about; rather he "plants" things—that is, leaves them in, say, a safe-deposit vault with the key in the hands of an outside person.

"I Knew They Had Me"

BY the "sample" in the letter was meant a sample of the explosive. The "other matter in hand" was spoken of as of tremendous importance, more vital to the safeguards of Britain than the other points mentioned in the letter, but it is something I cannot divulge at the present time. Later I shall.

I had judged my jurymen right, for they were very little impressed by this letter. It was all too vague, and even the fluent language of a Crown prosecutor does not impress a hard-headed Scotchman. I was feeling in high spirits indeed when I saw one of the attendants approach Mr. Anderson and deliver a document that had been handed into court. I at once recognized it, and my heart dropped into my shoes. The Solicitor General read the document and smiled. He called his colleagues together, showed it to them, and they smiled. Thereupon he made a request that court be adjourned until the next day. I knew they had me.

The Tell-Tale Code Is Produced

ON the following morning, in addressing the court, the Solicitor General produced two pieces of thin paper—the same that had been brought in on the previous afternoon.

"I have got to show the court," he said impressively, "the most deadly code ever prepared against the safeguards of Great Britain."

And it certainly was. It contained the name of every vessel in the British navy, every naval base, fortification, and strategic point in Great Britain. There were over ten thousand names, and opposite each was written a number. For example, the dreadnought *Queen Mary* was No. 813.

As I have confessed, I am superstitious. And have I not reason to be? It was the letter to the chemical company that got me caught in the first place. And my secret code was written in a book issued for the use of physicians. Both times the mark of that firm was upon me.

Using a magnifying glass, I had written in tiny characters my code. There were so many names it was impossible to memorize them all. Two opposite sheets of the little memoradum book were used, then the edges of the pages were pasted together. Whenever I learned the British warships were going to put to sea I slipped the book in my pocket, went to a position of vantage where I could make out the silhouettes of the warships, classified them in my mind, and then writing out a cable, put down the code numbers, say in this way: 214, 69, 700, 910, 24. (Necessary words were filled in by the A. B. C. code.)

This message was sent by way of Brussels or Paris to the Intelligence Department of the German Admiralty in Berlin, and told them what warships were putting to sea or arriving at Rosyth.

The accidental finding of this code, of course, settled all further argument. I called no witness for the defense except two or three personal acquaintances, to each of whom I put this question:

"What is your knowledge of my attitude as regards England?"

They all declared that even if I was a spy in the pay of any foreign government, I certainly had never shown any personal feeling or animosity toward Great Britain.

But Why a Short Sentence?

ALL of which I figured might aid the cause of clemency. The jury was out not more than half an hour. I was found guilty of endangering the safeguards of the British Empire, and under the new law that had been aimed against German spies I was liable to seven years' penal servitude. Even then my spirits were not down. I had what you Americans call "a hunch."

Just before his Lordship, the Chief Justice, summed up, an aristocratic, gray-clad Englishman, who never had been in the court room before, appeared and was courteously, almost impressively, conducted to the bench. I noticed that the Chief Justice bowed to him with unction, and they had about two minutes' whispered conversation. His Lordship was nodding repeatedly. This worried me. I felt I was going to get it hot.

But, in substance, his Lordship's verdict was:

"Taking all the circumstances into consideration, the Court pronounces a sentence of eighteen months' imprisonment."

A murmur of astonishment was audible. Everybody in court was surprised. I heard gasps all around me, especially among the foreign newspaper reporters. With everybody expecting seven years of penal servitude, eighteen months of plain imprisonment was a bombshell. Why?

In Prison

I WAS taken first to Calton Hill Jail, Edinburgh, and transferred after two weeks to Barlinney Prison, near Glasgow. Considering the circumstances, I was treated with surprising consideration. The conditions that had characterized my trial prevailed in the prison. I soon perceived that the Barlinney Prison officials were trying to sound me in a canny Scotch way—with no result.

"You're foolish to stay in here. You must have something worth while. Why don't you get out?"

That was the gist of their talks with me, from the warders up. I kept my mouth shut.

Now I shall present information that

Conditions in Paris

From Our Paris Correspondent
GELETT BURGESS

THE mails and telegraph service [he writes us] are so irregular, now, that I have no idea whether or not the Ms. has yet reached you, or whether it will at all. We don't know what's happening. No doubt much of the mail is opened and confiscated, especially that sent to newspapers. Telegrams are, of course, all censored, and delayed through having to go through several offices even before reaching the War Department. We Americans have all obtained our "permis de sejour" [permits to remain] but what will happen later, no one knows. No doubt as soon as the autobuses return from the front the shops will open, and traffic will be nearly normal, but there is always possibility of foreigners being sent away. . . . There are pretty sure reports of lots of wounded being already in Paris. I hear they are preparing churches for their use. Also there is no doubt a great many German spies have been shot—one, I know, Rieman (?) owner of the Astoria Hotel, was shot in his own hotel, after a brief court-martial. A wireless outfit was discovered on the roof, with the wires led down the chimney. . . . We have female car conductors, street sweepers, etc., besides the Red Cross work. . . . The Americans are organizing a series of "American Vaudevilles" for the benefit of Isadora Duncan's home for destitute children of soldiers. I expect some fun there, as there are lots of artists here. . . .

You dont have to Raise the Cap

To know of the Efficiency and Reliability of

TRADE K-W MARK

Road Smoothers

REG. U.S. PAT. OFF.

Quickly applied to your Ford Car

¶ It's true you can see the strong, flexible steel spring and the smooth fitting piston, but the K-W trade mark is your assurance that you are getting the best in design, workmanship and material. K-W Road Smoothers are built up to a standard and not down to a price.

¶ They give comfort on the roughest roads because they combine the three essential features necessary for lasting comfort. The helical spring takes up the shock, the air chamber with its smooth working piston checks rebound, and the anti-side motion links prevent side rocking,—make for your safety and save the parts of your car.

¶ Every K-W Road Smoother is thoroughly tested and perfectly built and of the right materials—high grade, heat-treated drop forgings; electric smelted, chrome vanadium steel springs (not ordinary spring steel); and extra heavy phosphor bronze bushings throughout give long, lasting service and make possible our broad guarantee.

¶ Beware of Imitations. The K-W is the **only** Road Smoother. K-W Road Smoothers are sold by dealers who know the difference, everywhere, **at one price.**

$25 SET OF FOUR ONE FOR EACH WHEEL

If your dealer cannot supply you we will direct on receipt of price. Write for booklet "*Taking Out the Bumps.*"

THE K-W IGNITION Co
2859 Chester Ave. CLEVELAND, OHIO, U. S. A.

Manufacturers of the 100,000 K-W Master Vibrators

was denied the House of Commons upon the occasion of an inquiry into my case.

On the fifth week of my imprisonment I was taken to the office of the Governor of the prison. As I entered I saw a slight, soldierly looking English gentleman of the cavalry type. (A cavalry officer has certain mannerisms that invariably give him away to one who knows.) The Governor spoke first:

"Graves, here is a gentleman who wishes to see you."

An English Proposal

THE stranger nodded to the Governor and said:

"I may be quite a while. You have your instructions."

"That's all right, sir," replied the Governor.

The Governor left and we were alone. The stranger rose.

"My name is Robinson, Doctor; please take a seat."

Of course, being a prisoner, I had remained standing. Robinson began some casual conversation.

"How are they treating you?"

"I have no complaints to make."

"Is the confinement irksome to you?"

"Naturally." I looked him straight in the face. "I am a philosopher—Kismet, Captain."

"Oh—ho," he explained. "You address me as Captain. Wherefore this knowledge? We have never met."

"No," I replied. "But I have associated too long with various types of army officers not to be able to detect a British cavalry officer. Formerly of the Hussars, I take it?"

He laughed for some time. He continued feeling his way in this manner. Then suddenly he changed front. Point blank he asked me:

"Now, old chap, we know that you worked for Germany against us. We also know that you are not a German. Is there any reason why you should not work for us? Any private reason?"

"Captain," I said, "you of all men ought to know that the betrayal of your employers for a monetary reason alone or for merely personal liberty is never entertained by a man who has been in my work. We go into it with our eyes open, well knowing the consequences if we are caught. We do not squeal if we are hurt."

Treachery from Berlin?

FOR a time he looked at me very earnestly.

"H'm," he said. "That just bears out what we have been able to ascertain about you. It puzzled us how a man of your known ability acted the way you did. From the moment you landed in England, all the time you were doing your work, even after your arrest, in prison and in court you showed a sort of listless, almost an indifferent, attitude. If I may put it this way, you seemed in no way keen to go to extremes in any possible mission you might have had." He paused. "We think you could have done more than you did. The mildness of your sentence—has it surprised you?"

I grinned.

"Nothing surprises me, Captain."

His manner became very earnest.

"Supposing," he said, "we show you that it was a *quasi* deliberate intention on the part of your employers to have you caught—what then?"

This did not startle me either. I had an idea of that all along. It is why I played my cards so quietly, why I did not accomplish in England everything I had a chance to accomplish. I did not grin this time.

"Under those circumstances," I said, "I am open to negotiations. But I am rather deaf and my vision is very much obscured as long as I see bars in front of my window."

The Captain smiled.

"Well, Doctor, I may see you again soon."

"Captain, I have not the slightest doubt but that you will. But let it be understood, please, that it's a waste of time so long as I am behind bars."

"Leave that to me," he said, and we shook hands.

The Proofs Are Shown

I WAS taken back to my cell. I am frank to admit that I didn't sleep much for the next two or three nights. All through my trial and in Barlinney I had been playing a part. When the occasion demanded I could be cool as I was with Captain Robinson. But that was a strain, and it took it out of me. During these following days I was nervous; I had insomnia; I paced my cell at nights.

We never fully appreciate a peaceful home 'till th' neighbors next door or over th' way get t' fightin'. Jest now "My Country 'Tis of Thee" hez a kind of a "Home Sweet Home" sound to it.

Velvet Joe

Most famous Trade Mark in all Europe

Every traveler remembers the three Ripolin men, that whimsical trio whose quaint humor is known throughout the entire Continent.

Where Ripolin Enamel Paint is a Household Word

THESE Ripolin men have been cartooned in Punch and the press time and again. So familiar is this **Ripolin Enamel Paint** that a member of the French Chamber of Deputies, famed for his polished appearance, is everywhere known by the nickname of "Ripolin." The name has become such a standard for enamel that it has even crept into the public vocabulary as a synonym for glossy or high finish.

Made in Holland by the old Dutch hand process, Ripolin is the most beautiful and durable enamel paint that has ever been produced. For fourteen years it has been used in America on interior and exterior woodwork and metal, wherever the architect or owner wants to be sure of a beautifully clear, soft tone that will remain pure white, and smooth as fine porcelain. There has never yet been a dissatisfied Ripolin customer. Homes finished with Ripolin have least expense for up-keep. A gallon will cover from 500 to 700 square feet, depending upon the surface. Your painter or decorator will tell you the quantity needed.

That brilliant, high, gloss finish is unexcelled for the kitchen, pantry, or wherever a glass-like surface is desired.

Then again for halls, reception rooms, libraries,—wherever the softer effects are preferred,—Ripolin is obtainable in a beautiful eggshell finish, or even an absolutely flat finish. Any desired tint can be obtained by mixing pure color ground in oil with white Ripolin—a buff or light green shade is excellent for kitchen walls.

Getting What You Pay For

¶ Are you holding down the high cost of living by seeing to it that you get what you pay for?

¶ Are you sure that every peck you pay for measures a peck; every pound, a pound; every ton, 2000 pounds; every gallon, 4 quarts?

¶ Almost all household supplies are bought without checking the amount delivered.

¶ Gas is a commodity which does not ask to be bought on faith. It is measured on your premises, as you use it, and all you have to do is to verify the gas meter reading (a simple process which your Gas Company will show you how to do yourself) and you can satisfy yourself that you are getting what you pay for.

¶ Your gas meter is a simple and accurate measuring machine. This is proved by thousands of tests made by City and State authorities whose records are accessible to the public.

¶ Your Gas Company stands ready at all times to aid you in securing the most efficient results from the use of its product, but it cannot, without your co-operation, control the amount or the way it is used after it passes through the meter.

¶ The men who make and sell you gas are MERCHANTS. They have invested a large sum of money in your community. They are there to stay. Possibly, you are a shareholder with them.

¶ Wisdom, as well as common honesty, leads them to strive for public confidence and to see that you get what you pay for. They want to keep on doing business with you.

¶ When you buy GAS, YOU GET WHAT YOU PAY FOR.

¶ Send for the free booklets: ***"A Thousand Uses for Gas," "The Hygienic Value of Gas Lighting."***

If you haven't read
"The Story of Nancy Gay"
send at once for a free copy that awaits you.

Nancy says: "What! you can't read your gas meter? Why it's as easy as telling time. I read mine every few days just for the satisfaction of knowing what my light and fuel are costing. And I know I'm getting all I pay for. I wish I knew that all the other things I buy were as accurately weighed and measured."

National Commercial Gas Association
29 West 39th Street, New York City

The feeling of a jail is cold and thick. But, as I expected, another week brought Captain Robinson again. This time it was late in the evening, after all the prisoners were shut up tight. The Lieutenant Governor himself took me into the Governor's office. No other warder or prison official observed us.

"Well, Doctor," was the way Robinson greeted me, "I have something definite to propose to you. You can be of use to us. You have still sixteen months of your sentence to serve. Are you willing to give these sixteen months of your time to us—terms later to be agreed upon? I am prepared to supply you with proofs that you were deliberately put away, betrayed by your employers, the German Government."

He did so to my complete satisfaction. As I guessed, I had come to learn so much of Germany's affairs that I was dangerous. To betray me in such a way that I would not suspect and squeal was a clever way to close my mouth for seven years in jail, or until all plans had either matured or failed.

"How would you suggest that we go about it?" he asked.

"To be of the slightest degree of use to you, nobody must know of my release." I added: "Here is my suggestion. I must leave the execution of it to you. The impression I conveyed around Edinburgh was that my health is rather indifferent. So it is also believed here in the prison. On those grounds it should be an easy matter for you to have me ostensibly transferred to another prison, but instead of that have me taken wherever you wish to. I see no necessity that, outside the Lieutenant Governor, the Governor, and yourself, anyone need know of it."

"Yes, yes," said Robinson. "That coincides with my own ideas and plans." Presently he departed and I went back again to my cell.

Release at Last

AT half past five the next morning I was aroused by the Lieutenant Governor. He was alone. There were no warders in sight. In the Governor's office I found all my clothes and effects ready and laid out for me. I dressed and left with the Lieutenant Governor. We took a taxicab for the Caledonian Station in Glasgow. Few people were abroad in Glasgow at that time of day, and there was no danger of recognition. The trip to London was uneventful. At Euston Station we were met by Captain Robinson. We went into a private waiting room, where Captain Robinson signed a paper for the Lieutenant Governor. It was what amounts to a receipt for the prison's delivery of me into his hands. Then the Lieutenant Governor left us; then Robinson, after handing over an envelope containing cash and instructions, left.

I was alone and free. I could then and there have disappeared. Obviously, the English Government trusted me fully.

My first move was to register at the Russel Square Hotel. Opening the envelope in my rooms, I found it contained £10 and the following instructions:

"Telephone at 10.30 to-morrow morning: this number, Mayfair —."

A Trip to Downing Street

I TELEPHONED the Mayfair number and was told to hold the wire. Then Captain Robinson got on the phone and told me to meet him at luncheon at one o'clock at the Imperial Hotel, Trafalgar Square. There another gentleman joined us—a Mr. Morgan, whom I easily judged and afterward knew to be of the English Secret Service. Presently Morgan told me that I was to drive with Captain Robinson to Downing Street that afternoon.

"One of our Ministers wishes to see you," he exclaimed.

We drove to Downing Street, Captain Robinson and I, and stopped before the historic government building. After we had signed the book that all visitors to "Downing Street" must sign, I was ushered into an anteroom, and Robinson took his leave. My name appears on this book as Trenton Snell, and if the English Government challenges a statement that I shall subsequently make, let them produce the "Downing Street" book for the date I shall mention; let them have a handwriting expert compare the name, "Trenton Snell," with my handwriting. I make this statement, because what followed is of great importance.

After a twenty-minute wait, which impressed me as being different from the slam-in and slam-out methods of the Wilhelmsstrasse, I was shown up a flight of stairs. The attendant knocked on the door, opened it, and announced:

"The gentleman."

I was facing Sir Edward Grey.

He was seated behind a big green-covered mahogany desk. I noticed that the room seemed like a private library; books, memoranda, letters, and dispatch cases littered, not only the desk, but the tables and chairs. The eye was struck by a huge piece of furniture—a tall, leather-covered easy chair. I present these details for obvious reasons.

The First Day at School
Sketches from Awayback

The First Diplomat of England

SIR EDWARD, looking small in the big armchair, was seated with his legs crossed. He was reading some document, and without a sign of recognition he kept me standing there, it must have been ten minutes. I noticed that he glanced at me now and then above the top of the paper. Abruptly he told me to have a seat. When I said that I preferred to stand, he nodded and, pulling open a drawer, took from it a folder that, as subsequent events verified, I suspected to be a report on me. There was another period during which he seemed to be unaware of my presence, and I took advantage of it to size up my man. He impressed me as being one of those intolerable, typically English icicles, which only that nation seems able to produce in her public servants. Presumably through a century-long contact with the races of the East, the English diplomat of the Sir Edward Grey type presents the bland, imperturbable, noncommittal, almost inane expression of the Oriental that hardly gives one any criterion of the tremendous power of perception and concentration beneath the mask. After playing with his monocle, he said:

"I presume you are familiar with Germany's naval activity."

"Up to a certain point, sir."

"What point?" he asked quickly.

"I am familiar only with the Intelligence Department of the Admiralty," I replied.

"Their system?" he asked. "Is it so extensive and efficient as we have been led to believe?"

"That cannot be exaggerated."

At this Sir Edward began to throw out innuendos, to which I replied in like vein. The interview was not progressing. Finally he came out with what was in his mind.

"Do you know if any officials or naval officers are selling or negotiating to sell information to foreign intelligence departments?"

Although he had not said English officers or officials, I knew what he meant, but I made up my mind not to tell everything I knew.

"There are such," I replied.

It had the effect of making him look at me in a most startled manner.

"How do you know that? On what

Reo the Fifth

A Super-Car

$1,175 *Equipped F.O.B. Lansing* — *Fall Series*

5-Passenger Touring Car or Roadster

Better Than It Need Be

By an Average of 50 Per Cent

R. E. Olds took this position when he first brought out Reo the Fifth:

The usual standards are not good enough for men who buy cars to keep.

So he built this super-car—a car of extremes, of vast over-capacity—ultra in its fineness, its exactness, its materials and its costly features.

This car has won men by the legions to a better grade of car.

New Additions

Countless new things have been added since this car came out. Nearly all you see is new—body, finish and equipment. And there are many new chassis features. No car is kept more up-to-date. None has more new-style beauty.

But the standards have not been altered. The car is still built better than it need be, by an average of 50 per cent.

Severe Tests

We send test cars over country roads for 10,000 miles of rough driving. Then take them apart and inspect them. That's to learn how strong parts must be to keep their newness after years of service.

The car has 35 horsepower, but every test is based on requirements of a 50-horsepower motor.

One whole building is devoted to these tests. There steels are analyzed. There gears are tried out in a 50-ton crusher. There vital parts are required to show at least 50 per cent over-capacity.

6 Weeks to Build

We spend six weeks on each car to get utter exactness, to make sure that each part is perfect.

We use 15 roller bearings, 190 drop forgings. We use a very costly clutch to prevent the strain of gear clashing. Every chassis part is built to stand abnormal shocks.

Then we give you here the one-rod control, found in no other car. A simple turn of the wrist does the gear shifting.

In these ways we add about $200 to the necessary cost of each car. But we save the average user twice that in troubles, repairs and upkeep.

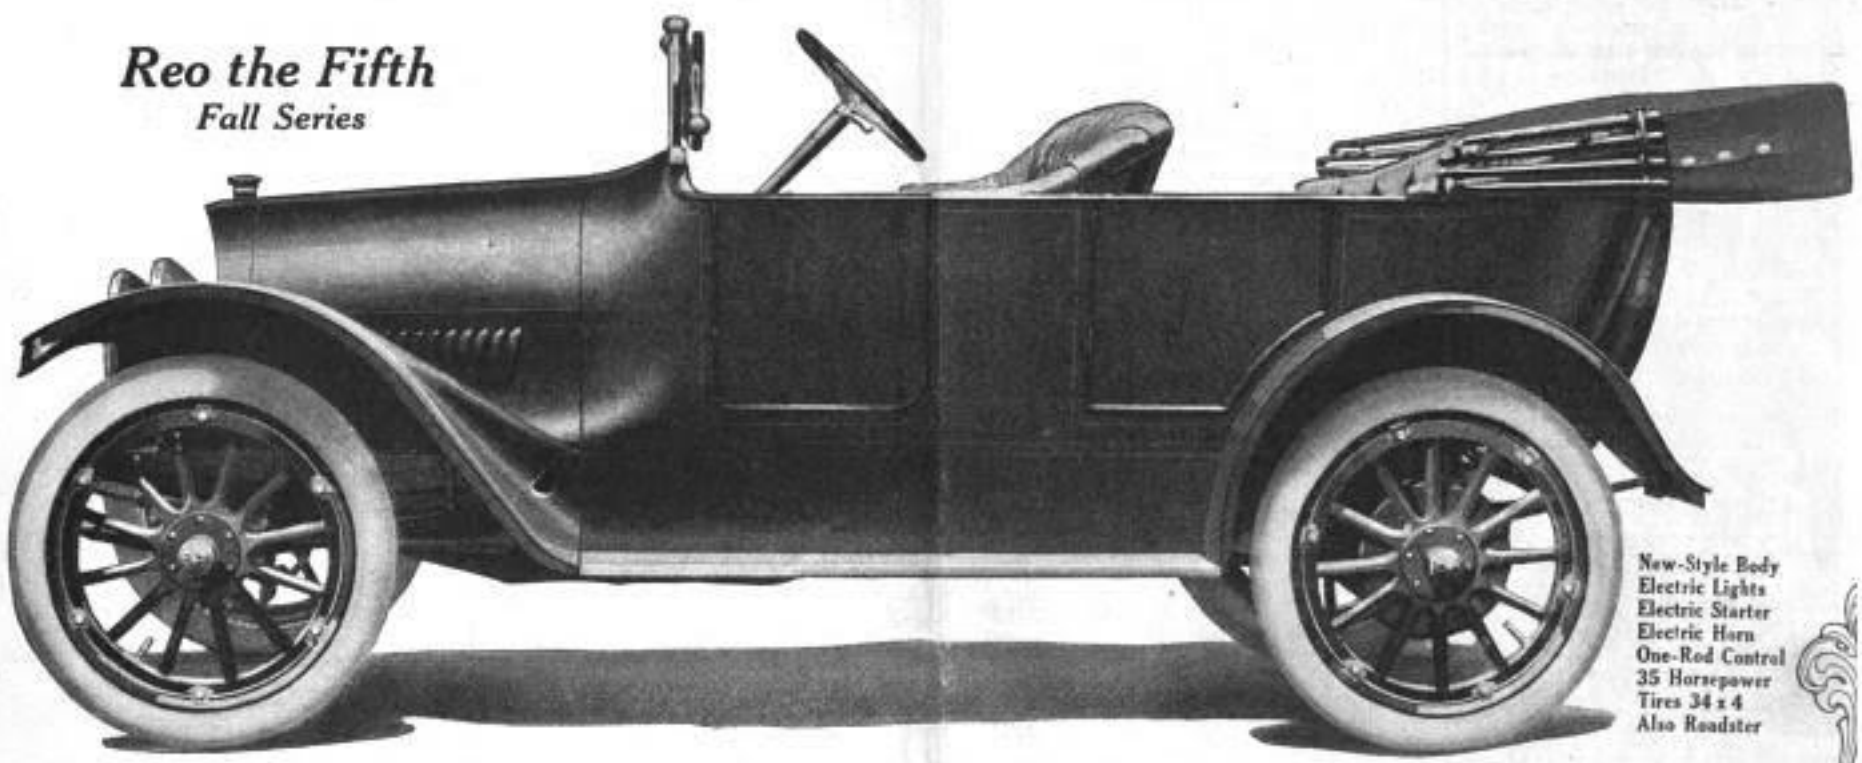
Cost Lowered

Reo the Fifth used to cost, with full equipment, $220 more than now. Standardization has brought that cost down. Special machinery, high efficiency and a model plant have helped. This latest model offers a value which two years ago was impossible.

This is the Long-Time Car

Reo the Fifth is built for men who want a long-time car—a car to stay new—to render years of perfect service. With proper care, a car like this should run 100,000 miles.

It is built to save trouble, upkeep and repairs. It is built to stand shocks and strain. The longer you own it the more it will show its supremacy.



Men are buying this car now faster than we can build it. There are 25,000 of them running today, showing how the car stands up. If you look at the facts or talk with users, you will choose this well-built car.

We have dealers in 1155 towns. Write for Reo Magazine, which tells and pictures how this car is built.

This Complete Library of LAW IN 6 HANDY VOLUMES Only $1 a Month

"Ignorance of the law excuses no man"

THAT'S LAW. You can't always "guess" the law. You may not have time to "study" law. Lawyers come high—especially some of them. BUT YOU MUST KNOW LAW.

THIS splendid little handy LIBRARY OF LAW is prepared for the average man—the business man—the doctor—the teacher—the minister—the man who works for others—the man who works for himself—the man who writes—the man who has money and the man who has not—EVERY MAN. This Library is a work to read at odd times and a reference work combined. The language is simple, direct, plain, and it covers every subject you need to know about. Here are just a few of them. "Wills"—"Mortgages"—"Deeds"—"Farm Laws"—"Landlord and Tenant"—"Leases"—"Copyrights"—"Trade Marks"—"Partnerships"—"Letters of Credit"—"Trustees"—"Corporations"—"Stockholders"—"Dividends"—"Marriage"—"Parental Relation"—"Employer and Employee"—"Assault"—"Defamation"—"Libel"—"Criticism"—"Self Defense"—"Automobile Laws"—"Patents"—"Contracts"—"Fraud"—"Damages"—"Negotiable Paper"—"Indorsements"—"Promissory Notes"—"Checks"—"Bills of Exchange"—"Bonds"—"Agents"—"Banks"—"Bankruptcy," etc.

HERE IS OUR SPECIAL OFFER

(9-14)

The Thompson Publishing Co.
1127 Pine Street,
St. Louis, Mo.

Send me for examination, one set of your handy LIBRARY OF LAW in six volumes bound in Buckram. If I am satisfied with the books I will send you $1 as first payment, and $1 a month thereafter until the special price of $6 is paid. If I do not wish to keep the books, I will notify you in seven days, and the books are then to be returned at your expense as offered in COLLIER'S Weekly readers.

We can't begin to tell you all about this splendid set of books, so we are not going to try. We want to send you the books themselves—the COMPLETE SET of 6 handy volumes, measuring 6¾ by 4¾ inches, so that you can examine all the volumes and decide for yourself if they are just the books you want—and need. If you decide to keep them, just send us $1 as first payment, and $1 a month thereafter for 5 months. But if you do not wish to keep the books after seeing them, then you may send them back at our expense. That's fair. Isn't it?

Mail Coupon Below at Once.

ADDRESS.....

grounds do you make that assertion?" His agitation was ill concealed.

"I have no specific proof," I replied (which I had), "but from information that has been gained, from plans that have been secured—plans like those of your dreadnought *Queen Mary* and the *Ajax*—it is obvious that these things have been done with the cooperation of high officials of your country."

To the United States

HE pressed me for further details, but I withheld them. I could have told him a pretty story about the plans of the *Queen Mary* and the *Ajax*. He fell to studying a rather voluminous report; then he began anew with his innuendos. I guessed what was coming. Although his speech was more prolonged than I shall now present it, this is the gist of what he asked:

"Were you ever present at conferences attended by high officials? Were you, for instance, at the Schlangenbad meeting? Have you any data? Any documentary evidence of having been there?"

I was not a bit startled. I had guessed it would be that. His very question showed that it was useless for me to deny that I had been at the Black Forest conference. Possibly Churchill, recalling my meeting him during the Boer War, had dropped a word about this coincidence to his Lordship. Naturally, I told him I possessed no such data. I deemed it wise to keep my own counsel.

My unsatisfactory answers seemed to displease Sir Edward Grey, for with true British discourtesy he abruptly began working at something on his desk, and, without even saying good day, let a commissary bow me out.

A few days later I received definite instructions from Captain Robinson. I was to go on a mission in the interests of the British Secret Service. And these instructions ultimately resulted in the mission which brought me to the United States.

The Turning of Joe

(Concluded from page 11)

watching the scene, his lips parted in a contemptuous sneer.

"Hae a smoke!" Sandy called to him.

"I buy smokes," he answered.

"As ye please." Sandy gave the box back to Joe.

THE happy father, without a moment's hesitation, walked over to Mike: "Misteer Mike, taka a smoke."

Mike's answer was a quick, upward blow of his arm. He hit the box and the cigars scattered in many directions to fall in the grease and blackstrap of the haulage road. "What's a dago's kid?" he roared, and cursed Joe's son.

For the next five minutes local history was rapidly made at the mine opening. Mike's curse and Joe's embittered cry were the overture to a show we shan't soon forget. The mouse attacked the cat. The miners could hardly realize that Joe had dared to strike his tormentor until Joe and Mike were wrestling on the ground. Not a word was spoken; it was a fight to the death.

"Mike's killing him," some one cried when Mike had Joe underneath his body.

"Separate them!" was shouted from the edge of the crowd.

Big Lars reached down his powerful hands and grasped Mike by the shoulder. With an effort he raised him up.

A wild cry burst from the watchers. Joe's hands were clinging to Mike's throat with the strength of a steel trap.

"It's Mike th..t's done for!" Jack's shout was triumphant.

ONE of the men threw his arms around Joe's body and gave him a violent jerk. The small, wiry fingers released the clutch that had been choking the life out of Mike.

"Me kill! Me kill!" Joe's scream was deadly. "He say hell, my boy!" The foreman must needs help hold the Italian. Mike sank limply to the ground.

When, with dazed eyes, Mike managed to sit up, his hand seeking his throat to caress the bruises made by Joe's fingers, Joe crouched again to make another spring at him. But Big Lars threw him back. "That ban plenty, Joe."

Mike gave a shudder.

"Away to your work!" the foreman ordered, adding, "and I'm thinking, lads, that Joe'll hae na trouble tae get a square deal the noo. The bairn's done that much for him."

Barrett Specification Roofs

A good building and a good roof

A fine, big, permanent building like this usually carries a Barrett Specification Roof. Why?

Well, first—because it's big. Mere bigness compels a careful study of costs—and the cost of a Barrett Specification Roof is lower than that of any other permanent roof.

Second—its bigness compels careful study of future maintenance costs and the maintenance cost of a Barrett Specification Roof is practically nothing. It will usually last 20 years or more without painting or tinkering of any kind.

Third—Being a first-class modern building, it is safe to suppose that it is being built by a first-class, up-to-date architect or engineer, and such live men know the low unit cost of Barrett Specification Roofs.

Big schools, big factories, big warehouses, big piers, big apartments, big office buildings, big everything usually have Barrett Specification Roofs. For small buildings they are just as economical and satisfactory.

Special Note

We advise incorporating in plans the full wording of The Barrett Specification, in order to avoid any misunderstanding.

If any abbreviated form is desired, however, the following is suggested:

ROOFING—Shall be a Barrett Specification Roof laid as directed in printed Specification, revised August 15, 1911, using the materials specified and subject to the inspection requirement.

A copy of The Barrett Specification with roofing diagrams mailed free on request.

Keep Your Razor Sharp

It is impossible to wipe a razor absolutely dry. Consequently invisible rust is always eating away the microscopic teeth that give a razor its shaving power. This is why your razor becomes dull—rust does it! Nothing keeps a razor in such fine shaving trim as

3-in-One oil

Use it this way and see for yourself: Before shaving, draw razor between thumb and first finger moistened with 3-in-One. Then strop with a few drops on the strop. Avoid making strop wet with oil. After shaving repeat this process. This checks rust and absolutely preserves the edge—microscopic rust cannot form—the cutting edge must stay keen.

3-in-One is sold in hardware, drug and general stores. 1 oz. bottle 10c; 3 oz. 25c; 8 oz. (½ pt.) 50c. Also in Handy Oil Cans, 3½ oz. 25c. If your dealer doesn't keep these cans, we will send one by parcel post, full of good 3-in-One, for 30c.

FREE—Write for a generous free sample and 3-in-One Dictionary.

Packer No. 8 Hears from a Pipe-Lover

To insure the complete satisfaction of every smoker of Edgeworth tobacco and as part of the guarantee that goes with every package a small slip is packed into every large size tin or humidor package of Edgeworth. This slip urges a return of the tobacco if it is not satisfactory and bears a number that identifies the packer.

Here is, in part, what one smoker had to say when he read his slip.

Packer No. 8,
c/o Larus & Bro. Co.,
Richmond, Va.

Sir, Madam or Miss:—I have just dug down to the bottom of a one pound can of "Edgeworth" evidently packed by you, and I found the enclosed notice; wherein your boss asks me to notify them in case I found any irregularity in the box in which the notice was packed. As I found no irregularity and as they asked for nothing more I thought I would tell you what else I found; e. g. "The Best Bunch of tobacco I ever smoked." A friend, (I was going to say a true friend, but then I reserve that expression for my old "chaboon" exclusively) gave me this pound box of "Edgeworth"—hence this letter, and now it's me for more as the last smoke was as good as the first, just as moist and held the same quality and flavor—you can tell your "boss" that there was no irregularity—no, it was all regular—yes, a regular find.

Yours in a decent smoke,
A. J. M.

Not every man is as fortunate as Mr. A. J. M. He was lucky enough to have a friend who introduced him to Edgeworth by presenting him with a full pound.

There's no need for you to wait until some acquaintance yields to an inspiration and gives you a package of Edgeworth to judge.

You can get it from us by asking for it. Just put yourself in a receptive frame of mind, say to yourself, "Well, since it costs nothing, I will give this Edgeworth a trial," then send us a postcard with your name and your dealer's name on it.

We will promptly send you a package of Edgeworth Ready-Rubbed Smoking Tobacco, free. Whether you will like it or not remains to be seen, but you should see some of the glad letters we get from men who have found Edgeworth just what they wanted.

Don't you think it's always worth while to try out a pipe tobacco?

Edgeworth is made from the finest tobacco that grows on the ground, and it comes in two forms, Plug Slice and Ready-Rubbed, and is on sale practically everywhere.

The retail price of Edgeworth Ready-Rubbed is 10c for pocket size tin, 50c for large tin and $1.00 in handsome humidor packages. Edgeworth Plug Slice is 15c, 25c, 50c and $1.00. Mailed prepaid where no dealer can supply. A sample of Ready-Rubbed is free if you mention your dealer's name. If you love good pipe tobacco, you will really favor us by asking for this sample.

Write to Larus & Brother Co., 3 South 21st Street, Richmond, Va. This firm was established in 1877, and besides Edgeworth makes several other brands of smoking tobacco, including the well known Qboid granulated plug—a great favorite with smokers for many years.

To Retail Tobacco Merchants—If your jobber cannot supply Edgeworth, Larus & Bro. Co. will gladly send you a one or two dozen carton, of any size of the Plug Slice or Ready-Rubbed, by prepaid parcel post at same price you would pay jobber

Bealby

Continued from page 15

who's fought us like a rat. Been committing all sorts of crimes about the country. Five pounds reward for him."

"Fruit stealing?" asked Mr. Benshaw.

"Yes," said Mr. Rymell, chancing it.

MR. BENSHAW reflected slowly. His eyes surveyed his trampled crops. "Good Lord!" he cried. "Look at those strawberries!" His voice gathered violence. "And that lout there!" he said. "Why!—he's lying on them. That's the brute who went for me!"

"You got him a pretty tidy one aside the head!" said Macculium.

The tramp rolled over on some fresh strawberries and groaned pitifully.

"He's hurt," said Mr. Mumby.

The tramp flopped and lay still.

"Get some water!" said Rymell, standing up.

At the word water, the tramp started convulsively, rolled over and sat up with a dazed expression.

"No water," he said weakly. "No more water," and then, catching Mr. Benshaw's eye, he got rather quickly to his feet. Everybody who wasn't already standing was getting up, and everyone now was rather carefully getting himself off any strawberry plant he had chanced to find himself smashing in the excitement of the occasion.

"That's the man that started in on me," said Mr. Benshaw. "What's he doing here? Who is he?"

"Who are *you*, my man? What business have you to be careering over this field?" asked Mr. Rymell.

"I was only 'elping," said the tramp.

"Nice help," said Mr. Benshaw.

"I thought that boy was a thief or something."

"And so you made a rush at me."

"I didn't exactly—sir— I thought you was 'elping 'im."

"You be off anyhow," said Mr. Benshaw, "whatever you thought."

"Yes, you be off!" said Mr. Rymell.

"That's the way, my man," said Mr. Benshaw. "We haven't any jobs for you. The sooner we have you out of it the better for everyone. Get right on to the path and keep it." And with a desolating sense of exclusion the tramp withdrew. "There's pounds and pounds' worth of damage here," said Mr. Benshaw. "This job'll cost me a pretty penny. Look at them berries there. Why, they ain't fit for jam! And all done by one confounded boy." An evil light came into Mr. Benshaw's eyes. "You leave him to me and my chaps. If he's gone up among those sheds there—we'll settle with him. Anyhow there's no reason why my fruit should be trampled worse than it has been. Fruit stealer, you say, he is?"

"They live on the country this time of year," said Mr. Mumby.

"And catch them doing a day's work picking!" said Mr. Benshaw. "I know the sort."

"There's a reward of five pounds for 'im already," said the baker. . . .

YOU perceive how humanitarian motives may sometimes defeat their own end, and how little Lady Laxton's well-intentioned handbills were serving to rescue Bealby. Instead they were turning him into a scared and hunted animal. In spite of its manifest impossibility he was convinced that the reward and this pursuit had to do with his burglary of the poultry farm and that his capture would be but the preliminary to prison, trial, and sentence. His one remaining idea was to get away. But his escape across the market gardens had left him so blown and spent that he was obliged to hide up for a time in this perilous neighborhood before going on. He saw a disused-looking shed in the lowest corner of the gardens behind the greenhouses, and by doubling sharply along a hedge he got to it unseen. It was not disused—nothing in Mr. Benshaw's possession ever was absolutely disused—but it was filled with horticultural lumber, with old calcium carbide tins, with broken wheelbarrows and damaged ladders awaiting repair, with some ragged wheeling planks and surplus rolls of roofing felt. At the back were some unhinged shed doors leaning against the wall, and between them Bealby tucked himself neatly and became still, glad of any respite from the chase.

He would wait for twilight and then get away across the meadows at the back and then go— He didn't know whither.

If there is no harmony in the factory, there will be none in the piano

BUSINESS Men interested in efficiency are invited to visit any dealer in Packard Pianos and learn about a new kind of efficiency that can be applied to any business.

Any Packard dealer can tell you how the Packard Piano Company has learned to utilize the spirits of its men, as well as their heads and hands—how the Packard organization—workmen, officers, salesmen and dealers—are all working in a genuine spirit of mutual purpose, mutual helpfulness and mutual reward which makes for better men, better goods, better business and better service to the public.

Whether you are interested in pianos or not it will pay you, in the interest of your own business, to

Investigate the Packard Business Policy

If you are interested in a piano, the Packard Business Policy will make you want a piano built the Packard way—and there is only one, the Packard.

Heats 12-Room Home for $27.00 with an Underfeed

Here are the Facts—

Meadville, Penn., Dec. 18, 1913.

Gentlemen: I have used one of your UNDERFEED furnaces for past seven years for heating our twelve-room residence. Have never had a dollar's worth of repair on it—always able to keep temperature above 70 degrees throughout the house during our coldest weather—use coking coal slack for fuel—largest fuel bill covering one year's heating $27.00; smallest yearly bill $22.00. These are facts which speak for themselves.

H. C. BEMAN, President,
Beman Automatic Oil Can Co., Ltd.

Over 25,000 Underfeed Users

have proved our guarantee that Williamson Underfeed furnaces and boilers cut coal bills ½ to ⅔ and deliver clean, even heat with minimum attention.

Our improved Williamson *New-Feed* Underfeed is the last word—the best word in heating systems. All the good points of the old Underfeed have been retained and a score of improvements added. Every possible objection has been banished. Now the attention of a 12-year-old boy twice a day for firing and *once* a week for removal of ashes is all that is needed.

WILLIAMSON NEW-FEED UNDERFEED Furnaces and Boilers

Cut Coal Bills ½ to ⅔

Coal in the Underfeed is fed from *below*, and like a candle, burns *from top down*. With the fire always on top, smoke and gases are consumed, making more heat with no soot, smell, smoke, clinkers or dirt, and few ashes. Cheap slack soft coal and pea or buckwheat sizes of hard coal yield in the Underfeed as much clean, even heat as *highest* priced coal in other heaters. Any kind or size of coal may be used. The Underfeed is adapted to warm air, steam or hot water in buildings of all kinds, large or small.

50% Saving Guaranteed We guarantee a saving over your present coal bills of at least one-half by means of the Williamson *New-Feed* Underfeed, when properly installed and operated. This guarantee is backed by a $1,000,000 company. Mail the coupon for our great free book "From Overfed to Underfeed." This book will surely startle you and show you how to save money.

METZ

The Quality Car

THE new fore-door model of the Metz Roadster appeals to your appreciation of *Quality*. Everything about it is expressive of efficiency. It won the last Glidden Tour, and scored sensational victories in the officially conducted hill-climbing contests last June and July at Uniontown and Richfield Springs, winning in open competition against cars of all makes and prices, including 60 and 90 horse power racing models. It is handsome in appearance, its equipment is the best throughout, and in reliable road performance it has no superior. It is the recognized high class car in the low price class.

$495
Equipped Complete

New Fore-Door Model

A Masterpiece in Automobile Design and Construction

THIS new METZ model is luxuriously finished, graceful in design, and wonderfully easy riding. It possesses both the *style* and the *power* that are today necessary features of the strictly up-to-date car. It travels 40 to 50 miles per hour, is easy to drive, and extremely economical in operation.

Special Features

Stream line body, plate glass rain-vision wind shield.

Wide, comfortable seat, with deep upholstery.

Four-cylinder water-cooled motor, Bosch high tension magneto, Prest-O-Lite tank carried in special closed compartment in rear, best quality Goodrich clincher tires, 96-inch wheel base, standard tread.

Left-hand drive, center control, and gearless transmission — which does away entirely with gear trouble.

Extension top with cover slip and curtains, full elliptic springs, 30" artillery wheels, 5 lamps, horn, pump, jack, tools, etc.

Illustrated literature describing the new Fore-Door Model mailed promptly on request. Write for catalog "C."

DEPARTMENT C., Notre Dame, Indiana

And now he had no confidence in the wild world any more. A qualm of homesickness for the compact little gardener's cottage at Shonts came to Bealby. Why, as a matter of fact, wasn't he there now?

He ought to have tried more at Shonts.

He ought to have minded what they told him and not have taken up a toasting fork against Thomas. Then he wouldn't now have been a hunted burglar with a reward of five pounds on his head and nothing in his pocket but threepence and a pack of greasy playing cards, a box of sulphur matches, and various objectionable sundries, none of which were properly his own.

If only he could have his time over again!

SUCH wholesome reflections occupied his thoughts until the onset of the dusk stirred him to departure.

He crept out of his hiding place and stretched his limbs, which had got very stiff, and was on the point of reconnoitering from the door of the shed when he became aware of stealthy footsteps outside.

With the quickness of an animal he shot back into his hiding place. The footsteps had halted. For a long time, it seemed, the unseen waited, listening. Had he heard Bealby?

Then some one fumbled with the door of the shed: it opened and there was a long pause of cautious inspection.

Then the unknown had shuffled into the shed and sat down on a heap of matting.

"*Gaw!*" said the voice.

The tramp's!

"If ever I struck a left-handed Mascot it was that boy," said the tramp. "The little *swine!*"

For the better part of two minutes he went on from this mild beginning to a descriptive elaboration of Bealby. For the first time in his life Bealby learned how unfavorable was the impression he might leave on a fellow creature's mind.

"Took even my matches!" cried the tramp, and tried this statement over with variations.

"First that old fool with his syringe!" The tramp's voice rose in angry protest. "Here's a chap dying of epilepsy on your doorstep and all you can do is to squirt cold water at him! Cold water! Why, you might *kill* a man doing that! And then say you'd thought'd bring 'im rlind! Bring 'im riind! You be jolly glad I didn't stash your silly face in. You [misbegotten] old fool! What's a shilling for wetting a man to 'is skin? Wet through I was. Running inside my shirt—dripping. . . . And then the blooming boy clears!

"*I* don't know what boys are coming to!" cried the tramp. "These board schools it is. Gets 'old of everything 'e can and bunks! Gaw! If I get my 'ands on 'im, I'll show 'im. I'll—"

FOR some time the tramp reveled in the details, for the most part crudely surgical, of his vengeance upon Bealby. . . .

"Then there's that dog bite. 'Ow do I know 'ow that's going to turn iit? If I get 'idrophobia, blowed if I don't *bite* some of 'em. 'Idrophobia. Screaming and foaming. Nice death for a man—my time o' life! Bark I shall. Bark and bite.

"And this is your world," said the tramp. "This is the world you put people into and expect 'em to be 'appy. . . .

"I'd like to bite that dough-faced fool with the silly 'at. I'd enjoy biting *'im*. I'd spit it out but I'd bite it right enough. Wiping abät with 'is *'O Gaw!* Get orf my ground! Be orf with you! Slash! 'E ought to be shut up.

"Where's the justice of it?" shouted the tramp. "Where's the right and the sense of it? What 'ave *I* done that I should always get the under side? Why should *I* be stuck on the under side of everything? There's worse men than me in all sorts of positions. . . . Judges there are. *'Orrible Kerecters.* Ministers and people. I've read abät 'em in the papers. . . .

"It's we tramps are the scapegoats. Somebody's got to suffer so as the police can show a face. Gaw! Some of these days I'll do something. . . . I'll do something. You'll drive me too far with it. I tell you—"

HE stopped suddenly and listened. Bealby had creaked.

"Gaw! What can one do?" said the tramp after a long interval. And then, complaining more gently, the tramp began to feel about to make his simple preparations for the night.

"'Unt me out of this, I expect," said the tramp. "And many sleeping in feather beds that ain't fit to 'old a candle to me. Not a *kordinary* farthing candle . . ."

THE subsequent hour or so was an interval of tedious tension for Bealby.

After vast spaces of time he was suddenly aware of three vertical threads of light. He stared at them with mysterious awe, until he realized that they were just the moonshine streaming through the cracks of the shed.

The tramp tossed and muttered in his sleep.

Footsteps?

Yes—footsteps.

Then voices.

They were coming along by the edge of the field, and coming and talking very discreetly.

"Ugh!" said the tramp, and then softly: "What's that?" Then he, too, became noiselessly attentive.

Bealby could hear his own heart beating.

The men were now close outside the shed. "He wouldn't go in there," said Mr. Benshaw's voice. "He wouldn't dare. Anyhow we'll go up by the glass first. I'll let him have the whole barrelful of oats if I get a glimpse of him. If he'd gone away, they'd have caught him in the road . . ."

The footsteps receded. There came a cautious rustling on the part of the tramp and then his feet padded softly to the door of the shed. He struggled to open it, and then with a jerk got it open a few inches; a great bar of moonlight leaped and lay still across the floor of the shed.

Bealby advanced his head cautiously until he could see the black, obscure indications of the tramp's back as he peeped out.

"*Now,*" whispered the tramp, and opened the door wider. Then he ducked his head down and had darted out of sight, leaving the door open behind him.

BEALBY questioned whether he should follow. He came out a few steps, and then went back at a shout from away up the garden. "There he goes," shouted a voice, "in the shadow of the hedge."

"Look out, Jim!" *Bang*—and a yelp.

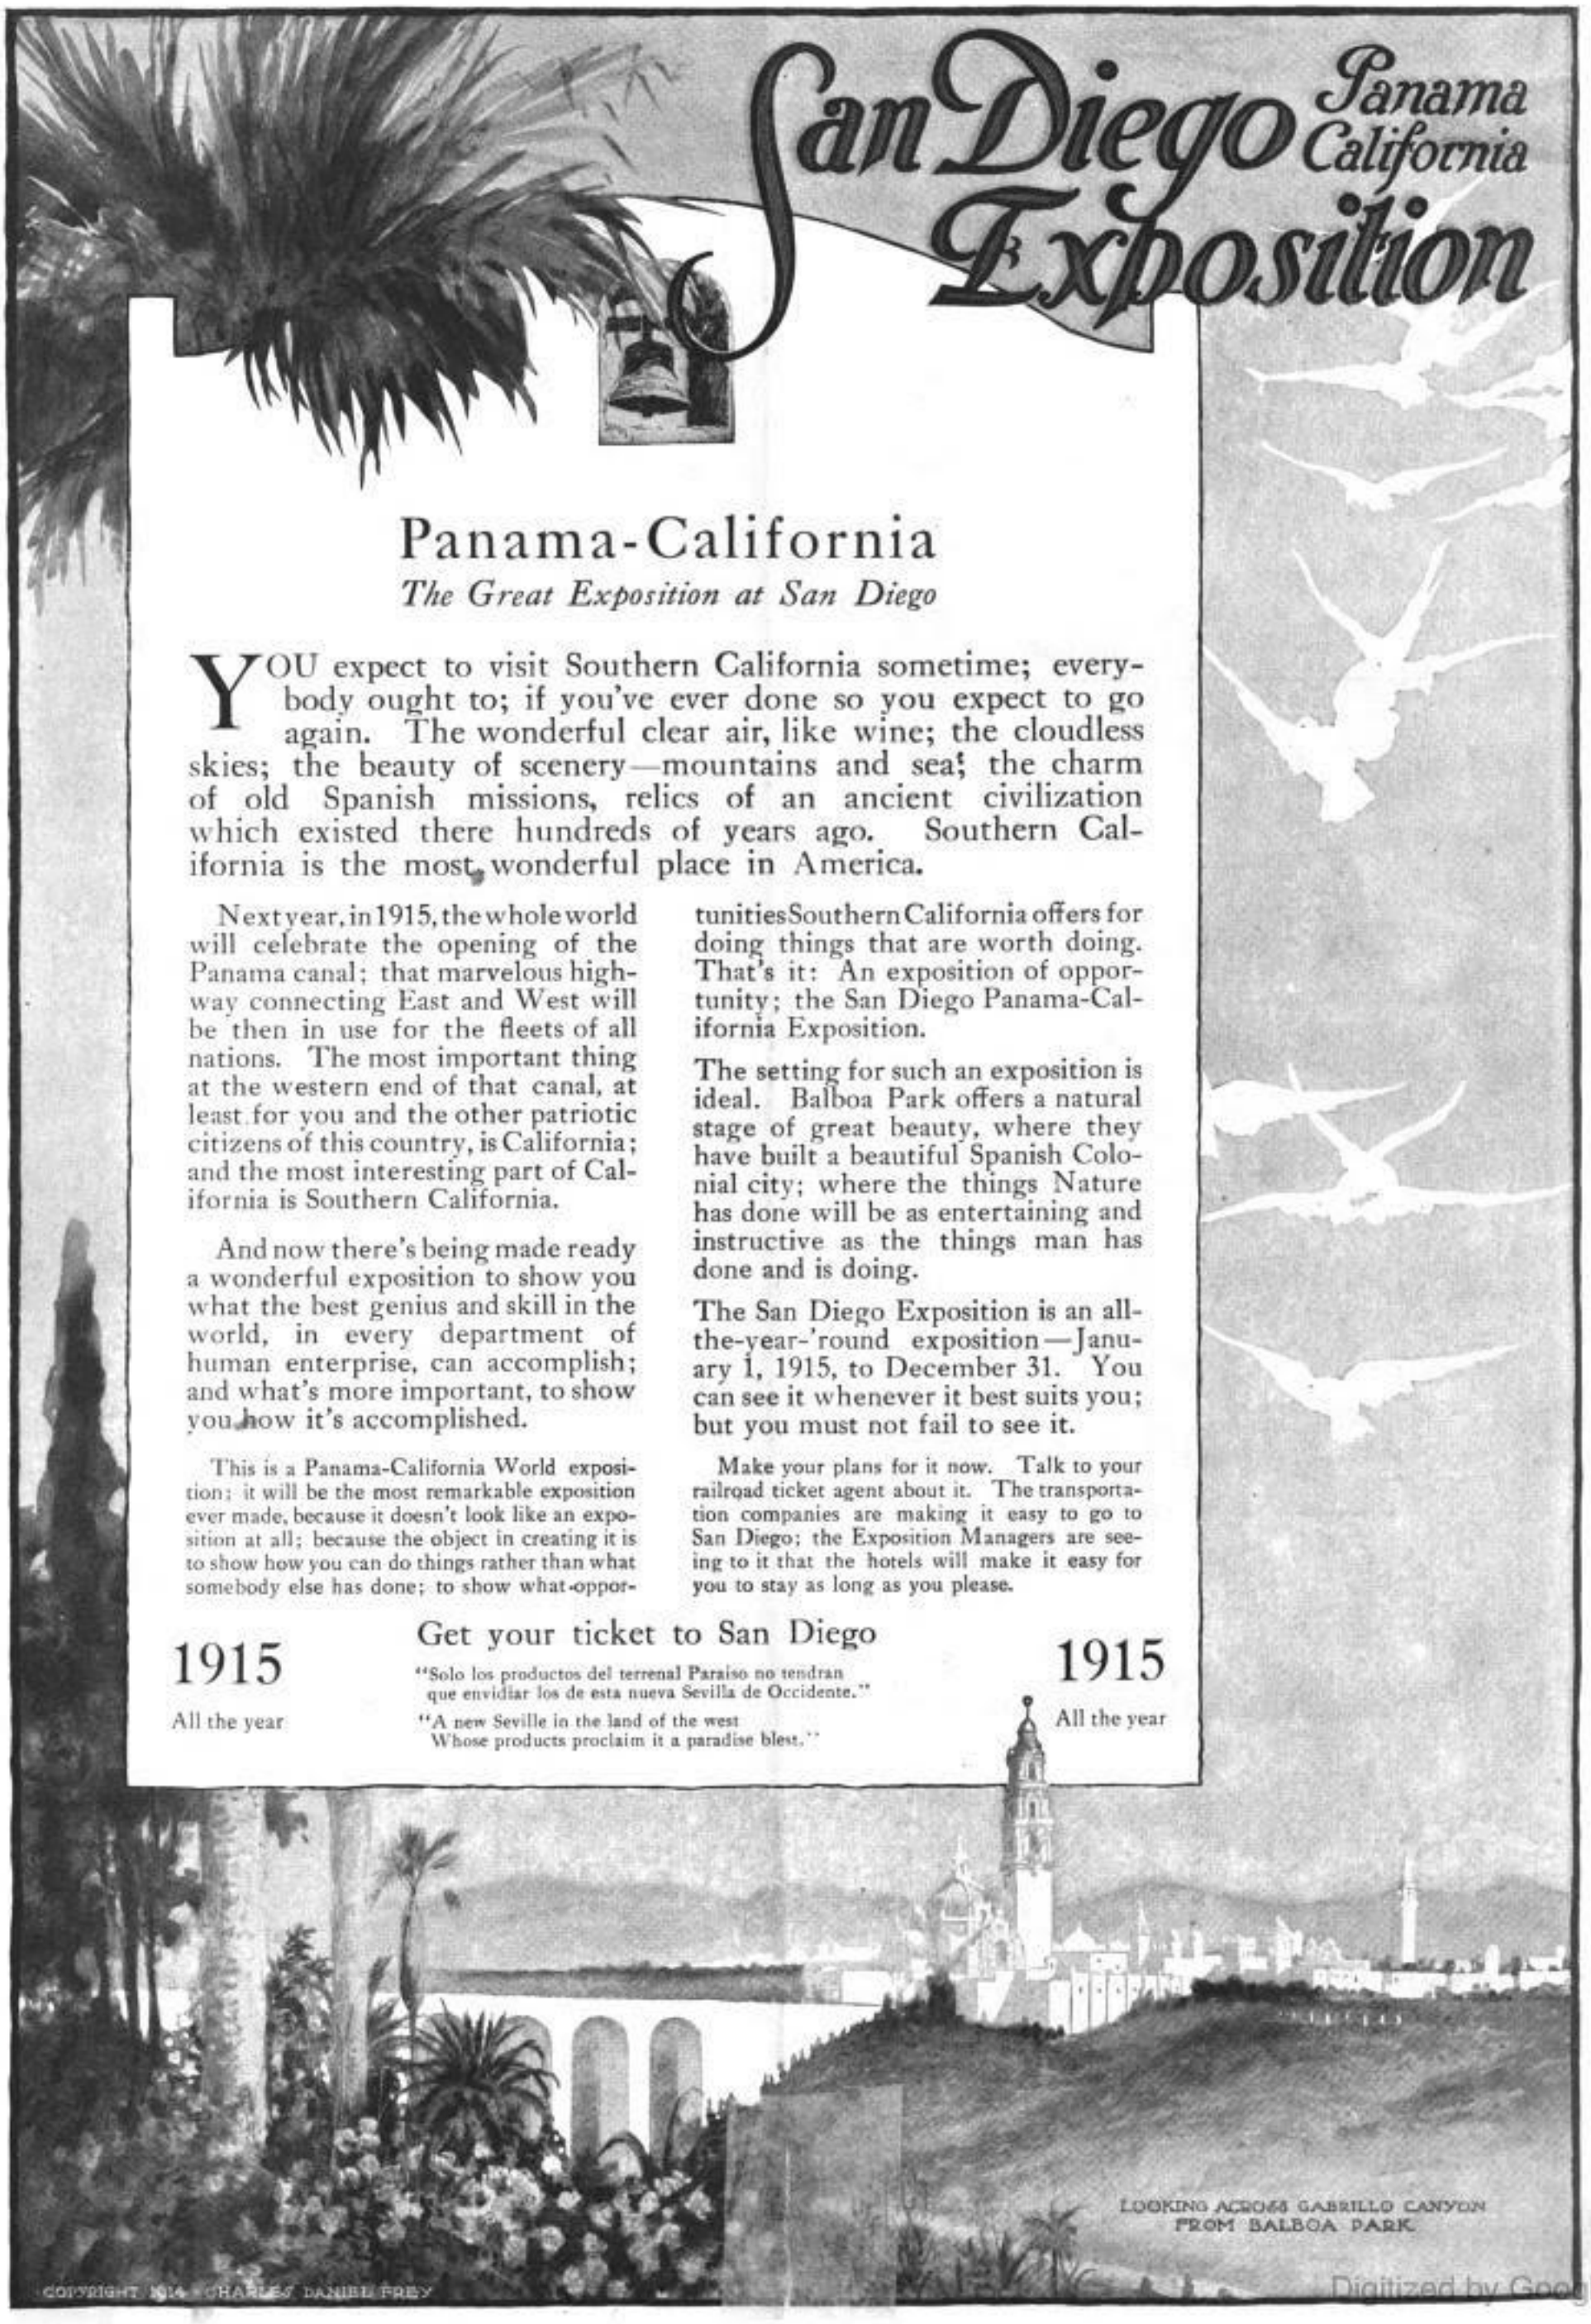
"Stand away! I've got another barrel!"

Bang. Then silence for a time and then the footsteps coming back.

"That ought to teach him," said Mr. Benshaw. "First time I got him fair and I think I peppered him a bit the second. Couldn't see very well, but I heard him yell. He won't forget that in a hurry. Not him. There's nothing like oats for fruit stealers. Jim, just shut that door, will you? That's where he was hiding . . ."

It seemed a vast time to Bealby before he ventured out into the summer moonlight, and a very pitiful and outcast little Bealby he felt himself to be.

He was beginning to realize what it means to go beyond the narrow securities of human society. He had no friends, no friends at all. . . .



HE caught at and arrested a sob of self-pity.

Perhaps after all it was not so late as Bealby had supposed. There were still lights in some of the houses and he had the privilege of seeing Mr. Benshaw going to bed with pensive deliberation. Mr. Benshaw wore a flannel nightshirt and said quite a lengthy prayer before extinguishing his candle. Then suddenly Bealby turned nervously and made off through the hedge. A dog had barked.

At first there were nearly a dozen lighted windows in Crayminster. They went out one by one. He hung for a long time with a passionate earnestness on the sole surviving one, but that, too, went at last.

He could have wept when at last it winked out. He came down into the marshy flats by the river, but he did not like the way in which the water sucked and swirled in the vague moonlight; also he suddenly discovered a great white horse standing quite still in the misty grass not thirty yards away; so he went up to and crossed the high-road and wandered up the hillside toward the allotments, which attracted him by reason of the sociability of the

Panama-California

The Great Exposition at San Diego

YOU expect to visit Southern California sometime; everybody ought to; if you've ever done so you expect to go again. The wonderful clear air, like wine; the cloudless skies; the beauty of scenery—mountains and sea; the charm of old Spanish missions, relics of an ancient civilization which existed there hundreds of years ago. Southern California is the most wonderful place in America.

Next year, in 1915, the whole world will celebrate the opening of the Panama canal; that marvelous highway connecting East and West will be then in use for the fleets of all nations. The most important thing at the western end of that canal, at least for you and the other patriotic citizens of this country, is California; and the most interesting part of California is Southern California.

And now there's being made ready a wonderful exposition to show you what the best genius and skill in the world, in every department of human enterprise, can accomplish; and what's more important, to show you how it's accomplished.

This is a Panama-California World exposition; it will be the most remarkable exposition ever made, because it doesn't look like an exposition at all; because the object in creating it is to show how you can do things rather than what somebody else has done; to show what opportunities Southern California offers for doing things that are worth doing. That's it: An exposition of opportunity; the San Diego Panama-California Exposition.

The setting for such an exposition is ideal. Balboa Park offers a natural stage of great beauty, where they have built a beautiful Spanish Colonial city; where the things Nature has done will be as entertaining and instructive as the things man has done and is doing.

The San Diego Exposition is an all-the-year-'round exposition—January 1, 1915, to December 31. You can see it whenever it best suits you; but you must not fail to see it.

Make your plans for it now. Talk to your railroad ticket agent about it. The transportation companies are making it easy to go to San Diego; the Exposition Managers are seeing to it that the hotels will make it easy for you to stay as long as you please.

Tiredom's Upper Class

Dear Sir:

It isn't extra price which marks the upper class in Tiredom.

Fanciful things don't count here. Nor does exclusiveness. Tires are mere utilities.

And Goodyear prices—due to mammoth output—count just as much as other Goodyear savings.

Real Aristocracy

The real aristocrats in Tiredom are No-Rim-Cut tires. They outsell any other.

By exclusive features and extra quality they won the ruling place. These are the royalty of Tiredom as class is measured there.

Yet many makes of tires are selling for more than Goodyear prices.

Badges of Class

These things, in Tiredom, are the sole criterions of class.

No rim-cutting. We prevent that in a faultless way—a way which we control. It saves a ruin which is wrecking one old-type tire in three, as per our last statistics.

Fewer blow-outs. Our "On-Air" cure—used by us alone—saves the major cause of blow-outs. It adds to our tire cost $450,000 per year.

Fewer loose treads. A patent method—used by us alone—reduces this danger by 60 per cent.

Perfect anti-skids. Our All-Weather treads are tough and double-thick. They are flat and smooth, so they run like plain treads. Their grips are deep, sharp and resistless.

Lowest cost per mile. These features, plus low Goodyear prices, insure that to our users: And hundreds of thousands have proved it.

No Pose of Price

No-Rim-Cut tires don't pose as extra-priced. They once sold for more than rival tires, because of these costly features. But mammoth output and new efficiency cut that cost immensely, and you get all the saving. Our average profit last year was 6½ per cent.

First we saved you rim-cuts, blow-outs and loose treads. Now we save you in the price per tire. As a result, men now are buying, on the average, 125,000 Goodyear automobile tires per month.

True Extra Value

We know but two ways to get extra value for an extra price. The price of some tires will buy you a half-inch wider Goodyear. That extra size, of course, means extra service. Or the price of three tires, extra-priced, will buy you four of Goodyears. And four tires will surely outlast three.

But, size for size, you'll never find a better tire than Goodyears. In the four ways cited you'll find none as good.

Remember that. High price marks class in some things, but it's a detriment in tires. It adds to dead expense.

Any dealer will supply you Goodyear tires at Goodyear prices if you tell him that you want them.

numerous tool sheds. In a hedge near at hand a young rabbit squealed sharply and was stilled. Why?

Then something like a short snake scrabbled by very fast through the grass.

Then he thought he saw the tramp stalking him noiselessly behind some currant bushes. That went on for some time, but came to nothing.

Then nothing pursued him, nothing at all. The gap, the void, came after him. The bodiless, the faceless, the formless; these are evil hunters in the night. . . .

What a cold, still, *watching* thing moonlight can be! . . .

He thought he would like to get his back against something solid, and found near one of the sheds a little heap of litter. He sat down against good tarred boards, assured at least that whatever came must come in front. Whatever he did, he was resolved, he would not shut his eyes.

That would be fatal. . . .

He awoke in broad daylight amid a cheerful uproar of birds.

AND then again flight and pursuit were resumed.

As Bealby went up the hill away from Crayminster he saw a man standing over a spade and watching his retreat, and when he looked back again presently this man was following. It was Lady Laxton's five-pound reward had done the thing for him.

He was half minded to surrender and have done with it, but jail, he knew, was a dreadful thing of stone and darkness. He would make one last effort. So he beat along the edge of a plantation and then crossed it and forced his way through some gorse and came upon a sunken road that crossed the hill in a gorse-lined cutting. He struggled down the steep bank. At its foot, regardless of him, unaware of him, a man sat beside a motor bicycle with his fists gripped tight and his head downward, swearing. A county map was crumpled in his hand. "Damn!" he cried, and flung the map to the ground and kicked it and put his foot on it.

Bealby slipped, came down the bank with a run, and found himself in the road within a couple of yards of the blond features and angry eyes of Captain Douglas. When he saw the Captain and perceived himself recognized, he flopped down—a done and finished Bealby. . . .

HE had arrived just in time to interrupt the Captain in a wild and reprehensible fit of passion.

The Captain imagined it was a secret fit of passion. He thought he was quite alone and that no one could hear him or see him. So he had let himself shout and stamp, to work off the nervous tensions that tormented him beyond endurance.

In the direst sense of the words, the Captain was in love with Madeleine. He was in love quite beyond the bounds set by refined and decorous people to this dangerous passion. The primordial savage that lurks in so many of us was uppermost in him. He was not in love with her prettily or delicately; he was in love with her violently and vehemently. He wanted to be with her, he wanted to be close to her, he wanted to possess her and nobody else to approach her. He was so inflamed now that no other interest in life had any importance except as it aided or interfered with this desire. He had forced himself in spite of this fever in his blood to leave her to pursue Bealby, and now he was regretting this firmness furiously. He had expected to catch Bealby overnight and bring him back to the hotel in triumph. But Bealby had been elusive. There she was, away there, hurt and indignant—neglected!

"A laggard in love," cried the Captain, "a dastard in war! God!—I am away from everything. First I leave the maneuvers, then her. Unstable as water thou shalt not prevail. Water! What does the confounded boy matter? What does he matter?

"And there she is. Alone! She'll flirt—naturally she'll flirt. Don't I deserve it? Haven't I asked for it? Just the one little time we might have had together! I fling it in her face. You fool, you laggard, you dastard! And here's this map!"

A BREATHING moment.

"How the *devil*," cried the Captain, "am I to find the little beast on this map?"

"And twice he's been within reach of my hand!"

"No decision!" cried the Captain. "No instant grip! What good is a soldier without it? What good is any man who will not leap at opportunity? I ought to have chased out last night after that fool and his oats. Then I might have had a chance!

"Chuck it! Chuck the whole thing! Go back to her. Kneel to her, kiss her, compel her!

"And what sort of reception am I likely to get?"

He crumpled the flapping map in his fist.

And then suddenly out of nowhere Bealby came rolling down to his feet, a disheveled and earthy Bealby. But Bealby.

"Good Lord!" cried the Captain, startling to his feet and holding the map like a sword sheath. "What do you want?"

For a second Bealby was a silent spectacle of misery.

"Oooh! I want my *breckfuss*," he burst out at last, reduced to tears.

"Are you young Bealby?" asked the Captain, seizing him by the shoulder.

"They're after me," cried Bealby. "If they catch me, they'll put me in prison, where they don't give you anything. It wasn't me did it—and I 'aven't had anything to eat—not since yesterday."

The Captain came rapidly to a decision. There should be no more faltering. He saw his way clear before him. He would act—like a whistling sword. "Here! Jump up behind," he said . . . "hold on tight to me . . ."

(To be continued next week)

Marconi vs. Hymen

(Continued from page 10)

we'd be waiting for you when this here steamer come in. My name is Davis and I'm a police officer," he added with a surreptitious flash of a nickeled star. "We've got a telegram from the Chicago police to hold you until your father comes to get you, so I guess it's you for police headquarters with me, Miss Weber. Sorry to bust up your little trip this way, but I've got to do it." He turned and took a few steps to the rail.

LENA, dissolved in tears long before the official explanation of Officer Davis was concluded, again sought to interfere.

"You're making a mistake," she began hysterically. "I won't allow this—"

Miss McMullen slipped an arm about her shoulders and drew the weeping girl close to her.

"Keep still!" she whispered. "This is your only chance—don't you see it? Nothing can happen to me. If Billy is waiting for you on the pier, run along and get married. If he isn't, take a train for home. They won't hold me more than an hour or two and in the meantime you can fade away. Keep your nerve and it'll come out all right."

The detective, leaning against the rail on both elbows, smiled at them tolerantly when Birdie looked up.

"I hope I didn't scare your friend," he suggested.

"No, she hasn't had a good look at you so far," she retorted. "What am I supposed to have put over—safe blowing or a train holdup? My little friend here didn't know she was traveling with a famous crook."

"You ought to know," he grinned. "All we got was a wire from headquarters in Chi asking us to meet this boat and take Lena Weber off and hold her until her father comes for her. If you was beating it away from home, you didn't cover your tracks very good, seeing that the old man got next to what steamer you was on the first thing."

"You don't know how smart he is," Birdie rejoined lightly. "He'd have been a copper only he never could wear shoes bigger than nines and that barred him. You don't mind my handing a few farewell messages to my friend here, do you? If I'm going to jail, I've got a lot of things to tell her."

Davis took the hint good-humoredly.

"Go as far as you like," he said, moving still further away from the couple. "Only I'll have to escort you when we get in. And as far as going to jail is concerned, there's nothing doing there," he added. "When we hold you runaways from Chi all you got to do is sit

WAR What is it all about?

ARE Europe's millions mad for blood just because a Prince was shot? Are cannon belching death—iron ships crashing to the bottom of the sea—is the death rattle the lullaby of Europe—just because Russia wants to show her love for the little brother—Servia? Has the whole world gone stark mad over a very foolish and trivial question?

Tear aside the curtain of Europe's politics and see the grim and sinister game of chess that is being played. See upon what a slim, yet desperate, excuse the sacred lives of millions are tossed away. Read the history of the past one hundred years, as written by one of the greatest authorities the world has ever known, and learn the naked, shameful truth.

FREE DURUY'S History of the World

Full, complete, distinct, luminous, as becomes its French authorship

In four splendid volumes, bound in cloth, and full of portraits, sketches, maps and diagrams, with a full index, and with one final volume by Prof. Grosvenor of Amherst.

Today is the climax of a hundred years of preparation. Read in this timely, authoritative, complete, AND THE ONLY CONDENSED classic world history—of which *over 2,000,000 copies have been sold in France alone*—just what has taken place in the inner councils of Europe during the past one hundred years. Read in these entrancing pages how Russia—a Gulliver imprisoned by Pigmies—has for years been trying to escape from her darkness.

Read how Germany and Austria, fearful of the monster's latent strength, have been trying to checkmate her, and how they pinned all in this last, supreme stake.

Duruy was Minister of Public Instruction in France—Grosvenor, who completed the books when Duruy laid down his pen, is an American.

Get the REVIEW OF REVIEWS for a Year

In the story of the past lie the secrets of today. When you know the motives of men in the past, their desires and their ambitions, then you can understand the history that is being made so fast today. And you will understand that better when you get the Review of Reviews for a year—for the Review of Reviews will give you a sane interpretation of the events that are taking place with such rapidity. It is not enough to read the daily news reports. Your ability to comprehend conditions, and to discuss them rationally depends on a true interpretation of the meaning and the "reason why" of events. In your mind you must bring order out of chaos—and the Review of Reviews will do it for you.

SEND NO MONEY Send the coupon only. It brings the whole set—four handsome volumes—charges prepaid—absolutely free. All we ask is that—after you get the books and like them—you send 25 cents for shipping and $1.00 a month for three months to pay for the Review of Reviews.

If the books aren't worth more than you pay for books and magazine together, send them back at our expense. But be prompt. The world-wide fame of Duruy will make these 5,000 sets disappear from our stock room at once. Send your coupon today—and be in time.

in a rocker in the matron's room until somebody comes to take you home."

IT required all of Miss McMullen's persuasive powers to make Lena consent to her continuing in the rôle she had undertaken. The runaway insisted that she would not shoulder off her troubles so readily and go blithely on her way to the altar, leaving Birdie in the hands of the law. But before the steamer docked that resourceful young woman had made her realize that the chance happening of the wireless message being delivered to her was the key to the situation: that nothing was to be gained by revealing identities, and that Miss McMullen could save the day by sitting around at police headquarters a few hours while Miss Weber was being wedded to her William.

"If you want him, this is the time to grab him," Birdie advised her. "He might not be so keen for running away again if you get dragged home by your father. If you marry him to-day, the old man's abduction charges go up in smoke; if you don't, he might be able to put something across on your fair-haired boy when the case comes to trial. You see what you've got to lose by getting chatty around here. Don't worry about me for a minute—I'm going to enjoy it, and when your dad comes to take you home, I'll hand him a line of conversation that will make him wish he'd sent for you by parcel post."

SO at length Lena saw things that way and agreed, though with many misgivings, to Miss McMullen's program. In pursuance thereof she went down the gangplank several minutes in advance of Birdie and the lantern-jawed detective, and therefore that eagle-eyed sleuth did not see a tall young man hurtle through the crowd of chattering vacationists and throw his arms about her.

"Lena!" he exclaimed rapturously.

Miss Weber threw a scared glance over her shoulder and tugged at his arm excitedly.

"Don't call me by my name like that, Billy," she whispered. "It ain't safe."

"What do you mean, it ain't safe?" he demanded. "Did you get my message? Has anybody been botherin' you?"

"Come on and I'll tell you about it," she said. "Oh, Billy, I had such a narrow escape! It was something terrible!"

And Miss McMullen, watching from the rail by the grace of Officer Davis while the crowd slowly filed ashore, smiled as she saw them eagerly elbowing their way toward the town.

IN the matron's room at the police station an hour later Peter Weber, the well-known dyer and cleaner, was gloomily listening to Miss McMullen's philosophy, which she expounded for him with a lightness and grace wholly out of keeping with her surroundings. His first wild ravings of rage and disgust had passed; the anathemas he had called down upon the police force of South Haven, upon William Harding, grocer's assistant, and upon society in general, had disturbed nobody in particular, and after a time he had calmed down under Birdie's soothing suggestions.

"You remember the time you married Mrs. Weber, don't you?" she said from the depths of a rocker where she had been reading a magazine until his arrival.

"Sure I do," he returned, facing about in surprise.

"Did anybody wish you on to her?" Birdie demanded. "Did her father pick you out and trot you up to her and say: 'Give this party the once over. You're going to marry him next month?'"

"Who, me?" Weber said, settling his coat lapels complacently. "I should say not! My wife picked me for herself."

"Well, what's the matter with you giving Lena the same chance?" she said. "It's a whole lot better all around. You talk about wanting your daughter to marry a man with money and a business. I'll bet you weren't round-shouldered from carrying your roll when you married."

WEBER waved his hands impatiently. "Oh, that's different!" he said. "I knew I could get along all right. What's this fellow Harding going to do, eh? Come down on me for housekeeping money? Not much he don't, by jiminetty!"

"He hasn't swung on you very hard so far," she suggested. "And he looks to me like a pretty game boy for a son-in-law—one that's more than likely to get by with anything he starts. For instance, you didn't have him bluffed for a minute to-day with all your warrants

Windsor, Can. 59 Tenth St., Detroit, U. S. A.
***Ingram's* Milkweed Cream**
Preserves Good Complexions
—Improves Bad Complexions
There is Beauty in Every Jar. Price 50c and $1.00 at druggists'.

See America first, not to bewail the slight depression which was inevitable when Europe went to war, but to take advantage of the business activity and proportionate prosperity that is bound to result from the exaltation of American business to the leadership of the world's production.

LISTERINE

Use it every day

LISTERINE applied to the scalp every day, either full strength or diluted, is almost a *specific* for dandruff.

This is but *one* of the many uses for Listerine in the range of personal hygiene. Use it as a mouth-wash, for relieving cuts and burns and skin affections, soothing the itch of insect bites, etc. Listerine has many imitators, but none of these possess its safe, non-poisonous, antiseptic properties.

Commercial and Secretarial Courses for *Both* Sexes. 50th Year Book Sent on Request. Address
The Registrar, Record Building, Phila., Pa.

"Made in Germany" has been a familiar phrase, but the lamentable turn of events abroad has largely thrown the producing of the world's commodities on this country, and thus has given American manufacturers the opportunity to emblazon on the world's notice, "Made in America" as Uncle Sam's international trade mark.

Many are planning to take advantage of this opportunity, and great benefits to both manufacturer and consumer will ultimately result.

and police and prosecutions. As soon as he got out of the police station he went right through with his little program—sent a wireless to his girl, grabbed the first train for here, met her at the dock and took her away to a minister's. You can't beat that much for speed and gameness, can you?"

"No, he beat me, all right—with you helping out," the old man admitted, and Miss McMullen saw the shadow of a smile flit around the corners of the grim old mouth. He was seeing Billy Harding in a new light. For the first time he was regarding the young fellow as a possibility and the prospect was not so unpleasing.

"Yes, and if you try to start any more rough work, believe me, he'll go right along with you to the finish," Birdie said. "He's that build, if I'm any judge. And don't forget to remember something else that's very important, Mr. Weber. Lena is still your daughter, but by this time she's Billy's wife. That makes things a whole lot different from what they were at ten o'clock this morning when that steamer started for here."

WEBER was staring out of the window. For a few moments he did not reply, but cleared his throat huskily.

"Yes, she's still my daughter," he said then. "And, by jiminetty, that young Harding ain't such a bad feller, when you come to look at it. Maybe if he got his chance—"

There was a knock at the door and the matron opened it and looked in brightly at Miss McMullen. Birdie's status had long since been established with the police.

"Some folks to see you," she said. "May they come in?"

From behind her Lena and Billy swarmed into the room without waiting for permission, hand in hand and smiling happily upon the world.

"Well, we're married!" Billy shouted, and then stopped short at sight of his father-in-law. Lena advanced a timorous step and Herr Weber relieved the situation by opening his arms.

"It's all right, children," he said. "I'm an old fool, I guess. Miss McMullen thinks so, and what she thinks is pretty near right. Come on—we'll all go home after we've had a wedding supper some place. You'll come along with us, too?" he added, turning to the heroine of the day.

BIRDIE was standing beside the smiling matron, drawing on her gloves.

"No, thanks," she said, "I'll just run along to the Sterlingworth before Evelyn Maguire has a fit, thinking I've done a Kellermann off the steamer. You folks can have your little family party without me, all right. But there's one thing I'm going to ask of you, Mr. Weber."

"Sure! You can have it now!" he declared happily, his arms around the grinning newlyweds. "What is it, Miss McMullen?"

"Next time I'm arrested," Birdie said, "I'll expect you to write me a swell reference."

The Studebaker is a Car of Distinguished Individuality

You instinctively think of the Studebaker as a car of superb quality.

You compare it not with cars in its own price class, but with cars costing $500 to $1000 more.

Often you pause in amazement when you try to reconcile Studebaker quality and Studebaker prices.

$985 for a full sized, roomy, four-cylinder touring-car and $1385 for a big, powerful "Six" are low prices for just "good" cars—They are really phenomenal prices when they have back of them Studebaker quality, and the strength and character of the Studebaker organization.

And there is only one thing that makes them possible—"Studebaker manufacturing methods".

Studebaker cars are the product of a manufacturing organization with 62 years of experience and ample capital back of it.

They are made in what we believe to be the most completely equipped automobile plants in the world.

They are manufactured under the direct supervision of the men who design them—

And they are manufactured practically complete in Studebaker plants.

Now couple with all these things Studebaker quantity production and you will realize immediately what we mean by the Economy of Studebaker Manufacturing Methods.

During the last eighteen months 55,000 Studebaker cars have been manufactured and sold.

This is the largest number of one make selling at or above Studebaker prices ever produced in the same period by any manufacturer.

And this quantity production, together with the completeness of Studebaker plant Equipment, makes possible the elimination of practically all the parts-maker's profit from the Studebaker cars.

Studebaker motors, transmissions, axles, springs, drop forgings, bodies, tops,—are all made in Studebaker plants.

Studebaker steels worked out to special formulae are all specially heat treated in Studebaker plants.

And this completeness of Studebaker manufacture means better, stronger, longer-wearing parts—consequently Studebaker quality.

In addition it means the saving of the parts-maker's profit—and so makes possible Studebaker prices.

The Studebaker Corporation shares its profits not with parts-maker's but with buyers of Studebaker cars.

The new Studebaker Book is a wonderfully interesting volume—Let us send it to you.

Studebaker Prices

FOUR Roadster	$ 985
FOUR Touring Car	985
SIX 5-Passenger	1385
SIX 7-Passenger	1450

F. O. B. Detroit

REO Motor Trucks

$1650

Model J Two-Ton Truck, Including Chassis with Driver's Cab. Body Extra.

149 Different Lines of Business Find This The Ideal Motor Truck

Be honest with yourself, and your business. Sit down and figure out how much your present wasteful method of hauling is costing you—how much you could save by bringing the Reo Motor Truck to your business.

The actual figures will surprise you.

Perhaps you have imagined the first cost of motor trucks too high for you. The average cost of 54 leading makes of two-ton trucks is $2701. The Reo Model J, a two-ton truck, everywhere acknowledged by experts as stronger and sturdier than other trucks of its rated capacity, sells for $1650.

The First Cost Your First Saving

Right at the start your investment for a Reo Motor Truck is lower than the first cost of two teams and wagons. It easily does the work of three or more teams.

Only one driver is needed, instead of three or more drivers for horse equipment. The saving in labor is a big item.

You save in the cost of operation. The Reo Motor Truck "eats" only when it is working. It goes just as fast and carries just as big a load the last hour of the day as when it starts out in the morning.

But the saving in time is the big item. Reo Motor Trucks will speed up every department of your business. As you deliver faster, you can build, sell, ship, assemble faster. Your whole business feels the spurt of this new form of energy.

Many Delighted Users

We are constantly receiving letters from Model J owners in all lines of business, expressing their satisfaction, not in general terms, but by facts and figures that are wonderfully convincing.

Jacob G. Shirk & Son, wholesale tobacco merchants of Lancaster, Pa., bought a Reo Motor Truck over a year ago. They write: "We use our truck for hauling freight between our warehouse and the freight station. This service was performed by the local dray company at $15.00 per week. Our REO now does this work for $3.50 per week, which includes the cost of keeping the truck in a public garage. Up to this time we have not spent a cent on repairs."

Features That Mean Unbroken Service

The Reo Motor Truck is carefully designed to keep going day after day for years, without any lost time for repairs. It has exclusive features, found in no other motor trucks, that make this constant service possible.

A radiator built of 24 independent, interchangeable units. One or several units could be injured, instantly repaired or replaced, and the run continued. Or the truck will run until you are ready to repair it later.

Much more power than you will ever need is supplied by the Reo unit power plant, cushioned on a sub-frame away from road shocks or vibration.

Reo hydraulic governor keeps the truck to a safe speed. An irresponsible driver cannot go too fast, or allow the motor to race.

Reo right hand center control and left side drive give the driver quick and easy access to and from the seat. No expert driver needed; no time lost in handling the machine.

Reo impregnable armored frame, built to withstand hard service—even collisions—without showing weakness or flaws of any kind.

Your choice of two lengths of wheel base, 130 or 146 inches.

Set Your Truck to Work

If you are paying for a Reo truck now, in wasted time and money, you should set it to work at once.

Look the facts in the face. Figure your present hauling costs, and write us about them. We will reduce our case to cold figures. Then we will ask you to decide on no other basis than your own profit.

Write us for any information on motor truck hauling that you need. A Reo Motor Truck catalog sent on request.

1155 Reo dealers, scattered from coast to coast, are ready to tell you about the Reo Motor Trucks and explain Reo service. Call on the nearest Reo dealer, and talk the matter over with him.

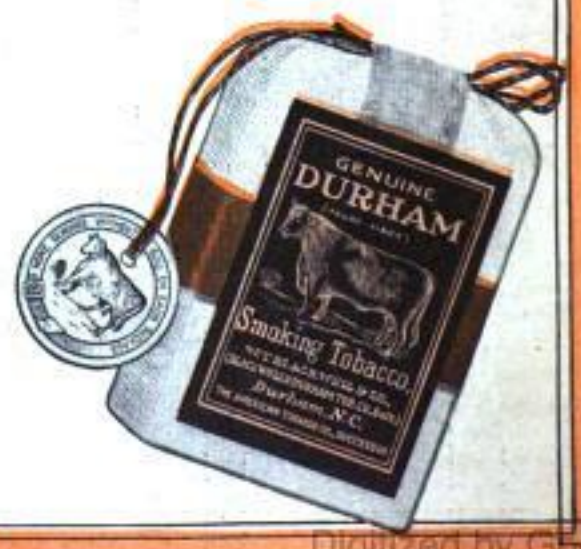
The Smoke of the Smart Set

is not the ready-made or even ready-made-to-order kind. Smart men of fashion everywhere—club-men, connoisseurs, bon-vivants, millionaire sportsmen—have discovered the keener enjoyment and greater satisfaction in the fresh cigarettes of unique flavor and delicious mildness they roll for themselves, to suit their individual taste, from mellow "Bull" Durham tobacco. Today it is the very last word in correct form to "Roll Your Own."

GENUINE "BULL" DURHAM SMOKING TOBACCO



No other tobacco in the world has the wonderful sweet fragrance and ripe, natural mildness of "Bull" Durham. No other cigarettes have the exquisite smoothness and delightful freshness of "Bull" Durham hand-made cigarettes.

"Bull" Durham is a distinctive form of tobacco enjoyment, thoroughly appreciated by smokers of experience and discrimination for the supreme, lasting, wholesome pleasure it affords.

FREE An illustrated booklet, showing how to "Roll Your Own," and a Book of cigarette papers, will both be mailed, *free*, to any address in U. S. on postal request. Address "Bull" Durham, Durham, N. C., Room 1281.
